Rebecca turned away sharply, overcome by the enormity of her sin. She wanted to fling her arms around her mother's neck, and cry, "No, no, it is Manuel Rodrigo, not Captain Gilmore, who has asked me to marry him! It is Manuel Rodrigo, not Captain Gilmore, whom I love!" But something held her silent. It seemed too late now; and this was the easier way.

"I haven't told you all that has passed between us, Mother," she said calmly. "But I understand it—and I have decided to go."

Mrs. Grant put her arms around her daughter's shoulders. "My dear child," she said, with tears in her eyes, "this is so sudden that I can't entirely approve of it.

## THE STORY OF TOBACCO

(Actual size)  
Robt. Burns  
Perfectos  
2 for 25c

Number Four of a  
series depicting  
"The Story of Tobacco"

IT is harvest time in the tobacco fields. All day long the roads are crowded with crude, rumbling carts, carrying the choicest of Cuba's yield to the drying sheds. The sun and soil and climate of the world's chosen tobacco country have done their work. Two years from now the smoke of this tobacco will be curling upward in clubs, hotels and homes throughout the country. But in the meantime there are two years of work ahead.

No two tobaccos grown by the hundreds of plantations whose outputs are used for Robt. Burns Cigars are quite alike. All are of the same selected Havana quality, but there is a variance in flavor that, unless it were corrected, would make impossible the

uniformity of Robt. Burns. Hence, the process of "marrying" the tobaccos.

For months and years, if need be, the tobaccos of the various plantations are mixed and blended and allowed to age. Each plantation's leaf slowly but certainly absorbs the qualities of every other leaf. The result is a composite of the best that Cuba grows—tobacco that is rich with the flavor that only Cuba can produce—tobacco that is mellow with the mildness that only exclusive methods of curing can give.

And that is just one more reason why more fine Havana tobacco is imported for Robt. Burns Cigars than for any other cigar in America. Have you tried one lately?

All Robt. Burns cigars are filled with the choicest Havana tobaccos, aged, cured and blended to a wonderfully pleasing mildness of flavor.

But if you have decided, it is not for me to stand in your way."

Bending above her, Rebecca noted that her mother's breath came regularly, that the news apparently had given the weak heart no disturbance. Her own heart sang with the precarious freedom she had won.

It was not until Rebecca came back from Boston to take up the old life in town that she fully realized the extent of her error. She had managed to exact a promise from her mother to keep the marriage a secret for a voyage. She had begged her not to write to Captain Gilmore, bringing an ostensible message from him that all would be explained on his return. But these were simple dangers, compared to what would accumulate in a brief time. Every waking moment her predicament stood before her. She saw no way to extricate herself, to face the reckoning that was to come.

SOMETIMES she was appalled at the ravages of her indecision—at her feverish imaginings, and the waves of recklessness and irresponsibility which now and then swept over her, seeming to destroy every vestige of her old character. Perhaps her condition was partially responsible; she had heard it said that women at such a time partook of a different nature. It was terrible to be torn in a conflict of error, when she needed all her strength. But the condition itself, she felt, must be kept secret as long as possible. She could not bear to fix that lie, too, on the other man.

There were moments when she hardly dared to think of the lover and husband who had appeared so marvelously out of the heart of life, who had vanished so abruptly at the call of his career, leaving her with heavier burdens than he knew. Yet as the time drew near for them to expect the first letters from Anjer, she was the prey of a devastating anxiety. Then, at length there arrived one noon a single letter for Rebecca, addressed in Captain Gilmore's hand.

She took it to her room in terror—closed and locked the door. For some time she sat at the window, afraid to go on. Why had Captain Gilmore written, and not Rodrigo? At last she summoned her courage and tore the envelope.

My dear Rebecca [the captain began]. I have little heart to write, but must not let Anjer go by without sending you a line. Our voyage has been saddened by an event that touches me deeply. My mate, Mr. Rodrigo, the splendid young fellow who called at your house on his way to Boston last summer, was washed overboard one morning in the West-  
Indies . . .

She got no further; unconsciously, she stood up facing the window, and the letter fell from her hand to the floor. Washed overboard . . . It meant—that he was drowned. Her lips opened wide, without breath or sound. The window looked out on the orchard; through the branches of the apple trees, now bare in winter, she could see the spot where the hammock had hung, and the worn place beneath it in the grass. His feet had rested there. She put her hands to her throat, as if to hold back the cry of a broken heart, but her strength went suddenly. . . .

Mrs. Grant, in the kitchen, heard the scream, and the sound of the fall. When she reached the room, Rebecca was lying on the floor unconscious. She called for

help, and soon the doctor came. At first, she could not believe it when she learned of her daughter's condition, but alarm quickly followed surprise. Rebecca revived, to pass at once into delirium. Toward night, the child was born prematurely. It was a healthy boy; after a few hours of uncertainty, the doctor said it would live. When mother and child had both been pronounced out of danger, Mrs. Grant took to her bed.

It was the sheer strength of her magnificent vitality that slowly brought Rebecca back to the world of life and health, of sorrow and despair. She had no wish to live; but youth willed it. In agonizing dread, she found herself forced to take up a mad existence, an existence in which every act was a deceit and every factor a lie.

After the birth of the child, it had been necessary to make explanations; before Rebecca knew of it, her mother had told of her marriage to Captain Gilmore. Her friends called her Mrs. Gilmore now; they spoke of the child as his, and teased her over the romantic episode. Her aching love for the boy, the picture of Rodrigo, was overshadowed by sorrow and apprehension. Her grief for Rodrigo, her utter desolation, she had to bear in silence, to conceal with an anguished constancy.

Her mother had quickly recovered from the shock of the experience; she seemed entirely happy with the baby. Captain Gilmore was now on his homeward passage. As the days flew by, Rebecca felt herself again borne forward by a terrible swift current—a dark and gloomy tide this time, that seemed to be rushing toward a hopeless end.

Often she thought of death, but turned from it resolutely. Death, she saw, would solve nothing, would only kill her mother, shame the fine man who had honored her with his devotion, and cast a shadow on her child. She must live, somehow, to atone to Captain Gilmore for the wrong she had done him. In the depths of her soul, she did not want to die.

CAPTAIN GILMORE paused irresolute at the door of Rebecca's room. Mrs. Grant had ushered him up-stairs almost without ceremony. "Your wife isn't seriously ill," she had reassured him. "She wants to see you immediately. And your wonderful son, Captain, is perfectly well."

What could it mean, this talk of wife and child? He had received two letters on his arrival in New York, one from Rebecca, the other from her mother. Fragments of these letters passed through his mind as he paused at the bedroom door:

"I beg you to say nothing, not even to my mother. Come to me at once, and I will explain." . . . "Your wife—your child—wonderful baby—a time of great anxiety, but all is well now." What in the name of heaven could it mean?

A child's cry came to him through the door. With stern lines deepening about his mouth, he rapped sharply, then turned the knob at the faint invitation from within.

The sight that met his eyes was one of beauty and pathos. Rebecca was weeping silently over the child. Without looking up—she dared not meet his eyes—she held out her hand to him. He took it, in spite of himself. In spite of himself, his heart was touched, and all the strength of his love revived at seeing her again. She had

never seemed so beautiful, so infinitely desirable.

"Whose child is that?" he asked huskily. "Rodrigo's," she murmured.

"My God!" He dropped her hand and went to the window. Now that he knew it, it seemed beyond belief. Behind him he heard her steady sobbing. He tried to think, but found himself adrift among numberless fragments and ramifications of ideas.

Suddenly she laid the child on the bed and ran to him. "I cannot let you think what you must be thinking!" she cried breathlessly. "We loved each other as truly and purely as man and woman can love. I went to Boston and married him before you sailed. See—" She tore open a bureau drawer and took out a roll of parchment. "This is our marriage certificate. I want you to see it; I want you to read it. I loved him; I was his wife—and now he is gone."

"My poor girl!" said Captain Gilmore. "But why not tell?"

"Oh, don't ask me!" she interrupted. "I was mad! He wanted me to come. Mother had been sick, and I was afraid to tell her. I did it as an excuse, to quiet her mind. I didn't think, I didn't know. . . ."

"Wait," he said calmly. "You mustn't excite yourself. Sit down and tell me all about it. I think I begin to understand."

HIS mature influence quieted her; she opened her heart as she had never expected to do again. It was the first time that her overwhelming grief had found a natural vent. Captain Gilmore listened with bowed head. After a while, he took her hand once more.

"Oh, it is such a relief to speak the truth!" she cried. "Now I can do what seems to be necessary—whatever you say. I have compromised your name almost beyond repair. But I will tell it all now, and take the blame. Oh, if it weren't for Mother! She will never hold up her head again. Or I could go away—as if I were your wife—and drop out of the world somewhere. You could make up a story to explain it. Mother could go with me—she wouldn't mind that so much as the other."

She looked up bravely, to find him smiling at her.

"There is another way, that you apparently haven't thought of," he said.

"What?" she asked. "I am ready to do anything."

"Marry me now, and let it never be known that we weren't married last voyage," he answered. "Then not even your mother need be disturbed."

She gazed at him in wonder. "Do you mean that you would take me—after this?" she breathed.

"I would take you always, Rebecca. It is for you to decide whether you care to be my wife."

She slipped from the chair, and buried her face on his knees. Kneeling beside him, an unaccountable peace stole over her, a relief so poignant that she could not face its significance.

"How can you be so generous and kind?" she sobbed.

"Don't!" he cried. "But I promise that I will try to make you happy." He smiled again in joy and confidence. Perhaps he realized that now she was truly his, as she could not have been before.

## IT STARTS PROMPTLY IN THE COLDEST WEATHER

The behavior of Dodge Brothers Motor Car on zero days is a fair example of its fitness the year round.

You turn the switch, step on the button, and the motor starts—without undue noise or delay.

The reasons are readily understood:

The coordination of the power plant is well nigh flawless. The slightest impulse sets it in motion.

The battery—6-cells, 12-volts—is unusually large.

A high-vacuum carburetor so thoroughly vaporizes the gasoline that it ignites instantly under the spark.

The electrical system is remarkably efficient and cuts to a minimum the usual voltage loss between battery and starter.

Finally, the starter, itself—an admirable example of its kind—is directly united with the engine by a chain drive which is always in mesh—a fact having much to do with the promptness and quietness of its action.

(Continued from page 20)

check wherever I happened to be. It wasn't much, but it enabled me once in a while to ride on regular trains.

"I got my first real job on an Indianapolis paper. The art manager wouldn't hire me; he said they didn't need anybody. But somebody slipped me a word to strike the managing editor. I did, and he asked to see some samples of my drawings.

"I don't need any samples!" I replied.

"But he insisted, and I promised to come back next day with some. I had nothing with me, but I went to my room and began to draw. I drew everything I could think of. I spent the whole night at it, without getting a wink of sleep. The next day I took these samples to the managing editor, and he liked me well enough to hire me.

"How much do you want?" he asked.

"Thirty-five dollars!" I replied. I thought that was all the money anybody could possibly earn in one week. But he gave it to me.

**T**HE art manager who had turned me down was a fellow with a big front. Naturally, he didn't like it because I had got a job over his head. He put me in a dark corner of the room where there was hardly any light, and he wouldn't even give me a pen to draw with. The managing editor told me not to mind that, though, but to come to him for anything I needed. Within two weeks they let out the old art manager, and the managing editor made me head of the department.

"Imagine it! I was hardly twenty! It was a fine office, though. I pushed one button and one fellow would come, and I pushed another button and another would come!

"In some ways I was not altogether fitted to be so important an executive. One day, I remember, I pushed a button and when the fellow answered, I said:

"Stewart, have you got a rag there?"

"Yes," he answered, "what do you want it for?"

"I put my shoes on the table and inspected them critically. 'Never mind,' I said, 'I'll brush them myself!'

"The first or second day I made myself a crown out of yellow paper, and printed on it: 'Who's boss around here, anyhow!' My régime was too much of a reaction from what had gone before, to last. I think it did last about three days.

"Since that time I have worked on a lot of papers. Hardly a day has passed, however, when one or more of my pictures did not appear in a paper somewhere. Whenever I went on vacations, I always got my stuff up ahead.

"One time I was hunting a job, I remember, and the editor said they wanted somebody who could make wash drawings. He asked me if I knew anything about it. I told him I did wash drawings better than anything else. Up to that minute I had never made one in my life!

"However, I got a fellow to tell me one or two of the tricks and I sat up all night practicing. Next morning I showed

up ready for work, and made good on the job.

"That was typical. I always made a point of finding out what kind of an artist they needed, and that was the kind of an artist I was! I had to be; sometimes I couldn't get a job any other way.

"I suspect that there is a turning point in every fellow's life, a point to which he can look back and say: 'If I hadn't done so and so then, I wouldn't be where I am now.'

"Sometimes it seems like a lucky chance that a fellow happened to do the right thing. It's like a fly trying to get through a screen. He lights on a place where a hole is, and buzzes in. But he might not be able to find that same hole again in a thousand years!

"That's how it was with me one time in Pittsburgh. I had tried to get a job at all the papers except the 'Press.' I said to myself, 'I won't tackle the 'Press.' It's not a good sheet, anyhow.'

"But for some reason that I can't explain, I kept going back past the 'Press' plant. Two times I passed by. The third time I said to myself:

"Oh, I may as well go in. It won't do any harm to see what this fellow has to say."

"I asked for the managing editor. A boy pointed him out to me.

"What's his name?" I asked.

"The boy told me, and I walked across the floor.

"Do you want a cartoonist?" I said.

"How in thunder," he said, "do I know you're a cartoonist?"

"How in thunder," I replied, "do I know you're a managing editor?"

"He didn't answer that, but he did ask me how much money I wanted.

"Thirty-five dollars," I replied.

"I'll give you twenty-five!"

**I** TOOK the job at that figure and was mighty glad to get it. And it turned out to be the turning point. From that time on I was in something worth-while, and constantly growing. It was while I had that job that I found my wife and my career too. If I hadn't gone back the third time, I suppose I might be driving a grocery wagon to-day instead of drawing the Gumps.

"In the early days I had drawn all sorts of things in front of audiences over the country; but when I sat down in a newspaper office with a pen and a piece of white paper and was told to do a cartoon, I didn't suppose there could be so few ideas in one head! It was marvelous to me when a kindly disposed chap on the paper sat down and ran over the items of news with me, and picked out an idea for a picture. It was great to know a chap like that. The drawing was not difficult after I got the idea. Gradually I got so I could get a few faint ideas of my own.

"One of the first permanent characters I had in my pictures was a goat. It was common to put a bird or some other small animal into a cartoon and have him make some comical side remark every

day. I selected a goat. People got in the habit of watching what he said. About the time of the Thaw trial the goat kept wondering day after day if he was crazy. And finally the goat himself began to go crazy. One afternoon they kept the presses running four hours on extras because of that fool goat!

"It occurred to me to make the goat the main character, and in time he grew to be Old Doc Yak. I carried Doc with me for fifteen or sixteen years. It seemed a shame, five or six years ago, to have to part with him, after we had been pals for so long. But by that time the Gumps had come along. I couldn't carry both. The Gumps, I saw, had elements of a wider popular appeal. We had a tearful farewell. Old Doc Yak shook hands all round with Andy, Min, and Chester Gump, and he handed over to Andy his fast racing car, number 148.

**I** AM often asked how the Gumps originated. That's hard to answer. It's hard to say how any idea originates.

"The Gumps were the first of their kind. There had been plenty of comic strips before, but usually the main interest centered around a good deal of slapstick action. One character would beat another over the head and knock him out one day, but the next day he would be up and around as usual, and nobody took any exception.

"I wanted something different, and something that would last. I had nothing but a sheet of white paper and what was up here in my head to go on. Everybody has that much of a chance!

"It was a pretty tough job, all in all, to decide what kind of characters to have. I decided I wanted just an ordinary family, and I wanted everyday things to happen to them. I was not so much concerned about making them terribly funny, but I did want them to be *true*. I thought I'd get what I wanted if I could draw something which a wife would read and hand to her husband with the remark:

"There, that's you!"

"But in order to do that, I had to get the right sort of characters. After I had hit on Andy, with his long neck and absent chin, I had to decide whether he was to be a rake or something of a philosopher; whether the boy Chester should be a roustabout and neighborhood terror; and whether Min should be just a sharp-tongued hag, or what.

"As the pictures got going, I introduced new characters. From first to last there have been a lot of them, but they all center somehow around Andy. He is the main hero.

"I got the idea of introducing a rich uncle from Australia. He was brought on: a bearded brute, who let everybody wait on him, and was rather stolid and uninteresting. After I had him a while, I began to realize that he was not the right sort for a real uncle. Then the question rose, how get rid of him?

"We played along for a while on the bearded chap, but presently it came out

# Hurried Men

Can now soften a beard in  
one minute

## GENTLEMEN:

By V. K. CASSADY, Chief Chemist

*No more three-minute rubbing, no more hot towels, no more finger-rubbing at all.*

A new-type shaving cream avoids that. It softens the beard in one minute. And it saves the average user a good many hours per year.

### Four other delights

We have done other things you'll like.

Palmolive Shaving Cream multiplies itself in lather 250 times.

It maintains its creamy fullness for ten minutes on the face.

It supports the hair for cutting, because the bubbles are so strong.

And the soap forms a soothing lotion, due to palm and olive oils.

*Multiplies itself in lather 250 times.*

### We are winning men by millions

We spent 55 years in soap making before we made a Shaving Cream.

We knew it was folly until we found ways to conspicuously excel.

Then, one by one, we evolved these advantages. We studied the subject for years. We made up and tested 130 formulas before we got what we were after.

Then Palmolive Shaving Cream fairly leaped into fame. The demand for this new Cream has become a sensation.

### Please find out

Find out the reason for this amazing success. It is due to yourself and us. If we have best solved shaving problems, you'll be glad to know it. If not, we are the only losers. Cut out this free test coupon—now, before you forget.

that he was an impostor. Then we began to prepare for the advent of the real man, the Santa Claus uncle with the long nose, the long purse, and the unmistakable Gump chin, who introduced a lot of events and finally fell into the snare of the fortune-hunting Widow Zander.

"From this you can see that the characters pretty much make their own story from week to week. One day I came down to the office with the bright idea of having a mysterious face appear at Andy's window. It was a woman's face.

"Andy saw her, of course. He didn't know who she was, but he conceived from her actions that she had fallen in love with him. He was all puffed up about it. He used to stick a flower in his button-hole in the evening, and sit in front of the window so she could have a good chance to see him. Sometimes Min caught him at it!

"The stunt was interesting enough, all right, but I had started something that I had to finish; and I did not know how to finish it, for I had no idea myself who the woman at the window was! We solved it in the end by discovering that she was harmless, but suffered from hallucinations. She had always had a fondness for anything with a long neck—giraffes and such—which explained her admiration for Andy!

"ONE thing I have discovered about Andy Gump is this: In order to be interesting to the great majority of people, the pictures must be clean. Many resent it almost as something personal if Andy or one of the other well-liked characters does something which they consider is not right.

"One day I showed Andy in a restaurant. He discovered a mistake in his check and started to kick about it. Very soon, however, he saw that the mistake was in his favor. He quit talking and let the check stand. I suppose lots of folks thought that was funny, but a lot of others objected to it.

"We didn't think Andy was the kind of chap who'd do that," they wrote.

"Again, if Andy hides a bottle in the basement and takes a quiet snifter now and then, it pleases a lot of people, but others don't like it. They have grown to have a certain feeling about Andy. They want him to live up to their ideas.

"But he is a kind of everyday philosopher. He tries to voice the sentiments of everyday people. My idea is to make him the sort of chap so that people can hold a mirror in front of themselves and say truthfully:

"There's Andy Gump!"

"He's not always right, by any means. He gets into trouble once in a while by being too cocksure. But you like one of your friends all the better, don't you, if you can laugh at him once in a while?"

"People hold us to strict account on details, too. In the very first strip of the series, introducing the family, I announced that Andy and Min had one son in the navy and a daughter away at school at the academy. I have never used those two characters, and now and then, even after five or six years, people still write in occasionally and want to know when I'm going to produce the other son and the daughter.

"An amusing incident happened not

## When dripping hands meet Thirsty Fibre

—they are instantly, thoroughly and *safely* dried. Millions of thirsty fibres, in every ScotTissue Towel, leap to their task of draining dry every drop of moisture, leaving the skin luxuriously clean and safely dry.

ScotTissue Towels are preferred in modern offices for their efficiency, economy and safety. They provide a clean, fresh, never-before-used towel to each person every time.

Buy ScotTissue Towels from your stationer, druggist or department store—40c for carton of 150—(50c in Canada). Less by the case of 3750 towels. Or, we will send (prepaid) the towels or \$5 outfit, upon receipt of price.

## Jewett Special—*Stylish as It Is Sturdy*

**T**HE Jewett Special gives you the sturdiness which has made Jewett one of the largest selling cars in the thousand-dollar class. And it gives you also color, beauty, quality appointments, and all the equipment heart could wish.

Observe the extra tire which, with its tube, rim and cover, is standard equipment on the Jewett Special. Note the trunk rack and trunk—both included. Also the bumpers, front and rear. You can see those in the picture.

Other features of the Jewett Special are: hand-crushed Spanish leather upholstery in colors to match body—nickel-plated radiator—nickel-plated, barrel type head lamps—bullet type side lamps—motometer—automatic windshield wiper—automatic stop light.

But special equipment does not make a car; color and beauty won't climb hills. It's the performance you get in the Jewett which makes it so delightful. Passing much bigger cars on hills without changing gears. Dashing ahead of others in the

traffic. Turning corners as slow as need be with never a thought of gear shifting. That's the way the Jewett behaves because it is the most powerful car of its weight. And it is decidedly sturdy.

The powerful Jewett motor will hold its power and smoothness for years. It is the best oiled motor ever put into a car of this class. Its high-pressure oiling system sends 3 gallons of oil a minute at 20 to 40 pounds pressure to all main and connecting rod bearings. Metal never touches metal in the Jewett motor. Always a thin film of oil between. Long life is certain because wear is absent.

The Jewett handles as sweetly as it looks. Paige-Timken axles with ball-bearing steering spindles give touch guidance. No car quite like it. The Jewett clutch engages smoothly and by its light-weight driven member aids gear shifting. No skill required to avoid the grinding noise—just move the lever as you please. Wouldn't you like to try the Jewett?

Once in awhile it needs, for nearly fourteen years, Mrs. Maertz has been swept and vacuum-cleaned her rugs with The Hoover. She has twenty-four rugs; the newest are twelve years old, while the oldest are eighteen. And she keeps runners.

## Even her 18-year-old rugs are still in good condition

"My rugs are frequently admired for their bright and clean appearance, yet I never have to pay to send them out for cleaning—I use The Hoover. People can scarcely believe it when I tell them the age of my rugs, for nothing is harder on your rugs than roomers."

And Mrs. Wm. F. Maertz, whose house at 880 First St., Milwaukee, is pictured above, adds: "I have been told by people who knew nothing about The Hoover that it was injurious to rugs. My own experience causes me to believe that rugs not Hoover-cleaned wear out twice as fast. I know that The Hoover has paid for itself over and over by making my rugs last many years longer—and it makes sweeping a pleasure."

Surely she is qualified to speak with authority!

"Some of my friends," continues Mrs. Maertz, "liked my Hoover so well that they sold their cleaners and bought Hoovers. Others are sorry they didn't know about The Hoover before buying. Many people are satisfied with their cleaners until they see The Hoover work. Personally I have tried other cleaners and am convinced I would have no other."

Write us for names of Authorized Dealers who will gladly demonstrate The Hoover on your rugs—no obligation. On the divided payment plan, 17c to 23c a day soon pays for a Hoover.

THE HOOVER COMPANY, NORTH CANTON, OHIO  
The oldest and largest makers of electric cleaners  
The Hoover is also made in Canada, at Hamilton, Ontario

# The HOOVER

It BEATS... as it Sweeps as it Cleans

long ago. Mrs. Zander's first name—she is the widow who led Uncle Bim into an engagement for the sake of his money, and sued him for breach of promise after he left her at the church—her first name was used in an early strip when she was introduced. But I forgot what name I used for her, and we couldn't locate the original strip in time. So I took a chance and renamed her Henrietta.

"I was called for it at once. It wasn't two days before I knew that Mrs. Zander's given name had originally been Lois.

"The details drawn into the pictures have to be correct, too. One picture not long ago showed Mrs. Zander in Uncle Bim's arms. Her hands were hidden and somebody thought they should have been visible. I was called on that. There's hardly any detail, in fact, from the size of Uncle Bim's nose to the number of bottles that Andy has left in the basement, that I can go wrong on without having the error called to my attention by a lot of people.

"Curious, as indicating the interest in the family, I have in my office a knot of a tree which somebody found and sent on because it looked like Uncle Bim. And somebody else out West sent me a stone picked up in an ancient gravel bed, which bears a remarkable resemblance to Andy!

"THE family adventures of the Gumps now appear in one hundred and six daily papers, and sixty Sunday editions. A peak of interest was reached not long ago during Uncle Bim's engagement and approaching wedding to the Widow Zander. Some few people wanted to see the wedding go through. But the great majority thought it wasn't a proper match; they were violently opposed to it, and they apparently got more and more excited as the day of the wedding approached and it looked as if nothing could prevent the ceremony. I got letters from everywhere about it. One chap wrote me:

"I have read the Chicago 'Tribune' for about twenty long years. If you let that Zander female marry poor old Uncle Bim, I am off your blooming sheet for life. Final notice.

"That was a fair sample. I got another letter with eighteen signatures which said:

"If this engagement isn't broken very soon, the undersigners won't buy the 'Tribune' any more!

"But there was at least one happy soul as the wedding seemed assured, for I got the following telegram:

"Aloysius Zander, owner of only one-horse hearse in North Tonawanda and manager of Presto Undertaking and Embalming Company, states that he is Mrs. Zander's ex-better-nine-tenths, and is tickled pink. Offers to come to Chicago and celebrate if they will forward his fare and he can get someone to hold his horse.

"It was made a front-page feature in a good many papers when Uncle Bim, on his way to the church, discovered in his automobile the widow's diary, in which he read various uncomplimentary things she had written about him: for example, that she did not love him, but would be willing to marry a chimpanzee with that much money!

"It was a hard blow for Uncle Bim.

## The Secret of the Sampler

is in the background of eighty years—three generations of fine ideals in candymaking.

The success of the *Sampler* is due not only to the quality of the chocolates and confections inside, but to the happy choice of the ten kinds in the seventeen ounce package, called by courtesy a "pound."

It is the continent-covering candy, sold in all those selected stores (usually the best drug stores in every community), that are agents for the sale of Whitman's Chocolates.

The *Sampler* is a liberal education in quality-sweets. It points the way to equally individual and meritorious assortments, made, packed, sealed and guaranteed by Whitman's.

STEPHEN F. WHITMAN & SON, Inc., Philadelphia, U. S. A.

Also makers of Whitman's Instantaneous Chocolate, Cocoa and Marshmallow Whip

New York Branch: 215 W. 33rd St.

Chicago Branch: 1537 Michigan Ave., South

San Francisco Branch: 409 Market St.

## Food—good Food!

Your strength and vitality depend on it

**N**O one ever did real justice to himself or his work, if undernourished. You may get plenty of food, and still be underfed, if your food doesn't contain the elements for proper nutrition.

If you eat "de-mineralized" food—food robbed of mineral elements—you are bound to lack the energy and endurance you should have. This is one of the reasons why Grape-Nuts should play an important part in your regular diet.

Grape-Nuts is a highly nutritious food made from wheat and malted barley. It contains the vital mineral elements that are needed to build up strength and vitality.

Grape-Nuts is ready to serve—no cooking necessary. A package contains many servings, costing about one cent each. Your grocer sells Grape-Nuts, and it is on the menus of hotels, restaurants and lunchrooms.

Where you don't find Grape-Nuts you won't find people.

# Grape-Nuts

FOR HEALTH

*"There's a Reason"*

Made by Postum Cereal Company, Inc.,  
Battle Creek, Michigan

He drove out into the country instead of going to the church, and later he sent the widow a note explaining his absence and returning the diary.

"The widow, meantime, had bought an elaborate trousseau, promising to pay for everything the day after the wedding. When the news spread that the wedding was off, the creditors pounced down on her at once. She brought suit against Uncle Bim for breach of promise.

"In Denver, first, and in other places later, the Widow Zander's case against Uncle Bim was made the basis of a mock trial in the local law school, and in that way the case got a lot of additional publicity.

"I think the biggest things I've learned about people, through the Gumps, are, first, that what they want is a clean and wholesome character in their fun; and, second, that they like best of all those pictures in which they see themselves or their friends pictured through the daily happenings in the lives of the Gumps.

"There's one other thing I ought to mention. I get letters every once in a while from people who want to know what Andy Gump's business is. But that is one detail, I've found, it doesn't pay to be too particular about. If Andy were an insurance man or a real estate agent or a bookkeeper, he might not be nearly so interesting to a lot of folks who are grocers or brokers or garage keepers.

"So, for the present at least, Andy's means of livelihood remains a state secret."

## The New Baby in Our House

*(Continued from page 21)*

now that she asked my opinion on the proper lead to make if no trumps were bid and you held five from the queen for your long suit; in a way I recall that she gave me a most interesting account of a recent dinner she had attended and I think now she mentioned the names of two or three books which had recently caught her fancy.

In between times I paced the floor and lit a fresh cigar or sneaked up-stairs for a bulletin of hope and cheer, returning always to light another cigar and listen to Florence and her cheerful chatter. She was brave, there is no doubt of that. As frightened as I, she smothered her fear in a babble of conversation. Knowing my weakness she tried golf. I think she tried to tell me of a wonderful shot her husband had made that day; but whether or not it won the match for him I don't know. I asked her about it a few days later, and she admitted that she herself couldn't say. She didn't recall that she had ever mentioned a golf game. She was merely talking against time; and my mind and ears were up-stairs.

"Take a little walk," she said at last to me.

"I think I will," I replied, and started toward the house of some friendly neighbors. I never reached that front porch. Florence let out a shout, and I hurried back. I crossed my own threshold on the run, just in time to hear that first glad "Wye-ah!" the first utterance of a

# MAXWELL

## ENGINE

An engine which incorporates high-priced quality and practice throughout, with features not found even in much costlier cars—

Three extra large crankshaft bearings; full pressure lubrication to main and connecting-rod bearings, through channels bored in the crankshaft; all rotating and reciprocating parts—even the flywheel—minutely balanced; pistons light-weight alloy, of the split-skirt type originated by Maxwell—an engine of great power and flexibility, notably smooth, vibrationless and quiet.

The car steadily winning a larger and larger proportion of its market, for the very excellent reason that it is a *better car*, and is *proving itself* better under closest comparison.

Showing the fine results in performance, in actual savings, in long-distance reliability that

can only come from the goodness which the new organization is consistently building into the good Maxwell.

Beneath the greater beauty of the good Maxwell—under the hood and the body—lie the reasons why it is outselling in constantly increasing volume.

Prices F. O. B. Detroit. Revenue tax to be added: Touring, \$885; Roadster, \$885; Club Coupe, \$985; Sedan, \$1335; Four Passenger Coupe, \$1235

## Granddad's WALTHAM ticked off the stirring minutes of "Sixty-two"

THERE is a degree of assurance that accompanies the purchase of a Waltham Watch that outweighs any claim concerning its mechanical fitness or its ability to keep faith with you and TIME. It is that the organization *behind* your modern Waltham was at the forefront in American watch-making seventy years ago—that there is nearly a century of accumulated knowledge, experience and REPUTATION between the first Waltham and yours.

Any reputable jeweler will be able to show you a Waltham Watch that will meet your requirements.

THE SCIENTIFICALLY BUILT WATCH

pure and lovely little soul coming into the world.

Talk about music! If you've never heard that cry you've missed the loveliest sound known to mortal man. I think I could write pages on what it says. I have heard it three times now, and always with the same delight. There is nothing else like it in all the experiences of life. The agony is ended! The doubt and fear and dread have vanished. The heavy heart is light once more.

"Wee-ah," it comes again. The new baby has life and strength and is giving satisfactory evidence of them both.

Florence and I stood in that hall together and for just a minute cried and laughed and danced a jig of joy. Then we listened for more news. They were evidently busy up-stairs. We could hear muttered voices and rapid footsteps. The baby was still crying, which was satisfactory; but the mother now was quiet. Suddenly Aunt Irene appeared at the head of the stairs. She was all smiles.

"It's all over," she said hastily. "Everything is fine, and you have a lovely little girl."

IT'S a girl! There are a few who know me well who understand just what that message meant to me. It is difficult to put it onto paper; but if you have ever wanted anything so badly that your heart ached for it and your throat hurt when you spoke your wish, and there was a possibility that you might not get it but would have to take something else instead, and at last your prayers were answered, you may understand the cheer I gave.

Our home needed a little girl. It had a little girl once and we could not keep her. Then we found Marjorie and she was our little girl through eleven happy years, and God called her from us one evening in May, more than a year ago. Then came the day when we knew God had taken pity on us, and I did not have to ask Mother what she was praying for. It was in her eyes every day. She wanted a little girl. She never planned for anything else; she made no preparations for a boy; the simplest articles of that outfit were feminine in character and color; pink ribbon ran through everything her fingers made, and all the things our friends brought to her were pink—pink for a little girl.

My first duty, of course, was to send out telegrams to far-off relatives and friends announcing Janet's arrival. That done, I could retire to a back bedroom and await further orders in the morning. The third or fourth night I woke from a sound sleep. It seemed to me that I had heard a baby crying. I raised up on my elbow and listened. It was an unusual sound in our house, and I wondered if I had been dreaming. Then I heard it again and my mind cleared. Of course, we had a baby of our own to cry! It had been ten years since I had had my sleep broken in that manner, and the strangeness of it was not surprising. But why were they letting that little thing cry and doing nothing about it? I'd find out. So I slipped into my dressing gown and went to investigate. It was two o'clock in the morning.

I found Miss Wicc, the nurse, awake, but not greatly concerned.

Firm in his belief that the locomotive was practical and would prove of inestimable service to man, George Stephenson sought an open competition at which other engineers might receive equal opportunity to exhibit their inventions. His notable success with "The Rocket" at Rainhill, England, in October, 1825, was the more creditable for Stephenson's unselfish attitude and fair-mindedness.

## The Courage of Conviction

**S**TEPHENSON, the untutored but far-sighted mine-worker, triumphed over adversity and found greatness through service because he was possessed of the courage of his convictions.

Faith in the ultimate accomplishment, strengthened by uncompromising standards, must invariably precede every great achievement.

It was the realization of the possibilities of pneumatic tires and the confidence of final suc-

cess that produced the present day cord tire.

In the performance of Firestone Gum-Dipped Cords, the Firestone organization sees the rewards of over twenty years of incessant effort toward better tire quality. Millions today are receiving mileage from Firestone Cords that seemed beyond the realm of possibility.

Belief in the standard of Most Miles per Dollar has brought acceptance of that standard from an ever-widening following.

*Most Miles per Dollar*

"What is the matter?" I asked.  
"Nothing at all," she replied.  
"But the baby is crying," I said.  
"Yes," she answered. "All babies cry at times. She is simply getting her exercise."  
"Exercising in the middle of the night?" I asked.

"Certainly. She knows nothing as yet of night and day. She has taken it into her little head to cry, and that's all there is to it."

"Are you sure she isn't in pain?"

"Quite sure. That is not a cry of distress."

"Don't you think she may be hungry?"

"It is two hours before she will be fed again."

"There are no pins sticking in her tender flesh?"

"Absolutely not."

"And you do not intend to do anything about it?"

"There is nothing whatever to do. She will settle down and sleep in a little while."

"Suppose I take her up and walk with her a little while? Won't that quiet her?"

"I think perhaps it would; but you are not going to do it while I have this case in charge. Walking the floor is not good for the baby or the parents."

"Would it help if I sat in a chair and rocked her a little while?"

"That would be just as bad."

"But I walked the floor with Bud when he was a baby and I rocked him and I ran with him and I sang to him and I bounced him up and down, and he lived all right."

"That may be; but this baby is not to be raised that way. I wish you would retire; and please shut your door so that you cannot hear, if this crying disturbs you."

**I** LATER learned to like and admire greatly Miss Wiece. She is a wonderful nurse and won the affection of all who came in contact with her, but when she was on the job she was all business. After that first run-in with her I think for a moment I wished that I had taken the grandmothers' advice and hired a good old-fashioned, plump, middle-aged, practical nurse who would walk the floor and pat the small of a baby's back incessantly, and leave us to carry on the performance to the end of our child's infancy.

For the first ten days visitors were denied the bedroom. I was for that idea, myself. Getting Mother well and strong was the big job, and that done we could receive company. Miss Wiece took charge of that, too. All company looked alike to her.

"Nobody's coming in here to handle that baby," she'd say; and you knew from the way she said it she meant it. Those who arrived in the daytime had a fair chance to get a glimpse at the child, but those who came after seven o'clock in the evening the first three weeks got mighty little for their pains.

"I'll not turn on the lights in that room for anybody," she announced. "That baby's put to bed to sleep, and she's not to be disturbed."

That was all there was to it. She met all comers in the upper hall; signaled to them with her finger to her lips for absolute silence; then ushered them tiptoeing into the room and led them to the bassinet in which Janet lay slumbering be-

# When You Buy a Burroughs You Know What You're Getting

*You know* you're getting a machine to fit *your* kind of business and *your* kind of work. Burroughs alone makes a *complete* line of figuring machines covering every figure need of every business, big or little—over 100 models, representing all four figuring machine groups, adding, billing, bookkeeping and calculating.

These are distributed by the largest and most highly trained body of representatives to aid business in selecting proper equipment.

*You know* you're getting reliability, in the finest quality of materials and in skilled workmanship. It took 38 years to build the Burroughs of today.

*You know* you're getting highly trained mechanical service—nation-wide, accessible anywhere, known everywhere.

It costs no more to have that three-fold certainty of satisfaction than it does to buy on guess work or uncertainty.

## BETTER FIGURES *for* BIGGER PROFITS

# Burroughs

ADDING • BOOKKEEPING • BILLING • CALCULATING MACHINES

Once you own a Burroughs, you'll say, as thousands of users have, that it's one of the best investments you ever made.

It will help you to get the figure-facts about your business, such as how much you owe and what is owed you; amount of sales by departments, lines or clerks, and other important items.

It will save time and prevent costly mistakes in totaling sales slips, invoices

and statements. It will cut down the work of taking inventory, simplify the job of making your income tax report and in dozens of other ways make itself one of the most profitable things you have in your business.

The Burroughs man will be glad to show you in dollars and cents what this means in your business. Call him today or send in the coupon.

*Beautiful*  
**FIBERLOID**

Do you know that many of the articles you use every day are made of this durable material, Fiberloid—combs, pendants, bracelets, optical frames, tooth brushes, knife handles, fountain pens, buttons, shoe buckles, toys, etc? Fiberloid is made in beautiful ivory, tortoise, amber and gold colors, and takes a brilliant finish. It can be so easily sawed, bent or pressed that many manufacturers use it to advantage in place of other materials.

Toilet Articles with the stamp Fiberloid will neither tarnish, dent nor crack, and can be obtained at the leading stores in the distinguishing *Fairfax, Rosemont, Avondale and Berkshire patterns*. Brushes, combs, mirrors, manicure and other articles may be purchased singly or in attractively boxed sets. A monogram easily engraved or inlaid with contrasting enamels adds to the charm and intimacy of possession.

#### CRAFT ASSORTMENT

Fiberloid is so ideal for craft workers' use, that we have put up a special assortment of ivory, tortoise, amber and other colors, with full directions, patterns and cement, enough to make many pieces of jewelry and novelties, which is sent postpaid for \$3.00. Satisfaction guaranteed.

#### Booklets Sent Upon Request

"Beautiful Fiberloid Toilet Articles," by Grace Gardner.

neath a coverlet of pink blankets and a hood of filmy lace and ribbon. They might breathe but they must not talk. She carefully pulled back about an inch of coverlet and the friends might see what they could.

"Isn't she wonderful!" was the common exclamation; but once outside they all added that they wished that they could see more of her.

One day, during the absence of the nurse, Florence was on guard. She had been instructed by Miss Wicc how to act and what to do:

"Remember; no loud talking; no lifting her up; no giving her to others to hold." And Florence promised to obey. She was doing very well, at that, and had just tiptoed two visitors into the room. No one was speaking above a whisper when up bounced Bud. Into the bedroom he dashed, rushed by his aunt Florence, elbowed the company out of the way, threw back the covers with one hand and shouted at the top of his voice:

"Hello there, little Janet, how are you this afternoon?"

Florence was dumb with amazement. Science and trained nurses may control grown-ups, but small boys can shatter all regulations.

I AM still taking off my hat to Miss Wicc. She has left us now to take care of someone else's new baby, and we miss her.

Where we stand and wonder, she knew. Calm and quiet and positive in her way, she left nothing to chance. Where we should have had to guess she found out. Was the mother's milk agreeing with the baby? How much was she getting at a feeding? She told us exactly. A little over two ounces. How did she know? By weighing the baby immediately before and after feeding.

We were all at dinner one night when the baby began to cry. It sounded to me exactly like all the other cries that had been given during the dinner hour, to which Miss Wicc had paid no attention, despite my protests.

"If you do not want a spoiled baby you must not take her up every time she cries," she had said repeatedly. "If you will let her alone she will soon learn to sleep the night through." So we had been obliged, against our innermost desire to take her up, to leave her alone to cry it out. But this night the baby cried, and immediately the nurse left the dinner table. The dessert had been served when she returned.

"Anything the matter?" I asked.

She smiled. "Yes, the poor little thing was in pain," she answered. "I think she had eaten too much and the gas was troubling her. I got it to come up, and she is comfortable now."

She had detected the difference in the cry. I think she taught that to Mother, because when I grow restless now and feel that I ought to do something, she shakes her head and says there is no pain to be relieved.

I imagine baby conversation must be the same the world over. Old bachelors and childless grouches insist that all new babies look alike, or don't look like anything. We proud parents do not agree with them; but I think we will all agree that the same things are said whenever a new baby is displayed.

*"One of the wisest decisions I ever made"*

E. E. Amick, Vice-President of the powerful First National Bank of Kansas City.

**I**N his own mind a banker divides men into three large groups.

1. Those who save nothing for investment—the wasters.
2. Those who put *every* penny into insurance and a home—the plodders.
3. Those who invest some part of their savings in themselves—the men of vision, the doers.

Out of this third group come the leaders of any industry, including the leading bankers themselves. E. E. Amick, whose letter is quoted on this page, being typical of many.

Mr. Amick's career might easily have terminated in Bunceton, Missouri. Entering the bank of that prosperous little community at the age of fourteen, he became its chief executive officer at twenty-three, with an income of \$5,000.

Or his career might have terminated in Boonville, where he was made President of the Boonville National Bank.

In either situation many men

*"I have made a good many investments during the past ten years but none which returned, on the amount involved, such large dividends or benefits as the investment in the Modern Business Course."*  
E. E. AMICK.

would have said: "I am content. I will put all of my surplus into a home and insurance and safe bonds. I will settle down."

But while he was still cashier in Bunceton, he read the little volume "Forging Ahead in Business" which is offered at the bottom of this page. The Modern Business Course and Service for which he subsequently enrolled was a revelation. It carried him out into a wider world. It gave him a working knowledge of each department of a modern business—the sales, accounting, factory and office management, advertising and corporation finance. It brought him into personal relationships with the methods which business leaders, in many lines, had tested and found successful.

His other investments were profitable but this investment—only a few dollars a month, and less than two hundred altogether—paid for itself dozens of times over and is still paying tremendously.

If the Course of the Alexander Hamilton Institute cost \$10,000 or even \$1,000, few men with family responsibilities would be justified in backing their faith with so large an amount. But the initial cost is nothing but a two-cent stamp which, with the coupon below, will bring your copy of "Forging Ahead in Business," the book that contains all the facts.

Even the most conservative banker will tell you that saving money is the best thing you can possibly do, *with one exception*. That exception is to put a little money into something your competitors do not have—knowledge and vision of the future. "Forging Ahead in Business" has given 200,000 men that sort of vision, and it is sent without obligation or cost.

### When your hat counts and your clothes do not

NO ONE can observe the careful tailoring of your clothes when you sink into the cushions of a lounge in a lobby or the seat of a railroad train. Your hat is then the most conspicuous article of your dress.

Whenever a man's clothes can say nothing for him, a Knox Hat speaks volumes for his taste and judgment.

*In leading stores throughout the country wherever the Knox Hat of America is displayed, you are assured of style, quality, and customer service.*

**"FIFTH AVENUE SPECIAL"**  
The pride of the Knox treasury and your logical choice is the "Fifth Avenue Special." This year's special hat is an exceptional example of fine craftsmanship—Knox Clasp—\$45.00 to \$50.00.

# KNOX HATS

FOR MEN  
AND WOMEN

KNOX HAT COMPANY  
New York: Fifth Ave. at 40th St.  
San Francisco: 51 Grant Avenue

Babies do have a resemblance to someone, but the trouble is no two people discover the same resemblance. Janet's two grandmothers were in one day.

"She's a Guest," said Grandmother Guest proudly. "She has Edgar's head and eyes and forehead. There's no doubt about it, she's a Guest all right."

"Yes," said Grandmother Crossman, "she has Edgar's eyes; but the dear little thing certainly has Nellie's features. That's the mouth of her mother. It's Buddy's mouth, too, and you all admit that Buddy resembles his mother."

Being the relative of a new baby is a tremendous responsibility. In the first place, it makes an uncle or an aunt or a cousin or a grandparent, or something, out of you, and whatever it is you realize that a change is taking place in your life. Now Janet's relatives, I think, have all paid their duty calls upon her; they have all knelt at her bassinet and pledged devotion to her, and they have all admitted that she is a mighty fine baby. But beyond that nothing definite has come from them.

Her eyes are blue. They cannot get away from that fact; but there are those who argue still that they will eventually become brown.

"She has her dad's eyes all right," says Uncle Bill.

"Yes," says Uncle Harry, "but they're not the shape of his eyes. She got those lashes from her mother."

Her mouth is the subject of argument. It is my mouth and it isn't my mouth at all. One aunt insists that every feature is a copy of my own, and two aunts shout her down with the statement that her forehead and her ears are the only things we have in common.

WHEN she was born she had a covering of long black hair. That has worn off now and the new hair is coming in. Whose is it? Mine, if you happened to be listening to some; Mother's, if you get the information from others. It is my chin and it isn't my chin, and the cute little nose is still in dispute. It may be the large ugly nose I carry or it may be the mother's, regular-shaped, well-modeled nose.

"She looks exactly like you," said a neighbor excitedly.

"Yes," I replied; "but we don't worry about that, so long as she is healthy."

They have had her looking like her Grandmother Crossman, and I have been told that she is the very image of a baby born forty years ago to a relative who lived in Newfoundland; they have dug up old photographs of babies taken in the sixties and seventies, to prove a family resemblance; they have likened her hands to those of all the Crossman and Guest babies ever born, and when the excitement shall fade out and the conversation cease she will still be herself, more like her mother, I hope, than me.

Being her dad I have ideas of my own, even though I am shouted down. I see little of myself in her, except the blue eyes and perhaps the long head, which is a family characteristic. But I can see in her the beauty of all our babies. I can see in her little plump face to-day something of the first baby we had and couldn't keep. At two months she

*"On the Plains of Hesitation bleach the bones of countless millions who, at the Dawn of Victory, sat down to wait, and waiting—died!"*

# The Warning of the Desert

By William A. Lawrence

**T**HIS is the story of Bill Andrews—"Plain" Bill Andrews. The nickname had been coined by some boyhood chum and it had stuck through the years. It was both deserved and descriptive. For Bill was plain in appearance—plain in dress—plain in conversation—plain in everything he did.

Bill was twenty-seven when I first got to know him well—married—the father of as fine a boy as you have ever seen.

Bill might have been a little further along in the world if he had had just a little more luck—or foresight—when he started. But like thousands of other men he had been forced to leave school and go to work while he was still young, and he had taken the first thing that came along.

He worked as hard as he knew how, but somehow or other he never seemed to get very far.

It was hard—terribly hard, sometimes—to make both ends meet—particularly when sickness came or there were other unexpected expenses. But Bill never gave up hope. You see, he had some "plain," old-fashioned courage, too.

Above everything else in the world, he wanted to go home some night and tell his wife of a raise in salary—of a promotion that would mean a happier, better home.

I wonder if there is a man anywhere who doesn't have that same ambition—that same hope!

But that increase in salary and that promotion never came. Indeed, once or twice, when things were slack, Bill came mighty near losing his job.

Then, one night Bill came across an advertisement that was to change his entire life. It told how other men just like himself had found a way to get out of the rut and make good in a big way—how every man has enough natural ability to

make a success in some line of work if he will only find that work and study it.

There was nothing particularly new about the thought—it was something Bill had known and realized for years.

**A**S a matter of fact, Bill had seen that advertisement and that familiar coupon many, many times before. For two years he had been promising himself that he would cut it out and send it to Scranton. He knew that he ought to do it—that he should at least find out what the I. C. S. could do for him. But he never had!

And he might not have sent it this time, either, but for a few heart-stirring lines under a picture which he had seen called "The Warning of the Desert":

*"On the Plains of Hesitation bleach the bones of countless millions who, at the Dawn of Victory, sat down to wait, and waiting—died!"*

Bill read that over two or three times. "The Plains of Hesitation!" "Countless millions who, at the Dawn of Victory, sat down to wait, and waiting—died!" These two phrases kept ringing in his ears. They worked their way into his very soul.

"That settles it," said Bill, with a finality that was unusual for him. "I'm tired waiting—I'm tired putting it off. This is my chance to get out of the rut, and I'm not going to overlook it again."

So that night Bill Andrews clipped the coupon he had seen so often—marked it—and mailed it to Scranton.

**B**ILL told me the other day that he was surprised how interested he became in his lessons—of the personal interest the teachers at the I. C. S. took in him—how his employers learned about his studying and kept moving him up and up as fast as he was ready.

Bill is manager of his department now, and they tell me he's going to be a member of the firm some day. He certainly is a shining example of what any man with ambition can do if he only makes the start.

If the International Correspondence Schools can raise the salaries of men like Bill Andrews, they can raise yours. If these Scranton schools can help men like Bill Andrews to win the advancement that means a happier, better home, they can help you, too.

Believe me when I tell you that the most important thing you can do to-day is to send in that I. C. S. coupon. It is far better to send it in now than to wait a year—or five years—and then realize what the delay has cost you. Do it now!

## INTERNATIONAL CORRESPONDENCE SCHOOLS

HOUSE No. 111

Designed by Jefferson M. Hamilton, Architect

This is one of the fifty attractive and distinctive houses shown in "The Home of Beauty."

## Houses of Enduring Charm

Every year home-builders show a greater appreciation for the value of beauty. Beauty enhances the satisfaction one gets out of his home. It adds to the investment value. It is both a sentimental and practical consideration. The realization of this fact is leading more and more builders to Face Brick, for the Face Brick house is not only attractive when completed, but takes on new and more beautiful hues as it ages. Dollars-and-cents considerations, too, favor the Face Brick house—slow depreciation, a minimum of repairs and upkeep, painting only around doors and windows, low insurance rates and smaller fuel bills. "The Story of Brick" discusses these matters in detail. For your copy, address American Face Brick Association, 1736 Peoples Life Building, Chicago, Ill.

### Send for these booklets:

"The Story of Brick" is an attractive booklet with beautiful illustrations of modern homes, and discusses such matters as Comparative Costs, Basic Requirements in Building, The Extravagance of Cheapness, Financing the Building of a Home, and kindred subjects. A copy will be sent free to any prospective home-builder.

"Face Brick Bungalow and Small House Plans" embrace 96 designs of Face Brick bungalows and small houses. These houses are unusual and distinctive in design, economical to build, and convenient in floor plan. "Face Brick Bungalow and Small House Plans" are issued in four booklets, showing 3 to 4-room houses, 5-room houses, 6-room houses, and 7 to 8-room houses. The entire set for one dollar; any one of the books,

twenty-five cents. We can supply complete working drawings, specifications and masonry quantity estimates at nominal prices.

"The Home of Beauty" contains fifty designs of Face Brick houses, mostly two stories, representing a wide variety of architectural styles and interior arrangements. These houses were selected from 350 designs submitted in a nation-wide Architectural Competition. Sent for 50 cents. We also distribute complete working drawings, specifications and quantity estimates for these houses at nominal cost.

"Orienting the House" is an illustrated booklet, with a sun dial chart and explanation for placing the house with reference to light and shade. Interesting to any prospective builder. Sent for 10 cents.

looked much like Janet, or I fancy she did. There is also something about her mouth which brings back Buddy's baby days, and whether she cries or smiles there are times I am certain they are alike. I look at her asleep in her little bed, and I think a tiny edition of her mother has been issued.

The mother, however, says otherwise. She, too, fancies that she is much like all our babies, but she can point out her strong resemblance to me. Where I see her features she discovers mine, and perhaps that is as it should be.

**D**ID you ever stop to think that it is not altogether easy to be a baby? It must, at times, be a dreadful nuisance to be constantly on display; to be bounced about and held by whoever wishes to take you up; to be thrown over everyone's shoulder, patted on the back; to be held in uncomfortable positions by devoted if inexperienced persons when you would much rather lie in your crib and get your exercise in your own way. Imagine it yourself, you grown-up—suppose you had just taken all the milk you could hold in your stomach, how would you like some giant of a man or woman to come along and pick you up and shake you up and down? Or suppose you were dumb and could not tell your ailments, but could only cry in pain, how would you like it if every time your stomach ached they led you to the table and forced you to eat your fill again.

That was the old-fashioned way with babies. Apparently it didn't hurt all of us, for a lot of us are still here; but I imagine that many babies would have been better off and had a fairer chance in the struggle for life if their parents had fed less and let them cry more.

At least we have thought it out for ourselves, and with the new baby we hope to give her the benefit of all that has been learned. She is now two months old, and has gained her normal weight. She has had no colic and no distress. She eats her fill on her regular schedule and digests it before demanding more, and she sleeps the night through with but one waking period. At first the modern way is difficult for fathers and mothers, but if they will persist in it it is better for the baby.

You must battle not only with your own desire to fondle and comfort the child, but you must battle, also, all the old-fashioned relatives in your family. They will neither understand nor support you. For a time you will be outcasts from the family circle. You will be treating your child as never were you treated; but your little one's health and comfort will repay you for the struggle.

**"YOU Can't Kill These Fifteen Immortal Jokes,"** declares Carolyn Wells, the brilliant novelist and short-story writer, in a tremendously interesting and amusing article next month. Miss Wells, who is famous as the compiler of "Book of Humorous Verse"—a collection of the world's most amusing poems,—analyzes for you the humor of all time, and boils it down to those elemental jokes at which human beings have always laughed and always will laugh.

### 3-Point Superiority

1. The Famous Diamond-Grid—the diagonally braced frame of a Philco plate. Built like a bridge. Can't buckle—can't warp—can't short-circuit. Double latticed to lock active material (power-producing chemical) on the plates. Longer life. Higher efficiency.

2. The Philco Slotted Rubber Retainer—a slotted sheet of hard rubber. Retains the solids on the plates but gives free passage to the current and electrolyte. Prevents plate disintegration. Prolongs battery life 41 per cent.

3. The Quarter-Sawn Hard-Wood Separator—made only from giant trees 1000 years old; quarter-sawn to produce alternating hard and soft grains. Hard grains for perfect insulation of plates. Soft grains for perfect circulation of acid and current—quick delivery of power. Another big reason why Philco is the battery for your car.

#### LOOK FOR THIS SIGN

of Philco Service. Over 3500 stations—all over the United States. There is one near you. Write for address, if necessary.

**PHILADELPHIA**

**BATTERY**

With the PHILCO Slotted Retainer

RADIO DEALERS—Philco Dynamic Radio Storage Batteries are shipped to you charged but absolutely DRY. No acid sloppage. No charging equipment. No batteries going bad in stock. Wire or write for details.

## He tried to beat winter with an ordinary battery!

But after THIS he bought a man-size Philco—the long-life, high-powered battery that whirls the stiffest engine—gives you quick, sure-fire ignition—protects you from the humiliations and perils of battery failure.

Veteran car owners realize—thousands from bitter, hand-cranking experiences—that starting cold, oil-clogged motors—firing sluggish slow-vaporizing gasoline—keeping headlights blazing hour after hour—is no job for weak or under-powered batteries.

That's why thousands upon thousands of motorists today are demanding Philco Slotted-Retainer Batteries with the famous Diamond-Grid Plates. They know the Philco Battery has the tremendous reserve power needed for trouble-free driving in winter—the rugged, shock-proof construction that stands overcharging in summer.

Why risk the uncertainties of ordinary batteries? Why continue exposing yourself and family to the embarrassments and dangers of battery failure? A long-life, power-packed Philco—*guaranteed for two years*—now costs you no more, in many cases less, than just an ordinary battery.

See your nearest Philco Service Station at once! He has a right-size Philco Battery for your particular car.

Philadelphia Storage Battery Company, Philadelphia

The famous Philco Slotted-Retainer Battery is standard on latest passenger cars and trucks, and is available in many sizes for all other types of motor vehicles. Write for details. Wherever you see a battery for sale, write Philco.

**A Work of Art, Sent on Approval:** Return in 5 days if not satisfactory. Your deposit will be refunded in full. No money need be sent with Coupon.

If only one like it had been made, this exquisite Greek-Pompeian Floor Lamp would have cost rather more than three thousand dollars. The League can produce it for less than one hundredth of that price, because its membership is so widespread, and because it can reach its members so quickly.

#### Compare Thoroughly That is Why This Lamp is Loaned to You

After you have received this lamp, we ask that you visit the art importers, the jewelers, the large stores and the commercial electric showrooms. See if you can find any lamp that, at twice or five times this price, even approaches it in artistic perfection.

We do no "selling" in the ordinary commercial sense. This is all the "selling" that the League has ever needed for any of its productions. The lamp must sell itself to you, on your own judgment and comparison.

If it does not . . . **SEND IT BACK**—any time within five days. We will return your deposit at once and in full, and you will be under no further obligation whatever.

If we could think of any pleasanter, fairer, more confident way to offer the League's productions we would do it—but we can not.

#### Noted Artists Collaborated in Its Design

A painter, a sculptress and a noted decorative expert collaborated in the design of this lamp.

The result is a design of dignity, richness and grace, which at once distinguishes it unmistakably from the ordinary commercial products of factory "designing departments."

When we send you this lamp we will also, if you wish, register you as a Corresponding Member of the Decorative Arts League, it being distinctly understood that such membership is to cost you nothing, either now or later, and is to entail no obligation of any kind. It simply registers you as one interested in hearing of really artistic new things for home decoration.

#### This Low Present Price is a Test

This lamp was designed to sell for \$300. We want to see if, by offering it at a much lower price, we can secure enough orders to cause a great saving in the cost of production and distribution, and without a loss to the League. So, as an experiment, we are offering it at \$19.85.

For the present, this is only an experiment. We cannot guarantee that the price will not be raised. Your Approval Request should be mailed at once.

#### Decorative Arts League, Inc. 175 Fifth Avenue New York

A regularly incorporated and self supporting organization, operating on a strictly business basis, to enable lovers of beautiful things to have the advantages of united purchasing.

#### Decorative Arts League, Inc. 175 Fifth Avenue, New York City

Please send me the Greek-Pompeian Floor Lamp and I will pay the carrier \$1.85 (deposit) when delivered, plus the transportation charges.

If not satisfactory I can return the lamp within five days of receipt and you are to refund my deposit in full.

If I do not return it in that time I agree to purchase it at the special introductory price of \$19.85 and will send \$4 monthly from date for four months; the lamp remaining your property until fully paid for.

Please enter my name as a Corresponding Member without cost or obligation.  
(The lamp cannot be sent on approval outside Continental U. S. A.)

I am a reader of American Magazine, March, 1923.

**Loaned**  
for your examination and comparison—the League's only method of selling.

Hand the carrier the postage and  
**\$3.85**  
Deposit (returnable)

Note the new and clever dual-purpose shade: an exclusive D. A. L. idea. Can be used without any draping. Is handsomely decorated. At the same time it is the ideal frame on which you can make silk covers in limitless variety.

Lamp is about 5 feet high. Finish, rich Statuary Bronze. Base and cap cast in solid Metallium. Upper shaft is seamless brass. Shade is parchment, brass bound, outside decorations in three colors: top and bottom bands in deep red, design in dark green; background graded in brown.

Inside reflecting surface is delicate pink. Gracefully curved arm is pivoted at the shaft so that the lamp can be raised or lowered with a single touch.

Another pivot enables shade and bulb to be tilted to throw light at an angle. Fifteen feet of cord, with two-piece attachment plug. Wiring to inside the shaft and arm.

Complete, ready for the bulb. Weight packed about 22 pounds.

# Ten Things That Keep Us Apart

(Continued from page 11)

push everyone away from you. It is a prime separator.

Jealousy is another form of egotism. Many imagine it to be caused by love; but jealousy has nothing to do with love. In fact, you can be insanely jealous of a person and not love him at all. There has been more than one instance of a husband who has lost all interest in his wife and all affection for her, and has suddenly waked up to jealous fury when he discovered that some other man was in love with her. What happened was that his vanity was touched.

II. *Disagreeableness*: The first thing that ought to be taught in the Sunday-school to little children is to be agreeable. For this is the first of all virtues. If love is the greatest thing in the world, then agreeableness comes next, for it is the road to love. What you want is that others shall please you; and the only way to obtain this is to make a practice of pleasing them.

Let me ask you a fundamental question: Is your life ordered to please others? You may answer with a show of heat that your first duty is to yourself, that you must look out for Number One, and your answer is justified. What you do not understand, however, is that most of the pleasure that Number One gets out of life he gets from Number Two; and the surest way to look out for one's self is to look out for others. No better means of inducing everybody around you to strive to please you can be found than the steady effort on your own part to please others.

Disagreeableness has caused many a separation. It might be a good catechism for a wife to ask herself, when the fear comes into her heart that she is losing her husband: "Do I wear the clothes he likes? Do I talk on the subjects he likes? Do I avoid the topics that irritate him? Do I study to make all of my manners and actions such as I know give him pleasure?" Whether or not you should do these things is not the question here. Possibly it is not worth while. Perhaps he is more to blame than you, and all that. The only point here is whether you are pushing him away from you or drawing him toward you.

III. *Gloom*: Gloom is a strong pusher. Perhaps you cannot help being gloomy, and you may have plenty of reason to be gloomy, and nobody has a right to expect that you be otherwise than gloomy. Granted all this, yet the gloom pushes people away from you just the same.

That sole quality that pulls us toward another person is joy. That sole quality in us which isolates us from our fellows and makes them want to shun us is gloom.

I am not at all discussing the question whether or not in this world of sin and sorrow you ought to be sour and dour and serious. I am simply pointing out the fact that if you conceive it your duty to be so, you need not complain that you have to go it alone. I know of no brotherhood of grouchy faces. Misery may love company, but it doesn't get it. If you have gloom and cannot get rid of it, at least you might conceal it as a vice; and

this you must do if you value the affection of others.

IV. *A sure way to push others from you is to show that your feelings are hurt.*

Life is complex. You cannot live long with any human being in the world and not have something come up at times to push you apart. We are so constituted that we could not live with an angel from Heaven without his offending us sometimes. Offense we must expect. The only question is what to do with it when it comes. And although we cannot help being hurt, what we can help is showing that we are hurt. Nine times out of ten, if someone has hurt our feelings it has been done either unintentionally or without an understanding of the damage that was caused; and if we will simply keep our mouths shut, keep smiling, and go on about our business, the whole matter will disappear. But if we advertise it every time we are jostled or bruised, then irritation begins and the separating process goes on.

V. *Nagging*: Nagging does not need to be defined, for everybody knows what it is, and most of us are guilty of it more or less. It is one of the best known separators, for nobody wants to be nagged and everybody wants to get away from the nagger.

It is quite important that people should know their faults and correct them, that they should mend their bad manners, that they should improve their moral character, and that they should be uplifted and polished generally. But when you go into the uplifting and polishing business, remember that it has its price, and you have to pay it. Only very rare souls like criticism and correction. Only one man in a hundred, and one woman in a thousand likes to be regulated. What people like is to be approved and appreciated.

I am not treating of the moral quality of these things, but simply of their pushing or pulling quality, and the thing to remember is that criticism pushes and appreciation pulls. Appreciation ought to be a constant habit. If we have to live in intimacy with any person, it is of vital importance that we get into the way of looking for and mentioning his pleasing and excellent qualities. We can always find some if we search for them persistently; and if criticism is necessary it should always be undertaken with the utmost tact and care, for it is dangerous business.

VI. *Deception*: Continued intimacy is very difficult unless it is based upon candor, sincerity, and truthfulness. Nobody can do business with a liar, at least unless he knows what sort of a liar he is. When we live with a person we have to depend upon him, to adjust our actions to his, and if he is untruthful we discover that we have been leaning upon a broken reed.

The trouble with lying is that nobody is clever enough to keep it up successfully. The beauty of telling the truth is that we don't have to think about it. When we tell one lie we have to tell two hundred and forty lies to make it fit, and the game becomes too complicated. Deception is one of the commonest of separators.

VII. *Artificiality*: This is a form of deception. We cannot love anything that is

# Another great achievement by the Squibb Laboratories!

*An important discovery for the care of your teeth and gums!*

**F**OR generations, dentists and physicians have prescribed Squibb's Milk of Magnesia to protect the teeth and to neutralize the acids which cause decay. They have long realized that if it could be combined with other necessary ingredients in a correct dental cream, the result would be a real benefit to humanity.

At their request, the Squibb Laboratories undertook this work and developed a scientifically correct magnesia dental cream.

## What Squibb's Dental Cream Does!

First of all, it cleanses the mouth and teeth thoroughly, assisting in the removal of food particles and film. It does this without the use of soap, as the excessive use of soap in the mouth tends to harm the gums. It polishes the teeth beautifully without the aid of gritty chemicals, acids or other harmful ingredients.

In addition, Squibb's Milk of Magnesia, contained in Squibb's Dental Cream, effectively neutralizes the acids which cause decay, and thus is decidedly helpful in preventing dental troubles.

## A Professional Product

No product has ever been produced bearing the Seal of Squibb which has not also borne the highest endorsements of the medical profession. You can use Squibb's Dental Cream with absolute confidence in its purity, efficacy and reliability.

Squibb's Dental Cream is highly recommended for every one. Its snappy flavor and the delightful sensation of true cleanliness it brings, make its regular use pleasant as well as very beneficial. It is excellent also for children.

## Special Offer

One trial of Squibb's Dental Cream will convince you, more thoroughly than anything we could say, of its superior merits. We will send you a generous trial-size tube, free, upon receipt of the coupon below properly filled out. Send it in to-day and begin to enjoy the benefits of using a dental cream that is prepared as carefully and correctly as a prescription from your physician.

# SQUIBB'S DENTAL CREAM

"THE PRICELESS INGREDIENT"  
of every product is the honor and  
integrity of its maker.

## Mail this Coupon for Trial-Size Tube

Sign your name and address, and your druggist's name and address on this coupon and mail it to us for one free trial-size tube of Squibb's Dental Cream. Only one tube to a family.

220 BROADWAY, NEW YORK  
DEPT. 7

not real. And if one is constantly posing or pretending to be what he is not, and especially if we have fallen in love with the pose and not the real person, then separation is not far distant.

The very first thing is to be ourselves. If I am loved for myself, then there is some hope of love's continuance, for at least I shall always be myself.

Love is a thing that clings only to personality. We don't love qualities nor attainments nor accomplishments nor manners. What we love is the real person. And love clings quite as much to faults and deficiencies, when they are real, as it does to excellencies.

Successful lovers, or those married couples, for instance, who have lived together for thirty years or more and are still genuinely fond of each other, will be found to know thoroughly each other's limitations. When you love a person really, you love him, and the "him" includes his little peculiarities, his faults, and his mannerisms, quite as much as his virtues. No woman loves a man for his success alone. No man loves a woman for her beauty alone. It is the little human failings that tie us one to another.

VIII. *Politeness*. The beauty about the habit of politeness is that it goes on making us agreeable even when we do not think about it. It is an automatic pleaser.

Politeness is even more necessary among those with whom we are intimate every day than it is toward strangers. For politeness is a lubricant of life. And when we rub against people every day we need a deal of lubrication to prevent friction and irritation.

Many a family has broken down and children have been scattered and estranged because they were not drilled in courtesy. For politeness is simply the rule of the game. And there is no game that can be played without rules.

And we must not fall into the error of imagining that rudeness is necessarily frankness and honesty. It is not. It is merely lack of self-control. A person that is habitually polite knows the rules of the human game and keeps them, can be just as sincere and real as any selfish boor.

IX. *Over-familiarity*. The human soul has its curious laws of attraction and repulsion. One of the traits of the soul is that it resents being crowded. Each life must have its integrity respected. And many a passionate love has been wrecked because of an ignorant violation of the soul's self-respect.

In all our intimacy we must remember that the other person must have and retain his own independence. You can maintain the relation of master and slave, but you cannot maintain friendship or affection without mutual respect.

Many a married couple have grown apart simply because they have seen too much of each other. They have not had opportunities enough for the independent development of each.

Above all things, we should allow the one we love to have his own tastes, his

own opinions, his own moral convictions. We should honor them as we expect our own to be honored. Perfect and continued unity depends upon a certain amount of independence. And when we violate the sanctity of personality and insist on rummaging through the depths of another soul upon every occasion, and knowing and judging all the secret places of the heart, we may well look for resentment.

X. *Domination*. One of the oldest forms of perversion is the desire to rule. It is one of the lowest traits of humanity, just as the desire to serve is the highest trait. All slavish souls and mean persons love to boss, to give orders, to dominate.

It is well to recognize this trait when we see it cropping up in ourselves. It is what has made the monarchies of history with all their attendant evils.

Ambition is a good thing; but only the ambition to be of service, to help, is commendable. The ambition to lord it over others is the seed of revolt and trouble.

If you wish, therefore, that one you love should be drawn toward you and not thrust from you, see to it that your constant desire is not to dictate, not to impose your own opinions and will, not to control, but, as far as possible, to serve.

Of course it is conceivable that the one you love may be entirely unworthy of this and take advantage of you and proceed to dominate you. In that case it is a tragedy. But it is not so bad a tragedy as if the guilt were yours.

The main thing that we are to keep in mind, all said and done, is that love is the greatest thing in the world, and it is love and the supreme worth of love that we should constantly consider. In every crisis think of that. Ask yourself if anything else is worth while. Examine the matter to see if what you purpose has its right bearing upon love, or whether it is centered in your own egotism.

We cannot force love. It will not come when we whistle nor stay when we entreat, but it has certain natural channels. If we observe certain things it is more likely to come and to stay.

To be natural. To be human. To be sincere. To be teachable. To love to serve and not to rule. And to be helpful. Those are the wires upon which the strong current of love runs.

And, last of all, we should remember that we cannot love everybody. There are some people to whom we naturally do not take. There are some natures that have no chemical affinity for our own. There are some souls that are negative to our positive.

And it is a good plan not to waste much time with these persons. It is a wide world and there is plenty of room. If a person does not like you, the best rule is, other things being equal, to go away. Somebody else will like you. Of course this cannot always be done; but as much as possible we shall save complications and struggles if we would encourage the natural affinities and side-step the natural repulsions.

H. G. WELLS, who is probably the most widely known and widely discussed writer in the English language to-day, will tell you next month what he considers "The Ten Most Important Books in the World." The whole psychology and practical philosophy of reading is vividly portrayed in this extraordinary piece, in which you will have personal access to the matured judgment and conclusions of one of the world's greatest authorities.

*How to keep your hair soft  
and silky, full of life and lus-  
tre, bright and fresh-looking*

ESTABLISHED 1892

## Why proper shampooing makes your hair beautiful

**A**NYONE can have beautiful hair, if it is cared for properly.

Shampooing is the most important thing.

Proper shampooing is what brings out all the real life and lustre, the natural wave and color, and makes your hair soft, fresh and luxuriant.

Proper shampooing, however, means more than just washing your hair—it means thorough cleansing.

The hair and scalp are constantly secreting oily, gummy substances. These substances catch the dust and dirt, and the hair becomes coated with this.

This coating, when it becomes excessive, naturally dulls the hair and destroys its gloss and lustre. It covers up and prevents the natural color and beauty of the hair from showing. It also causes scales and dandruff.

### How to prevent this coating

To have beautiful hair, you must prevent this coating from accumulating.

This cannot be done with ordinary soaps not adapted for the purpose. Besides, the hair cannot stand the harsh effect of free alkali which is common in ordinary soaps. The free alkali soon

dries the scalp, makes the hair brittle and ruins it.

Mulsified coconut oil shampoo is not only especially adapted to cleanse the hair and scalp thoroughly, but it cannot possibly injure. This clear, pure and entirely greaseless product does not dry the scalp or make the hair brittle, no matter how often you use it.

### The quick, easy way

Two or three teaspoonfuls of Mulsified in a cup or glass with a little warm water is all that is required.

Simply pour the Mulsified evenly over the hair and rub it in. It makes an abundance of rich, creamy lather, which rinses out quickly and easily, removing every particle of dust, dirt, dandruff and excess oil.

After a Mulsified shampoo you will find the hair will dry quickly and evenly and have the appearance of being much thicker and heavier than it really is. It keeps the scalp soft and healthy, the hair fine and silky, bright, fresh-looking and fluffy, wavy and easy to manage.

You can get Mulsified at any drug store or toilet goods counter, anywhere in the world. A 4-ounce bottle should last for months.

*Splendid for Children  
—Fine for Men*

# Mulsified

REG. U.S. PAT. OFF.

## Cocoanut Oil Shampoo

# Now the physician can watch the glands of your mouth at work

A new instrument brings wider knowledge of how the glands protect the unreplaceable enamel of your teeth

SCIENTIFIC studies of human beings and animals now show there are glands which determine whether we shall grow to be giants or pigmies, others which regulate the speed at which our body shall work, and still others which control our youth and vitality.

Equally important are the six tiny glands in the mouth which protect us against colds, tonsilitis, pneumonia and many other infectious diseases. With a new instrument—the *sialometer*—the physician can watch with his own eyes these glands pour out their healing, germ-free fluids.

This instrument teaches us also that it is their steady stream of fluids that protects the precious, unreplaceable enamel of your teeth against the deadly acids of decay.

## *All day, all night, they wage this constant struggle*

In the warmth of the mouth minute food particles ferment just as milk turns sour when left in a warm, moist place. The acids thus formed immediately begin to attack the enamel, forming cavities.

Brushing the teeth, while absolutely essential to mouth cleanliness,

The acids which destroy the enamel of your teeth are constantly forming—just like mist on your wind-shield on a foggy night

will not keep the acids from forming. Trying to fight the acids by brushing alone is like trying to keep your wind-shield polished on a foggy night. Even

if you brush your teeth after every meal (and not one person in a hundred does) enough food remains to feed myriads of acid-forming bacteria.

To provide protection against the acids, nature intended the salivary glands automatically to flush the

"This new instrument—the *sialometer*—is teaching us the enormous importance of the six tiny glands of the mouth"

mouth and teeth every moment in the day and night. The fluids with which they bathe your teeth and gums are *alkaline* in character. They neutralize and wash away the acids as fast as they form.

Although the glands are small they can win their fight against the acids if they can be made to function normally. In a healthy mouth they secrete more than a quart of fluid per day.

But the way we live today makes it difficult for our glands to work at anything like their normal rate. Nature expected us to stimulate and exercise them by long-continued chewing of hard, tough foods. When we are chewing they are 20 times more active than when the jaws are at rest. The soft foods, quickly swallowed, that we eat today do not keep the glands active and healthy.

## *How to keep the glands of your mouth at work*

For keeping their salivary glands at work, thoughtful, intelligent people

all over the world for twenty years have been using Pebeco.

Pebeco is a dentifrice prepared especially to assist the natural processes causing these glands to work. It does for us what long-continued chewing of hard food did for our primitive ancestors. Pebeco is neither acid nor alkaline. By its mere presence in the mouth it causes the salivary glands to flow for a long period of time. It never exhausts them as do strong acids—it never checks their natural action as do soapy alkaline substances.

For washing the teeth and keeping the outside surfaces polished, no better dentifrice than Pebeco can be made. It works quickly and efficiently without wearing away the enamel or injuring the edges of the gums. Its constant use gives you teeth as beautiful

as nature intended you to have.

After a thorough cleansing with Pebeco—it has just enough tang to it to exhilarate—your mouth feels just as refreshed as does your body after a bath—and you have the convincing feeling, too, that you have done for your teeth and mouth all that science can teach you to do.

Take home a tube tonight and note its pungent and refreshing taste. It will keep the glands of your mouth active and your teeth sound and beautiful. 50c at all druggists. Manufactured only by Lehn and Fink, Inc.

## *This simple test will show you*

Send us ten cents today for the material for testing whether your own salivary glands are active enough to protect you against these deadly acids. We will include a junior size tube of Pebeco and our booklet—"How the Glands Protect the Teeth." Lehn and Fink, Inc., Dept. C-5, 635 Greenwich St., New York.

# This Man Trained Strongheart, the Wonderful Dog

(Continued from page 10)

well and I showed my appreciation by scratching his head, an attention which delighted him immensely.

"Then I took into the room the dress which the lady was to wear in the scene and laid it beside me on the couch where she was to sit. I spread part of it over my knees, so that he would rub against the dress and become accustomed to it. By this time, the lady herself had experienced a change of heart toward the tiger and we began having little friendly parties of three.

"When that scene finally was photographed, the lady was sitting on the couch and the tiger was lying beside her with his head in her lap! I'm sure, if the tiger could have been interviewed, he would have reported that 'a pleasant time was had by all.'

"NOW, was there anything in the psychology of that animal that was different from the psychology of a human being? When he felt that he was safe and comfortable, that he was among friends who understood him and treated him with respect and kindness, he reacted just as you would expect any creature to react.

"You know, it's funny that human beings seem to forget that they are animals, too. Intellectually, we have gone far beyond other animals. We have learned to control our primitive impulses—but they are there, just the same!

"If you want to know how a human being will feel toward you if you treat him in a certain way, just literally try it on the dog. Treat the dog as you intend to treat the human being. If the dog snarls, you may be sure that the man will be snarling inside, no matter how polite he looks. If the dog wags his tail with pleasure, you may be sure that the human being will be in a tail-wagging frame of mind, no matter how indifferent he may try to appear.

"A human being may try to hide these inner feelings; but if he gets a chance sooner or later he will act on them. If you have made him angry, he will try to get even. If you have given him pleasure, he will want to do you a good turn. To study animals is to read a Book of Revelations about man.

"Take Strongheart, for example. When we first got him I kept him with me day and night. I watched how he reacted to every stimulus—sounds, sights, smells. The very first thing you learn from animals is the enormous power of habit. Strongheart had been trained for police and Red Cross work. I had to make him un-learn some of the things he had been taught. But while I have changed his actions, I have not changed his impulses. He still feels the desire to act according to his instincts and his habits. But he does not do it, if I, whom he recognizes as his supreme authority, don't want him to do it.

"That is exactly what a human being does. He overcomes certain desires if they run contrary to some authority which he recognizes. If the man is weak or

vicious, the authority is outside himself. It is the law, or the police, or his boss, or society in general. But if he is a man of strong character, the authority which he obeys is within himself.

"A grown dog, like Strongheart, is very much like a child ten or twelve years old. He obeys some outside authority. He may do this through fear; or he may do it through respect, affection, and confidence. But the obedience that comes through fear is absolutely unreliable. A dog who is afraid of his master is like a child who is afraid of his parents: he obeys only so long as he is in danger of punishment. The first good chance he gets, he will follow his own impulses.

"Of course there is individuality among animals, just as there is among human beings. Strongheart, for instance, has an innate dignity and depth of feeling that are as fine as anything I ever encountered in a human being. All animals have a greater sense of personal dignity than we give them credit for. I have seen people treat animals in a way that made me cringe, because I knew that the animal felt humiliated.

"Never ridicule an animal. Never laugh at his mistakes. Never play practical jokes on him. Never put him a position where he feels foolish and embarrassed. Play with him—yes, but always make it a mutual affair. Let him see that it is just as much his fun as yours. Never sneer at him. If he doesn't understand you, and so does a thing wrongly, don't make him feel that he is a fool.

"Sarcastic people, who assume a sneering superiority, never get on well with animals. They never get on well with human animals, either; and the explanation is perfectly simple: That kind of person is not sincere, straightforward, or kind; and the animal—whether a man, a dog, or any other variety—knows it. The sarcastic employer, or teacher, or parent, or alleged friend, may be treated with superficial deference, but he has no real hold on people.

ALWAYS treat an animal with respect. Would you like to have a stranger slap you familiarly on the back, pull your ears, or rub your hair the wrong way? You'd resent it hotly, just as hotly as you dared. Then why treat an animal, or a child, with the familiarity you, yourself, would resent? It is an instinct, the primitive instinct of fear, that makes an animal snap at a stranger who comes too near him. And it is the same primitive instinct that makes the human animal feel like snapping at anyone who gets 'too fresh' with him.

"Never lie to an animal. Never fail to carry out either your threats or your promises. There, again, you have a fundamental principle of human psychology. You cannot control an animal if he does not believe in you. Strongheart will do anything I tell him to, because I never have betrayed his faith in me. Sometimes he will hesitate and look up at me,

## Cleans every part of every tooth every time

WITH any tooth brush and some extra effort you can clean parts of all your teeth—or even all the surfaces of some teeth.

You can be sure that a Pro-phy-lac-tic Tooth Brush does a thorough job for every tooth.

The scientifically curved handle and the tufted bristles of the Pro-phy-lac-tic enable you to clean easily every part of every tooth every time you use that brush. Food may lodge around your teeth, but a Pro-phy-lac-tic finds its hiding place.

Pro-phy-lac-tic Tooth Brushes are made with hard, medium, and soft bristles. In three sizes—adults', youths' and children's. They are all guaranteed. We will replace the brush you buy, if it is not absolutely satisfactory.

FLORENCE MANUFACTURING CO.

# The Odds Are 4 to 1 Against You

## There's a way to check Pyorrhea

Don't gamble with your teeth and health. You have far too much at stake. More, the odds are too heavy against you.

Pyorrhea strikes four persons out of every five that pass the age of forty. And thousands younger, too. The chances are 4 to 1 it will strike you unless you are vigilantly on guard.

Heed Nature's warning when she gives it. Bleeding gums are the warning. Act at once. Don't wait. For Pyorrhea works fast. The tender gums recede. The teeth loosen, or are lost through extraction. The system is often flooded with infection.

Go immediately to your dentist for teeth and mouth inspection. Brush your teeth, twice daily, with Forhan's For the Gums. This healing, time-tested dentifrice, when used in time and used consistently, will prevent Pyorrhea or check its progress.

Forhan's For the Gums is the formula of R. J. Forhan, D. D. S. It will keep your teeth clean and white, your gums firm and healthy. It is pleasant to the taste. Buy a tube today. At all druggists, 35c and 60c.

as if to say, 'Did I understand you? Do you really mean what I thought you said?'

"When I repeat the command, he seems to say, 'Oh, you did mean it! That's all right. I just wanted to be sure.'

"In 'The Silent Call' there was one man who played the villain of the piece. In reality, Strongheart was very fond of this man. Yet he had to spring on him, apparently catch him by the throat, and tear the man's clothing to pieces. If I had made him jump at the man in anger—well! We would have been minus one of our actors. He would have killed the man in short order.

"Instead, I trained him to do it as part of a highly enjoyable game. I taught him to jump, not at the man's throat, but at his necktie. If by accident he did get hold of the man's throat, he knew *that* wasn't the game; and he wouldn't close his jaws, but would let them slip down to where he could catch the necktie with his teeth. The instant I told him to stop, he would let go and come frisking back to me, his tail wagging furiously. Just as plainly as in words, he was saying:

"'Gee! that was fun; wasn't it? What are we going to play now?'

"Yet the whole performance was contrary to both his primitive and his acquired impulses. He simply *took my word* for it that this was a great game. If I said it was, then it must be so.

"ONE of the things he had been taught, as a Red Cross dog, was never to touch anything that was dead. On the battlefield, he was to carry aid to the wounded. Therefore he must not waste time on those that were past aid. He won't touch a dead thing now, unless I tell him to. In that case, he believes that I have some good reason for it, so it must be all right.

"He was taught not to attack other animals. But in 'The Silent Call' there was a scene where he must *seem* to attack one of a herd of cattle. Now, if I had made him *really* attack the animal, I would have confused him, upset all his ideas by telling him to do something at one time which he was forbidden to do at another time.

"I managed it by having him *play* with a young heifer, jumping at her and running around her. It was just sport; but it looked in the picture as if he was in earnest. Then, in a later scene, he and the lady wolf with whom he was consorting were to be shown eating the flesh of the animal they were supposed to have killed. Of course they didn't kill it. We bought a carcass to use in the scene.

"The wolf did eat the meat. But Strongheart wouldn't consider such a thing; and I didn't want him to. But I wanted the picture to *look* as if he had gone back to the ancient savagery of his race. So I pointed to the carcass and told Strongheart to bring it to me. He looked up questioningly. Did I really mean it? I repeated the command. All right! He went and took hold of the horns with his teeth and tried to drag the animal to where I was standing. In the picture, the impression was of his tearing at the body with ferocious hunger. I got the effect I wanted, but not by having him do anything that he couldn't explain. In other words, never tax an animal's confidence unreasonably. And that's a good rule to follow with human beings, too.

# Magic nights under the red moon

Though you sit in your cozy armchair you can still be out in the clean white spaces of the Northwest—out in Adventureland!

IF THE hard pavements of the city streets are beginning to pall—if you feel hemmed in by tall, smothering buildings—if the electric lights along the City Trail are beginning to lose their glamour—it is a sign that the "call of the wild" is coming to you—it is a sign for you to "pack up" your mind and follow James Oliver Curwood into the great Romance-land of the Northwest.

Here is the great magic land where care and worry are banished in a twinkling—where

the breath of Romance slips in the blood of men and women—the land of adventure, strange, enchanting, wondrous. Stand under the great open sky—gaze at the wondrous Red Moon and the White Stars—hear the cry of the wolf pack—stand at the top of the world and feel the spell of the vast white wilderness! You do not have to stir out of your easy chair to do it. James Oliver Curwood is waiting for you, ready to carry you far and happily into Adventureland.

## JAMES OLIVER CURWOOD 6 Complete Volumes • Now at a Special Price

"Nomads of the North," "The Grizzly King," "Baree, Son of Kazan," "The Courage of Marge O'Doone," "God's Country and the Woman," "The Hunted Woman."

To every soul there comes the frequent, insistent "call of the wild." Your adventurous spirit will find satisfaction in exploring with James Oliver Curwood, the great Romance-land of the Northwest. Here in the enchanted country this great author writes about so absorbingly, wonderful adventures are always happening. Let him take you along to the great white spaces of the wilderness. Spend the night with him under the frosty stars—travel over the great untrammelled spaces by canoe, by snowshoe, by dog sledge. Go on exciting big game hunts; form an intimacy with the wild creatures of the Northwest.

Here, waiting for you in the wonderful pages of James Oliver Curwood's books, is all the magic Romance of a great and glorious country, ready to thrill and inspire you—ready to lift you clear of worry and care—ready to transport you to the land and people of your dreams.

There never was a writer with the compelling power of James Oliver Curwood. His stories have the gripping, broad interest of big things done in a big way. More than 2,000,000 copies of these books have been sold. The tales have been eagerly sought by moving picture companies all over the world.

And now you have the opportunity of obtaining a beautiful six-volume

set of James Oliver Curwood at an unprecedented price! At last this world-famous author is brought within the reach of everybody. By acting quickly—that is the condition, remember—you can obtain a wonderful six-volume set of James Oliver Curwood for practically half price! The set, which is beautifully bound in dark maroon cloth, with the titles lettered in gold, has sold regularly for almost DOUBLE the present price!

### Send No Money

If you are tired of ordinary novels, if you are "fed up" with the banalities of your daily routine, if you want to feel the clean white snow of the great Northwest under your feet, if you want to live among real men and women, follow Curwood into Adventureland! Don't bother to send any money. Merely mail the coupon and the six volumes of Curwood will be sent to you at once. When they arrive, you have the privilege of examining them for seven days, and then paying for them in small monthly installments. This offer is good only while the current special edition is available. Take advantage of it now—mail the coupon at once and make sure of your set.

Nelson Doubleday, Inc.  
Dept. C-373  
Garden City, N. Y.

Kindly send me the six-volume set of James Oliver Curwood at the special low price for free examination. I will either return the books at your expense in 7 days or send you \$1.50 and then \$2.00 a month for three months, making a total of only \$7.50.

Enlarged from negative made with No. 1 Pocket Kodak, Series II, equipped with Kodak Anastigmat lens *f*.7.7.

*The sharp-cutting qualities of the Kodak Anastigmat lens result in negatives that yield splendid enlargements.*

Made with No. 1 Pocket Kodak, Series II, Kodak Anastigmat lens *f*.7.7. Actual size.

## No. 1 Pocket KODAK, Series II

with Kodak Anastigmat lens *f*.7.7

This latest Kodak model gives negatives that "enlarge up" beautifully and has several interesting features besides its famous lens. The self-erecting front throws the lens in position as the bed is dropped, and the focus is secured by merely turning the lens flange. The camera is autographic, of course, and has shutter speed controls of  $1/25$ ,  $1/50$  and  $1/100$  of a second as well as time and bulb actions.

*Pictures  $2\frac{1}{4} \times 3\frac{1}{4}$ . Price \$20.*

EASTMAN KODAK COMPANY, Rochester, N. Y. *The Kodak City*

"Never teach an animal to depend on graft. I don't bribe an animal to do a thing. I don't give Strongheart a reward for carrying out a command; not a material reward, such as food. He does it solely because he wants my approval. He will look up at me questioning, as if he said, 'Was that what you wanted? Did I do it right?' If I smile and look pleased he fairly quivers with pleasure.

"Of course you can get a kind of service out of either animals or human beings by bribing them—if you care for that kind of service. I don't! It isn't really good service, anyway. Strongheart will do more, just to *please* me, than I ever saw a dog do in order to get food. It is just the same with human beings. They would starve, if it came to that, for someone they love supremely.

"When Strongheart makes a mistake, I don't rail at him or strike him. I know he *meant* to do it right. He just didn't understand. When he sees, by my expression, that he has failed to satisfy me, his expression is almost tragic. It is up to me to show him where he was wrong. Kicking and cussing wouldn't *explain* it to him. He would be more confused than ever. Isn't that human psychology too?

"**H**ERE'S another thing: Never play on an animal's emotions. Don't rouse him to anger, grief, fear. For instance, except when it is absolutely necessary for us to be away, Strongheart is always either with Miss Murfin or with me. We are the two human beings to whom he feels he belongs. I am his master, or superior officer. She is 'the queen of the world' to him.

"By the way, there is something curious in that connection. Miss Murfin and I do not feed Strongheart, or take care of him; and you might think he would regard the man who does do this as his master. But to him, this man is his servant, who waits on him and brings him food. He likes the man, but he does not regard him as a superior officer to whom he owes allegiance. He knows what human beings sometimes forget; that allegiance comes from the mind and the heart.

"Well, as I was saying, Strongheart is with me pretty constantly, except when I have to be away on a journey. When this happens I don't say good-by effusively and make a great to-do over the leave-taking. He would think I was abandoning him, and would be grieved and bewildered.

"Several days before I am to leave I begin to prepare him for it. I go out of his sight, but come back in a few minutes. I do this at intervals, staying away from him a little longer each time. In this way, I set up in his mind the confident expectation of my return. He sees me go—but he knows I will come back, because I always *have* come back.

"Never tease an animal. You can't expect to keep its good will if you wantonly annoy or frighten it. I have seen people amuse themselves by hectoring a caged animal, just to see it show its anger. Then they call it a savage beast, and say you never can trust a wild animal. The animal is simply showing that it knows it cannot trust *them*. Human beings feel just the same way. We don't like, or trust, people who are always picking on us and tormenting us. We'd be glad of a chance to bite them, either literally or figuratively.

## Breakfast should be "double-breasted," too

**T**O KEEP the child warm inside as well as outside, oatmeal is best. But—you can never realize the startling difference in oatmeals until you have tried H-O (Hornby's Oats).

*The superiority of H-O is due to an exclusive process of Steam-Cooking and Pan-Toasting the oats in the old-fashioned way.*

Thorough Steam-Cooking in closed kettles at 250 degrees, dextrinizes the starch and makes the oats digestible. Pan-Toasting over live coal fires at 650 degrees, produces that delicious H-O flavor.

H-O oats are plump, curly and brown—exclusive characteristics made possible only by the Steam-Cooking and Pan-Toasting process.

Oatmeal made from H-O (Hornby's Oats) has distinctive color, flavor and texture, unlike any other oats.

For free trial package, write The H-O Cereal Company, Inc., Buffalo, N.Y., Department "C."

The house illustrated is the GLENMERE. Reduced page from "Lewis Homes" shows how four plans and details of each house are given.

## Do you expect to build this year?

**The Lewis Method saves you a substantial sum on materials and labor and guarantees a house that will stand the test of years**

**THE** Lewis Method makes sure that you will have a house which measures up to your ideals, and that you will get it at the lowest possible price.

For Lewis Homes we furnish lumber logged in our own forests, cut and finished in our own mills. Our large scale operations enable us to sell you the materials for a substantial sum less than you could buy locally.

There is also a big economy in labor cost because the materials for Lewis Homes come ready to put together. Weeks of costly time are saved. Yet they are built even more solidly than by old-fashioned methods. They comply fully with all building laws.

### **You pay no money until you inspect the materials**

The high-grade quality of every bit of material is covered by our binding guarantee of satisfaction.

In one shipment you receive all the necessary lumber, shingles, lath, nails, paints, hard-

The Sea View—A bungalow with a wide porch and a low, wide roof.

ware, sash weights, even to the picture molding, door stops, shelving, coat hooks, etc. You need send no money until the materials arrive. You can inspect them before you pay.

You know in advance exactly what your Lewis Home will look like. Instead of a mass of blue-prints, you see an actual photograph of the finished house. And you save the architect's fee. The plans are based on a study of thousands of the most artistic and livable houses throughout the country.

### **In this 128-page book is your ideal home**

It contains photographs, floor plans and descriptions of over one hundred homes—distinctive Colonial designs, bungalows and semi-bungalows, Swiss chalets, Old English half-timbered designs, two-family houses, summer cottages, garages, etc. Answers every point you want to know about the Lewis Method of Home Building. 128 pages, 7 1/2 x 11 inches, fine paper, beautifully bound. Mailed for 25 cents (coin or stamps).

Our Personal Service Bureau will give you information regarding excavation, foundation costs, plastering—every possible item. There will be no extras coming up at the last minute.

Fill in and mail the coupon now to Lewis Manufacturing Company, 1430 Michigan Avenue, Bay City, Michigan.

Write name and address plainly. (Note—if you live anywhere outside of the United States, send \$1.00)

"In the picture 'Brawn of the North' we have fourteen wolves. One of them, Lady Silver, is supposed to mate with Strongheart in the play. The people from whom we got her sent us a supposedly vicious wolf, because they were afraid Strongheart would kill a gentle one. This was queer reasoning, but never mind that; the point is that Silver was considered so vicious that she was chained inside the crate in which she was shipped.

"On the journey from Montana, the kind of people I spoke of—those who tease an animal when they think they can do it safely—amused themselves by poking at Silver, just to see her rage. One of the links in her chain had got caught between the bars of the crate, holding her down. But she would do her best to jump at them, snarling and showing her teeth. When she reached us, she hated the whole world, and I didn't blame her.

"It took me an hour and a half to get her out of the crate. I didn't want her to bite me; partly because I didn't want to be bitten, but also because I didn't want her to remember that she had bitten me. Finally, I got the chain and collar off and put her in a small enclosure surrounded with wire netting. I told the men to pay no attention to her, to go back and forth just as usual; but to be quiet and not even to talk in loud tones. Lunch time soon came, but I said I would stay with the wolf.

"And I will bet you anything," I told them, "that in a few days she will be on friendly terms with me."

"ONE of the men offered to bet his salary for weeks ahead that we never would tame that wolf. Yet when he came back, one hour later, I was sitting in the enclosure, and the wolf was climbing into my lap and licking my face. She just couldn't get close enough to me! And two hours before, she had wanted to bite my head off.

"How did I do it? Well, when she had found that these new people were quiet and apparently peaceful, she was surprised. She hardly knew what to think. That was a good opportunity for me to show her what to think, so I went into her enclosure and calmly sat down on the ground. If I had been standing, she would have felt at a disadvantage. If a strange creature came and towered over you, I guess you would be afraid. But I sat down! That brought me on her level. She knew she could spring on me whenever she wanted to, so there was no hurry about it. She needn't attack me, for I was not in a position to attack her.

"At first she paced back and forth, as far from me as she could get. Then she became curious. Most animals are curious and wolves are especially so. She began circling the cage, going behind me. She knew she could get me then; but I didn't even turn my head. However, little by little, I edged backward, so that the space behind me became narrower, until she brushed against me as she passed.

"Can't you understand how interested she was in the whole proceeding? She was having an entirely new experience. And so long as I was sitting on the ground, where she knew she had me at a disadvantage, she was willing to find out what was going to happen. Finally I got so close to the wire netting that she had to squeeze past my back, in order to get through. Then she began to make little rushes to-

# A NEW AND BETTER GOODYEAR CORD TIRE

*with the beveled All-Weather tread*

**Y**OU know, of course, what a marvelously good tire the Goodyear Cord Tire always has been. Probably you remember with what speed and certainty it swept the country, inaugurating a new principle of tire construction.

You may remember, also, how its superb performance displaced all previous standards of mileage and freedom from trouble.

*Now this wonderful tire is made even more efficient and economical, by a remarkable improvement in its tread.*

This new All-Weather Tread is semi-flat instead of round, giving a broader road contact which offers greatly increased resistance to wear.

The clean-cut, rugged blocks are buttressed at the base by heavy circumferential ribs, knitting the whole tread design into a firmer and stancher unit.

The blocks which line the tread on either side are beveled at the outer edge, relieving the carcass from the strain of vibration as wear proceeds.

Finally, this new tread is made from an extraordinarily efficient rubber compound, by far the most serviceable that Goodyear has ever devised.

Think of being able to buy an *improved* Goodyear Cord Tire—a better Goodyear Cord Tire even than you have known.

Think of being able to buy this better tire for no more than you are asked to pay for ordinary tires. Your Goodyear Service Station Dealer has this new Goodyear Cord in stock—go to him for your size today.

Insuring your satisfaction is that same high quality that has made more people ride on Goodyear Tires than on any other kind.

*Goodyear Means Good Wear*

## How lead helps you see

**T**HE use of lead in lens-making has made the planets in the universe objects as familiar to astronomers as are the chickens in a barn-yard to a farmer's wife.

The microscope lens, containing lead, has enabled science to count and classify bacteria so small that millions can live in a drop of milk.

There is lead in the telescopic lens of the sextant with which the navigating officer determines his latitude and longitude and plots the course of his ship.

Before such lenses were made, man could distinguish objects only a few miles away, and the point of a needle was the smallest thing conceivable, because it was the smallest thing that could be seen.

### How lead gets into glass

Ordinary lead is melted at a very high temperature. On cooling it falls into buff-colored flakes. This is litharge, a lead oxide. Reburning and recooling the litharge gives an orange-red powder, called red-lead, another oxide of lead. Litharge or red-lead melted with silica (fine white sand) and potash or soda unites with these materials and forms clear glass.

Lead gives to this glass the quality necessary for properly refracting or bending the rays of light, so that the magnifying power of the glass lens is enormously increased.

Thus with the help of lead the courses of stars and comets are revealed. The length of days and sea-

sons, the tides, even the weather, can be known in advance. With the help of magnifying lenses man has developed the serums that protect humanity against diphtheria, typhoid, and other diseases.

### Lead in other lenses

This same lead is used in making the moving picture lens through which you see the countries and peoples of the world. It is in the glass lenses of ordinary cameras, and also in those of spectacles, eye-glasses and reading glasses.

### Paint needs lead

The most widely known use of lead and its products is, however, in making paint. It is white-lead that gives to good paint its ability to last long and adequately protect the surface. The quality of any paint depends largely upon the amount of white-lead it contains.

### Property needs paint

Until recently many people did not realize as fully as they should that by keeping the natural destroyers away from their property they prolonged its life. Today, however, they are acknowledging the wisdom of the phrase, "Save the surface and you save all." And they

are saving the surface by painting with white-lead paint.

### What the Dutch Boy means

NATIONAL LEAD COMPANY makes white-lead and sells it, mixed with pure linseed oil, under the name and trademark of *Dutch Boy White-Lead*. The figure of the Dutch Boy you see here is reproduced on every keg of white-lead and is a guarantee of exceptional purity.

Dutch Boy products also include red-lead, linseed oil, flattening oil, babbitt metals, and solder.

Among other products manufactured by the National Lead Company are battery litharge, battery red-lead, pressure die castings, cinch expansion bolts, sheet lead, and Hoyt Hardlead products for buildings. It also manufactures lead for every other purpose to which it can be put in art, industry, and daily life.

### More about lead

If you use lead, or think you might use it in any form, write to us for specific information; or, if you have a general academic interest in this fascinating subject and desire to pursue it further, we will send on request a list of books which describe this metal and its service to the civilized world.

ward me, leaping away quickly at first. But as I made no move to touch her she gradually came closer. After a little, she would jump and pretend to bite my arm or would jump at my face, her muzzle striking against my cheek or my chin.

"She was a pretty strenuous playmate, I can assure you; but I took it all in good part. If I had made a single move that she could even have imagined to be a menace she would have attacked me instantly, because she would have been afraid *not* to do it. But I let her become certain that I was harmless. Then I let her convince herself of my friendliness. When she finally believed, in her own mind, that I was safe and kind, her delight was absolutely pathetic. As I said before, she just couldn't get close enough to me.

"And that was the 'vicious beast' which, only an hour before, had hated the whole world, because she thought the whole world hated her! Silver was just a poor, lonely, misunderstood creature. She became, to all of us, a loving and trusting friend. Of course we have kept her. You don't turn away a friend like Lady Silver.

"THE other wolves we used in that picture were with us only five weeks before we made the scenes in which they appear. With them, as with any animals, the first thing we did was to make them feel perfectly safe. We enclosed the place where the scenes were to be taken and gave them the chance to become familiar with it.

"In one scene, a young mother and her baby are lying in the snow; a wolf comes up to them, and apparently tries to seize the baby. There was no fake about it. It was a real wolf and a real baby. The child's own mother was sitting beside me, watching the proceeding. And there were no men standing by, with clubs or revolvers to be used in case of need. We knew there would be no need.

"I had found that this particular wolf loved to play with leather. He would roll in it, the way a cat rolls in catnip. If he got hold of an old leather glove he was like a child with a new plaything. Gradually I got him to play with other and similar things; a piece of cloth, and finally a knitted shawl.

"In the scene I spoke of, this shawl was lying beside the baby, among the garments wrapped around it. And the wolf had no designs on the baby; he just wanted to get the shawl to play with. I recommend you to see that picture, if you want to realize how animals respond to anyone who wins their confidence.

"Take a skunk, or a hedgehog, for instance. Both of them can make it very unpleasant for you, if they want to. Nature has given them their power as a means of defense. But I can handle them with absolute impunity, because I make them feel perfect confidence in me.

"They are astonishingly like some persons I have known. At heart, these skunks and hedgehogs are friendly and affectionate. But when they feel helpless and at a disadvantage, they become regular touch-me-nots. There are people who are just like that. They crave affection and companionship. They respond eagerly to kindness and understanding. But they are afraid: afraid of having their feelings hurt, of not making a good impression, and they assume a churlish and repellent manner, simply as a protective armor.

# Old English Wax

## The beauty treatment for floors

Quickly, as you finish your floors with Old English Wax, a rich, velvety lustre appears; not a temporary polish, but a finish that stays—a hard, beautiful surface that does not scratch or show heel-marks.

Each year your floors will grow more mellow and beautiful.

### A new, easy way

Of course, a soft cloth will always be a good way to apply wax and polish the floor. But with the Old English Waxer-Polisher, the work of waxing floors on hands and knees is made unnecessary.

It waxes—and then polishes the floor. Easy as running a carpet-sweeper. The only device of its kind.

### Old English costs less

Because it goes farther and lasts longer the actual cost of using Old English Wax is about one-third that of most other finishes.

Paint, hardware, drug, house-furnishing or department stores sell Old English products.

Learn the secrets of beautiful floors, woodwork and furniture

- How to care for waxed floors
- How to care for varnished or shellaced floors
- How to prevent worn spots
- How to finish new floors
- How to "do over" old ones
- The proper way to clean and polish floors
- A new invention that saves time and work
- A special finish for linoleum floors
- How to preserve the beauty of your furniture
- The care and finish for interior woodwork
- How to remove old varnish or shellac
- How to fill floor cracks
- How to prepare floors for dancing
- How to polish automobiles
- Estimates and general advice based on over 25 years of experience—all will be found in this free book, a copy of which we are holding for you.

THE A. S. BOYLE COMPANY, 1621 Dana Avenue, Cincinnati, Ohio

Canadian Factory: Toronto

Manufacturers of the famous "X" brand of floor wax

### Free to you!

You will receive a can of Old English Wax free if you buy an Old English Waxer-Polisher now. This new labor-saving device does two things—it waxes, then polishes the floor. It's a great improvement over any weighted brush, which does not apply the wax, but merely polishes. Lasts a life-time. If your dealer can't supply you, just mail the coupon NOW.

## It will lengthen the life of your car

Thorough chassis lubrication means fewer repair bills, less wear and a smoother running car.

Alemite makes thorough lubrication a simple matter.

Developing 500 pounds' pressure to the square inch it forces out the old, grit-laden grease and packs the bearings with fresh lubricant.

The very fact that 95% of all motor car manufacturers are now equipping their cars with Alemite is the best proof of its superiority over all other lubricating methods.

If your car is Alemite-equipped, see that the system is used regularly. If your car is not equipped with Alemite, have the system installed at once. It will save you money.

### *Alemite Lubricating Spring Covers—*

Alemite Lubrication is not limited to the chassis bearings but is now extended to the springs as well. Alemite Lubricating Spring Covers encase each spring in a flexible armor of non-rusting steel that retains the lubricant, excludes water, dirt and grit, adds to the life and easy riding qualities of the car.

*High pressure lubricating system*

"If you know such a person—someone who is considered a confirmed grouch—try treating him the way I treat a wolf, or a skunk, or a hedgehog. Make him feel absolute confidence in your understanding of him; try to show him that he has nothing to fear from you. If you do that, I'll wager he will surprise you by showing you his real self.

"The members of our moving picture company, I have noticed, are guided by many of the same impulses that guide Strongheart. He doesn't do his work because we dangle a piece of meat before his eyes. And our company doesn't work because fat salaries are dangled before their eyes.

"Why, one man gave up an outside job and worked for us for *nothing*, when we had spent all the money we had allowed for the production and still had some scenes to make. Another man put in his whole summer, at his own expense, getting ready to make the next picture. He could have gone to another company, but he wouldn't leave us.

"Our people are loyal, not only to Miss Murfin and to me but to the idea we are trying to put over. For allegiance, as I said before, is a matter of the heart and the mind. And you get this allegiance from a human being just as you get it from an animal; just as I got it from Lady Silver, or from the tiger, or from Strongheart. Make him feel safe with you. Don't threaten him, or confuse him, or lie to him. Never ridicule him or make him feel that he is a fool. Mind your own business and let him mind his. Respect his sense of personal dignity. Observe the common courtesies of life and give the other fellow his share of the road. Respond to his mood; don't jump all over him, figuratively speaking, when he wants to be let alone. Don't be in a hurry to force even your friendship upon him. And always keep faith with him. That's the way to win any animal: dog, tiger, wolf, skunk—or man, or woman."

## Outwitting the Flapper

*(Continued from page 32)*

moment. I've got to have a smoke. Got a cig. about you?"

There were no other voices, no other sounds, but those two. Had that girl come to Buddy's house, alone, when Buddy's mother and aunt were to be away?

For a moment, Mrs. Carpenter stood irresolute in the hall, debating whether to go into that room; but somehow she could not break in upon her son, when he did not want her to be there. Slowly she started to climb the stairs; at the landing she paused, glancing back. From where she stood, she could look into the hall mirror which stood opposite the living-room door. Reflected therein was the girl, a mass of fluffy hair, a tip-tilted head, the curling smoke of a cigarette, a supple figure, a long pair of gray-stockinged legs, crossed, and below the short skirts just a glimpse of white, bare knee. Buddy's mother gasped. So that was what she was like!

How about

# "Give me a Quart of [ LIGHT MEDIUM HEAVY ] Oil"?

Dangerous word juggling. And why.

**D**O YOU EXPECT economy and protection simply because you ask for a quart of "light" oil—or "medium" oil—or "heavy" oil? If so, you will be interested in these facts:

One well-known "heavy" oil has the same body at 150° F (average crank-case temperature) as another well-known "light" oil. Two well-known "light" oils are equally far apart in body. Among oils classified as "light," "medium," and "heavy" there exists a wide variation. There is no accepted standard for light, medium and heavy oils.

In asking for a "a quart of light oil" you run the risk of getting "light" oil today, "medium" oil next week, and "heavy" oil before the month is out.

Motorists are waking up to this danger. That is why more automobile owners ask for the correct grade of Gargoyle Mobiloil than for any other three brands of oil combined. And that is why specific grades of Gargoyle Mobiloil are recommended by more automobile manufacturers than ever before.

With the correct grade of Gargoyle Mobiloil in your crank-case all doubts as to correctness of body are settled once and for all. The uniformity of each grade of Gargoyle Mobiloil is strictly maintained.

## Not a By-product

Unlike 9 out of 10 oils offered you, Gargoyle Mobiloil is produced from crude stocks chosen primarily for their lubricating value—not for gasoline yield. This distinct specialization in lubricating oils has won for the Vacuum Oil Company its world-wide recognition as the outstanding authority on correct lubrication.

You will never get Gargoyle Mobiloil economy until you use Gargoyle Mobiloil. You cannot expect full Gargoyle Mobiloil results until you make the Chart your guide.

# Mobiloil

## Warning:

Don't be misled by some similar sounding name. Look on the container for the correct name *Mobiloil* (not *Mobile*) and for the red Gargoyle.

Don't believe false statements that some other oil is identical with Gargoyle Mobiloil. Gargoyle Mobiloil is made only by the Vacuum Oil Company in its own refineries, and is never sold under any other name.

## Chart of Recommendations

(Continued from page 104)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger and commercial cars are specified in the Chart below.

A means Gargoyle Mobiloil "A"  
B means Gargoyle Mobiloil "B"  
BB means Gargoyle Mobiloil "BB"  
E means Gargoyle Mobiloil "E"  
Arc means Gargoyle Mobiloil Arctic

When different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures may be experienced.

This Chart of Recommendations compiled by the Vacuum Oil Company, and approved by Automotive Engineers, and represents our professional advice on correct engine lubrication.

NAME OF AUTOMOBILE AND MOTOR TRUCK	1924	1925	1926	1927	1928	1929	1930	1931	1932	1933	1934	1935	1936	1937	1938	1939	1940	1941	1942	1943	1944	1945	1946	1947	1948	1949	1950	1951	1952	1953	1954	1955	1956	1957	1958	1959	1960	1961	1962	1963	1964	1965	1966	1967	1968	1969	1970	1971	1972	1973	1974	1975	1976	1977	1978	1979	1980	1981	1982	1983	1984	1985	1986	1987	1988	1989	1990	1991	1992	1993	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048	2049	2050	2051	2052	2053	2054	2055	2056	2057	2058	2059	2060	2061	2062	2063	2064	2065	2066	2067	2068	2069	2070	2071	2072	2073	2074	2075	2076	2077	2078	2079	2080	2081	2082	2083	2084	2085	2086	2087	2088	2089	2090	2091	2092	2093	2094	2095	2096	2097	2098	2099	2100	2101	2102	2103	2104	2105	2106	2107	2108	2109	2110	2111	2112	2113	2114	2115	2116	2117	2118	2119	2120	2121	2122	2123	2124	2125	2126	2127	2128	2129	2130	2131	2132	2133	2134	2135	2136	2137	2138	2139	2140	2141	2142	2143	2144	2145	2146	2147	2148	2149	2150	2151	2152	2153	2154	2155	2156	2157	2158	2159	2160	2161	2162	2163	2164	2165	2166	2167	2168	2169	2170	2171	2172	2173	2174	2175	2176	2177	2178	2179	2180	2181	2182	2183	2184	2185	2186	2187	2188	2189	2190	2191	2192	2193	2194	2195	2196	2197	2198	2199	2200	2201	2202	2203	2204	2205	2206	2207	2208	2209	2210	2211	2212	2213	2214	2215	2216	2217	2218	2219	2220	2221	2222	2223	2224	2225	2226	2227	2228	2229	2230	2231	2232	2233	2234	2235	2236	2237	2238	2239	2240	2241	2242	2243	2244	2245	2246	2247	2248	2249	2250	2251	2252	2253	2254	2255	2256	2257	2258	2259	2260	2261	2262	2263	2264	2265	2266	2267	2268	2269	2270	2271	2272	2273	2274	2275	2276	2277	2278	2279	2280	2281	2282	2283	2284	2285	2286	2287	2288	2289	2290	2291	2292	2293	2294	2295	2296	2297	2298	2299	2300	2301	2302	2303	2304	2305	2306	2307	2308	2309	2310	2311	2312	2313	2314	2315	2316	2317	2318	2319	2320	2321	2322	2323	2324	2325	2326	2327	2328	2329	2330	2331	2332	2333	2334	2335	2336	2337	2338	2339	2340	2341	2342	2343	2344	2345	2346	2347	2348	2349	2350	2351	2352	2353	2354	2355	2356	2357	2358	2359	2360	2361	2362	2363	2364	2365	2366	2367	2368	2369	2370	2371	2372	2373	2374	2375	2376	2377	2378	2379	2380	2381	2382	2383	2384	2385	2386	2387	2388	2389	2390	2391	2392	2393	2394	2395	2396	2397	2398	2399	2400	2401	2402	2403	2404	2405	2406	2407	2408	2409	2410	2411	2412	2413	2414	2415	2416	2417	2418	2419	2420	2421	2422	2423	2424	2425	2426	2427	2428	2429	2430	2431	2432	2433	2434	2435	2436	2437	2438	2439	2440	2441	2442	2443	2444	2445	2446	2447	2448	2449	2450	2451	2452	2453	2454	2455	2456	2457	2458	2459	2460	2461	2462	2463	2464	2465	2466	2467	2468	2469	2470	2471	2472	2473	2474	2475	2476	2477	2478	2479	2480	2481	2482	2483	2484	2485	2486	2487	2488	2489	2490	2491	2492	2493	2494	2495	2496	2497	2498	2499	2500	2501	2502	2503	2504	2505	2506	2507	2508	2509	2510	2511	2512	2513	2514	2515	2516	2517	2518	2519	2520	2521	2522	2523	2524	2525	2526	2527	2528	2529	2530	2531	2532	2533	2534	2535	2536	2537	2538	2539	2540	2541	2542	2543	2544	2545	2546	2547	2548	2549	2550	2551	2552	2553	2554	2555	2556	2557	2558	2559	2560	2561	2562	2563	2564	2565	2566	2567	2568	2569	2570	2571	2572	2573	2574	2575	2576	2577	2578	2579	2580	2581	2582	2583	2584	2585	2586	2587	2588	2589	2590	2591	2592	2593	2594	2595	2596	2597	2598	2599	2600	2601	2602	2603	2604	2605	2606	2607	2608	2609	2610	2611	2612	2613	2614	2615	2616	2617	2618	2619	2620	2621	2622	2623	2624	2625	2626	2627	2628	2629	2630	2631	2632	2633	2634	2635	2636	2637	2638	2639	2640	2641	2642	2643	2644	2645	2646	2647	2648	2649	2650	2651	2652	2653	2654	2655	2656	2657	2658	2659	2660	2661	2662	2663	2664	2665	2666	2667	2668	2669	2670	2671	2672	2673	2674	2675	2676	2677	2678	2679	2680	2681	2682	2683	2684	2685	2686	2687	2688	2689	2690	2691	2692	2693	2694	2695	2696	2697	2698	2699	2700	2701	2702	2703	2704	2705	2706	2707	2708	2709	2710	2711	2712	2713	2714	2715	2716	2717	2718	2719	2720	2721	2722	2723	2724	2725	2726	2727	2728	2729	2730	2731	2732	2733	2734	2735	2736	2737	2738	2739	2740	2741	2742	2743	2744	2745	2746	2747	2748	2749	2750	2751	2752	2753	2754	2755	2756	2757	2758	2759	2760	2761	2762	2763	2764	2765	2766	2767	2768	2769	2770	2771	2772	2773	2774	2775	2776	2777	2778	2779	2780	2781	2782	2783	2784	2785	2786	2787	2788	2789	2790	2791	2792	2793	2794	2795	2796	2797	2798	2799	2800	2801	2802	2803	2804	2805	2806	2807	2808	2809	2810	2811	2812	2813	2814	2815	2816	2817	2818	2819	2820	2821	2822	2823	2824	2825	2826	2827	2828	2829	2830	2831	2832	2833	2834	2835	2836	2837	2838	2839	2840	2841	2842	2843	2844	2845	2846	2847	2848	2849	2850	2851	2852	2853	2854	2855	2856	2857	2858	2859	2860	2861	2862	2863	2864	2865	2866	2867	2868	2869	2870	2871	2872	2873	2874	2875	2876	2877	2878	2879	2880	2881	2882	2883	2884	2885	2886	2887	2888	2889	2890	2891	2892	2893	2894	2895	2896	2897	2898	2899	2900	2901	2902	2903	2904	2905	2906	2907	2908	2909	2910	2911	2912	2913	2914	2915	2916	2917	2918	2919	2920	2921	2922 The Institute of Thermal Research  
of the  
American Radiator Company  
Buffalo, N.Y.

The largest laboratory in the world  
devoted exclusively to the problems  
of better warmth.

## “What are these chimneys in my life?”—you ask

A CURIOUS collection of chimneys, isn't it? Some big, some little, some tall, some short.

But because of them your architect feels perfect confidence when he writes “AMERICAN Radiators” or “IDEAL Boiler” into the specifications for your home.

He knows that every new boiler designed by the American Radiator Company is tested by being connected with these chimneys before quantity production begins. By these tests, with varying types of chimneys, the engineers of the Company can certify in advance precisely how much warmth a boiler will develop under varying conditions from a given amount of coal.

Naturally your architect likes to specify a boiler and radiators whose performances are definitely known, even though the initial cost may be a trifle more. And you will do wisely to accept his counsel—together with his assurance, and ours, that the trifle more you pay at the start will be returned to you again and again in the fuel saved.

May we send you a useful little book entitled “BETTER WARMTH & BETTER HEALTH?” It contains ten definite suggestions for saving coal that are applicable to your home, no matter how it may be heated; and other information that makes it well worth sending for. Your request mailed to either address below will bring a copy at once.

816 So. Michigan Ave., Dept. 21  
CHICAGO

She clenched her teeth. "I declare it's disgraceful!" Then she pulled herself up short. Those words sounded familiar, and she remembered where she had heard them before—Aunt Mamie. Whatever happened, she must not be like Aunt Mamie. She mustn't condemn Buddy's girl, Buddy's friends, she mustn't turn down the corners of her mouth. "They're young," she said to herself, "I mustn't forget that, the younger generation—"

"Oh, Bud, old dear," again came the girl's voice, "this is a grand place to dance. Why don't you ever have any dances? Everybody in town gives dances."

"Oh, I don't know." There was a hint of embarrassment in Buddy's tones.

The girl laughed: "Oh, I see! It wouldn't quite do! The Ogress might gobble you up—anyway, she'd gobble me!"

And they both laughed.

Mrs. Carpenter went on up the stairs. The Ogress! That word echoed through her mind. That was their name for Aunt Mamie. Aunt Mamie had driven Buddy from his home, had driven him to friends like Ruthie Baxter, had driven him to bringing his girl and his friends to his house when his mother was away. But, worse than that, Buddy's girl knew it, Buddy's girl made fun of Buddy's family, made fun of their disapproval, their squeamishness, mocked them openly, and Buddy laughed with her.

Very thoughtfully she took off her hat, then she drew herself up, straight and defiant.

"I'm going to do something," she vowed. "He can go around with her all he wants to if he likes her, but he isn't to go with her because his family disapproves of her, and because she'd shock us. His family doesn't disapprove. We approve, all of us; I approve. And as for shocking—bare knees, cigarettes, and everything—no girl of my son's can shock me! I don't care if I am forty-five."

**B**UT it was not until two days later that she started on her campaign. Casually at the supper table she turned to Buddy:

"You know, Buddy, I've been thinking. You're always going to so many dances and parties. All the young people seem to be having them. I think we ought to have a party, too. We used to have them when you were in high school. We might have a few of your friends in for supper and then ask some others in later, and dance; we could open the doors through from the living-room to the library and—what do you think, Edgar?" She threw her husband a quick glance.

"Fine idea!" he answered. "Go ahead!"

"And you, Buddy?" she smiled at her son.

His voice was uncertain, doubtful, "Ye-es, it would be . . . fun . . ."

Aunt Mamie said never a word, but her silence was eloquent. Buddy felt it, Mr. Carpenter felt it, but Mrs. Carpenter was oblivious.

"All right, then. When shall we have it, and whom shall we ask? I thought we might ask Howard Montague for supper and Mrs. Rupert—you've been out there so much, Buddy; and Roger, and"—fearlessly she rattled off the names of her son's fast crowd—"and Ruthie Baxter, of course, and—I think it would be nice to ask Nina Roberts and—then the old high-

## You wouldn't have blamed her either

**S**HE was left a widow when she was thirty-five. Her husband's estate was quite a substantial one, and not being a businesswoman she was naturally glad to find her affairs left in the hands of a very good attorney—a young lawyer with whom her husband had done much of his business.

Various complications of the estate required her to be in this attorney's office quite often; there were many details to dispose of from time to time.

Then suddenly, for some reason or other, she announced to her friends that this attorney was no longer handling her affairs. He was a rising young man in his profession, and enjoyed an excellent standing. The abrupt change in her dealings to the office of a much less known lawyer puzzled every one, and there was really quite a lot of talk about it. No one could understand why.

Some men succeed in business in spite of halitosis. But

many others are held back—often not knowing why.

\*\*\*

Sometimes, of course, halitosis comes from some deep-seated organic disorder that requires professional advice. But usually—and fortunately—halitosis is only a local condition that yields to the regular use of Listerine as a mouth-wash and gargle.

This halts food fermentation in the mouth and leaves the breath sweet, fresh and clean. So the systematic use of Listerine this way puts you on the safe and polite side. You know your breath is right. Fastidious people everywhere are making it a regular part of their daily toilet routine.

Your druggist will supply you with Listerine. He sells lots of it. It has dozens of different uses as a safe antiseptic and has been trusted as such for half a century. Read the interesting booklet that comes with every bottle.—Lambert Pharmacal Co., Saint Louis, U. S. A.

# How Can I Earn Some Money?

*How can I, a woman absolutely without previous experience, earn the money that is so necessary to the welfare and happiness of myself and those I love?*

**A**RE you one of the thousands who are asking themselves this question every day? Have **you** a vital need for more money—to help support your family—to buy a home or pay off a mortgage—to educate your children—to pay doctors' bills—to properly clothe yourself? We have answered this question for thousands of women and can answer it for you. **You** can have a profitable occupation and build for yourself a permanent income by becoming our representative and selling our

## World's Star Hosiery and Klean-Knit Underwear

—to your friends and neighbors. We can show you—as we have shown thousands of others—a pleasant and certain way to have your own money to spend.

### We Have Helped 27,000 Women

Without previous experience hundreds of our representatives have accomplished amazing results. Miss Kinney has earned \$22,698.98 in eleven years—an average of nearly \$200 a month. Mrs. Olson, a widow, sent her boy and girl through college. Mrs. Weger makes \$1,500 a year. One representative in Minnesota made \$3,027 in eight months. Ten church workers together made enough money to pay off the mortgage. Literally hundreds are earning from \$100 to \$200 a month and thousands more have modest but assured incomes in return for part time work.

### You Can Do As Well As They Are Doing

Sell World's Star Hosiery and Klean-Knit Underwear in your home town. **No previous experience is necessary.** We show you how to make money in an easy, congenial and profitable way. We sell direct from the mill to the home through our local representatives and our lines of hosiery and underwear for men, women and children are famous the world over. Our advertising makes sales easy—the quality holds the trade.

### A Complete Line—Hosiery and Underwear

Our line is most complete—**Hosiery** in silk, wool, mercerized, and cotton—all colors for men, women and children; **Underwear** in all weights and grades for every member of the family; other undergarments for women—in beautiful glove silk at prices so low that they sell on sight. We will send you our beautiful colored catalog and show you how easy it is to become a World's Star Money Maker. Write us today. Don't wait or someone else may get ahead of you.

**Liberal Commissions—Prompt Deliveries—Protected Territory**  
We pay transportation charges.

We have been in business for twenty-eight years

school crowd can come in the evening, and— How does that suit you?"

Buddy gasped. He eyed his mother, puzzled, questioning.

Right after supper, Aunt Mamie cornered Buddy's mother in the back hall.

"Elizabeth Carpenter, are you going to invite that girl to the house? Are you going to countenance—"

"Why, Aunt Mamie, if Buddy gives a party, he couldn't very well leave her out."

"Well, if she comes to this house, I go!"

There was a moment's silence. Buddy's mother took a deep breath. It had come to a show-down.

"Well," she remarked, "Cousin Rose has been urging you to visit her."

Aunt Mamie gasped. "Elizabeth!"

"I'm sorry, of course, Mamie; but Buddy's going to have a dance, and he's going to ask his girl, and if it will offend you or hurt you to sit down to the table with her, I don't see any other thing to do. Of course, Edgar and I would rather that you were here, and when the party's over we'll want you back again."

Aunt Mamie said nothing. She was too astonished to speak.

Calmly Mrs. Carpenter went into the library. Buddy was there, pacing up and down restlessly.

"Say, Mom," he said, "do you really want to give this dance? Do you really want to ask those people, Ruthie and the rest?"

"Why, of course I want to ask them. Aren't they your friends?"

"But, Aunt Mamie—she—"

"Aunt Mamie won't be here, Buddy. She's going away for a little visit."

Their eyes met for one illuminating moment.

"Mom!" he cried, "you—" His voice trailed off into silence. He knew now that his mother was siding with him, was openly endorsing his friends and his girl; but he did not know what to say.

Calmly she opened a drawer in the library table, took out a pencil and a piece of paper and handed them to him.

"Now write down those you want to ask, so we can count 'em up," she said.

**W**HEN Aunt Mamie left, a few days later, both Buddy and his mother were relieved. Just before she got on the train she turned to Mrs. Carpenter: "Elizabeth, you are making a great mistake to receive that girl in your house, to countenance—"

"Good-by," said Buddy's mother. "Have a good time, and be sure and wire me that you arrived safely."

Aunt Mamie gone, Mrs. Carpenter threw herself into the preparations for the dance. She spent a day in the city and bought a new, very stylish dress, and she engaged, for music, the jazziest orchestra in the county.

Finally the evening came. At the last minute, Mr. Carpenter was called out of town on business and Mrs. Carpenter had to face the ordeal alone.

"Now, don't you worry, sweetheart," he said as he kissed her good-by, "everything'll be all right. I'd back you against fifty flappers and vamps."

But she could not help being excited. This evening was to be the test, this evening she was to meet Buddy's girl on what she felt might be a battlefield.

"I must remember that they're young,"

## *It happens in most families*

*Father* somehow fails to hit the nail on the head  
*Mother* undertakes too much  
*Brother* ———

**F**ATHER seems unable to handle a hammer without smashing his thumb—

Mother *will* keep on her feet all day—and have a tired, aching back at night—

And young brother! Baseball in the spring and football in the fall keep him the constant possessor of bruises and sprains.

No wonder in one out of every three American homes today, Sloan's Liniment has a prominent place on the bathroom shelf.

### *What Sloan's does*

Sloan's Liniment brings almost instant relief to sore and aching muscles.

Most muscular and nerve pain is due to congestion. Congestion occurs when blood collects in a tissue and does not circulate freely. Fatigue—cold, damp weather—or an actual sprain or bruise—these are perhaps its most frequent causes.

Sloan's Liniment breaks up congestion by drawing the blood away from the congested or inflamed tissues. Normal circulation is quickly restored. Discomfort disappears.

### *A matter of minutes with Sloan's*

The thing that astonishes you, if you have never used Sloan's Liniment before, is the rapidity with which it brings relief.

Apply a little Sloan's to the sore or aching spot. Don't rub it in. Don't bandage.

Almost immediately you notice a warm, tingling glow—a drawing, healing sensation.

For a moment you think that this warmth has simply made you forget the pain. Then suddenly you realize that the pain itself is completely gone!

In its place is a soothing feeling of ease, comfort, relaxation.

Get a bottle of Sloan's today and keep it always on hand. Don't wait until some member of the family needs it badly.

You will find more practical everyday uses for Sloan's than for any other item in your medicine cabinet.

# Sloan's Liniment

*Wherever congestion causes pain—use Sloan's*

**"Standard"**

"Standard" kitchen sinks, "gard stick high" provide comfort and prevent back-strain. How high is yours?  
Standard Sanitary Mfg. Co., Pittsburgh

she repeated over and over to herself, "and the younger generation's always different—and whatever happens, I mustn't be shocked!"

The new dress was very becoming. Its soft blue enhanced the blueness of her eyes, and its long straight lines emphasized her girlish figure. She had hoped that Buddy would comment on it, but he did not. He was too excited, himself, to notice it.

The guests began to arrive: Mrs. Rupert, handsome, smiling, and just a wee bit gushy; Nina Roberts, sweet, laughing, and stylishly dressed, and Ruthie Baxter.

Ruthie joked with Buddy for fully two minutes before she greeted her hostess; then she turned to her in an offhand, casual fashion, as if she were of no importance.

"Oh, how do you do, Mrs. Carpenter? It's awfully nice of you to have us here, such a rowdy crowd, as we are. . . . You don't know, we may pull the house down on you—"

"I'm willing to take the risk," answered Buddy's mother, smiling. For a moment her blue eyes held Ruthie's brown ones, then the girl turned to Buddy again.

AT THE dinner table, it was Ruthie who entertained them. She leaned forward, her arms resting on the table, her face aglow under the mop of fuzzy bobbed hair, her neck white above her vivid green dress, and chattered on, telling story after story in lively, amusing fashion, about herself and her own exploits in the city, where she had spent the past winter, how she had danced until late into the night at strange places, how one night someone had "mixed her drinks," and she had had to sleep it off the next day.

Every once in a while she glanced over at Buddy's mother to watch the effect, but Buddy's mother laughed with the rest.

Then, in the middle of a story, just before dessert, Ruthie interrupted herself, turning to Buddy, "Oh, say, Bud, I've got to have a smoke. Give me a cigarette, will you?" Her voice was casual, very casual, but it did not fool Mrs. Carpenter. She knew the intent that lay beneath it.

Buddy groped in his pocket, and his eyes sought his mother's anxiously.

"The cigarettes are on the sideboard," she said, her tone just as casual as Ruthie's. "Will you get them, Buddy, and the ash trays, too?"

With her own hand she offered the box to Ruthie. Ruthie took one, tapped it lazily on the table, then leaning forward, her whole attitude defiant and rebellious, her brown eyes boldly meeting Mrs. Carpenter's, she lighted it.

Mrs. Carpenter met those eyes unflinching, then she smiled and passed the cigarettes on to Mrs. Rupert. She had been so afraid of this bob-haired, smoking, jazzing flapper, so afraid for Buddy; and yet there was nothing to be afraid of. Here was no worldly-wise siren. She was only just a little girl, a pert, brazen little girl, so young in the way she flaunted her independence and her unconventionality, her cigarettes and her stories, so childish in her eager efforts to shock her hostess and her beau's mother. That was what the Ruthies of the world thrive on: the condemnation of their beaux' women-folks, the uplifted eyebrows of their beaux' mothers, the shocked silence of their

# Brighten Up Your Home

## Ideal Polish for Furniture

Johnson's *Liquid Wax* is the perfect furniture polish. It imparts a hard, dry, oil-less polish which does not finger print or collect dust and lint. It takes all drudgery from dusting.

## A Preserver of Linoleum

Johnson's Polishing Wax prevents cracking and blistering—brings out the pattern and color—protects linoleum from wear and makes cleaning easy.

## Rejuvenates Floors & Trim

You can easily keep your floors and woodwork in perfect condition by polishing occasionally with Johnson's Wax. The Wax cleans and forms a thin protecting finish coat.

# JOHNSON'S Paste - Liquid - Powdered POLISHING WAX

EVERY room needs the brightening touch of Johnson's Polishing Wax. It will rejuvenate your furniture, woodwork, floors and linoleum, and give your home that fine air of immaculate cleanliness. It imparts a beautiful, lustrous polish which will not gather dust and lint—or show finger marks. Johnson's Prepared Wax cleans, polishes, preserves and protects—all in one operation.

## A Form for Every Use

Johnson's Polishing Wax is conveniently put up in three forms—Paste, Liquid and Powdered.

Use the *Paste* Wax for polishing floors of all kinds—wood, tile, marble, composition, linoleum, etc.

Use Johnson's *Liquid* Wax for polishing your furniture, woodwork, linoleum, leather, shoes and automobile.

Johnson's *Powdered* Wax makes perfect dancing floors.

beaux' aunts; it was their food, their fun, their charm. It turned them from rather harmless, scatterbrained girls into daring, naughty little devils—and it brought the Buddies to their feet.

Dinner was over. They all adjourned to the big living-room, shorn of its rugs and furniture. Other boys and girls began to arrive. The dancing started. Mrs. Carpenter stood in the doorway, watching. Every once in a while across her line of vision, flitted Buddy and Ruth, his arm tight around Ruthie's supple figure, her cheek very close to his.

After the music stopped, Ruthie darted up to her:

"That was great. Buddy and I do dance together so wonderfully. I hope—" her eyelids flickered a bit—"I hope you don't mind jazz?"

"Oh, no, I think it's fun."

"Fun! Why, Mrs. Carpenter! Do you dance?"

At that, Buddy laughed aloud: "Of course, Mother dances. She's a good dancer, too." He smiled down upon her. How young she looked to-night. How foolish of Ruthie to think his mother didn't dance, that she disapproved of jazz, that his mother wouldn't like her to smoke—for the defiance in Ruthie's pose as she lighted her cigarette had not been lost on Buddy. His mother wasn't a mid-Victorian, she wasn't like Aunt Mamie, she wasn't living twenty years ago, she was living now—in the present—

Ruthie's voice interrupted his thoughts. "This isn't the first time I've danced in this room. Did you know that, Mrs. Carpenter? I was over here one afternoon, last week—you were all out—just Buddy and I. We wanted to go somewhere where we could dance all by ourselves. Of course, I know it isn't quite the thing to come to a man's house like that, but—"

**B**UDDY started. Suddenly the truth dawned upon him. She was trying to shock his mother, deliberately trying. That was the meaning of those stories at the dinner table, those cigarettes, those remarks about jazz. How silly of Ruthie! As if she could get his mother's goat! He remembered, with a touch of pride and amusement, how his mother had handed those cigarettes to Ruthie, how his mother had laughed at Ruthie's remarks. His mother was a good sport!

"I was terribly afraid someone would come in upon us," went on Ruthie; "I don't know what I would have done if Miss Mamie had appeared in the doorway, or you—"

"I did come in," said Buddy's mother.

"You—" Ruthie gasped.

"Yes, I came in. I heard you dancing, but I went on up-stairs. I didn't want to interrupt you."

For a moment Ruthie was hushed, and during that moment Mrs. Carpenter's eyes met Buddy's. Solemnly, over Ruthie's head, he winked at her.

And in that wink, Buddy's mother knew that her son was laughing at his girl, knew that the spell, the spell of her defiance and her deviltry, that spell enhanced by Aunt Mamie, was broken.

Ruthie, however, did not know it. She went on dancing with Buddy, and flirting and smoking. When the punch was served, she sampled it, and then put down her glass in disgust. "Not a sign of a

stick!" she exclaimed to the whole room. A few minutes later, Buddy saw her talking with his mother. Wondering what she was saying, he followed her across the room.

"I've got a flask out in the car. Oh, it's hidden away all right, nobody could find it! Do you mind if I go out and get it? Just a few drops in the punch. . . . That's what you need to put pep into a party." Her eyes challenged Mrs. Carpenter's.

Mrs. Carpenter's smile faded. She had laughed at Ruthie's stories, though in her heart she thought them vulgar; she had handed Ruthie cigarettes, though in her heart she did not like to see young girls smoking; she had danced to this horrible, nerve-racking, jazzy music, though in her heart she loathed it. "They're young," she had told herself again and again. "The older generation always disapproves of the next. But I mustn't, I mustn't! for the more we condemn their smoking and jazzing, the more they'll smoke, and the more they'll jazz. . . . You must give them enough rope, these young people who are growing up! I've got to keep up with them, keep up with the times! I've got to be young with my son!" But this was different! The stories, the dancing, the smoking—they were just little things, foolish little things, but drinking, young people drinking in her home! Buddy's girl had trapped her!

"It'll be all right, won't it?" repeated Ruthie Baxter.

But before Mrs. Carpenter could answer, Buddy interrupted. He was not laughing at his girl; he was angry at her for the way she was treating his mother.

"Nothing doing, Ruthie," he said, laying his hand very firmly on her arm; "I don't know whether you've really got the stuff out there, or whether you're just bluffing, but you can't bring it in here; and if anyone goes outside and takes some, they can't come back! My mother doesn't like to have drinking in this house, and what she says—goes!"

Ruthie gasped. "Why, Buddy, don't get up on your ear! I didn't mean anything. It was just a joke!"

"Well, it's gone too far," he answered; then, turning his back upon her, "Come on, Mom, dance with me. I want to dance with the best dancer in the room."

WHEN Aunt Mamie came home, she asked no questions until she was inside the house, then she turned impressively to Mrs. Carpenter: "Well, how did the dance go off?"

"Fine," answered Buddy, "great party, wasn't it, Mom?" He grinned at her, and she grinned back, then he turned toward the door. "Want the car any more this afternoon, Mom? I thought I'd run around to see Nina Roberts. I'll be back early."

"That's all right."

The door banged behind him.

"Nina Roberts!" repeated Aunt Mamie. "Why, what's the matter? What about that other girl?"

Buddy's mother smiled. "I guess that's all over," she answered.

"All over!" For a moment, Aunt Mamie was silent, then she spoke triumphantly. "There! I knew he'd come to his senses if we showed him plainly enough that we didn't approve, and that we didn't like her! All you have to do with young people is to put your foot down firm."

## How Men Get Those clean, white teeth you see

Not long ago beautiful teeth were seen less often than now. People did not like to show them. Now everywhere you see teeth that shine.

The reason lies in a new teeth-cleaning method. Make this free test and see what it does for you.

### That cloudy film

Your teeth are coated with a viscous film. You can feel it with your tongue. It clings to teeth, gets between the teeth and stays.

Food stains, etc., discolor it. Then it forms dingy coats. Tartar is based on film. Those coated teeth don't shine.

Film also holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay. Germs breed by millions in it, and they cause many troubles.

### Very few escaped

Under old methods few escaped these troubles. So dental science searched for ways to fight that film. Two ways were found. One acts to curdle film, one to remove it, and without any harmful scouring.

Able authorities proved these methods effective. Then a new-type tooth paste

was perfected, based on modern research. Those two great film combatants were embodied in it.

The name of that tooth paste is Pepsodent. Leading dentists the world over now advise it. Millions of people in some fifty nations use it every day.

### Kills acids, too

Pepsodent also multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits on teeth which may otherwise ferment and form acids.

Thus Pepsodent gives manifold effect to these great tooth-protecting agents in the mouth.

Learn what it means to you. Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

You will see and feel enough to convince you that you should always brush teeth in this way. Cut out the coupon now.

## The Nearest I Ever Came to Death

FIRST PRIZE

### Braved Death to Help a Friend

**I**T WAS in the spring of 1885. I found I would have to go from Ft. Smith, Arkansas, to Van Buren, Arkansas, at midnight, to prevent a great wrong being committed to one I loved.

There was no way of getting there at that time of night but to drive as far as the river, then walk the railroad bridge, which was a one-track open trestle.

I started to cross, but the night watchman, who was stationed in the middle of the bridge, told me I could not, as no one was allowed to cross the bridge on foot; but I ran past him. I thought I was safely on my way when I saw the headlight of the St. Louis Cannon Ball Express.

There was no time to go back. The train was ahead. The river far below, swollen from the spring rains.

One's mind works quickly at such times—if it works at all. I climbed down upon the timbers below the bridge and hung from a projecting beam; but when the train had thundered past, I could not pull myself up again. I slipped and fell into the muddy river far below.

I was a good swimmer. Battling with the raging waters I finally reached a clump of swamp willows and managed to pull myself out of the water.

After much stumbling and falling in the pitchy darkness, I found my way back to the railroad track; then I had only a short distance to go.

I reached my destination in plenty of time, wet, muddy, and shivering with cold from the frigid north wind that was sweeping over the country.

At the time this happened I was a girl of eighteen. It is still vivid in my mind.

MRS. H. T.

### Thrown From a Horse, Found Paralyzed After Eighteen Hours

SECOND PRIZE

**O**NE July day, many years ago, I was riding a cayuse from Corpus Christi to San Antonio, Texas. Sawbuck, my four-legged flivver, shuffled along, as innocent a looking creature as one could hope to find until, stimulated by the warning of a rattlesnake, he suddenly bunched himself and sent me spinning, to alight on the back of my neck.

When I "came to" and tried to get up I discovered there was no "get up" in me. I was paralyzed from head to foot; and this, I then believed, meant a broken back. Death seemed very near indeed!

Despite the condition of my body, however, my mind was more active than ever; and in the eighteen hours I lay there until, by chance, I was discovered, I did a deal of thinking—or was it imagining?

I saw my mother, my brothers and sis-

### The Right MAZDA LAMPS for Your Car

The following National MAZDA Automobile lamps will fit most cars of 1919 and later models: Headlights, 1129 and 1130, at 35 cents each; auxiliary headlights, rear, side and instrument lamps, 61, 62, 63 and 64, at 20 cents each. Many drivers find it worth while to carry a complete set of spare lamps in the handy Blue Kit to meet emergencies.

NELA PARK, Cleveland, is a "university of light", dedicated to improvement in lamps and progress in the art of lighting. It serves 24 factories, 17 Sales Divisions and 15,000 dealers in the production and marketing of 98 million National MAZDA lamps annually for use in homes, offices, factories, stores, streets, railways, flashlights and automobiles.

## What If You Hadn't Seen Him In Time?

You'll surely come to grief sooner or later if you depend on the "other fellow's" lights. Parked cars—ditches—curves—traffic—all road hazards must be instantly seen, and yours is the responsibility for seeing them! Safety lies in having your own car properly lighted with reliable lamps.

When you need new lamps, go to the National MAZDA lamp dealer. He offers you safety because he supplies the particular National MAZDA lamp for each socket on your car. Verify the name and number on the base of each lamp you buy.

Each of these labels represents a Sales Division equipped to give a complete lighting service.

# NATIONAL MAZDA LAMPS

for Automobiles

*The grading and sorting table at one of the fifteen Weyerhaeuser manufacturing units. Here the lumber is graded, regraded, checked, inspected and sorted by men with years of experience and training. Weyerhaeuser thoroughness makes for uniformity in grades.*

*This alley in the storage and drying yard of one of the Weyerhaeuser mills gives an idea of the immense quantities of lumber accumulated by this organization to take care of the needs of its customers. The higher grades are protected in storage sheds.*

## The Importance to Industry of Uniformity in Its Lumber Supply

**T**HE industrial concern, hampered in one or more of its operations by a lack of uniformity in its lumber supply, will find it worth while to inquire into the service the Weyerhaeuser organization is rendering to a wide variety of industrials.

This service insures a constant supply of lumber, uniform in grade, car after car. The tenth or hundredth car is like the first. The first car in the type of wood and in the particular grade best fitted to meet the requirements of the buyer.

Such a service reduces operating costs in many ways. Production is not hampered through lack of the right kind of lumber. There is no unnecessary wastage of lumber. Handling costs are reduced.

In short, the user is able definitely to standardize lumber practices and factory operations.

**T**HE Weyerhaeuser organization has for years studied industrial lumber needs. It has found that the best way to serve American Industry is to help a group of permanent customers find the wood best adapted to their requirements; and then to keep them supplied with the exact type of lumber in the correct grade, size and quantities they require.

Such a lumber service is made possible because of the timber resources, specialized

equipment and highly-trained personnel of the Weyerhaeuser organization:

A large supply of mature timber of fifteen different species, and many types within these species, sufficient for decades of cutting.

Scores of logging camps guaranteeing a steady stream of suitable raw material.

Fifteen complete modern manufacturing units.

Seasoning processes that prepare lumber scientifically for each exacting need.

A crew of men at all the plants, with years of experience in producing, grading and shipping Weyerhaeuser quality lumber.

A corps of salesmen trained to think as purchasing agents and buyers have wished for lumber sellers to think.

Distributing facilities backed by fifteen immense mill stocks and two great strategically located storage plants.

**E**ACH year more and more concerns are finding what this type of lumber service means in standardizing their lumber practices and factory operations.

The Weyerhaeuser Sales Company distributes Weyerhaeuser Forest Products through the established trade channels. Its principal office is in Spokane, Washington, with branch offices at 208 So. La Salle St., Chicago; 220 Broadway, New York; Lexington Bldg., Baltimore; and 4th and Robert Sts., St. Paul; and with representatives throughout the country.

### WEYERHAEUSER FOREST PRODUCTS SAINT PAUL • MINNESOTA

*Producers for industry of pattern and flask lumber, factory grades for remanufacturing, lumber for boxing and crating, structural timbers for industrial building. And each of these items in the species and type of wood best suited for the purpose.*

ters, the girl I'd left behind me; all of them in tears, saddened and subdued, very different from the jolly crowd who had kissed me good-by that morning. I wished that in some way I could comfort them, tell them not to grieve for me.

Then my thoughts turned to the mystery of death itself. I wondered what the sensation would be when the actual transition from life to death took place. And, I remember, I was amused when it occurred to me that I soon would know more about Heaven and Hell than did those wise persons who had so seriously described them to me.

For five long weeks I lay in a hospital bed, "balancing on the brink," but never once during that time was there any conscious effort on my part to prolong life, to beat off death.

Since that time I have seen many men die; and, like other men, I have sometimes wondered about this "greatest adventure," have rebelled against it when loved ones slipped away, have prayed for understanding. But from my own experience I know that when the Grim Reaper takes my hand he may find me unwilling, but not afraid.

## Pinned Under Fallen Rocks in Coal Mine

### THIRD PRIZE

I HAVE had several narrow escapes. Some of them were at sea, and others happened on dry land; but the narrowest of all came to me when I was working underneath the surface of the earth. Another man and I were working together in a coal mine located in Illinois. We were driving entry and had just fired a shot. The smoke cleared away and we started to work again, my partner a little in the lead. Then, without warning, a slab of slate fell upon me. I was stooping over and the weight of the slate and other debris bent me double, but did not render me unconscious. I recall trying to move, but the best I could do was wiggle my fingers a little. I was completely covered, so far as I could judge.

This happened about eight o'clock one night, and it was two hours later before the rescue workers got me out of the mine and into a bed. While the men were working to save me my thoughts were very clear; my past life came up for mental review, so to speak. I thought of it all, and of my desire to live, but I experienced no sensation of dread or intense fear.

When I was taken home my troubles were not over, for I had a mashed leg, one of my kidneys was injured, and my spine also was hurt. My people had but little hope for my recovery. For twelve days I hung on, and then came a crisis in which it seemed I must surely die. From what I was told later a clot of blood caused this crisis. But with the aid of the doctor I got through with that, too, and ten months later I was out again.

Twice, therefore, have I been at the point of death, and each time I knew my situation; each time I was conscious, and each time I was free from personal fear. I thought, rather, of the effect my death would have upon those who looked to me for support.

*The soap for  
every day  
in the year*

**I**F YOU have a clear, healthy skin you are proud of it. You know what an asset—and comfort—it is and you want to keep it in that condition. But perhaps you are so busy with other things that you haven't time to give much thought to the matter, and the result is becoming unpleasant. Adopt Resinol Soap for your toilet and bath and find your skin automatically cared for.

The soothing, healing, Resinol properties and its unusually cleansing lather enable this delightful toilet soap to relieve clogged, irritated pores, reduce the tendency to blotches, excessive oiliness, roughness, redness, etc., and restore skin health.

No nursery is complete without Resinol Soap. Mothers have found that it not only cleanses baby's tender skin without hurting it, but it helps to prevent rashes and chafing, and keeps his hair soft and silky. It is the soap for the entire family. Men like it because it gives such a quick lather, rinses easily and has no heavy perfume—only the refreshing and invigorating Resinol fragrance.

Get a cake today from any grocery or toilet goods dealer and use it night and morning. Trial on request. Dept. 3-E, Resinol, Baltimore, Md.

Soap*

# CURTIS WOODWORK

It is surprising how the addition of a china closet or the replacing of a door will enhance the appearance of a home. Good woodwork adds much to the appearance of a new house and to the value of an old one. Curtis woodwork has that quality and refinement of design which you would expect from a firm which has had 57 years of experience. It is so often imitated that it is wise to look for the trade mark on each piece—"1866" the year when we started with the intent to make the best possible woodwork, and "Curtis," the name we jealously guard by careful inspection of every piece produced. Look at the Curtis Catalog in your dealer's hands, or write the Curtis Companies Service Bureau, Clinton, Iowa.

## Why Not Improve the Old House With New Woodwork?

SOME people think that woodwork in a house is laboriously constructed by hand. They do not know that doors, windows, stairs, porches, mantels and built-in furniture can best be made in Curtis factories by expert Curtis workmen.

It is easy to rearrange your home—to install mirror doors—built-in bookcases—new molding or a breakfast nook. These things will make living twice as comfortable.

Manufacture on a large scale with costly machinery enables Curtis to include many refinements, which, if done by hand, would be highly expensive. Take, for example, the herewith illustrated china closet. Its moldings are a marvel of line, yet quantity production puts their beauty within reach of every purse. The shelves are adjustable. Double strength glass in the upper door; solid raised panels 7-16 of an inch thick below. Closet comes crated and wrapped, and sanded ready for the painter.

Woodwork means so much to the success of a house that it is well worth considerable study. See the catalog at your local Curtis dealers. Or send us the coupon.

C100 Entrance—The projecting roof of this Colonial design affords protection from the weather. Ask for free booklet on "Entrances and Exterior Doors."

C778 Wall Case Ironing Board. Requires no lifting and can easily be built in an old house. See our other designs in our free booklet on "Permanent Furniture."

## Does Anything Come After Death?

(Continued from page 7)

behind the march of present-day science. The scientist tells me that the head of a common pin is a universe, that inside it millions of atoms move in regular cycles, like the planets in the sky. I have seen it stated that two hundred and fifty thousand years would be required to count the atoms in the head of a pin. To me that is inconceivable; it exceeds my powers of imagination. Yet I do not reject the scientist's assurance as untrue because I find difficulty in imagining it.

"So with the conditions of life after death—because they are hard to imagine is no reason to doubt their reality. Suppose an Eskimo, whose whole experience with vegetation is confined to a few lichens or bits of moss, were asked to imagine an African jungle, how could he possibly conceive it? Yet our knowledge of the whole of life is as fragmentary as the Eskimo's knowledge of botany.

"An unborn child, even though he were a philosopher, would have no easy time making clear to himself the conditions of our earthly life. He lives without air; how can he live with it? He is absolutely dependent upon the cherishing environment in which he finds himself; and he cannot well imagine himself living without it. The crisis of birth would seem like death to an unborn child, if he could foresee himself wrenched from all the conditions which have hitherto sustained life.

"In our knowledge of life we are as yet only unborn children; our minds are in the fetal stage; we have only in the last few years begun to discover anything at all about the mysteries of the universe. Surely it need not discourage us if we find it difficult to imagine conditions in the unseen world as created and guided by an Infinite Intelligence."

THERE was another pause, and when he spoke again it was with the voice of one who moves reverently over sacred ground.

"It was a great day in my mental experience when I suddenly realized that I had never really seen my own mother, and that she had never really seen me," he said.

"My mother was a very great influence in my life. I knew and loved every detail of her features, every tone of her voice, every glance of her eye. Yet it dawned upon me like a great light one day that these were not herself; that love, consciousness, mercy, thought, affection, hope, charity—all her *real* attributes—were as invisible to me as God himself. Back there in the unseen, back somewhere behind the eyes and the lips she was signaling to me; and I, out of the unseen, was signaling back to her. But we did not see each other; we could not possibly picture our real selves to ourselves or to each other.

"There is this mystery in every human conversation: each of us is invisible, just as invisible as God. To-day, at this hour, we are citizens of the unseen world;

This is how "telephone paper" looks to the microscope. Note the crisscross fibres, a mark of pure linen paper.

The Watchdog of the Telephone—the condenser. So called because it keeps electric currents where they belong. Winding the condenser, from linen paper and tin foil.

## Paper! in your telephone \*

UNSUSPECTED because unseen. But it's there. And it gets into action every time you say "Hello!" In helping to keep voices on the telephone track, paper has long proved its value. Each year the Western Electric Company uses 5,500,000 pounds of it in the production of a million telephones and 6,000 miles of telephone cable.

**Western Electric**  
Since 1869 Makers of Electrical Equipment

*\*No. 1 of a series  
on raw materials.*

For days the cable is kept in an oven heated to 230°. This thoroughly dries and seasons the paper covering.

Your "Hello!" travels over wires which have been wrapped in paper. Paper is a great insulator. It helps to prevent your message from getting tangled up with messages on other wires.

This machine twists the paper-covered wire into a cable "core." Your conversation has plenty of company in a cable—as many as 1200 people talking at the same time.

## Helps you men look your best

*How a certain ingredient in Williams' actually benefits the skin*

**M**EN used to think that all a shaving soap could do was to give a good heavy lather. But Williams' Shaving Cream does far more than that. It not only softens the beard quickly but is of actual benefit to the skin.

### What one ingredient does

There is in Williams' a certain ingredient which is distinctly helpful to the skin, leaving it supple, soft and pliant after every shave. You can feel the smoothness of this ingredient by simply rubbing a bit of Williams' Shaving Cream between your fingers.

Williams' lather containing this ingredient is heavier, thicker, more profuse than you are accus-

tomed to. It acts as a cushion for the edge of your blade, keeping the skin resilient and making the whole shave a delightful one.

### Soothing after-effect

After the shave, this same ingredient has a pronounced soothing effect on the skin. You are pleasantly aware of this effect because of the feeling of utter comfort and relief that comes at the end of every Williams' shave. Use Williams' regularly and see how helpful to your face it is.

### Trial Tube Free

On request, we will send you a "Get Acquainted" tube which contains enough Williams' Shaving Cream to let you test it fully. Mail coupon below.

*For men who prefer the Stick, Williams' Holder Top Stick gives you the genuine Williams' in stick form.*

to-morrow we shall not have changed our citizenship; we shall merely have been given eyes with which to see each other as we really are, and to see Him.

"I said at the beginning that the stronger men are, the more surely they lay hold upon faith in immortality," Doctor Fosdick concluded. "I would like to repeat that: I would like to say to the men and women who read THE AMERICAN MAGAZINE that it makes a difference whether they believe or do not believe in immortality. That it is not an academic question; that it is a matter which relates itself very definitely to their powers of doing worth-while things.

"One of the most futile men of our fathers' generation was one of the most gifted and best educated—but he accomplished almost nothing. Why? Because his mind let itself be poisoned by the feeling of futility; because the whole creation seemed a senseless show in which it was not worth while to take an active part. Because whenever he essayed a real man's task, the deadening spirit of Doubt would stand before him, asking with a sneer, 'What's the use of it all?' Of course, he accomplished nothing! Such men never do.

"It does make a difference whether you believe and what you believe. Religion is not a thing apart from life; it is life. Given the trained soldiers of King Charles on the one side, with their cynical contempt, and the consecrated peasants behind Cromwell, fired with faith in their cause, and there can be only one outcome. Faith carries men to the top and over the top; it gives them the sense of Something infinitely worth-while behind them.

"I WROTE a little book once on prayer. The president of a great corporation sent for five hundred copies and gave one copy to each of his five hundred salesmen. 'I want you to read this book,' he wrote. 'I don't care what your religion may be' (there were Jews, Gentiles, Catholics, Protestants, agnostics—all kinds among them); 'never mind the theology in the book, but get the message. If you can get a real grip on a Faith like that it's going to mean the greatest year that this company ever had.'

"His idea was right. There are only two alternatives: Either the whole universe is a whim, a caprice—purposeless, rudderless, and doomed to destruction (in that case, human history when it is over will prove to be, to use Arthur Balfour's words, 'A brief and discreditable episode on one of the minor planets'); or else there is a God behind it all, watching the battle, guiding it, managing the whole creation as a vast mechanism for the production of Personality and Character, which are eternal.

"You can take your choice. You can, if you choose, regard your life as one instant in a 'brief and discreditable episode.' Or you can think of yourself as Jesus Christ thought of Himself, as a Son of God and heir of eternity. But don't imagine that it makes no difference what or how you think. It is not by chance that the great men of the world have been believing men. They were great because they had the courage and imagination to believe greatly."

The rug on the floor is Gold-Seal Art-Rug No. 518. The 9 x 12 foot size costs only \$16.20.

**"I can hardly believe you paid only \$16.20 for this beautiful rug."**

A genuine bargain—these beautiful *Gold-Seal Art-Rugs*. They cost so much less than woven rugs—and they're so easy to clean and care for.

Their charming patterns will amaze you—elaborate Oriental designs for living and dining room—simple, dainty ones for the bedroom—conventional patterns for kitchen and bathroom.

And you will find Congoleum Rugs so practical too. Nothing will stain their smooth surface. A few whisks of a damp mop leave them clean and spotless—and they always lie flat without fastening.

COOKS THREE THINGS AT ONCE

## The most enjoyable kind of entertaining

**YOU** can prepare an informal supper on the Armstrong Table Stove right at the living-room table—crisp waffles, creamed oysters on toast, club sandwiches, or any tempting hot dish!

This remarkable stove cooks three things all at the same time. The heating unit is in two parts. You cook above, between and beneath—boil, broil, steam, fry, toast, and bake wonderful waffles! And the Armstrong Table Stove, with its distinctive square shape and snowy white enamel which heat does not tarnish, harmonizes with your nicest silver and china.

Ask to see an Armstrong Table Stove at your electrical or hardware dealer's. Price \$12.50 with aluminum toaster, deep broiling pan, griddle, four egg cups and rack; and sparkless tilting plug which controls heat by lifting off—no tugging or pulling. Write for our folder, "A Week of Menus"—breakfast, lunch, afternoon tea, dinner and late supper for seven days.

### THE ARMSTRONG MFG. CO.

Cooks 3 things at once

# The Marvels of Artificial Legs and Arms

(Continued from page 29)

bringing his left foot up to the same step; and he continues all the way up with his right foot first.

A wooden leg has to be carefully fitted and adjusted to the individual's height and weight. Everything but the fitting of the socket can be done without the prospective wearer's presence; but for the fitting of the socket it is usually necessary for him to go to the factory.

Some time ago, a negro, a giant of a fellow, who weighed over two hundred pounds, ordered a leg for an amputation below the hip. It was made as the manufacturers thought it should be. The only way it differed from the leg made for a white man of his size was in the color. A negro usually wants his leg made the color of his skin: a chocolate brown, light or dark as may be. Legs for white persons are made a flesh tint. But when this negro came in on crutches to try his new leg, he burst forth into a loud guffaw.

"Where's the hoss what's lost his leg!" he cried. "That member sho' wa'n't made for this heah pusson!"

He could not be induced to try it on, but went away saying he would send a picture of the kind of leg he wanted. A few days later I received from him by mail a picture of the leg that had aroused his admiration. It was from a catalogue of artificial limbs, showing a short, very slender leg that would have done for a boy of twelve or fourteen. Soon after his letter arrived, in came the negro to see if we could make him a nice little leg like that. I showed him a sample of the boy's leg, putting it alongside of him so that he could get an idea how it would fit. Again, he burst into a roar of laughter, for the leg was not long enough by several inches.

Finally, controlling himself, he said the joke was on him, and that he guessed he'd do better with the "hoss's" big leg than he would with the boy's little pink one.

**FIRST** of all, when a man is to be fitted with a wooden leg, he must have the amputation reduced. That is by massage and by wearing what is called a "preparatory" leg. What remains of the natural leg must be reduced as nearly as possible to its permanent size. This procedure is useful, also, in toughening and strengthening the tissues and muscles.

Many people ask how a man can stand it to walk with his weight on the end of his amputated leg. The answer to this question is, of course, that he can't. The end must not touch the bottom of the socket at all. If it does, serious trouble is bound to result. All the pressure must come upon the *sides* of the amputation.

Revenue officers have accused some people with wooden legs of storing contraband materials in the sockets of their wooden legs. And I know a good many men who regularly use the space as a sort of safe deposit vault. I have known a few men to keep jewelry there;

and more than once, on exploring the socket of a leg left with us to be repaired, we have found forgotten wads of bank notes!

Do accidents happen to people's wooden legs? The other day a man in Trenton, New Jersey, stepped into a coal hole and fell forward with such violence that his wooden leg snapped off below the knee. If he had not already lost his natural leg he might have broken it.

A few years ago, a man was standing on the platform of a railway station at Gary, Indiana. He was struck by a train, and one of his legs was run over. There was a loud crashing and grinding, but, happily, the member he lost in that accident was his wooden leg.

**THE** other day a man was knocked down in New York City by a taxicab. On getting up, he limped shockingly; but, strangely enough, he told people who came to his aid that he wasn't hurt at all. He hobbled a few steps, then almost fell. A policeman insisted that he ought to go to a hospital, but the man said a taxicab would do instead of an ambulance. He spoke a few words quietly to the policeman, after which both the policeman and the injured man *laughed*—to the amazement of the spectators.

The man had lost control of his wooden leg because the knee joint had been bent by the taxicab so as not to respond to the pull of his shoulder suspender. He went to a hospital; but it was one for artificial limbs, where his leg was fixed in a few minutes.

Many people ask how far a man can walk with an artificial leg. Usually they are surprised to learn that men with wooden legs have made fine records as athletes. One man with two wooden legs walked a mile in thirteen minutes. Another, with the same handicap, made a record for the high jump of five feet and seven inches; still another won the mile bicycle race in two-eighths; and a man with one artificial leg did the hundred-yard dash in thirteen seconds—records made under official supervision at the Iowa State Fair and at Pittsburgh, Pennsylvania, during athletic meets of the Railway Association of Cripples.

Have you ever grown very fond of an old pair of slippers? Do you dislike very much to "break in" a new pair of shoes and to give up those that have become an "easy fit"? Then you will understand how a man who wears a wooden leg becomes very fond of his artificial member. If his leg has to go to the repair shop and he hasn't another to take its place, he feels completely at a loss. He is used to the old leg; and the leg, as you might say, is used to him. They fit each other exactly. Really, when a man has to give up his old leg it is about as bad as having a death in a family.

There is a business man on Broadway, New York,—and there are many parallel cases in Boston, Chicago, and St. Louis—

## Is Your Time Worth \$50 an Hour?

**FIFTY DOLLARS AN HOUR** would be a mighty satisfactory price to receive for your time, wouldn't it? Yet, as a matter of fact, it may easily be within your power to invest a certain portion of your time in a way that, provided you are sincere and conscientious, will surely bring you that return—very possibly even more.

Some time ago, an analysis of the relation of education to earning power—made by one of the largest philanthropic organizations in the country—demonstrated the fact that the average adult gets back in increased earnings the sum of thirty dollars for every hour spent in well directed study.

That certainly throws a new light on study habits, doesn't it? But read what follows.

This university trains men in their spare hours at home for specialized activities in the higher fields of business. Its resources of over seven and a half million dollars make possible the maintenance of staffs comprising many of the leading business specialists in the country.

It conducts its training by the LaSalle Problem Method—distinctive with this university—whereby the student gains not "book learning" but actual practice and experience, at every stage of his progress. He learns to do by *doing*. To all intents, from the moment he begins he is actually performing the work of the position he is training to fill.

Naturally you would expect the rewards to be higher for the man who trains this way than for the man who follows a less intensive—a less practical method.

The facts show that the gains *are* greater.

It is a matter of record—established by the facts in our files—files built out of the experience of the four hundred thousand men who have enrolled with LaSalle—that the time invested in the study of any highly specialized LaSalle course by the average member who *completes* that training, returns him in increased earnings not less than \$50 an hour.

Indeed, we have many reports showing that spare hours spent at home with LaSalle training have resulted in increased earnings which—when

apportioned over the ordinary period of a man's business activity—would show a return in excess of \$100 an hour.

Such reports are by no means unusual.

But it is safe for *any* man to expect—and with every prospect of realization—that with diligence and sincerity he can make the time he devotes to acquiring LaSalle training yield him returns at the rate of \$50 for each hour so invested.

LaSalle has no magic formula—no marvelous cure-all.

All that it does—as witnessed by the progress-records of 400,000 men—is to provide an effective way to help men help themselves.—Which is all the right man *needs*.

But that, as we see it, is a mighty big, a vitally important task and we feel and realize the full necessity of living up to the tremendous obligation it carries—because it is our job as it is our privilege to serve one of the most sacred things in human life—ambition.

To the man who "doesn't care," LaSalle means nothing.

But to the man who is looking for "the way," this institution has a message.

UNIVERSITY**

*The Largest Business Training Institution in the World*

HYDE PARK, LONDON\*

Hon. Freddy—"Haven't the foggiest, old dear—Ridley, do we use tyres?"

Ridley (waxing warm)—"Kelly-Springfields, sir—American, nothing to touch 'em—never blow or skid—a bit of ool right, sir, if you ask me!"

**T**HE qualities which a motorist seeks in tires are the same practically all over the world. These qualities are long mileage, freedom from trouble, safety from skidding, and low cost. Since Kellys combine all these qualities to a marked degree, it is not surprising that they have become internationally famous. It costs *no more* to buy a Kelly.

who lost both arms above the elbow. Yet with artificial arms he can do almost anything a man can do with his natural hands. He dresses and feeds himself, carries his own luggage when traveling, and manages his own correspondence. He runs a typewriter at a rapid rate, striking the keys with rubber-tipped metal rods which are held between the fingers of the artificial hands. Often he writes personal letters with a pen. He takes up the pen in his right hand between the thumb and first finger, straightens it with his teeth, and then, using the Palmer method of writing and moving his whole arm and shoulder, he writes far more legibly than the average man will take the trouble to do.

How can he do these things? How do you do them? You move your hands and arms by muscles which extend from finger tips to shoulders. But he moves his hands and arms in any direction and rotates his wrist through mechanical control from the shoulder.

The upper and fore arm of such an artificial member is made of willow. The hand itself is made of an alloy which is very strong, but lighter than steel. You could hang a hundred and forty pounds of weight from any one of the fingers. The arm is built to carry seventy-five pounds as a regular thing and is guaranteed against injury while doing such heavy work.

In the wrist is a mechanism which is controlled by a few simple movements from the shoulder. A slight shrug pulls a cord which operates a spring in the wrist. This causes the fingers and thumb to open, and they are then mechanically locked in this position. Thus, with an artificial arm a man can stoop and open his fingers so as to pick up a dime from the floor. A second shrug—the same movement as before—and the fingers close upon the coin, and again the hand is mechanically locked, this time in a closed position.

The wrist itself rotates very much in the fashion of a natural wrist. If a man is eating soup, for instance, he simply raises his arm, bends the elbow, and the wrist then automatically rotates a quarter of a circle, bringing the spoon directly in front of the mouth in the usual position.

**SUPPOSE** you had to accustom yourself to wearing an artificial arm. It would take you less than an hour to memorize all the movements required to operate it. Then it would simply be a matter of patience and practice before the arm would be almost as useful to you as the one you had lost.

If you had lost, say, your right arm, you would begin at once to train your left hand to take the place of your right, and you would learn to do with your new artificial right hand all the things you once did with your left. Under these circumstances, a bookkeeper, accountant, or lawyer, learns to write with his left hand. A mechanic learns to hold his chisel, or any other tool, in his right artificial hand so that he can strike blows with a hammer in his left hand.

You would soon learn to carry your hat and overcoat in your artificial hand, leaving your natural hand free for shaking hands, moving chairs, and so on. You

would hold a letter in your artificial hand while opening it with a paper cutter in your left hand. Your right hand would hold the brush, and you would wash your natural hand without help. In tying your cravat, you would hold one end in your artificial hand and wrap the loose end around it with your natural hand. When playing cards, you would hold the cards in your artificial hand and play with your natural hand.

What do you suppose is the hardest thing for a man with two artificial arms to do? You would never guess, for most of the things you would think the hardest for him come easy, while certain very simple things prove to be very difficult. The hardest thing for a man with two artificial arms to do is to go into a strange hotel room in the dark and turn on the electricity.

**THREE** men, each of whom had lost both arms, recently fell into conversation about their experiences. One of them said that when he first tried to put on his collar and tie, he had not understood the use of the hooks, very similar to button hooks, which make dressing comparatively easy. He had spent nearly half a day getting on his collar and tie, though later with the aid of hooks he had learned to do it in a few seconds.

Another man said, "I'll never forget my first experience in putting on my socks. I had not had my artificial arms very long, and I had not learned all the tricks the maker of the arms said he would teach me. Anyhow, I got the notion it was time I should dress myself, and I did pretty well until it came to the socks. They kept slipping out of my fingers, but after two hours I did get them on."

"Then I said to myself that there ought to be some simple way out of the difficulty, and I went to the manufacturer and asked him how a fellow could start dressing before breakfast and get through in time for dinner. He showed me a lot of simple methods. 'Just have loops put on the back and front of your socks,' this man told me, 'like the loops on the back of your shoes. Slip a finger through each loop, hold the sock open, put in your foot, pull on the loops, and, presto, the sock is on!' It worked like a charm, and I wondered that I hadn't thought of it myself."

"Now," said the third man, "I'll tell you something to do that is really hard. One night I went to a strange hotel in St. Louis. The bell boy carried up my luggage and admitted me to the room. Then someone called from down the corridor, and he dashed off without turning on the light. I was stranded. I hoped my eyes would grow accustomed to the darkness and be able to locate the fixture, but the room was on a shaft and there wasn't a glimmer of light."

"I thought at first that I would call for someone to turn on the light. Then I said to myself that I was not going to be stumped by a little thing like that. I began to 'feel' along the walls, and then raised my arms hoping to come in contact with a fixture in the middle of the room. I didn't strike a thing. Finally, I made a bargain with myself, for I was pretty angry. I said, 'You'll turn on that light or go to bed in the dark!'

## HEINZ Tomato Ketchup

There's more ketchup in a bottle of HEINZ Tomato Ketchup than in a larger bottle of ordinary ketchup. More tomato and less water. Sound tomatoes and no artificial preservatives. Luscious red ripe tomatoes and no artificial coloring matter.

H. J. HEINZ COMPANY

## The freshness and charm of youth

What more engaging than women who, far into middle life, still retain the radiance, the freshness and the charm of their youth?

Why are such women the rare exception rather than the rule?

Simply because of the prevalence of wrong eating habits!

The greatest menace to the health, beauty and vigor of American women lies in the food they eat. Too many foods are entirely devoid of a precious element without which you cannot have strength, vitality, firm tissues or clear, youthful skin.

To supply this deficiency, eat Yeast Foam Tablets. They are the richest known source of an element you need.

Yeast Foam Tablets are whole, selected, dried yeast. Easy to take; they keep and they don't cause gas.

Get them from your druggist; eat them regularly and see how much better you look and feel.

"I began all over again at the door and went around the walls of the room several times, holding my arms at different levels. Occasionally I struck things and I clamped my fingers down on every kind of a projection. One thing I struck was a knob on a picture frame, and I kept trying to turn it, thinking at the time that it was an electric light button. I never was so thoroughly conscious before of what it meant to be without feeling in the hands with which I'd got accustomed to doing almost everything.

"At last, I thought I'd try to figure it out with my head. It seemed that there could be only one fixture in the room. Where would it most probably be? Over the head of the bed? I hadn't investigated that part of the room, and now I climbed upon the bed to feel around. My arm came down with a bang on what sounded like a brass fixture. I felt of the thing with my face, rubbed my cheek against it. I had it all right! It was cold. I thought I could tell the difference between the metal part and the crinkly glass globe. But somehow, neither with my face nor with my hands, could I locate anything like a button. And finally, I had to keep faith with myself and go to bed in the dark.

"In the morning I was up at daylight for a look at that fixture. What do you think? The light didn't work by a button at all. It worked by one of those chain pulls, and the chain hung down at the back where I couldn't have reached it with my face. I figured that I must have hit that chain with my hands when 'feeling' around it, but my hands hadn't been able to tell me what it was. As soon as I saw the situation, I got into my arms, caught hold of the chain, yanked it, and said to myself 'There, by golly! I've found you and got light out of you. Now I don't care if you burn all day!' I felt a lot better after that."

IN THE United States, there are about the same number of people wearing artificial hands and arms as there are wearing artificial legs—a million. Less than a third as many people wear artificial eyes—about three hundred thousand.

In the past few years there have been wonderful improvements in artificial eyes, as there have been in artificial limbs. You used to see people with glass eyes which were really disfiguring because of the hard glint and glassy stare. They were easily detected, too, because they did not move. Those were the old "shell" eyes; but the modern type of artificial eye has what is called a "full" back, and it is constructed in such a way that the muscles of the eye can grasp it. It moves in conjunction with the natural eye in a very lifelike manner, and the casual observer is not very likely to detect it.

The making of artificial eyes is a very special business. So far as I know, there is no firm in the United States which makes artificial limbs and also artificial eyes. The things I am going to tell you on this subject came to me through one of the country's largest manufacturers of glass eyes.

"People who are particular about their appearance," he said, "have their glass

eyes made to order by men who have a discrimination for color as delicate as any artist. They work right in front of the person whose eye is to be imitated, making an exact model in color of the natural eye. The artificial eye is made from this model by difficult and more or less secret processes of baking and fusing. The iris has the same color as the person's natural eye, and the white of the eye has even the same delicate little veinings.

"Some time ago a woman customer of mine came to me for a duplicate of the eye we had made for her years previously. At that time she had had three eyes made up. On the morning of the day she came with a hurry-up request for a duplicate—she had broken the last of the three eyes by dropping it on the bathroom floor.

"She said that before she and her husband had married, eight years before, she had told him she wore a glass eye. He had laughed and said he would believe it when he saw it. During the eight years they had been married, she claimed, she had managed so that he had never seen her when the eye was not in place. She was very anxious to get a duplicate at once; she said she would never go home until she could be certain of looking natural to her husband. She was planning to stay with a relative until the eye could be made.

"WOMEN are our most particular customers. Sometimes a man will not take the trouble to have an exact color model made; but a woman is only too glad to take any trouble required to get a perfect match.

"A good many people who cannot go to the eye manufacturer to have a model made order their eyes by mail. Such an order is filled by selecting what seems to be the nearest size and color from an assortment of fifteen thousand 'stock' eyes. To fit a person well we require information concerning the shape and condition of the eye socket and a description of the color. Sometimes people send as a sample the glass eye they are discarding. If the customer can have an artist with good color discrimination make a color sketch of his eye it helps us greatly.

"The cost of an eye from stock is six or seven dollars. One made to order costs fifteen dollars.

"In Chicago there is a prominent lawyer who wears both an artificial arm and an artificial eye. He is very particular about his appearance though not oversensitive. By day, his hand is covered with a gray silk glove. When he goes to any very formal social affair, his hand is covered with a white kid glove. His eye he has made to order, and for different occasions he wears different eyes.

"The two kinds of eyes he wears have the same colored iris, of course, but they differ in the size of the pupil. In the daytime, the pupil contracts because of the bright light, but at night the pupil enlarges to adapt itself to the weaker light. That is why, in order to have his eyes look alike, the lawyer wears an eye with a small pupil by day and one with a larger pupil at night. The lawyer is not alone in this practice. A large number of people who are especially fastidious about their appearance do the same."

"Save the surface and  
you save all" — *Paint & Varnish*

SPRAY PAINTING  
a modern development

## Don't neglect the Skyline

—it is crowded with things  
that need Paint

**B**UT why paint a water tank—or for that matter, a gas tank or oil tank? Why go to the trouble and expense of painting the metal work on skylights and signs? Is it merely to improve their appearance, that metal smoke-stacks are regularly painted, often at great expense and with risk to life and limb?

No. Here appearance, though important, is secondary to the fundamental reason for painting—saving the surface.

Think of the roofs, too—millions of them—lashed by rain—assailed by wind and storm—burned by the sun—victims of melting tons of snow. Without the protection of paint, roofs fall into leaky ways. Property is damaged. Costly repairs are made necessary. Properly protected by paint, roofs will last indefinitely.

Fire escapes, ventilators, in fact *all* exposed surfaces of metal and of wood should be regularly protected with paint. You may put off action, but deterioration never does. Rust and rot go on till you check them. Paint and varnish **NOW**, or you'll pay far more, later, for repairs and replacements. Don't put it off—put it on. Save the Surface and you save all.

SAVE THE SURFACE CAMPAIGN, 507 The Bourse, Philadelphia. A co-operative movement by Paint, Varnish and Allied Interests, whose products and services conserve, protect and beautify practically every kind of property.

# Each of These Willard Batteries is as Good as We Can Make It

## *This One is Insulated with Wood*

Between each positive plate and its negative neighbor—insulating them from each other—is a carefully selected and treated wood insulator.

It possesses the best combination of durability and porosity—the two essential qualities of a good insulator—that we have ever found in any *purely natural* product.

Otherwise, it is like every other Willard Battery—as good as we can build it. Plates, jars, connections, acid-proofing and sealing represent the best value that Willard's long experience can put into it.

It is the battery that first built Willard reputation and is more sturdy and reliable today than ever.

## *This One is Insulated with Rubber*

Between the plates of this battery are Willard Threaded Rubber Insulators—invented by Willard seven years ago.

Rubber is the best acid-resisting and insulating material known—greatly reducing the probability of repair expense. The 196,000 threads piercing each insulator make it more uniformly porous than any natural product—which increases the force and amount of energy.

Threaded Rubber makes the cost—and hence the price—of the battery slightly higher, but this is more than offset by freedom from repairs and sustained high voltage to spin the motor.

# A Taxicab Driver Hasn't Eyes in the Back of His Head

(Continued from page 63)

to our office. They feel that the driver sent in response to such an order will be more responsible even than the driver of one of our cabs which might be hired casually on the street. And these out-of-town people who go sight-seeing almost invariably have the driver take them along the same routes—up Fifth Avenue, along Riverside Drive, through Central Park, or through the Bronx Zoological Gardens. Young country couples sometimes leave the matter of where they shall go entirely to the driver, simply asking for a "pretty drive." Usually, the driver takes such a couple through Central Park, and if he catches a glimpse of them holding hands, he knows he has made a wise choice. When two men from out of town start out sight-seeing in a taxicab they usually drive first through lower Broadway and Wall Street.

New Yorkers as a general rule hire the first cab they happen to see on the street. If they order a cab by telephone it is likely to be because they want it at a certain hour to take them to the theatre or to a railroad station. But not always. We have found that eloping couples usually summon a taxicab by telephone, and they make a point of having the cab pick up the young woman first. The man gets in later. They seem to think that thus they are more likely to escape parental interference; but I have an idea that this simple plotting is due simply to the desire of youth for romance.

A YOUNG fellow telephoned an urgent order a few weeks ago for one of our cabs to call for a young woman at Ninety-sixth Street and Central Park West. When the taxi arrived the young woman instructed the driver to go down Eighth Avenue to Twenty-third Street. At this point a young man entered the cab, and it was at once apparent that he was in charge of their destiny. He said one word, which meant as much to the driver in view of the other circumstances as though he had said: "I am Romeo; she is Juliet." That word was Hoboken.

When the cab had crossed the ferry to Hoboken the young fellow asked the driver if he could take them to a justice of the peace, and it happened that, from previous experience, the driver knew the shortest way to the justice. After drawing up in front of the justice's office, the driver remained in his seat just as though he did not know what was going to happen next. The couple went inside, but the young man very soon came out and began to stammer:

"I—I say, would you do us a big favor? We're over here to get married, and we've forgotten to bring a witness. Would you mind?"

"Certainly not," said the driver.

When the bridal pair were getting into the cab for the return trip the young man said, "You don't seem very much surprised. Maybe this is in your regular line of work?"

"It used to be," said the driver. "During the war I once served as a marriage witness three times in one day. But nowadays things are pretty slow. You don't hear of elopements to Hoboken oftener than once in ten days or so."

The majority of people who ride in taxicabs are in a hurry, or say they are in a hurry. If the passenger is going to a train or steamship we assume that he is *actually* in a hurry, for in these days of rapid transportation nobody seems to want to start for a station so early that he will have any time to spare.

Few people who tell the driver to make time, however, have such important business on hand that they are willing to pay ten or twenty cents additional fare. When a driver, to make time, turns off one of the main thoroughfares and follows the side streets to avoid traffic the average "man-in-a-hurry" raps on the window and asks why he doesn't go the shortest way. When the driver tells him he can make better time by going a few blocks out of his way the passenger usually says to go the shortest way possible, anyhow.

I MUST tell you the story of the man who was in the greatest hurry of all the people who have ridden in our taxicabs in recent years. Wearing a brown derby and a shepherd plaid suit, he rushed out of an apartment house near Broadway and Seventy-sixth Street, hailed a cab and cried to the driver, "Quick! Get me down to J. P. Morgan's office just as fast as you can! I've come into possession of all these railroad properties, and Mr. Morgan wants to see me!"

During the ride down-town, he exhibited a feverish anxiety for haste, rapping on the window and urging the driver to proceed regardless of traffic regulations. When the taxi drew up in Wall Street, the man jammed his hat down on his head, cried "Wait!" and rushed up the steps of the financier's office building. Two minutes later he came out and breathlessly exclaimed, "Mr. Morgan is too busy to see me now! I must go right up to the College of the City of New York to see the president of that great institution. Get there just as fast as you can, or it may be too late!"

So the cab hurried up-town several miles beyond the point from which it had started. At the executive offices of the college, the passenger got out, but again he returned quickly.

"We'll have to drive up to Tarrytown to see John D. Rockefeller," he said. "Can you make it in an hour? He's waiting for me?"

"I should say we couldn't make it in an hour!" returned the driver. "No chance! You'd better pay your fare now and take a train."

The man looked at him blankly for a moment. "My fare?" he said; "I'd like to accommodate you, but I haven't a cent in cash just now. Take me up to see Mr. Rockefeller, and if he does business with

Jim Henry's Column

Mennen's is the best shaving cream for wet-shave faces.

**Why skin conditioned with Mennen Shaving Cream never chaps**

You don't have to be a skin specialist to know that when your skin becomes dry and hard it cracks in cold weather. Also, any man who ever shaved with strong, harsh soap or cream remembers how dry and smarting his face felt afterwards.

When you shave with Mennen Shaving Cream your skin never becomes hard. It is soft and pliable after shaving and stays that way.

There are two reasons. In the first place, Mennen's is so bland and perfectly balanced—is so totally without free caustic—that it doesn't deprive the skin of necessary oils, the way a harsher soap does.

And all the time Mennen lather is actually soothing, healing and invigorating the skin. This result is accomplished by our wonderful Boro-glycerine—a mildly antiseptic emollient which softens and relaxes skin tissues. Boro-glycerine is an important element in Mennen Shaving Cream and is conducive to skin health, clear complexion and the freedom from sensitiveness or itching enjoyed by men who use Mennen's.

But to get back to the beard. I am not going to attempt to explain by what magic process Mennen creamy lather reduces the meanest, toughest beard that ever bristled, to the soft non-resisting consistency of the fur on a kitten's chin. I say it does it and you know it does it ten seconds after you lean a sharp razor against a Mennen chastened beard.

This first test will convince you as to other superiorities of Mennen's. It doesn't have to be rubbed in with fingers. The lather never dries on the face. Mennen's works equally well with cold, hot, hard or soft water.

Why not try it? Go to your favorite store and buy a giant size tube, containing nearly 300 shaves. I'll refund your money if you are not satisfied that Mennen's is the best shaving cream in the world.

THE MENNEN COMPANY  
NEWARK, N. J., U. S. A.

(Mennen Salesman)

# He smokes a meerschaum pipe fifty years old

**Packed with Edgeworth he  
thinks no other pipe can  
compare with it**

We have run on the case of three generations of pipe smokers preferring the meerschaum pipe to all other pipes. Not only that, but all three generations smoked the same meerschaum pipe (in turn, may we be allowed to add).

For further details we refer directly to the present owner of the ancient pipe.

"Dear Sirs," he wrote us. "I have a meerschaum pipe originally purchased and smoked by my grandfather. When he died, he willed it to my father, who smoked it continually throughout his lifetime.

"When the pipe came to me, I was a little dubious about accepting the family responsibility of keeping up the tradition. I tried sev-

eral brands of tobacco in the pipe and they all made me sick. Then someone suggested Edgeworth.

"From that day to this I have smoked no other tobacco—no other pipe.

"Give me the old family meerschaum and a little blue can of Edgeworth and I can get all the enjoyment out of smoking there is any time of day or night.

"Perhaps I'm prejudiced, but that's the way I feel about pipe smoking. And that's the way I intend to feel as long as you continue to make Edgeworth."

Well, we can reassure our correspondent on that point, for we intend to go on making Edgeworth just as long as there are smokers who would give up smoking if they couldn't get Edgeworth.

And we intend to go on making friends for Edgeworth by sending out more free samples.

So if you haven't tried Edgeworth, send us your name and address and we will immediately forward to you generous helpings of both Edgeworth Plug Slice and Ready-Rubbed.

For the free samples, address Larus & Brother Company, 25 South 21st Street, Richmond, Va. If you will also include the name and address of your tobacco dealer, it will make it easier for you to get Edgeworth regularly if you should like it.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

me I'll be fair with you. We'll divide the profits. Look here!"

And the man drew from his pocket three savings bank books bearing a woman's name. Upon examining them the driver found that they showed credits for ten thousand dollars.

"Maybe you can advise me what to do," said the passenger anxiously. "Here I am ready for business, and I can't find a man to take up a wonderful bargain in railroading."

"I'll find you one!" said the driver. "Jump in!"

His passenger complied, and the driver brought him to our office. After a short interview with the man, who took me for a great financier, I came to the same conclusion that our driver had reached. We called the police. A few days later we learned that the man—formerly a member of the Bar in New York City—had been returned to the institution from which he had escaped, the Matteawan Insane Asylum. He had been admitted to his niece's apartment in New York by a maid, and upon going through her bureau drawers had realized his fond dream of becoming a railroad magnate. The niece cheerfully paid the fare for her uncle's whimsical journey, and she also expressed her appreciation of the fact that during his travels her uncle had been in safe hands.

SOMETIMES I think that rational people who seem in the greatest hurry have no more reason for their haste than this "railroad man." Only the other day, a man came out of a hat store on Broadway near Thirty-fourth Street, jumped into a taxi and said to the driver: "If you get me to 511 Fifth Avenue by three o'clock, there'll be something extra in it for you."

It was then a few minutes of three. Just as the taxi started from the curb, the passenger cried, "One minute! There's a man I know! Hello, John!"

Then the man got out, gleefully shook hands with the man on the sidewalk and, leaning against the taxi, began talking of old times back in Davenport, Iowa. The news his friend from back home had to tell about the wonderful new fountain erected in the square where they had played together as boys seemed of far more importance than any business he had on hand.

At three-fifteen the man who had hired the taxi invited his friend to get into the cab with him. Then, as rapidly as traffic would permit, the driver went to the Fifth Avenue address and drew up at the entrance.

"What are we stopping here for?" asked the passenger in surprise.

"This is the address you gave me."

"So it is," the passenger admitted; "but I don't want to go there now. We'll go for a ride. Take us through Central Park and up Riverside Drive."

Taxicabs are always in greatest demand on rainy days and in very hot weather. More people use taxicabs to avoid getting wet or to escape excessive heat than to get out of the cold. Perhaps they figure that in cold weather they can keep warm by walking fast, and also save money.

On rainy days we always have a great many of what we call "short-distance riders." The taxi driver must respond, of course, to any call that comes; but he is reluctant to pick up the short-distance

fares because the tip is usually small and he may just miss the man who might want to go several miles.

Recently, during a heavy rain, one of our cabs was passing the corner of Thirty-fourth Street and Broadway when four women signaled from the curb. The driver drew up, and the ladies entered, arranging themselves comfortably and with great deliberation.

"Where to?" asked the driver.

One of the ladies thereupon looked out the window and up at the sky to see if the rain showed signs of slackening. Smiling sweetly, she said:

"Drive down to the middle of the block to that awning, please!"

A man and two women were already under the awning, and when the four ladies had left the cab, having paid a fare of twenty cents, these three entered it. The driver was hoping for better luck this time, but the instruction the man gave him was:

"Let us out at the subway station at the next corner!"

A man asked me the other day why people so seldom go to church in taxicabs. I told him that he must be a "fair-weather" church-goer, because, if he had been to church recently on any but a perfect day he would have seen plenty of taxicabs drawing up in front of almost any large church in New York. In fine weather, of course, people who live anywhere near the church to which they belong enjoy a walk before the sermon. But there are many churches to which people go in taxicabs regardless of the weather.

The Cathedral of St. John the Divine, located on Morningside Heights, is the objective of scores of taxicabs on almost any Sunday. Many people drive from Riverside Drive in taxicabs to synagogues on the East Side. But more people go to Christian Science churches in taxicabs than to any other. For some time I was puzzled to account for this, but the reason is very simple. The homes of members of the congregation of a Christian Science Church are far more scattered than those of the congregations of other churches.

ANOTHER question people often ask concerns the amount of tips received by taxi drivers. They seem to think that the tips mount up to fabulous sums. The fact is, however, that if he receives as much as twenty-five dollars in tips in a week the taxi driver is doing well, and if he receives forty dollars it is exceptional.

In most of our large cities to-day the best tippers are the people who receive tips—waiters, especially head waiters, bell hops, high-priced barbers, beauty-parlor experts, and manicurists. Next comes the high-priced mechanic who is out for a ride on pay day. People who make a train or steamship which they would probably have missed but for the skill of their driver usually tip with liberality.

The very rich are always conservative in the amount of the tips they bestow. The day has passed when the rich Westerner, or the rich man from anywhere, tossed his money away in a fashion that made his millions notorious. Ordinarily, he gives the tip which seems to be regarded as reasonable after a ride between any two points on Manhattan Island—twenty-five cents. This sum is also the recognized tip for taxicab rides anywhere

# The Car for the Girl in Business

The modern business woman needs her own personal transportation medium. It saves time and increases her efficiency and earning power. Yet, because she is a woman, she also insists that her car shall measure up to a high standard of quality.

The Chevrolet Utility Coupé with Fisher Body, refined gray cloth upholstery, plate glass windows, Turnstedt window regulators, and other artistic fittings, streamlines and riding comfort, fully meets her quality requirements. Its mechanical efficiency and ease of handling make strong appeal, and finally its surprisingly low price and lowest per mile cost decide her choice.

STEPHENS TOURING CAR, 7 PASSENGERS, \$1295

## Seven new Stephens body types *\$1295 now Price of Touring Car*

Redesigned and refined in forty-two important details, the new Stephens Touring car at \$1295 establishes a peak level of motor car value never reached before.

Six other individual body types on two specialized chassis provide this same super-value in motor cars created to satisfy every transportation need and desire.

At the New York, Philadelphia, Cleveland, Chicago and San Francisco Shows, recognition of Stephens value-building was emphatic. The Stephens exhibit was a focus of interest at each Show.

### *Center of interest at Motor Shows*

Thousands of Stephens owners came in, only half believing that we could make such prices without slighting quality. Unit by unit, they found so much added value they bought many new cars.

Delco-Stephens ignition is new. Mather springs, also, Stromberg special carburetor, Saal chassis oiling and Kellogg power-driven tire pump. Timken axles, Fedders radiator, Gemmer steering and other standard units continue oversize.

### *Vital value in Stephens-built motor*

The Stephens-built motor, they told us, *with intake manifold inside the cylinder head*, means more to performance and economy than any group of standard units. Stephens low-swung, hand-built bodies are luxuriously comfortable.

See the Stephens cars *soon*. Study their powerful lines, balanced design, oversize units, unmatched equipment. Write to Moline for color catalogue today. Call on the Stephens dealer and give the type you like your own performance tests.

Motor  Cars

within the city limits of most of our large cities, such as Boston, Philadelphia, Chicago, and St. Louis.

People who ride in taxicabs have one thing in common with those who ride in trains and street cars—they are likely to leave their personal belongings behind them. The other day a woman got out of a taxi in front of a department store and left her little woolly, red-eyed lapdog asleep on the seat. After driving a few blocks the cab was hired by another woman, and as she stepped in the dog awoke, jumped up, and began to bark with all his might.

"Gracious!" the woman exclaimed. "What kind of a lion is this?"

The driver was as much surprised as the passenger, but with the courage of a Daniel he reached in, collared the disturber, and then tethered the little mop alongside himself in front. After delivering his passenger to her destination, he brought the dog to our office. As the owner of the creature had already informed us that her "Toodles" had been abandoned in one of our cabs, we were ready not only to receive him but to greet him by name. Within a few hours the anxious owner came and took her pet away. We were as delighted at the restoration as she was, for our lost-property man has no facilities for keeping live stock.

Everything in the way of lost articles except live stock we have on hand in considerable quantities, including raincoats, camera films, umbrellas, woman's hats, men's collars (size 16, slightly soiled), hammocks, books, children's paint boxes, brass electric fixtures, sweaters, spectacle cases, a miniature Chinese temple, a carved wooden souvenir of the Pocono Mountains, sea shells, cartridges, cigarette cases, hand bags, knitting bags, and school bags.

SOMETIMES people who claim to have lost valuable things in our cabs impress us as "peculiar," either by the vehemence with which they demand compensation or by their obvious embarrassment. Once a woman claimed that she had left behind in one of our cabs twenty thousand dollars' worth of jewels and securities. Her husband came to inquire about them, and he expressed some indignation that his wife should have been traveling about in a cab with her valuables. We made a thorough search and inquiry for the supposedly lost valuables, but did not find them, and I doubted whether they had actually been lost, because of the evasive manner of the woman when we sent an investigator to see her.

Six months later this woman notified us that all her valuables had been returned to her anonymously by mail. It then seemed necessary for us to inquire further into the matter, because of charges that had been made against our driver. What we found was that the woman had indulged in some extravagances in dress and in entertaining and so had had to go into debt. To pay this debt, she had put her securities as collateral and had pawned her jewels, without her husband's knowledge. To cover their disappearance she claimed to have "lost" them. As soon as she was able she had got her jewels and securities back, and she had notified us that they had been "returned to her"—apparently so we wouldn't feel bad. Since she confessed the truth, with apologies, we were glad to let the matter drop and

to inform our driver, who had been under suspicion, of the true circumstances.

The most valuable article ever left in a taxi to my knowledge was a bag containing seventeen thousand dollars in jewels. The owner, a woman, had got the jewels from a safe deposit box in the afternoon to wear at a party in the evening. On the way home she did some shopping. While she was arranging her bundles in the cab, the bag had slipped from her hand behind the seat. It was found that night by the man who washed the cab, and turned into my office. As the woman happened not to go to the party and so did not want the jewels, she never thought of them until morning. When she called us by telephone we were able to invite her to come to our office to identify the property. She asked to see the washer who had found them and, after expressing her hearty thanks, she gave him fifty dollars.

THE complaint passengers most frequently make concerns the distance traveled and the amount of the fare. Often the complaint is due to a misunderstanding on the part of the passenger. When a man has ridden between two points once and has paid eighty cents or a dollar for the trip, he seems to think that every time he goes over the same route the fare must be the same. However, the taxi meter registers *distance* as long as the cab is running, and it registers *time*, at the rate of ten cents for every four minutes when the cab is standing still, due to the stoppage of traffic or any other cause. Thus, in traversing Fifth Avenue or any other main thoroughfare, it is an easy matter for the meter to show a difference of ten or twenty cents in the course of two miles because of varying conditions of traffic at different hours of the day.

Another reason why some people are inclined to dispute the fare is because they reckon distance on the basis of twenty blocks to the mile. In traveling north or south in New York between the short blocks this calculation is correct, but most blocks running east or west are each equal to several short blocks. In traveling east or west in New York, the calculation should be on a basis of about seven blocks to the mile.

Of course the passenger is not always wrong in entering a complaint concerning the fare. A meter may be out of order or, in some cases, a driver may deliberately overcharge. However, reliable taxicab companies in all our large cities are doing all they can to-day to see that the passenger is treated with absolute justice in the matter of the fare.

I must tell you about one other thing we have discovered in conducting one of the biggest taxicab services in the country. While I have left this matter until the last it is far from being the least important. We believe that the safety of the public in the streets of our large cities has greatly increased *as a result of prohibition*.

Under prohibition we have paid in damages for personal injury only about one third (37.8 per cent) of what we paid for the same cause *before* prohibition. I have concluded that the only way to account for the difference is the sobriety of people in the streets; and I have to admit that our drivers are part of the public, and that since prohibition the standard of sobriety among them is almost absolute.

## The Search for Riding Comfort

FOR MORE than a generation automotive engineers have proved every possibility to secure the ultimate in riding comfort and spring protection for the motor car. They have come unanimously to the conclusion that leaf springs are not sufficient without devices for controlling the spring action.

Ten years ago Robert H. Hassler, Inc., produced such a device in the Hassler Shock Absorber—a device that won from the first a large following, and which is now approved by more than a million owners, including many of the country's largest corporations, operating great fleets of passenger cars and trucks.

Hassler Shock Absorbers control violent spring action, check the vicious and destructive upthrow after a big bump, make riding restful, and save more than their cost in reduced car depreciation, tire wear and lessened fuel consumption.

# Why I Am Forty-Five

(Continued from page 27)

pleasures of the table. Now, my stomach and I have been living together for forty-five years, and hardly a cross word between us—except about cheese. I have never stopped to visualize my stomach, but if I did I should conceive him to be a large, good-natured fellow, answering to the name of Bill or Mac. He hails an oversized broiled lobster with three ringing British cheers, and if I stand him an occasional drink of bicarbonate of soda there is nothing he will not do for me in return—barring only cheese.

What I am telling you in this interview with myself is my own formula for living at the age of forty-five. I don't stand back of it with any guarantee that it will suit you. Maybe your stomach is too spoiled to stand for the gastronomic calisthenics I have outlined for mine; pork chops and lemon pie may be your masters. Therefore I warn you that what you do you do at your own risk. Don't send any doctors' bills to me!

PERHAPS there is nothing which preserves the youth of middle age as much as being in love. A man of forty-five ought to be in love with some good-looking woman and, of course, his love ought to be returned. But the difficulty about this is that most good-looking women regard men of forty-five in that impersonal spirit with which they view the surrounding landscape or architecture. No matter how well preserved you reckon yourself at forty-five, you will no more provoke love at first sight than if you should be a figure in an allegorical group of sculpture, labeled "Thrift," or "Agriculture." The best you can hope for in the way of an approving look will be when some woman allows her eyes to rest on you for just an instant, as if to say, "Pretty fair for the period."

How, then, can a man of forty-five be in love with a good-looking woman and have his love returned? The only safe plan is to pick her out when you are about twenty-odd and marry her as quickly as possible, before she has time to realize that she is probably making a fearful mistake. I am aware that this advice is flying in the face of all the younger fiction writers and Henrik Ibsen. Half the stories written by some of our cleverest novelists in the last two years ought to warn me that almost any time now, my wife is likely to say to me: "For sixteen years, I have been nothing but a slave. *Your* will has been *my* will. You have ordered my life for me. I have been a cipher—a puppet. But this is the end. I am going out into the world to live my own life, and when the boy calls from the Pasadena Domestic Finish Laundry, don't forget to tell him that last week they were short two handkerchiefs and one of your best dress shirts, because you will never see me again."

In fact, I am lucky to have escaped this situation as long as I have. At least, that's what I am told by some of the ten best-sellers of recent years; but the information thus obtained doesn't square up with my experience. I will take the word of any one of the ten best sellers that his

wife might up and leave him in his forty-fifth year and disappear from his life forever; but I am confident that in my case I would receive a telegram the next day reading:

Why haven't you written? Is anything the matter?

Hence, my judgment based upon experience would be that the man of forty-five not only stands in no danger of having his wife disappear from his life forever, but that if she disappears from his life for as long as a period of four hours, he will receive at least one telephone message asking him if the youngest member of the household took her afternoon nap, another message demanding whether Onishi, the gardener, was spraying the roses as instructed, and still a third message that he should be sure to tell Sigrid the asparagus and strawberries were for luncheon tomorrow and not for dinner to-night.

Altogether, therefore, forty-five is an extremely satisfactory time of married life. Husband and wife know the best and worst of each other and have formed a final estimate by striking an average of past performances. At thirty, for instance, if one's wife lays down a novel and gazes absently out of the window, the husband might be justified in saying to himself: "Aha! She's going to do a Nora on me!"

At forty-five, however, you will know that this sudden abstraction has always ended by her saying something as irrelevant to the text of the novel as, "Is it Hedwig's afternoon out *this* Sunday or *next* Sunday?" Moreover, your knowledge is founded upon the history of your married life. She can't possibly tell you that for sixteen years she has been your slave and that *your* will has been *her* will, because the only reason why for sixteen years *your* will has been *her* will is that she willed it first. And why not, indeed? At forty-five, all that you have of property and reputation stands in your wife's name. When you married, you not only domesticated the Recording Angel, as Stevenson says, but you also domesticated the Great Incentive.

DO YOU mean to tell me—and remember that I am now talking to myself—that you are trying to write a successful play, or story, or article for the greater glory of a fat man aged forty-five, slightly overfond of his stomach and much given to lying abed in the morning? You know you are not. You know very well that every piece of work you turn out ought to bear, in addition to the imprint of the publisher and the usual copyright notice, the following inscription:

To M. C. G. and E. M. G.  
My Wife and Daughter  
Without Whose Incentive the Time  
Spent in Writing this Book, Play, or  
Article would have been Devoted to  
Idleness, Pleasuring, Eating, and  
Drinking

They are the real reasons why I hope to remain forty-five indefinitely. Without them I should have felt at least eighty more than five years ago.

# OLDSMOBILE

## *The New Brougham Combines Quality and Complete Equipment—No Extras to be Bought Later*

You have a right to expect these three essentials in any closed car you buy: A high grade chassis, a strong, handsome all-metal-covered body, and adequate equipment for safe and comfortable driving.

The new Oldsmobile Brougham gives you all these things, and at a price which is a direct challenge to every car in the same price class. How this is done will be explained in a moment—first, see just what the Brougham offers you.

**The Chassis:** Famous for its 40 horse power Four motor which has won numerous economy and endurance tests. Its 115" wheelbase is in marked contrast with the 110" wheelbase average of all competitive fours. (Write for official reports on the Four's record.)

**The Body:** Standard closed car construction—a sturdy frame of seasoned hard woods sheathed with panels of steel from top to bottom. To appreciate this construction, compare the Brougham body with those employing composition materials which are subject to rapid dete-

rioration. The interior of this excellent body is roomy and comfortable for five grown-up people.

**The Equipment:** Read the items of equipment listed at the right. They are just the things you would choose if you were building the car yourself. Because Oldsmobile buys and makes them in immense quantities, these refinements do not add materially to the manufacturing cost. You, however, would find them very expensive if you bought them singly, at retail.

What advantages does Oldsmobile enjoy which make possible this wonderful Brougham at \$1375? First, the advantage of twenty-five years' experience in fine car manufacture. Second, the benefit of the great General Motors Corporation facilities in engineering, research and purchasing.

Choose the Oldsmobile Brougham on the basis of its quality—and at the same time remember that it is the lowest priced fully-equipped car of this type on the market.

*The rear compartment is large enough for a bag and several parcels. In the hinged cover is a tray of tools.*

**The Brougham Equipment:** Drumhead lamps which require no special lens or visor to comply with anti-glare legislation, high grade upholstery, satin silvered hardware, heater, door locks, cowl ventilator, sun visor, windshield wiper, cowl lamps, nickel-plated radiator, one-piece crowned fenders, dome light, door and window regulators, window shades, walnut steering wheel, good carpet, walnut-finish instrument board with instruments symmetrically arranged and separately removable for service.

*Price Range: Four—\$955 to \$1185. Eight—\$1375 to \$2025 f. o. b. Lansing.*

**OLDS MOTOR WORKS, LANSING, MICHIGAN**  
*Division of General Motors Corporation*

*Oldsmobile*

A PRODUCT OF  
GENERAL MOTORS

*The front seats are deep non-folding Pullman-type chairs which move forward to give unusual entrance space. The doors are twenty-nine inches wide.*

## Save Fuel Keep Warm End Draughts

You will be surprised at the small cost of equipping your home or business building with Chamberlin Metal Weather Strips.

And they add so much to comfort, cleanliness and good household economy. They save 25% to 40% of fuel costs. Keep dirt, dust, soot and smoke from sifting in. That ends one of the most tedious tasks of housework.

### Why Heat Your Building 36 Times Every Day?

Tests show the inrush of cold air at unprotected windows and doors fills the average building 36 times daily. Why fight this with fuel?

How much more simple to bar it out as thousands of good home managers do, with Chamberlin Metal Weather Strips.

At 12,000,000 windows and doors Chamberlin Metal Weather Strips permanently end fuel waste and discomforts resulting from draughts. They make homes dust-proof. Protect hangings, furnishings and decorations. End rattling doors and windows.

Healthier homes result. Children are safe from cold

air currents. No cold spots. You are not driven from the bright, cheerful window by chill draughts.

**Free** Chamberlin Strips are used on 85% of all weather stripped buildings, including homes, banks, schools, office buildings, churches, stores, hotels and apartments.

They are guaranteed to last as long as the building. Any need for service or attention, no matter how many years hence, is cheerfully done free, by Chamberlin experts. An estimate by our engineering department, on the cost of your equipment, is free. Just send the coupon.

# The Kidnapping of Prunes Alaska

(Continued from page 23)

glanced up in blank amazement. "How much for Prunes? For Prunes Alaska?"

"Yes! How much? How much?"

Even then the bugler stared as if he doubted his ears. He grinned. "Why, man, John D. Rockefeller himself couldn't buy that bear there! Could he, Prunes?"

He started to turn away—the congestion ahead had thinned and the bandmen were unlimbering their instruments again—but the other clung to his sleeve.

"I train animals! And I want him to train, see? I'll make him the best show bear in the world! I'm willing to pay a good price, too. What d'you say?"

Kearny jerked himself loose. He shook his head again, still good-naturedly. "Wouldn't make no difference if you was the President himself! Nobody can't take Prunes off the 'Alaska.' No, sir! Hi there, Prunes! Get a move on! Standard speed ahead!"

The parade moved on. A throng of hilarious, jostling bluejackets surged upon the still-beseeching little man. He was swept up and tossed to the sidewalk again like a chip before a comber.

"Why didn't you listen to me, and stay out of that crowd?" demanded the red-faced man unsympathetically. "Did you go crazy all of a sudden?"

Tears of rage and helplessness shone in the dapper man's eyes. "The bums! The big blue bums! They walked right over me—just as I was making an offer!"

The red-faced man stared. "You weren't actually trying to buy that bear off these sailors, were you?"

"I'd 'a' give a cold thousand for him. But I'd 'a' made him worth a hundred thousand to the show!"

The big man whistled. "A hundred thousand?"

"No! Not just one hundred thousand—two hundred thousand!"

"Holy smoke!" The red-faced man was gazing into the distance. Suddenly he grabbed his companion by the shoulder. His eyes sparkled out from beneath their lowered lids like little beads. "Come on, Frenchy! We got to get a move on. We've got business to do!"

THERE were tears in Bugler Kearny's eyes as he stood in the "Alaska's" forward casemate the next day and narrated the events of the evening before.

"Honest, that's the way it was, fellows; honest, that's the way it was!" Then, as he took in the coldness of his audience his voice faltered. "You—you don't think I sold Prunes, do you?"

Turret-captain Brooks, leading the inquisition, looked long and searchingly into the quivering, earnest face. He shook his head slowly. "If we thought that we'd 'a' thrown you overboard long before now. No, we don't think you sold Prunes, Kearny. But we're blamed well going to find out all about this business!"

Kearny leaned forward eagerly. "Well, it's just like I'm telling you. We were going back, me and Prunes, after the parade, when we come to a bunch of kids on a corner. They were wild about Prunes, so I stopped to let 'em see him

a bit. Along came this red-faced man. He give the kids a nickel apiece and then he asked me wouldn't I have a glass of near-beer. And that's the last thing I remember—drinking that beer—till I woke up to-day in a vacant lot, and no Prunes in sight!"

"You figure this red-faced guy put something in your beer—is that it?" demanded Brooks.

"Either him or somebody else in that near-beer place."

"And you couldn't find out anything about Prunes?"

"No. I looked all over town—even though I was overtime then—but I couldn't find him or anybody that had seen him even."

ABOUT him the clustered sailors began to shuffle uneasily. One and all they bore the marks of conflict: cut lips, swollen noses, or freshly discolored eyes. They whispered and mumbled.

"You can't remember anything else, Kearny, that might explain his being missing? No 'Samoa' men snooping around, or anything?"

"No; there was just the parade." Suddenly Kearny's eyes flashed, his voice grew excited. "Hold on! Now I remember something! There was a fellow come running up to me in the middle of the parade, yelling something about he wanted to buy Prunes. I thought he was crazy then. But maybe he was the man that stole Prunes!"

"Was it the same man—the red-faced man you were telling about—that gave you the beer later on?" demanded Brooks sharply.

The animation died from the little bugler's face. He shook his head. "No-o-o. This one was a little fellow, a dudish-looking little guy. He wasn't much bigger'n I am, I don't guess."

The glow of interest in the turret-captain's face also faded. His words fell slowly and unsympathetically. "Well, Kearny, we ain't saying you did it deliberately. But it's done just the same. We've lost Prunes. And the only way you'll ever square yourself on this boat is to get Prunes back." Then, as he glanced around at the blue eyes and swollen faces, Turret-captain Brooks smiled a grim smile. "Goodness only knows how you're going to square it with the 'Samoa' for the way we pitched into 'em last night. 'Course, when you and Prunes didn't come back we thought right away they'd kidnapped you. And what we did to that second liberty-party of theirs was a plenty!"

The wheels of Navy routine are relentless; they slow down no more for a mascot than they do for an admiral. The nine months past had not been without their effect on the "Alaska." Changes, such as happen or are likely to happen to any warship, had taken place aboard her. Time-expired veterans were paid off, took their three months' furlough and reenlisted on other ships hundreds of miles away, wherever their money happened to run out. Last of all the "Alaska" was detached utterly

from her old anchorages and with her sister ship, the "Samoa," was given a new division and squadron number in the Pacific Fleet. With her went Turret-captain Brooks and Bugler Kearny.

Bugler Kearny had changed. From a jocund, perennially-young perpetrator of pranks he had devolved into a moody, middle-aged hermit. Rarely he smiled; never did he mix in the skylarking around the decks.

Only Bugler Kearny himself could have told how many zoos, municipal parks, and the like he had visited in the course of his search for Prunes.

AT THAT it was sheer accident that put him on the right track. His sister in Sacramento telegraphed, announcing her impending marriage and requesting him, as the nearest living relative, to lend his presence immediately.

His furlough called for seven days. But on the night of the sixth, a good fourteen hours before his leave was up, Kearny returned. His face had undergone radical changes during the interval, but they were not changes that would have gratified his commanding officer. A green blot as big as a cloud hung under one eye, a gaping hole showed where two front teeth had been but were no longer, and his left ear was clamped to his jaw by a strip of plaster.

Turret-captain Brooks, sighting him as he came over the gangway, gaped with astonishment. "F'r the love o' Mike! What sort of weddings do they have in your family, anyway?"

Bugler Kearny grinned—something that he had not done for a year. His eyes gleamed strangely. "Get Riley and Jones and Kerrigan and the rest of the old-timers together down in number 4 casemate right away, will you, Brooks? I'll be there as soon as I can check in. I've got something to tell you."

Brooks blinked, opened his mouth, and started to ask a question, but Kearny was already half way down a ladder. Still muttering wonderingly to himself, the turret-captain set about obeying the request. Ten minutes later the casemate was crowded with veteran machinists, coxswains, and gunners.

Climbing onto the trainer's platform Kearny spoke in jerky sentences:

"Fellows, you remember the bear mascot that was stolen from us in Norfolk? Well, listen. The day before my sister's wedding a circus come to town. I went to it; I haven't missed a circus in ten months. And, fellows, I saw Prunes!"

"Saw Prunes!" It was one gasp.

"Yes! I saw Prunes! They had him all diked up in a clown suit, and he's grown bigger, but I knew him the minute I saw him. There ain't any other bear in the world walks with a roll like him. And the circus has got him!"

There was silence for a second, the weighty silence of surprised intellects.

Turret-captain Brooks recovered first. "You're sure it was Prunes? You're sure it wasn't some other bear that just looked like him? Prunes was stolen 'way back East, remember, and—"

"Sure it was Prunes?" interrupted Kearny. "As sure as I am that I'm standing here! These circuses travel as much as we do, remember. But that ain't all. I was sitting down close to the ring where

the bear was. And I says, 'Prunes! Feather yer ears!' And he feathered 'em! What other bear in the world would ever savvy what that meant—huh?"

The argument carried conviction. Brooks questioned the identification no longer.

"What did you do when you knew for sure it was Prunes?"

"Went straight to the animal tent, of course," responded Kearny promptly. "I told them Prunes was our bear and I wanted him back. That was when I got this black eye. The menagerie man just turned around and yelled, 'Hey, Rube!' And before I knew what was up a half-dozen toughs jumped on me and beat me up and threw me off the grounds."

"Whyn't you go to the police about it?" demanded a curious voice.

Kearny glanced in the direction of the speaker with a contemptuous sneer. "Police? Police? Why, every policeman in town had a free pass to that show in his pocket! Do you think they'd take my word against the whole circus? Listen! That circus shows in Los Angeles on Saturday, the 29th. That's the day the 'Alaska' is due to be at San Pedro. And San Pedro is only forty minutes from Los Angeles! What more do you want—huh?"

It was at the turret-captain's suggestion that the evening performance was chosen.

"You see," he pointed out, "in the afternoon our uniforms will be too noticeable. And if they get suspicious they'll hide Prunes, and the whole thing will be off. At night, though, they won't notice us, all mixed up in the crowd."

"How about driftin' in separate, and then sorter collectin' somewhere inside?" inquired a husky water-tender.

Brooks adopted the suggestion immediately, like the good general that he was: "Right you are, Wiley. A good idea. Some of us'll slip inside and some of us'll mix with the crowd hanging around the hot-dog stands. If you hear any sort of unusual noise or rumpus, that's the place to make for—understand? Saturday night week, at the circus grounds. And not too big a crowd together at any one place—don't forget!"

THE "Alaska's" crew did not forget.

It is doubtful if even the ticket-takers, accustomed as they were to gauging the character of an audience, remarked anything unusual in the throngs that poured into the big top that night.

The "Alaska's" crew was there in full force, every man that was not on duty or furlough. In twos and threes they came.

"They're well hid, all right," Brooks said jubilantly, standing up in his seat near the performers' entrance the better to see. "I can hardly spot a one of them. How long after the show began did you say it was before Prunes came on, Kearny?"

"About fifteen minutes. There's some Jap jugglers come on just ahead of him; you'll know when to expect him." The little bugler was gazing discontentedly at the considerable space that separated his seat from the ringside. "Say—why can't we get down nearer—down on that straw they're putting down by the ring there?"

Brooks eyed him suspiciously. "What's the idea?"

"Nothing. Only I just want to be down there near Prunes."

## Plus Value in Brimming Measure

**T**HIS is the greatest Overland ever made—and at the lowest price. We soberly believe it is the greatest automobile value in the world today!

It is a better looking car. The hood is higher. Body lines are longer. Seats are lower. The body of the touring car is entirely of steel. Its finish is hard baked enamel. The tires are first quality

Fisk oversize—not the second grade tires placed on most cars sold near this price.

Triplex Springs give unusual comfort. The powerful motor gives extraordinary economy—twenty-five and more miles to the gallon of gasoline.

Drive the New Overland and realize the difference.

"You ain't fixing to start anything?"

"No; I just want you to see for yourself it's Prunes. I promise to be good."

Reluctantly Brooks gave his assent. These two were discreetly garbed in civilian clothes, yet something whispered a warning to the wary turret-captain. "You've promised," he reminded. A moment later they were seated on the straw that was already being strewn thick alongside the ring ropes.

Fifteen minutes, Kearny had said, would pass after the performance began before Prunes would come on. Now it seemed like hours. At last the Japanese jugglers bowed their grotesque little bows and skipped lightly from the ring. The band struck up a waltz. And then Brooks, searching the crowd once more for a sight of blue, felt his arm gripped until the blood almost stopped circulating.

"Look! Here he comes! It's Prunes—see!"

**PRUNES** indeed it was. Not even ten months of cage and ring could change that rolling gait learned from infant days of waddling across a heaving deck. His color, the slim turn of his muzzle were the same. But in other ways it was a different Prunes! A white painted ring now gleamed around each eye; a pair of voluminous trousers was knotted cruelly tight around his trunk. There was a leanness, too, about his body that brought a tearful note to Kearny's voice:

"They're starving him, Brooks; they're starving him! Look how thin he is!"

"Sh-h-hh!" warned Brooks. "Remember, you promised to be good."

The bugler subsided fretfully.

As the comically-dressed figure ambled into the ring it was greeted with an outburst of cheers and shrieks from the children. A short length of chain hung from the shaggy neck and this the dapper little trainer held in his hand. Now he released it and cracked his whip. Rising on his hind legs, Prunes began to waltz heavily to the slow beat of the music. His step was not the frolicsome step of former days; it was lumbering and lifeless. His red tongue did not loll out from a grinning mouth, nor did his eyes sparkle.

"The devils!" exclaimed Kearny, half-sobbing; "they've been whipping him! Look how he watches that whip!"

"Hush!" again ordered Brooks. But in his tone was a sudden grim tightness. "You got to wait, Kearny!"

In the ring the pitiful maneuvers were still going on. The mustached trainer had placed a wooden gun in the brown fore paws.

"Por-rt arms!" he called sharply. "Shoulder-r-r arms! Pot-rt arms! Order arms!"

Again shouts of laughter rose from the audience, handclapping, applause. The trainer bowed and beamed. He turned again to his animal. "Por-rt arms!"

Prunes did not obey. The gun lay loose in his arms. He was still sitting up on his haunches as before, but his eyes had left the whip. They rolled eagerly from side to side. His ears were pricked up intently.

For almost a year Prunes had been waiting for that voice. He had harkened for it through the pounding roar of the wheels on the rails, he had sat up in his cage in the midnight stillness to listen for

it. Again, even though it came so low that the keen-eared trainer heard nothing, the perked-up ears caught it:

"Don't mind him, Prunes! He's only a coal passer!"

The little trainer's face grew angry: "So you're sulky, hey? Just wait! Just wait until I get you outside again!" he hissed. Then with a smile toward the ringside seats, he raised his voice blandly "Por-rt arms!"

Instead of obeying, Prunes let go of the wooden gun altogether. He dropped to his all-fours with a sudden whimper.

Over at the edge of the crowd the little bugler was babbling excitedly to his swearing companion. "See? See—I told you it was Prunes! Now you'll believe it!"

"Yes, you blooming idiot! And the whole tent'll know you're telling me if you don't sit quiet. Hold on! Where're you going? Kearny—Kearny—"

The incensed trainer had suddenly raised his whip. And at sight of it Kearny had forgotten all else. Crawling under the ropes before Brooks could stop him he leaped into the ring. His face was working, his fists were clinched. "You hit him—you just hit him once—and I'll half-kill yer!"

The dapper little trainer stepped back in surprise. "Huh-h-h? Oh, it's you again, is it?" He turned to a nearby attendant—it was his business to grasp situations quickly. "Throw him out, Buck; he's crabbing the act!" Then grabbing at the chain around the bear's neck he snapped his whip. "Up, up! To your cage! Come on, you hell-cat!"

Snarling, whining, Prunes fought against being dragged away from that suddenly materialized savior. But the artful hooks in his collar, tearing old wounds at each jerk of the chain, were irresistible. Whimpering with pain, he loped out of the ring behind the little trainer, who was savagely jerking him away.

With a yell Kearny tore loose from the attendant's grasp and plunged after.

**JUST** outside the performers' entrance a big red-faced man had been watching the incident in the ring with scowling eyes. "Humph! So he's come back, has he? Well, after we finish with him this time I bet he'll never come around this show again!" Rolling up his sleeves, he waited until the trainer and his bear had passed the opening: Then he stepped across the aperture, blocking it with his hulking body and long arms. "Come here to me, you little devil!"

Kearny did not even slow down. The same lightning duck that had freed him from the ring attendant served him equally well again. What the sweeping arm encountered was not the bugler's stocky neck but the brawny chest of Turret-captain Brooks, following close behind. A fist that seemed like a flying nail keg tore out of the night and crashed home on the red-faced man's chin.

The diversion, however, would have allowed the flying trainer to escape had it not been for a bale of hay carelessly dropped in the passage and over which he now plunged headlong. After him plunged Kearny and the tortured, squealing Prunes. Another second, and the three had become one struggling dust-obscured ball from which emanated a confused medley of words and thuds:

## What Oldsmobile brought to General Motors

**T**O DRIVE an automobile from coast to coast—it seemed incredible in 1905!

On May eighth of that year, two curved dash, one-cylinder Oldsmobiles set out from New York to Portland, where a national good roads convention was to be held in connection with the Lewis and Clark Centennial Celebration.

Only a few had faith in the audacious venture. For forty-four days the nation watched, reading the papers with eager interest, expecting news of failure. But each fresh bulletin reported the cars a little further west.

On the forty-fourth day "Old Scout," the first car, arrived in triumph, just one hour and twenty minutes before the opening of the convention. "Old Steady" arrived seven days later.

Transcontinental runs have long since become commonplace; but that first historical journey star-

tled the nation into a new conception of what the motor car was destined to be and to do.

The whole motor industry took on fresh courage, and looked forward with a larger vision.

\* \* \* \* \*

Twenty-six years ago the first automobile factory in Michigan was erected; it was for the manufacture of Oldsmobiles.

Twenty-three years ago the principles of quantity production, on which the motor industry has been built, were worked out in that factory. Fourteen hundred Oldsmobiles were completed and sold that year, an unprecedented record.

The first two-cylinder car was an Oldsmobile.

The first cars to be exported in quantity were Oldsmobiles, carrying the reputation of American craftsmanship to the far corners of the world.

Thus Oldsmobile brought to General Motors the courage of the pioneer. And General Motors, adding its abundant resources of men, money, and engineering talent, has made certain that the achievements of the past will be projected into the future in even larger measure.

THE WESTERN COMPANY • Chicago • New York

"You will whip Prunes, will you? You will, hey? Then take that! And that! . . . That's right, Prunes! Sit on him! Hold him down! But don't get in my way! . . . And there's another for you, darn you!"

All this the red-faced man, staggering back, heard and saw. Also he saw the keglike fists of Turret-captain Brooks again becoming imminent.

He did not wait, but retreated pusillanimously. And retreating he raised his voice in a hoarse bellow: "Hey, Rube!"

"Hey, Rube!" the rallying cry of the circus lot. Not an unfamiliar cry was it to the roustabouts. "Hey, Rube!"

From cook-house, big top, dismantled side show or menagerie, they trooped to the call. They hastened toward the performers' entrance whence had come the call—and so to a new experience.

For these were neither drunken toughs nor peace-loving farmers they were to meet this time. Close upon that first vociferous, "Hey, Rube!" had come another war-cry, unfamiliar to the roustabouts, but known and respected through all the ports of the Seven Seas. "Hey, Sailor!" It rang out near the performers' entrance. And from everywhere, it seemed, came the answering cry, "Hey, Sailor!"

FROM tent walls, from haystacks, from dark concealments beyond the circle of flaring lights swept the bluejackets. Big-chested, brawny-armed, and riotously eager they swarmed to battle. "Crash, crash!" The thud of heavy fists punctuated the rush of the blue-uniformed hordes.

"Hey, Sailor!" . . . "Hey, Ru—ugh!" . . . "Hey, Sailor!" . . . Take that, you thief! . . . Hey, Sailor!"

The circus strong-man burst from his dressing-tent, primed for murder. Before he could get himself set he was overborne by Big Kerrigan, heavy-weight wrestler of the fleet. Brute strength bowed precipitately before strength combined with science. With his chin twisted almost under one ear and one leg half-dislocated by a punishing toe-hold, the strong man bellowed for mercy.

"Shut up then, and lay still!" ordered Big Kerrigan, emphasizing the command with an extra twist. "One more wiggle or bleat out of you, and I'll jerk the leg plum' off you, darn you!"

There was nothing to it. Outnumbered,

outrushed, and outfought, the roustabouts gave back before that swirling blue wave. What few held out were soon overpowered and flattened against the ground by the weight of half a dozen nautical bodies. From the light-circle near the tent the commanding voice of Turret-captain Brooks called off the battle. "All right fellows, that'll do! They've had enough. They won't bother us again. Let 'em go!"

He was not in error. The circus bouncer had indeed had enough. Swearing but submissive the freed roustabouts slunk away into the night.

FROM the dust cloud near the hay Bugler Kearny rose, panting from his exertions. The figure beneath tried to rise also, but Prunes Alaska, sitting triumphantly on top of it, cuffed it flat again with a single sweep of a powerful paw. Only after repeated command from his newly returned master did he turn a heedful ear.

"That'll do, Prunes; that'll do!" puffed Kearny. "He's had enough, I tell you. Let him up! Let him up!"

Slowly and reluctantly Prunes lifted his bulk from his sprawled-out captive. Without an instant's delay that dust covered and utterly dilapidated trainee scrambled to his feet and scuttled off into the darkness. Prunes gave one last disapproving snort before turning back to youthful friends again.

Kearny's hands were working feverishly at the chain collar. "No more chains—no more cage for you, Prunes!" he was chanting as he worked. "You're a free bear from now on! Do you hear me? A free bear!"

In a few moments the bugler had lost a dozen years. His eyes were bright, his face glowed. As the chains came loose in his hands he hurled them with an oath through the open doorway into the gleaming, glaring ring within.

"And now, Prunes, you're going home! You're going back to the good old boat! Yes, you're back in formation again! Do you hear me? You're back in formation again! Full speed ahead, Prunes! We're going back to the 'Alaska'!"

And Prunes—a new Prunes—one whose eyes twinkled and whose mouth gaped—whose red tongue lolled joyfully out—Prunes obeyed.

## "Children Given Away"

(Continued from page 42)

our duty to place them in as nearly congenial homes as we can find. This child would not suit you—and you would not suit the child."

Outside, Mary lifted Ardath to the seat. Her heart was beating sickeningly.

"Oh, honey, I've done it now!" she whispered tremulously. "I've made the State mad at me! And I've made Marcelia Mae mad at me and the State!" She climbed in, her face set. "God made you a very special product, Ardath, but no Marcelia Maes shall have you so long as I—" She swung the car 'round and flew down the road. "Oh, darling, I'm glad after all! The last applicant for a little girl was Miss Jane Talbot, the richest

woman in Franklin County. She could feed you beauty all your days. I was simply sick when they told me she 'phoned in for a girl child yesterday. And now we're free to go!"

BY MID-AFTERNOON, the day had turned cold and raw; a chill had come in the heart of spring. Mary was driving subconsciously, her mind concerned with the woman where they had eaten their dinner; when they were leaving, Mary had asked, "Do you know Miss Jane Talbot, over in Bramford?"

The woman's kindly face had sobered a trifle: "Yes. I know her."

"What—what sort of a woman is she?"

# "Projected Selling increased our business 25% to 50%" says W. R. MERS, merchant, of Ottawa, Ill.

"We do not wait for the farmer to come to us—we go to him with our merchandise. In this way we anticipate his needs, create new wants, and make sure of trade which he might not obtain otherwise. It is a plan which will increase business for any merchant just as it has increased our business."

Thus is summarized the method of Projected Selling, as advocated by Farm & Fireside, employed by the Ottawa Farm Machinery Company of Ottawa, Illinois. Every day, weather permitting, their "Red Baby" truck may be seen speeding over the country roads, or stopping at a farmer's home, with an interested group around it examining the feed grinder, the cream separator or the particular item of farm equipment which it carries on that day.

"Farmers appreciate service," W. R. Mers and G. C. McKinstrey, of the Ottawa concern, declare. "That is why we adopted Projected Selling. Farmers are glad to see us, to talk over the news from town and to inspect the implements which they have learned about through advertising in Farm & Fireside."

ing four months, twenty were sold in the homes of farmers.

"In many of the more prosperous farm homes, we find that Farm & Fireside, the National Farm Magazine, has already done part of the selling for us. Advertising of the McCormick-Deering line in Farm & Fireside has given the farmer a knowledge of the merchandise which often enables us to close the sale as soon as we show the product."

In all parts of the country, the experiences of this Ottawa company are being duplicated. The International Harvester Company has adopted Projected Selling as an integral part of its sales plan—and thousands of "Red Baby" trucks are scouring the country in the interests of improved farm equipment.

In all parts of the country, also, the compelling force of advertising is furthering Projected Selling. Consistent advertising in Farm & Fireside has acquainted leading farmers in every locality with the merits, the mechanical excellence, the labor-saving and money-saving features, of International Harvester Farm Operating Equipment. When the "Red Baby" calls, the sale is often ready to close.

## *This booklet sent free*

Projected Selling can be applied to many of the articles advertised in Farm & Fireside (see list below). We have prepared an interesting booklet which tells how merchants in various lines have increased farm trade by means of Projected Selling—we will gladly mail you a copy free.

Get the facts about Projected Selling. Many times it represents the difference between success and failure, profit and loss. Just write us on your letterhead, "Send me 'Projected Selling,'" and we will mail it to you without charge or obligation.

The new  
"CONTROLLED HEAT"

The Old Way

## The woman's side of the heating question

FOR years, heating systems have been designed with no thought of the woman's problems; yet nine-tenths of the day it is the woman who must live with the heat.

In most systems, radiators are equipped with obstinate, back-straining valves that even a man can barely turn. No provision is made for accurately regulating the temperature in different rooms; so that the nursery can be kept warmer than the living room and the bedrooms cooler than the living room—a requirement that every woman knows is vital.

### A heat designed for women

BUT there is a new way of heating which does consider the woman's side of it—Hoffman

"Controlled Heat." On each radiator is a "control" valve. The lightest touch of your finger on this valve gives the exact amount of heat you want where you want it and when you want it. You can have any desired temperature in any room.

### Economy, convenience

MEN will be just as interested in the remarkable economy and simplicity of "Controlled Heat" as women are in its comfort and convenience.

In planning your new home, first investigate Hoffman "Controlled Heat."

If your present heating system is unsatisfactory, ask your Heating Contractor how much it will cost to transform it into "Controlled Heat."

"Controlled Heat."

A reflective moment: "She's got money." Mary smiled wistfully. "Is that her chief characteristic?"

The gentle eyes saddened a bit. "It's her body, her soul—and her God." Then, reflectively, "Jane Talbot and I were girls together. I've always been poor and worked hard, but I've made a home for a big family; Jane has always had money, but she lives alone in a big stone house when she could take care of a dozen and never miss it."

A man was signaling Mary in the middle of the road ahead, and she jammed down her brake. The man seemed excited. He was carrying a gun.

"Say, miss, have you passed a boy on the road? A dark-lookin' kid, with a—"

Mary released her brake. "No. We've only passed a man with a dog. How far is it to Bramford?" She started on, slowly.

"Eight miles," he called after her.

THEY were off again. And now Mary was conscious of a weary, beaten feeling of futility. Every mile onward with her little charge seemed to add to it. The day's touches with life were such as to make the matter of one's own selfish plans go thin and flimsy. Life was so difficult! You just got matters straightened out in your head, when in steps your heart and makes a mess of things.

There came a little open space by the road, a deep recess to a spring. In the damp moss under the trees were great blue violets, and Mary stopped with a jerk and climbed out.

Sitting well in back, out of sight of the road, she watched the ecstatic little hands among the violets. Suddenly, a great thrill of apprehensive compassion rushed through her. She held out her arms.

"Ardath, come here!" She held the child by her side and looked wistfully into the deep, calm eyes. "Did you understand what the lady said, back there, where we got our dinner?"

The grave eyes clouded in their depths. "She said that the woman ahead was mean," stoically. "And she said God had lots of little boys and girls to give away." There came a soft pause. "But—but—I guess she didn't know that, unless they're dollies, nobody wants 'em."

For a moment Mary's eyes, hot and wet, were pressed tight to the front of the brown wool dress. She knew what Ardath meant. Selection was always for the "dollies," in the Home. Then fervently, "Oh, darling, you are a marvel-child! A wonderful little soldier of courage!"

Mary took her in her arms. "Oh, honey, don't you think nobody wants you! I've wanted you! I, myself, started out in a Home, dearie, and I've wanted you since the first minute I saw you. But I, myself, have never had a real home. I haven't now."

She rose, startled. Another car had shattered the calm stillness and roared to a stop out in the road behind her own. A man came crashing up through the brush. He touched his cap hurriedly.

"Have you seen anything of a boy around here, or on the road, miss?"

Mary shook her head. "No. I have already been asked that. Whose boy is it? Why are you hunting for him?"

"He's run away from his home over in Bramford. He like-ta killed a man that I guess was—correctin' him a bit; and he

stole a roll o' money and took to the woods. We trailed him into Oxford County; last night he was seen back here."

The "child specialist" in Mary roused. "How old is he?"

"About twelve or thirteen."

"Has he been naturally bad?"

"Why, no." The man was mopping his neck with a handkerchief. "He was always *queer*—kind of. They think he's gone crazy." The man floundered away.

Mary faced about. Ardath was standing rigid as a little statue, watching the man depart, with great fixed eyes in which burned some strange, tense emotion. Then, as the car vanished, the child's face turned swiftly to an ancient log, half buried in the underbrush, and "pointed" it immovably, like a dog.

Mary followed with her own eyes. Something affected her heart disturbingly. She seemed looking on at inner workings. Just above the bark of the log showed a little fragment of cloth, not old and mildewed, but with the "feel" of life about it.

ALL was still. Mary moved over and parted the growth. She had a swift impression of wild upturned eyes, as the boy rolled over, struggling up and away. "Wait, boy!" It was firm enough to distract, gentle enough to bewilder. "I'm not going to hurt you."

He shot a glance about, took in the solitary girl and the little child, and relaxed, trembling visibly. Along with the wild misery of his eyes were the grim signs of hunger and exhaustion.

"Have you had anything to eat?"

"Not since yesterday. Only spring water." His leg muscles, as he stood, were quivering shakily.

"Wait." Mary went to the car, and came back with a package of crackers and some cookies.

The boy had slipped well in back among the heavier growth, and was waiting for her with glittering, famished eyes. He seized the cookies, simply crushed them in his hand and crammed them into his mouth. Ardath appeared at his side with her little cup filled with water.

Mary waited. Then, "Tell me about it," she said gently.

The boy seemed to come suddenly out from his animal-like abstraction over the food. He stared confusedly, and suddenly sobbed.

"They wouldn't let me play. And they broke the neck off Pap's fiddle. And—and—it was all I had." He swallowed frantically a moment. "I was goin' back and try and git the body of it. I can have it fixed."

"Who do you mean by 'they'?"

"Old Nate and the 'Dreadnaught,' the people I lived with. It was *her* place." Bitter anger seemed giving him self-control. "Nate hated her; but he hated me worse because he knew she hoped I could run the whole place pretty soon; and that would throw him out. And I *did* work." The boy's voice rose to despairing insistence. "I've pumped water for the tank till I was dizzy, and I've sawed wood till—till my nose bled. And—and Nate set 'round and laughed—and laughed—and said it was good for me!" He choked utterly a moment. "Evenin's I tried to keep on my playin'. Last Sunday I took some silk thread to make an E string! And—and—she got him to take my fiddle

## A ruined floor reduced their coal bills

FOR three winters, the air valves on their steam radiators had hissed and sputtered and the pipes had thumped and banged. But they didn't connect those slight annoyances with the fact that their coal bills were unusually high.

Finally, one of those radiator valves did more than hiss, it leaked hot water, and ruined the floor. And then they decided to try Hoffman Valves.

Not only did their radiators become whole-hot and silent; but they found that they were actually getting *more* heat from *less* coal.

They discovered that—

**Hoffman Valves**  
**reduce coal bills**

PRACTICALLY all of the trouble and inefficiency in a steam heat-

ing system can be traced to poor air valves on the radiators. When those valves fail to do their work properly, the result is poor heat and wasted fuel.

**Don't waste**  
**precious coal**

If your coal bills are high don't wait until the valves sputter and hiss or the pipes bang; but *immediately* replace the inefficient radiator air-valves with No. 1 Hoffman Valves, "Watchmen of the Coal Pile."

Then you'll get maximum heat with minimum fuel consumption, and in *addition* silent, never-leaking radiators.

Hoffman Valves are guaranteed in writing to give you five full years of satisfactory service.

and break it! I—I—went for him with my jackknife and—and—I hope I killed him! And now—now—"the youthful face was tragically bitter—"now I'm a thief, and I'm glad of it!"

Dead silence.

"Can you play much?" It was distraction of infinite wisdom.

All the bitterness melted away. "I got so I could play 'Trawmy-rye and Goonod's Avie Maria pretty good. Pop taught me to bow a fiddle when I was a kid. When he died, I could play for dances. Then Mom and me puzzled out the notes. I heard them two pieces on the phonograph."

"How did you come at Nate's place?"

"The selectmen gimme away." Something thumped hard in Mary's breast. "Mom died when I was twelve." The voice was tranquil now, the saddened reflection of a little, lonely boy. "She'd fought against givin' me away longer'n she had a license to, I guess. She said takin' a little young-one of one set o' parents and givin' him away to another set was like givin' a lamb to be brought up by a catamount, or graftin' a honeysuckle onto a brier. She said she knew it had to be done, but givin' young-ones away was God's business." The boy stood up. "Thanks, missus, for the cookies an' all. I got to go."

"Wait!" Mary was thinking furiously. "Where are you going?"

A deathless light of freedom leaped to his eyes. "Oh, far—far! I'm goin' to see the ocean! I'm goin' to cities and big places—where I can hear folks as knows *how* to play!"

**T**HEN—it struck Mary with breathless inspiration—how she could get him back. "I'll give you a lift along the main road eight or ten miles. You can lie in back, down under the robe."

A half-mile along, the road branched off into the Bramford road. She felt the boy would be watchful for duplicity, so she sailed right along by. Five miles farther along there was another road to Bramford. She would take that.

Mary was trembling all the way. Her mind was seething. "Giving young-ones away was God's business." Long ago she had realized it. It was one of civilization's terribly slippery places.

The cross-road came. She made it with as gradual a sweep as possible. All was well in back but when Bramford showed below them to the left, a little hand crept appealingly out to her arm. Somehow, Ardath knew! Mary steeled herself. Right was right, and law was law! In Bramford perhaps she would intercede for the boy. Now something new struck her—something strange: "Water for the tank," and "Silk for an E string." What sort of people in Bramford would be having a house equipped with gravity water, and with silk for sewing. Suddenly a great upsetting question dislodged all else. They were sliding rapidly down a long grade, but Mary turned her head a little to call sharply down behind her. "Boy! What was the 'Dreadnaught's' name?"

A stir, and muffled came the answer: "Miss Jane Talbot!"

Mary's heart leaped. At the same time her eyes met the road. Gravel! New-piled!

There was one blinding clairvoyant instant. The front wheels jammed. The universe flashed upside down. Blackness!

When Mary's eyes came open, she felt on her face the soft methodic patting of a little hand. And to one side a frightened monotonous mourning. Ardath was safe—but the boy? She turned to him. "Are you hurt?"

"No. But—Why'd you bring me back?"

Mary tried to rise, but the top was pinning her down. She sank back. "I was wrong, boy. I know it now. You're free to go!"

But he was calm now, a white, resigned calmness. "I can't leave you. The Talbot place is on about a half a mile, I'll go—"

Mary's feelings were killing her. "Listen, boy! Go! Go, quickly! And get away!" she gasped. "You're not bad. And I'm as justified as they are." His eyes were flaring wide. "I'm not hurt. It's just the top. And Ardath here—" hot tears blinded her—"Ardath will find someone for me."

The boy couldn't speak, but life leaped anew in the thin, ravaged face. Then: "I'm—I'm goin'! But—but—" he choked painfully—"Mom'd hate me bein' a thief!" He was fumbling in his shirt. "Here! I took it to pay for Pop's fiddle. Give it back!" He pressed a pitiful little wad of money into her hand, and was gone.

The girl on the ground sensed the growing early darkness:

"Quick, Ardath. Go on ahead until you find a house, and bring someone back. You're not afraid, even though there's woods, are you, dear?"

The brave, undaunted spirit of Dave Ritter looked into her eyes from the eyes of the child. "No. Ardath will find 'em." The little legs took up a pattering course, bravely, into the kingdom of the dark.

AND now strange things were happening in the mind-workings of the girl on the ground. She seemed held in a great dead silence, seeing, with startling clearness, her own part in things. There was but one thing to do. She, herself, would be a deputy mother; the spirit of eternal motherhood thrilling through the tense stillness within her seemed urging her on. It was taking a big chance with her own future life, but perhaps, after all, it was God's business, and— She felt herself sinking into a soft oblivion, but she knew she would not forget.

What seemed like ages after, there came a sudden sense of great lightness, and swiftly she was raised up. She knew everything—perfectly. But she rested one gentle languorous moment against a man's coarse coat. Then she disengaged herself, a bit wobbly, and looked around.

"I'm all right now," Mary smiled bravely. "How about the car?"

"Never hurt a mite. Top's smashed a little."

As Mary hobbled to it and sat down on the running board, out of the dusk came a little, panting, elfin creature, and Mary opened her arms. A close moment, and she stared rapt and dry-eyed over the child's shoulder into things across the border.

A man was speaking: "That's a wonder of a young-one, missus. If it hadn't 'uv been for her—" He shook his head, forebodingly. "Where was you goin'?"

"To a Miss Talbot's." Mary thanked them gratefully, got aboard and—turned the car.

A man stepped forward hurriedly.

The Bell System's transcontinental telephone line crossing Nevada

## Highways of Speech

Necessity made the United States a nation of pioneers. Development came to us only by conquering the wilderness. For a hundred and fifty years we have been clearing farms and rearing communities where desolation was—bridging rivers and making roads—reaching out, step by step, to civilize three million square miles of country. One of the results has been the scattering of families in many places—the separation of parents and children, of brother and brother, by great distances.

To-day, millions of us live and make our success in places far from those where we were born, and even those of us who have remained in one place have relatives and friends who are scattered in other parts.

Again, business and in-

dustry have done what families have done—they have spread to many places and made connections in still other places.

Obviously, this has promoted a national community of every-day interest which characterizes no other nation in the world. It has given the people of the whole country the same kind, if not the same degree, of interest in one another as the people of a single city have. It has made necessary facilities of national communication which keep us in touch with the whole country and not just our own part of it.

The only telephone service which can fully serve the needs of the nation is one which brings all of the people within sound of one another's voices.

"You're goin' in the wrong direction. The Talbot place is farther on."

"I'm not going there, now, thank you. I'm taking a short cut back to the capital!"

The car, with its shattered top, gained headway and dashed at the falling darkness with lamps that glowed defiantly.

It was ten o'clock when a slue-sided little car with a battered top, ran in around the great circle up to the statehouse steps. In the big silent vestibule, Mary Cartwright spoke to the watchman.

"I'm going up to get some things, Amos. I'll be down soon."

IN THE board's office, she had taken out a little collection of belongings from her desk and piled them in a heap; it killed her to think of taking them away in office hours before the interested eyes of the others. Then she got out her record book. Suddenly she dropped down before it and buried her face in its open pages.

And then the door opened rather hastily to admit the young insurance commissioner. He stared a startled moment at the muddy, rather disheveled figure, then gathered it into his arms, almost fiercely.

"I saw your battered car down below. It . . . it scared me . . . pretty bad."

She was crying rather gustily, was Mary, and the tighter his arms pressed, the harder Mary cried. In a lull he said, "Now tell me."

"I'm through, Peter. I've—I've made an awful mess of my first commission. The chairman of the Board always said I had too much sentiment for the job. I've—I've brought her back!"

A moment, then the man was saying grievously. "Oh, Mary, dear little kid, why don't you give up all this? A career isn't your real sphere. It's a home. Can't you see it?"

She was crying again, brokenly: "Yes. I know it. I know now I've been starved all along for—something different. But—it's too late!"

"What do you mean?"

"Why, don't you see? . . . I've brought her back to be mine! She's in my bed at the boarding-house now!" The sobs stopped. "This child is one of God's specials. It would be a crime to give her to someone who would never see the wonder of her, or to someone without a brain to their back. But I can bring her up; I can develop her. Under the car, when she was bringing help, I promised myself I'd be her deputy mother, and—" she faltered, miserably. "Oh, who wants to marry anyone with an already child?"

Now, she was being slowly hugged into incoherence. "I'll show you," said Peter gravely, and began picking up her things.

There was a long, tense moment. Mary was staring at him exultantly, unbelievably. Then she began, a bit wildly. "Oh, Peter dear, the mother of the little fiddler I saved from the 'Dreadnaught' said giving young ones away was God's business, and now I know it's so, but—"

He glanced at her sharply. Then he put her tenderly in a chair and soothed her, concernedly. "There, there, dear! You're all unstrung. Just a minute."

Mary was laughing, tearfully, happily. "I'm not crazy, Peter dear, except with joy. And wait!" She stopped his operations. "Leave the things, Peter. I can come and get them to-morrow . . . when the others are here."

## How Henry Wilkinson Became Rich—

Although never favored by fortune, Henry Wilkinson died leaving a fortune. The small sums he was able to save never would have amounted to much but for a discovery Henry made of the power of compound interest. By a simple but unsuspected method Henry Wilkinson doubled his money and doubled it again. Henry Wilkinson's system is not a secret. It has nothing to do with speculation. There is nothing left to chance or luck. It is a sound plan of investment which you or anyone else can follow.

## Ideas Are Worthless Unless You Put Them Over

(Continued from page 39)

bridge difficult places. It could be thrown across streams where the current was very rapid, or the water deep or treacherous, or where the bed was of quicksand. It was also useful for spanning ravines where no understructures could possibly be erected. Nevertheless, the design was so unusual that it encountered all the opposition of a wholly new idea.

"It's fantastic!" I was told by one friend. "Utterly impractical!" said another.

"One of the most vigorous objectors to the design was so sure he was right that, even after the first bridge of this type had been constructed and was in operation, he used to make annual trips to see it. He brought along a hammer and went around tapping the concrete in various places. He was sure that kind of a bridge ought not to stay up!

"But it did. High-speed electric trains have been operated over it for sixteen years. It is as good now as when it was built.

"In order to get my design for that first concrete bridge accepted, I had to build it! People often value an idea according to how far the author of it is willing to go to prove it. I was not a contractor, but an engineer. But the railroad people said:

"If you really think it's a good kind of bridge, you ought to be willing to build it."

"I TOOK the contract; but I sublet it. The sub-contractor got into financial difficulties. He got the bridge under way and did his best, but merely accumulated a series of debts, then failed!

"I had to go in myself and finish what he had begun. It was no easy job. I had very little money. I had no crews to build any kind of bridges. And this bridge was a totally new kind, which nobody had ever learned how to put up.

"But there were even greater difficulties than that. My predecessor had left not only debts, but also an accumulation of ill will in the neighborhood.

"The farmers had furnished gravel and sand and teams for hauling, and they wanted their money the worst way. They did not intend to let us go ahead with the bridge until they got it. When my men went out to start work, the farmers wouldn't even let them near the site of the bridge.

"I went in person to see what could be done. I found promptly enough that the farmers cared a lot less for the sound of my voice than they did for the color of real money. I had to settle part of the old debts—I managed to scrape together enough for that; and I promised to see that they got the balance in the course of time. Then they let us go ahead.

"Finally I finished this bridge and two others safely, and demonstrated that my ideas of bridge construction were practicable. But at the end of my second year in business I had managed to lose thirty thousand dollars! It was costly, but it paid,

## "Old Town Canoes"

### Have You Ever Gripped a Paddle?

**H**AVE you ever lazed along in a canoe? Just an occasional paddle stroke keeps you moving. The water murmurs off the bow. And you are at peace with all the world.

Have you ever dug deep with the blade? Swift, powerful strokes? The canoe shoots through the water. A fellow canoeist accepts your challenge. And the race is on.

Did you ever mosey up a winding stream? Pick a good place to land, and broil a steak over an open fire? Then paddle home in the moonlight?

If you haven't, buy an "Old Town" and learn all the joys of canoeing.

The grace, speed and beautiful lines of the old-time Indian canoes are reproduced in "Old Towns." For every "Old Town" is patterned after a genuine Indian model. "Old Towns" are the lightest, strongest, steadiest canoes made—and the lowest priced. \$54 up from dealer or factory.

*The new 1923 catalog shows all models in full colors. It is free. Write for one to-day.*

OLD TOWN CANOE CO.  
363 Middle St., Old Town, Maine, U. S. A.

in the end; for I demonstrated something besides the bridge, and that was that I could be depended on to finish what I started.

"At that critical period I decided to abandon divided effort and concentrate on the huddle and the building up of my business. For ten years straight I kept that course. Then I again entered the field of experiment, and among my adventures none was more interesting than the reinforced concrete freight car.

"Developed long before the war, but too far in advance of the times then, it lay dormant. There is always a best time to put an idea across. The steel shortage during the war provided that best time. Accordingly I undertook to construct the first car, a one-hundred-thousand-pound gondola.

"This car was built under great handicaps. The right kind of materials could not be obtained on account of war conditions, therefore we had to use scrap materials. The shop was a dark, cramped, and unheated shed; it was the best place we could get and we had to use it, even though freezing weather was at hand. Labor was scarce.

"Nevertheless, the car was somehow completed. Hardly anybody believed, however, that it would stand the shock of use.

"Bring along a nice large basket to pick up the chips!" I was advised.

"The car, loaded with fifty tons of sand, was sent at ten miles an hour against a string of wooden freight cars. The first blow quieted the doubters. The concrete car was uninjured; the others were considerably the worse off as a result of the impact!

"THE subsequent tests to which this car was subjected are interesting. They show in a way what you have to plan for, the kind of opposition you must expect to meet, in putting over any new idea. The car, built under the difficulties I have mentioned, was not as perfect as we could have desired. But it went safely and with but slight damage through the following:

"A collision test, in which it was run at twenty miles an hour against a string of loaded combination wood and steel cars; an impact test, in which a forty-four-hundred-pound clam shell bucket was dropped eighteen to twenty feet into the car many times; an end wall test, when the car was stopped suddenly while loaded with steel rails, so that the rails slid violently forward; a billet and rail loading test, the loads being dropped into the car from various heights; a clam shell unloading test; a car unloader test—the car was passed through with a full load, then turned over on its side to unload; this was repeated three times; a distortion test—the car was jacked up at one end twelve inches.

"In addition to all this, it went through a severe ninety-day service test, in which the normal usage of a full year was approximated. The car was then placed in service and purposely abused. All this was, of course, much harder than normal conditions; but if an idea is really a good one, it must stand up under the worst conditions it may encounter.

"Railroad men stated in advance that the concrete car could not last six months. Yet it has been in operation now for nearly four years, and, barring some damage due

### The Importance of Holes

The dead air spaces of Natco Hollow Tile form a vertical blanket of air that insulates home interiors against both winter cold and summer heat. The absence of through-the-wall mortar joints wards off dampness. The large, strong units furnish, at the same time, a wall of solid masonry with either Natco's own charming Textile face or with rough face for stucco or brick veneer. Write for book of Natco Homes today.

Fruitland Park land owners, not land men, desiring new settlers, offer you the opportunity of acquiring orange groves in this lake-jeweled highland section for only \$140 an acre. Those in earnest write for book of actual photos and easy payment plan. BOARD OF TRADE, Room 317, Fruitland Park, Florida.

**Your Boy + ST. NICHOLAS = a Man**

The right kind of work, the right kind of play, and, most essential of all, the right kind of reading, makes red-blooded boys and girls the right kind of men and women. Every child has originality and it should be developed. St. Nicholas Magazine, with its many worth-while suggestions placed before the youngster in a manner indicating fun and pleasure, has helped to produce during the last fifty years many of the world's greatest and most successful men and women.

In 1923, St. Nicholas will print the best stories of the most popular writers for boys and girls. Among these authors are Emile Benson Knipe and Alden Arthur Knipe, Augusta Hufell Seaman, Ralph Henry Barbour, Samuel Scoville, Jr., Hildegarde Hawthorne, Countess Vera Tolstoy and George Inness Hartley—all writers who know how to interest and instruct.

At less than the cost of your morning paper, you can give your boy and girl the kind of reading that develops character while it entertains. One year's subscription is only \$4. Send check or money order to St. Nicholas Subscription Department, U-2, 353 Fourth Ave., New York.

**ST. NICHOLAS**  
for Boys and Girls

to exceptional abuse, and defects naturally to be expected in pioneer work, it has suffered very little, and will continue in service indefinitely. I have now arranged with the Illinois Central Railroad to put three more of these cars in experimental use, built on plans incorporating the results of experience gained in the demonstration car. The concrete car holds promise because of its lesser first cost, greater permanence, and reduced upkeep."

After having built some of the largest movable bridges in the world, Mr. Strauss now proposes to build on a completely new design the largest bridge of any kind in the world—longer by seven hundred and fifty feet than any bridge yet even proposed. He proposes to span the Golden Gate!

This is not a vague dream, or mere speculation. The mammoth bridge has been designed. I have seen the plans. These are some of the facts about it:

The distance from bank to bank at the site of this proposed bridge is 6,700 feet. The plans call for piers 1,345 feet from either shore, supporting a main center span 4,000 feet long.

There is nothing like that anywhere in the world to-day. The longest bridge now in existence is the Quebec Bridge, with a clear span of 1,800 feet. The proposed Hudson River Bridge in New York would have a clear span of 3,250 feet.

The two main piers of this great new bridge will rise two hundred feet above the water line, and on top of them will be superimposed steel towers that will bring the total height of the piers, from water line to top, up to 1,010 feet—or ten feet taller than the highest structure previously erected by man, the Eiffel Tower, in Paris.

The bridge provides for two lines of trolley cars, two lines of automobiles in each direction, and two seven-foot sidewalks. It is a combination of the cantilever and suspension principles. When finished, it will surpass any steel structure thus far erected.

**R**ELECT that this bridge was designed by a man who went into bridge engineering thinking that everything was already known about it!

"Don't be afraid," he says, "to dream!" And he adds:

"(1) Be sure that the idea itself is right; examine the objections without prejudice, and demonstrate it to yourself.

"(2) Subject it to the conditions of use; learn all the arguments and weaknesses that impair its value, and be sure it stands up under the test.

"(3) Remember that there is a right time for putting the idea over; don't be too early or too late.

"(4) Be sure the idea stands up under the *prout* test; that it will save time or money, or earn, or do something so much better that it will warrant junking some equipment that may already be in existence for doing the same thing in another way.

"(5) When you come to demonstrate your idea, be sure that you are prepared to show its merits completely and conclusively; don't expect others to accept the idea as soon as you half-explain it.

"(6) Above all, if you are certain that the idea is sound, let *nothing* discourage you; go ahead with it in spite of all that people say. You know. They guess."

**Are You and Your  
Boy Chums?**

When he was a little toddler you gave him all the time he demanded. You would have been appalled at the idea of turning him over to a stranger to care for.

Now you are seeing less of him than you used to. School, play, boy chums, street acquaintances you know little of, absorb his time. Now, as he approaches the turning point between boyhood and manhood, he needs you as never before. Either you or others are going to put in his way the things he will think about, dream about, and turn into deeds.

To-day you can be the best chum in the world to your boy. Not by always being with him, but by giving him clean-hearted associates, substantial ideas and noble ideals to guide and govern his growing impulses. Give that son of yours

**THE  
AMERICAN BOY**

"The Biggest, Brightest, Best Magazine  
for Boys in All the World"

It will bring him in touch and into harmony with the real important things in life through the medium of intensely interesting stories of adventure; adventures in business; adventures in manufacture; adventures in railroading; the sea; history; science; machinery; travel; law; through fact stories, written by the foremost authors of the day in a way that gets under a boy's skin.

It will breed in him a love of honor, fair play, courage, persistence, an appreciation of service to others, sacrifice of the immediate desire for the better thing to come.

Great responsibilities await your boy. More and more he is going to be called upon to make decisions and act when you are not by to counsel. Will emergencies find him prepared, puzzled or paralyzed? Let THE AMERICAN BOY be his chum for the next few years, and he will absorb from its stories and articles that understanding which will help him to think, speak and act with well-balanced judgment.

A year's subscription to THE AMERICAN BOY costs only \$2.00. You will never spend \$2.00 in a better cause than the future of your son. Single copies at news-stands are 20c. Subscribe for a year or leave a standing order at your news-dealer's.

The panel above shows the links of a Simmons Chain twice enlarged. Notice their beauty and strength of design.

## A Good Watch Chain from end to end

WHAT could you desire in a watch chain!

Beauty? Simmons Chains are superbly designed in many different link styles and finishes to agree with each type and color of dress.

Durability? A Simmons Chain will wear for years and years—for it is made by the special Simmons process of drawing gold, green gold or Platinumgold over a less expensive base metal.

Value? In spite of its beauty and durability, a Simmons Chain is most reasonable in price—\$4 to \$15.

There is your style in a Simmons Chain, whatever your preference or occupation. See it at your Jeweler's.

## "Do It Better—and Do It in Your Own Way"

(Continued from page 45)

have never seen men work together for any considerable length of time where their interests were solely financial. It is not possible to buy loyalty. The man who thinks that he can get anywhere by offering his services to the highest bidder is as mistaken in his conception as the man who makes the bid. It is not right to pay less than the average market rate for ability. Neither is it right to pay more, unless for ability above the market average.

"We have never had any serious dispute of any kind with our workmen, nor ever the suggestion of a strike. Since I started, back in that grocery store in 1886, I have never had a wage dispute with any man. During the war boom, when wages and salaries beyond all reason were being offered—wages and salaries far higher than we could legitimately pay—none of our executives and none of the workers who had been with us over two years left.

"There is no secret about it all. It came about through the application of the same ideas my father had. Though he had no head for business he is the one from whom I have learned the most. He did not care whether two plus two made three, four, or six. But he did know how to get along with people. He was honest, fair, and always tried to put himself in the other man's position and to discuss every fact with absolute frankness. That sort of attitude will win out in any kind of situation.

"IT WAS easy enough to carry these ideas through in the first little company. There we gathered the nucleus of the present force, the force that has done most of the work and is responsible for most of the success. W. T. Simpson, who is now the first vice president, came from a mill which had been sold to the United States Steel Corporation. He had rolling-mill experience and he became the first general superintendent. Twenty-odd years ago, it must be remembered, rolling-mill practice was exceedingly rough. The workers were simply hired and fired. The nucleus of officers and workers that we brought from Cincinnati put the spirit of self-respect into the larger force that the new company employed. They grew from three hundred and fifty to six hundred men. Then we built a new plant, and overnight jumped from six hundred to fifteen hundred men. It took three or four years to convince the new workers that we were square.

"A good deal of that convincing was done by Charles R. Hook, now our vice president and general manager. He had been an office boy in a Cincinnati rolling mill. When the Tinplate Trust took over that mill he was made a clerk in the Chicago office. Then he insisted on going out and getting rolling-mill experience in Indiana. He worked nights and Sundays, and gained experience. When he came to us as

**BACK** of Compo-Board's smooth, tough, moisture-proof surface—so readily adaptable to any form of decoration—is the stout wood core which gives it such great strength and rigidity.

## Compo-Board

## New Methods in Child Training

Now for the first time there is a new method in child training, founded on the principle that confidence is the basis of control. This new system shows you how to bring home to children the value of obedience, self-control, and other things which, if properly understood, lead to the best results. The new method removes the cause of the child's misbehavior, and by persistent repetition of the new method, the child's mind is brought to a point where it is ready to accept the new system. This new system, which has been put into the hands of parents, is a simple, practical, and immediate result for the thousands of parents who are looking for a better way to train their children.

### Highest Endorsements

Consistently prepared especially for the home parent, it is a practical, immediate result for the thousands of parents who are looking for a better way to train their children. It is also endorsed by leading educators. It covers all the ground from the first year to the first year.

### Free Book

"New Methods in Child Training" is the title of a startling book which contains this new system and method. Send for it or postal order and the book will be sent free—but do it now. It is the only book of the kind ever published.

The Parents Association  
Dept. 93, Pleasant Hill, Ohio

night superintendent in the sheet mills he was only about twenty-five, and might have passed for seventeen. The first night he entered the mill the men sang out:

"Where did the kid come from?"

"But 'the kid' knew his job. The workers found that there was nothing in the place that he did not know how to do better than they did; and they found he was on the level in everything he did. It was only a matter of weeks before he had their absolute confidence. And so it has gone on.

"For nearly eight years we earned, but did not pay, dividends. We put all the money back into the business. Just as quickly as the opportunity offered, we extended. We bought a works at Zanesville and doubled our production overnight. We took over blast furnaces at Columbus. We built an entirely new plant in Middletown. Our workers reached the peak number of fifty-eight hundred.

"In twenty years we grew seventeen hundred and fifty per cent! And this has been done largely by keeping three principles in mind. They are general principles, applicable to anybody and anything. They are: (1) Get men who will make the business *their* business and who will work with each other; acquire specialties in men. (2) Make products that no one else makes; and make them economically. (3) Borrow money when the circumstances justify it!

A GREAT deal might be said on the last of these points.

"We all know the kind of man who says, proudly: 'I never borrowed a penny in my life. I pay cash for everything. I do not ask for credit. It's a principle with me.' That man has a great deal to learn.

"I had a young man in my office the other day who had been brought up in the belief that it was always wrong to borrow money. I have known him since he was knee high. He had come to consult me on a chance to buy out a small business for about five thousand dollars. He felt pretty certain that he could borrow the money, but he thought that it was wrong to start off with a load of debt—that the pay-as-you-go policy was the only policy. And he had just about decided to pass up the chance.

"I have never borrowed any money," he said. "I am afraid of debt."

"This is as good a time as any," I answered, "to stop being afraid of fear. Nearly every man starts in business on his own account with at least partly borrowed money; for hardly ever has a man accumulated enough money by the time he is twenty-five to start in anything worthwhile solely on his own resources. If he feels that he ought to be in business for himself, then the only thing to do is to find the money to get started with. And it is dollars to doughnuts that this money will have to be borrowed from an individual. A bank can scarcely take the risk.

"You can borrow the money if you have established your character. You can't borrow it if you haven't. And it does not make much difference whether your proposition is good or bad. The man will lend to *you*, not to the business, and it is up to you to repay if you fail in business.

## Leonard CLEANABLE Refrigerator

"Like a Clean China Dish"

Leonard All-Purpose Refrigerator

### Helping Housewives in their war against waste

C. H. LEONARD

Those who know the Leonard recognize its supremacy as a preserver of food, a guardian of health and an aid to thrift. The Leonard's safe storage of foods permits leftovers being used to the last atom. Waste is eliminated, money saved, extra work avoided.

It's economy to buy a refrigerator one size larger than you think you need. This assures uncrowded space for dishes left over or prepared ahead.

The Leonard has ten walls of insulation, one-piece food chamber, porcelain-lined. Furnished with water cooler and rear icing doors when desired. One out of every six refrigerators sold is made by Leonard. See the nearest Leonard dealer. If you cannot find him, write us and we will see that you are supplied.

Send for actual sample of porcelain, and catalog illustrating over 75 styles and sizes of refrigerators. Mr. Leonard's own booklet on "Selection and Care of Refrigerators" will be mailed, too.

There is a Leonard size and style to suit every purse

Grand Rapids Refrigerator Company  
603 Clyde Avenue, Grand Rapids, Mich.

Be sure the refrigerator you buy is made in Grand Rapids, the fine furniture center of the world.

## Deaf Can Hear Says Science

### New Invention Aids Thousands

Here's good news for all who suffer from deafness. The Dictograph Products Corporation announces the perfection of a remarkable device which has enabled thousands of deaf persons to hear as well as ever. The makers of this wonderful device say it is too much to expect you to believe this, so they are going to give you a chance to try it at home. They offer to send it by prepaid parcel post on a ten-day free trial. They do not send it C. O. D.—they require no deposit—there is no obligation.

They send it entirely at their own expense and risk. They are making this extraordinary offer well knowing that the magic of this little instrument will so amaze and delight the user that the chances of its being returned are very slight. Thousands have already accepted this offer and report most gratifying results. There's no longer any need that you should endure the mental and physical strain which comes from a constant effort to hear. Now you can mingle with your friends without that feeling of sensitiveness from which all deaf persons suffer. Now you can take your place in the social and business world to which your talents entitle you and from which your affliction has, in a measure, excluded you. Just send your name and address to The Dictograph Products Corporation, 1764 Chamber Building, New York, for descriptive literature and request form.

## \$1800 for a Story!

RECENTLY an American writer was paid \$1800 for a single short story. By beginning to tell the stories of her dreams this woman has found her way to fame and fortune. You can learn to write, too. Dept. 3, 218 S. Wabash Ave.

Agents or dealers wanted in all parts of the country. Every auto owner should have one. They pay for themselves in a few nights of use, saving expensive hotel bills.

"Find out, as nearly as you can, just how much you will need; then get that amount. If you cannot get the full amount, then change your plans or give up that particular scheme. For if you try to get on with too little money you will fail. Do not try to borrow more than you need—it is hardly likely that you will get it anyway—but it will only hurt the confidence in you to try for it. But do not start with less than you need."

"I believe I would be the last person in the world to advocate indiscriminate borrowing. More men are ruined by borrowing money than succeed by obtaining it. But the plain fact is that the only way to get started in anything is to get money. The man who usually makes the largest success is the one who has to borrow money to start."

"Never misrepresent your circumstances in asking for a loan. For instance, if money is needed for a certain personal object, and there is no reasonable likelihood of it being repaid for, say, two years, then the loan should not be asked for a period of two months. Yet the average personal borrower will ask for the money for only two months—having often persuaded himself, against the facts, that he can pay within that time. Then, when the due date arrives and he cannot pay, instead of making a clean breast of the facts he tries to borrow from another man to repay the first one. And so he gets a bad reputation, which could have been avoided by a sensible statement of the facts at the beginning."

"One must clearly distinguish borrowing for personal needs from borrowing to get started in business, or to extend a business."

"THERE are two kinds of legitimate borrowing: one for capital purposes, and the other to provide money to finance operations. The first kind of borrowing can be repaid only out of profits over the years, and therefore has to be borrowed for a long term. The second kind of borrowing has to be self-liquidating; that is, the operation for which the money is borrowed must be such that it will turn over a sufficient quantity of money to repay the loan. If you attempt to borrow on short term for business extension then you are sure to get into trouble, for the business cannot possibly earn the necessary amount of money; or if it does earn it, the amount of money cannot be taken out of the business in so quick a time. The money has to be taken out gradually. In the self-liquidating kind of obligation no money at all is taken out of the business. It is simply that an operation is financed. If the man keeps these facts clearly in mind, and tries to look at every loan from the standpoint of the lender, he will have no trouble as a result of borrowing money. Honesty is of course a prerequisite, but honesty alone is not enough. One must also have common sense."

"THE First Woman to Sit on a Supreme Court Bench" is the title of an interview next month with Florence E. Allen, the most famous woman judge in the world. You will be fascinated by the story of her unique career and her experiences with witnesses, lawyers, and juries.

## He Makes Homes Grow in Waste Places

(Continued from page 51)

two hours. It was a typical tag-end section, with rock quarries and waste places. The ravines served as rubbish dumps. Among my neighbors were dairy barns, truck gardens, slaughter pens, a cider mill, and any number of ramshackle buildings.

"In spite of the unlikely surroundings, I believed that the district was in the line of the city's growth and had a future. I was just married, and my wife was a college graduate. But we built ourselves a little house on the property and I knuckled down to selling lots. I had to carry our drinking water from a spring across a ravine. We kept a cow and I milked her. Mrs. Nichols did her own work.

"Meantime, I laid a board sidewalk, driving every nail myself. I took a hand, in the morning, with a grading crew which, after careful thought, I hired for a special piece of work. I considered a good while before I hired that grading crew, because it involved an expenditure of one hundred and twenty-five dollars, and every one of the dollars came hard.

"Afternoons, as a rule, I got into a buggy and drove to the end of a street car line, a full mile away, to bring prospective buyers to the subdivision and try to sell them.

"MY EXPERIENCES with this property started me on the line of development that came later. But I sold the lots in this first subdivision without improvements of any kind; when the buyers began to build houses, they had to have the ordinary city conveniences; and these were brought in piecemeal and at a high cost to owners.

"Furthermore, some of the original undesirable neighbors did not move away, as I had hoped they would, when home owners began to come in. For instance, on a five-acre plot adjoining my property lived a scavenger with his family. He kept a pig lot, and brought garbage to feed his pigs. He also brought dead cats and dogs, and burned their bodies.

"This was a great nuisance. Finally, in order to get rid of it, I bought his five acres, cleaned it up, and sold it along with the original ten acres. But another neighbor, a brickyard, I could not get rid of.

"As time went on, I began to see that the people who had bought from me had not bought profitably. When they tried to resell, they could not get as much as they had paid. This worried me, for I knew that a permanent business could be built only on the basis of the buyer profiting as well as the seller.

"I wanted people who bought homes and home sites from me to find their purchases a profitable investment. On this first tract I went so far in some cases as to buy back certain lots myself, to save the owners from loss; and I built some houses in order to try to improve the character of the residences. But it was too late, after the property had been sold, to control the situation. Too many factors making for the depreciation of values were

## The POSTAL LIFE INSURANCE COMPANY

(SCENE: After dinner at the Club; Banker Allwyn is chatting with Goodsell, a real estate broker, formerly a life-insurance man, and the question of insurance protection comes up.)

Allwyn: "After all, Brother Goodsell, I want to tell you something which is a sure boost for the business you used to be in, and that is when a man asks me for credit, I always ask him how much life insurance he carries."

Goodsell: "And I reckon you also ask him what companies he's in."

Allwyn: "Oh, the companies; like the churches, are all good; they have to be, don't they?"

Goodsell: "Sure thing. State supervision looks out for that."

Allwyn: "Of course, the oldest companies are mentioned most frequently, but the comparatively younger ones also bob up pretty often, and particularly the Postal Life."

Goodsell: "Why, the Postal's not so very young. I remember because I used to fight it 15 years ago."

Allwyn: "'Twas sound from the start, wasn't it?"

Goodsell: "Yes, 'twas always sound, but it was—well—well, we said it was an experiment."

Allwyn: "Why?"

Goodsell: "Oh, because it got business direct, personally at the home office or by mail, and didn't send out agents or have branch offices."

Allwyn: "Well, even so, the Company seems to have made good all right."

Goodsell: "Sure thing; it has policyholders in every State, and in Canada, too, and has its own building on Fifth Avenue and 43d Street. I believe there is no company better known in our country."

Allwyn: "What do you consider the strong points that helped the Postal win out?"

Goodsell: "Well, low cost, dealing direct with the public, and the privilege of paying premiums monthly if one so desires; then there's a 9½% annual dividend guaranteed in the policy, and there's a free medical examination through the Company's Health Bureau which helps keep its policyholders 'fit.'"

Allwyn: "That's pretty good, isn't it?"

Goodsell: "Sure thing; and I want to tell you that just as soon as I can afford to take out another policy, it's going to be in the Postal."

Allwyn: "That seems to me to be good horse-sense, for it's based on safety, saving and service. Why, the Postal Life is growing just like a bank; its policyholders are its depositors; agents do not bring them in. And now I want to put you wise to something else; I've carried a Postal Life policy for ten years or so myself, but didn't tell you about it, for I just wanted to 'feel you out'."

Goodsell: "Well, the reaction, as they call it, was O. K., wasn't it?"

Allwyn: "It certainly was, and it's kind of pleasant to feel that each of us has a highly-prized mutual friend in the Postal. Isn't that so?"

Goodsell: "You've said it, and unless I miss my guess, we'd both prize the Postal Life more as time goes on, and there are over 25,000 other policyholders who feel the same way."

Allwyn: "Now you've said it. Have a fresh cigar."

The foregoing business chat is typical of many others that must be taking place, since similar sentiments are reflected in letters that come to the Company from far and near, in praise of its method and in appreciation of its treatment. It is indeed the Company of

### Safety, Saving, Service

To find out what you can save and to enjoy Postal service, simply send in the Coupon or write and say:

"Mail me official insurance information as mentioned in the March American Magazine."

In your first letter be sure to give

1. Your full name
2. Your occupation
3. The exact date of your birth

No agent will be sent to visit you. The Postal, as stated, has no agents and the resultant commission savings go to you, because you deal direct.

## Brush Teeth in This Correct Way

Made to meet the requirements of modern dental authorities

This is the type of brush adopted by modern dental authorities. It is made to their specifications.

It is one of the most important factors in proper tooth protection. Dentists the world over now advise it.

A tooth brush, to meet modern requirements, must do more than remove food debris.

It must attack film-coats and other deposits. It must effectively reach all tooth surfaces. It must penetrate between the teeth.

It must be adapted to the rolling method—brushing from the gums toward the tooth points. That is the way to brush teeth.

Decoater Brushes cost 50c; Pocket Style, \$1.00; Refills for Pocket Style, 50c.

It must massage the gums to maintain their health and vigor.

The best type made to meet all these requirements is known as the Decoater. This is the authoritative type, and careful people are everywhere adopting it, largely by dental advice.

### Decoater

#### Carry it with you

Dentists also advise that you carry a tooth brush with you. Teeth should be brushed after every meal. People who eat away from home, like school children and workers, should carry a pocket brush.

To travelers and motorists this is especially important.

The pocket Decoater is made for this purpose. It folds into a ventilated metal case, vest pocket size. The handle-case is permanent. One simply buys refills as brushes wear out. This is the sanitary, convenient way to always have a tooth brush with you.

Most drug-gists now sell Decoaters. If you fail to find them, remit to us.

involved, and I could not fight successfully against them all.

"My difficulties with this property, however, led me to dream about some of the things that we have since turned into realities. One of the first necessities, it seemed, was to get for purchasers the benefit of all possible economies in installing pavements, sewers, and other customary improvements. I decided that in future all my property should be sold with all improvements in.

"This looked idealistic to my partners, and as it involved a considerable investment they told me they would rather drop out."

Nichols, however, put every dollar he could scrape together into more land, and interested enough men, with money and generous confidence in him, to complete the financing of the project.

Then began the hardest fight. Men called Nichols, with his new ideas, a dreamer. He met many prospective buyers, who liked his ideas but thought they could not be made to work. He had a firm friend who was the president of one of the banks. But two of the heaviest stockholders of the bank criticized this president for lending so much money to a man in such an uncertain business, established on theory and ideals, rather than on proven earnings.

BUT Nichols did not turn aside. In fact, with time, his dream amplified.

"I began," he said, "to study more deeply the factors that influence home values. I wanted to insure permanent values. In order to do that, I knew it was necessary to have permanent restrictions as to the class of buildings to be erected, the distance of houses from the street, free space, architectural design, the location of business blocks, and so on.

"I found, however, that the common method of restricting was for a term of years; ten, fifteen, or twenty, perhaps; and when the restricted term expired, many of the owners no longer had any interest in extending it. Experiences like that of the ex-governor with the undertaker are common, as many persons in many towns can testify. I saw that home owners suffered great losses because of this.

"At the same time I, of course, realized that some provision had to be made for natural growth and change in the character of districts. Consequently, I began to provide restrictions covering a period of twenty-five years, which could be renewed at the end of that time upon agreement of a majority of the owners.

"But I found that even this was insufficient. It would be easy enough for an owner, who had moved away from a district and had lost his personal interest in continuing the restrictions, to refuse to sign an agreement extending the period. Consequently, I evolved a new plan. Under it, the restrictions are automatically self-extending for a stipulated term of years, unless a majority of owners execute at specified times an agreement in writing to cancel them. It is very difficult to get a majority of owners to sign such an agreement, unless it is in the interest of the majority to do so."

That Nichols made his dreams come true, and in a remarkably short time, is evidenced to-day by the beautiful resi-

dential section of Kansas City known as the Country Club District. It is a tract of some two thousand acres, housing about fifteen thousand people.

The purpose that Mr. Nichols has kept in view constantly is to provide better individual homes, protected against undesirable encroachments, so that the values will increase with time. To accomplish this, he has had to adopt many unique methods.

Streets and drives are scientifically located according to topography, with a vast improvement in appearance over the common checkerboard arrangement which does not consider the lay of the land. Shrubbery and ornaments are selected and placed by experts. The company itself has built and sold homes with a total value of many millions. Novel architectural ideas have been worked out. Paths for pedestrians have taken the place of streets at convenient points. Bridle paths for horseback riders are laid out. Playgrounds are provided for children. A new kind of street paving, especially well suited for residence districts, has been developed.

IT IS characteristic of Nichols that whatever he has undertaken he has always found a way to finish it. Once he wanted a certain street put through as a boulevard entrance to the district he had developed. He fought for ten years, but he finally got the boulevard.

When it was completed, he began buying property along it, so that he could resell it under restrictions which would insure a permanently attractive approach. Almost at once, however, billboard companies began to erect huge signs. Nichols, feeling that they would detract from the dignity and beauty of the neighborhood, tried without avail to get them removed. Finally, he appealed to the residents themselves; and at once they flooded the offices of the companies with letters.

"We will not use the products advertised," they said, "if you keep the billboards there."

Against this force of public opinion it was useless to struggle, and the signs were taken away.

Over the brow of a hill from his first subdivision was an ugly brickyard, already mentioned. When in operation it poured forth clouds of smoke. Nichols tried to buy it or to get it moved, but was unsuccessful. He resorted to the courts, carried a suit to the supreme court, and now, after fifteen years, the brickyard is being moved away.

Once, as a youngster, Nichols got a job loading freight cars with bags of potatoes. He was to receive a dollar and a half per car. The job had always been done in a primitive way. A man took a bag of potatoes on his back, carried it into the car, stowed it away, and went back for another bag. Nichols tried that method, and soon decided that his back would break if he kept it up. So he studied a bit and devised a truck, with which he figured he could work faster and easier. He loaded several bags on the truck, wheeled it into the car, and then unloaded all the bags at one time. That saved a lot of carrying; and by means of his invention, Nichols was soon loading cars so fast that the people who hired him would have liked to cut the rate, but could not manage it. That little incident is typical of the man.

## Combat Sore Throat both Inside and Outside

Treat the infection with an antiseptic gargle. Break up the congestion with a liniment application. Give prompt and thorough treatment to this forerunner of many dangerous throat infections. A treatment made most convenient in the use of Absorbine, Jr.—the combined antiseptic and liniment.

### What the Safe, Dependable Antiseptic Does

Spray or gargle the throat with a solution of Absorbine, Jr. This germicidal solution destroys the virulent germs; the combined soothing and healing properties of Absorbine, Jr. relieve rawness and hoarseness.

### What the Powerful, Efficient Liniment Does

Rub Absorbine, Jr. gently into the throat muscles. This scatters the congestion and helps nature to restore the normal circulation of the blood. It draws out the inflammation or soreness. It reduces the swelling.

Absorbine, Jr. holds a responsible never-empty place in many thousands of medicine cabinets. It is of a clean, agreeable odor. Keep it handy for emergencies.

At most druggists \$1.25, or postpaid. Liberal trial bottle, 10¢, postpaid.  
W. F. YOUNG, Inc., 178 Temple Street, Springfield, Mass.

## The Experiences of a Deaf Person

(Continued from page 55)

when she hears me saying, "Absolutely," she is sure I've no idea of what was said.

Ah, well, these pitiful subterfuges are part of the "blessing."

It is all the more trying, as I have a reputation to sustain for being witty. Some lucubrations of mine in print have gained for me the credit of being a humorist. Invariably, strangers on meeting me are disappointed that I don't keep the room in a roar by my witty comments on everything that is said.

I overheard one lady say, in a cloak-room, after a party:

"No, she didn't say anything funny. It's just as my husband says, these professional wits never get off anything good when you talk to 'em."

A deaf person is very apt to become self-centered. Even selfish. Than which there is nothing more awful.

But it is a temptation to take the attitude, "All right; if they won't speak so I can hear, then I won't try to hear," and withdraw into your shell like a nautilus.

And really, there's small use in trying to make them speak so you can hear them. You can train the members of your household—that is, if you live with them for fifty or sixty years and keep at it all the time.

But the man in the street cannot be taught.

SOME have the God-given gift of a clear voice; but this is rare. And it is clarity that counts. Loudness is a secondary consideration. A deaf person can hear a clear voice even if a low tone is used.

Pitch is the thing. I can always hear a person who sings soprano or tenor far better than those who sing alto or bass. For this reason, I cannot say that I hear either men's or women's voices better. I hear the high-pitched voice of either sex. I always hear a shrill scream or whistle, never the deep boom of thunder or the low roar of the sea.

Music, I can always hear. Except perhaps the deepest notes of the bass instruments.

But the highest, finest notes of the violin or the faintest high tones of the human voice are always perfectly audible to me.

Also, I hear perfectly on the telephone, which is naturally a great advantage and which compensates for some other deficiencies.

And I hear perfectly in a motor car or on a moving railway train.

It amuses my friends that I can hear their chatter, every word while the train is going, yet cannot hear during the station stops.

Similarly, in a motor car, I hear all the conversation, whether I sit in the front seat or the back, and I often get bits not intended for my ear. For my friends are so accustomed to my deafness that they don't realize how well I hear in a moving vehicle.

Scientific explanation of this has been given me: It seems that the drums of my

ears are loose, and the vibrations of the moving vehicle make them so taut as to be normal—so as long as I am going I am not deaf.

Of course I have friends who love me enough or admire me enough to want me to hear them. These really take thought to their speech, really make an effort to have me hear.

And yet their success is by no means commensurate with their efforts. Some, with the best intentions, can only succeed in yelling without clarity. Others mouth their speech until it loses all distinctness. Others have an unbreakable habit of turning the head aside, especially at the point of the story.

But there is one speech I always hear. One line, often spoken, that I never miss.

That is, when a truly kind and well-meaning friend, says, in a low tone to someone else, "Speak louder; she is a little hard of hearing."

I don't believe this has ever been said that I failed to hear it. And the reason is simple: Because I am not meant to hear it, the speaker drops her voice (men never do this, they speak right out), and because of the lowered voice she speaks specially clearly in order that the one the warning is meant for may hear it. Consequently, owing to the unusual clarity, I hear it, too!

Nor do I resent it. I fully appreciate the kindness of the intent, but they may as well say it outright. For I am not sensitive.

I AM sorry, angry, resentful, exasperated, and sorely wounded in my pride, but I am *not* sensitive. I do not mind jokes at the expense of my deafness; I do not mind when people swear at me (and they have), because I cannot hear them; I do not mind when my friends tell strangers to "speak louder, she's deaf," for all these things are such trifles compared with the great, the ever-present fact that I *am* deaf. No amount of jeering or poking fun, no amount of sympathy or lamentation, no advice as to what remedies to use or how best to bear it, have any bearing on the real thing, for no one, not deaf, has any idea what it means.

Opera I can always hear, also light opera or farces.

But in serious plays or dramas, there are so often asides, or moments of emotional acting, that I miss a great deal. Moreover, of late years, actors, and more especially actresses, speak with their backs to the audience. This used to be taboo, but now it obtains; and when it does I can't hear them.

One of my chief regrets is my inability to talk with little children. Some think the fresh, clear voices of childhood should be easily heard by the deaf, but it is not so. The little thin pipes most children put up, or the turned aside, half-shy enunciation, are usually impossible for me to hear. And to ask a child to repeat is fatal to conversation. The child is frightened at the idea of speaking in an unusual manner and declines to speak at all.

Indeed, the more intelligent, the more intellectual, the more highly educated a person is, the better, as a rule, can he understand the manner suited to the deaf. Perhaps the quality most needed is imagination. The faculty of putting yourself in another's place.

## Automatically Shows Your Mistakes in English And How to Correct Them

IT is no longer necessary for anyone to be handicapped in life by faulty English. No one need make mistakes in grammar, in spelling, in punctuation. There is no excuse for poor expression in writing and speaking.

Yet it is not necessary to memorize rules, to practice tiresome exercises, to undertake a long course of study. A remarkable new invention which automatically finds and corrects your mistakes, has been perfected by Sherwin Cody, the eminent authority on English. This invention, which is called the Correct-o-graph or 100% Self-Correcting Device and on which a patent has been granted, makes it so easy and interesting to acquire a perfect command of the language, that it is just like playing a fascinating game.

## Your English Reveals You

It is an amazing fact that most people are only 60% efficient in the vital points of English. Few people realize how many mistakes they make. These mistakes hurt more than you know, for people are too polite to help you correct them.

Every time you talk, every time you write, your English reveals you. When you use the wrong word, when you mispronounce a word, when you punctuate incorrectly, when you use flat, ordinary words, you handicap yourself enormously. An unusual command of English enables you to present your ideas clearly, forcefully, convincingly. Nothing is more important to your success in life.

## Wonderful Invention

For many years Mr. Cody has been working constantly on the problem of devising some method by which correct habits in speaking and writing would be readily absorbed by the mind. After countless experiments he found the solution to his problem in his invention, the Correct-o-graph. A unique feature of this device is that it is 100% self-correcting. It employs an entirely new principle in education which automatically points out your mistakes and helps you correct them. You acquire a new mastery of English almost without any conscious effort on your part.

## 15 Minutes a day

Another remarkable advantage of the Correct-o-graph is the rapid progress that can be made. By means of this self-corrective method, fifty questions can be answered and corrected in 15 minutes. Every minute you spend with this fascinating course increases and strengthens your mastery of English. Almost immediately your English begins to improve. Soon the use of correct language in writing and speaking becomes "second nature" to you. You do not think of any rules; you simply employ good English instinctively.

## FREE NEW BOOK AND 15 MINUTE TEST

If you feel your lack of language power, if you are ever embarrassed by mistakes, if you cannot command the exact words to express your ideas, our new booklet "How to Speak and Write Masterly English" will prove a revelation to you. With this book we send you a 15 minute test which you can take in your own home. Merely mail the coupon. Learn how Sherwin Cody's Correct-o-graph makes command of language easy to gain in 15 minutes a day. Mail this Coupon or a Postal AT ONCE.

## What People Say

"Your system is unique. I have never seen anything like it. Interest is awakened and held from the start. By means of the self-marking and the keys one knows the progress he is making, and he is carried from point to point so smoothly that he really smiles at his satisfactory accomplishment."

BENJAMIN F. MANN,  
200 A Street, N.W.  
Washington, D. C.

"Your 100% Self-Correcting Course in English Language is the finest and most interesting device for self-education I have ever tried."

U. G. FRY,  
Haltmore, Md.

"Never have I found study of any kind more fascinating or more productive of results than your course in English."

EDWIN F. C. COOPER,  
Newport News, Va.

"I am more than pleased with the new way of studying English. It makes that old laborious work a pleasure."

REV. W. WINTER,  
Holtzman, Kan.

It is the one who sees with his mind who senses another's deafness so truly that he doesn't need to remember to speak clearly; he does it intuitively. These people are rare; but they exist and they are the ones who make a deaf body's life worth living. For this nature has something to say worth saying and has the power of saying it—without effort, so I can hear it.

I was recently asked two questions: "What would you say you have gained by being deaf?" and "What have you lost or nearly lost by being deaf?"

To the first, I answer unreservedly, Nothing. I cannot think of a single "gain" from my deafness. It has not made me meek, patient, humble, or imbued with any of the Christian graces. It has not improved my mind, my moral, or my temper. It has not saved me from a lot of senseless chatter. When I don't like people's chatter I go home.

On the other hand, I've not lost anything much through my deafness. I may have missed a few compliments here and there; possibly I've let a pleasant invitation pass unheard. But I've lost nothing much, except a sort of prestige that might have been mine could I have heard—not the senseless chatter, but the truly delightful conversations that I have sat through and missed.

I have lost the satisfaction and self-complacency that come from the feeling that I have done myself proud, or that I have fulfilled the hopes of a hostess who was introducing me to her friends. It is humiliating to be a guest of honor and to do or say nothing specially honorable, yet I do my best; and though I can't fool all the people all the time, I can often leave behind me the impression that I'm not so very deaf after all.

THE only class of people I'm sure of hearing are those in the theatrical profession. Ministers are apt to mumble. Public speakers speak far from clearly, when off the platform. Lawyers and professors rarely speak above a whisper, but actors speak well because they've been trained to do so. If everybody in society took a course of voice culture, we deaf people would have no further cause to mourn.

The people I hear least of all are the other deaf people. Somehow, deaf people have achieved a reputation for shouting. I have never heard any do so. The deaf people I have talked with, and I run whenever I see one, have spoken so low as to be almost entirely inaudible to me. I have some intimate friends who are deaf, and I never can hear a word they say.

The only shouter of my acquaintance is a dear little girl, a slight, anemic young thing, who wants to please me, and so, whenever she speaks to me, she draws a long breath, shuts her eyes, clenches her fists, and—yells!

If anybody really wants to make a deaf person hear—and there are a few in the world who really do—he must observe only a few rules:

Speak naturally but clearly. Keep your face turned toward the deaf auditor. Don't put your hand up to your mouth. And remember that she is deaf. Don't forget it.

The remembrance will keep you speaking clearly, not loudly. The remembrance will keep your face turned toward her,

## A Big Raise in Salary

Is Very Easy to Get, if You  
Go About It in the Right Way

You have often heard of others who have doubled and trebled their salaries in a year's time. You wondered how they did it. Was it a pull? Don't you think it. When a man is hired he gets paid for exactly what he does, there is no sentiment in business. It's preparing for the future and knowing what to do at the right time that doubles and trebles salaries.

## Remember When You Were a Kid

and tried to ride a bike for the first time? You thought that you would never learn and then—all of a sudden you knew how, and said in surprise: "Why it's a cinch if you know how." It's that way with most things, and getting a job with big money is no exception to the rule, if you know how.

## We Will Show You How

Without loss to you of a single working hour we can show you a sure way to success and big pay. A large number of men in each of the positions listed are enjoying their salaries because of our help—we want to help you. Make check on the coupon against the job you want and we will help you get it. Write or print your name on the coupon and send it in today.

not away from her. And I hope the remembrance will keep your hand away from your mouth.

The fearful attraction the mouth seems to have for the human hand is as inexplicable as it is universal.

It is quite possible for the deaf one to know at a glance if a stranger is going to speak clearly or not. The fat man with the squashy collar will surely mumble his words, or have a voice with no sound to it. The hatchet-faced, stringy-necked individual will doubtless speak in a high, strident voice that may not be beautiful but is delightfully easy to hear.

And a voice easy to hear is a godsend to the deaf person. The strain—mental, physical, and nervous—that we go through trying to hear is enough to throw a strong constitution into nervous prostration, and I have often gone home after an evening of such strain a total wreck from sheer weariness and exhaustion.

Sometimes, however, occurrences have a flavor of humor. One funny occasion was when I was introduced to a well-known man of letters who was afflicted with a tendency to stammer. It was in an editorial office, and directly after our introduction the editor was called out, leaving us alone.

I heard afterward that when the editor asked of the stammerer how we got on, he said: "Oh,—I—I—c-c-couldn't s-say anything—t—to her, and sh-sh-she c-c-couldn't have heard m-me if I had!"

**B**UT to me, the funniest thing that ever happened in connection with my infirmity was at a dinner where I was the guest of honor. It was a formal affair, and I was treated with almost regal courtesy. After dinner there was an entertainer who gave monologues of great dramatic intensity.

I was ensconced in a throne-like chair to listen, but I was not quite near enough to the speaker to hear him. Especially as his dramatic ideas seemed to consist of a screamed-out phrase and then a whispered one. Neither of which was intelligible to me.

Yet he looked at me continually as he recited. He seemed fairly to hang on my smile or tear as recognition of his histrionic powers. He gave a funny monologue, at which I needs must laugh although I caught no word of it. And after the performance was over he came to me and wrung my hand in gratitude.

"You are a wonder," he said. "It is my invariable custom to select some attentive one in the audience and recite directly to him or her. To-night I selected you, and you were a positive inspiration! Never have I found anyone so truly in sympathy with both the manner and matter of my work; you understand me as few do. I thank you for your perfect attitude of mind toward my art and your very evident appreciation and enjoyment of it."

Of course, I couldn't tell him I hadn't heard a word, for which kindly deceit I trust the Recording Angel will forgive me.

Yet not all incidents that deafness brings about are humorous. One I remember was so pathetic as to approach tragedy, to me, at least.

I was visiting down in Kent, at the beautiful country home of Mrs. Frances Hodgson Burnett. In the house party were Mr. and Mrs. Oliver Herford and several others of the type of mentality I

## A New Butter-Kist Popcorn Machine at Half Former Price!

**H**ERE'S a marvelous money-making opportunity—a beautiful, new automatic Butter-Kist Popcorn Machine at half what former models cost.

For a small down-payment this new Gold Mine Model will be shipped immediately to any responsible retailer. Within a few hours after its receipt you can be earning big profits, selling the world-famous Butter-Kist Popcorn, out of which you should easily and quickly pay the balance.

The "Gold Mine" is a beauty. Attractive mahogany-finished cabinet. Handsome glass sides. Highly polished nickel parts. Takes up little room. Feeds, discharges, pops and butters the corn automatically. Keeps the corn warm and crisp after popping. Produces thirty 10-cent packages an hour.

Butter-Kist Popcorn sells fast. It's nationally known and advertised. People go out of their way to buy Butter-Kist. Out of every dollar's worth you sell, you keep 65 cents as your profit! F. J. Studer writes, "My Butter-Kist Popcorn profits have averaged over \$900 per year for six years". R. C. Hoegge says, "First six months' sales went over \$2500". Many are making even more.

The "Gold Mine" attracts customers. Builds trade. Makes big profits. Write immediately for the new Butter-Kist Easy Payment Plan.

## Purebred Holstein Milk Best for Babies VITALITY

Doctors, nurses and infant-feeding specialists recommend milk from purebred Holstein cows.

Purebred Holstein milk is naturally light in color, and contains the natural mineral elements, vitamins and solids essential to health and growth in proportions which are closest to Mother's milk.

It is generally accepted as the "ideal" milk for infants and children as well as for invalids and convalescents.

The average test of the milk from 12,300 purebred Holsteins, tested under the official supervision of the Agricultural Colleges last year, was 3.57 per cent fat.

Purebred Holsteins are large, strong and healthy. More than a half million are supplying milk to all sections of the United States.

If your milkman can not supply you with purebred Holstein milk, write us and we will assist you in securing it.

Write for our booklet on "The Milk Road to Child Health," mailed prepaid upon request.

like best in all the world. We had beautiful times, and on Sunday afternoon our delightful hostess said, "Now, we will go out to my Fairy Orchard, and I will tell you Fairy Stories."

Out we trooped, through the rose garden, down to the tangled wildwood and orchard, and she placed us all picturesquely on rocks or fallen tree trunks. One was the Chief-Goldstick-In-Waiting, one the Royal-Book-Bearer, and so forth. But all were separated by what were to me appalling distances.

The stage thus set, Mrs. Burnett told Fairy Stories—the stories, the teller, the scene, all ideal—enchanted.

And I could not hear a word! I, who wanted especially to have every drop of joy out of that whole marvelous visit!

The others commented now and then, or flung out merry little jests, and occasionally Mrs. Burnett would say, in her inimitable way, perhaps addressing me, "And what do you suppose happened next?" And I, not having the faintest idea of what had already happened, sat like a bump on my Fairy Orchard log! I stood it as long as I could and then, with a hurried murmur of excuse, I left the fairy ring and ran up to my room, flung myself on the bed, and cried and cried!

But it didn't do any good.

I DON'T cry now—since it does no good. As experience comes to deaf people values change, and we grow more cynical. The friends we have and their adoption tried, the friends we want to grapple to our souls with hoops of steel, are those who have the intellectuality and the imagination to remember to make us hear.

As a dear friend said to me recently, "Whenever you say to me 'What?' Whenever I fail to make you hear the first time I want to kick myself for my thoughtlessness! It is unpardonable!"

Worth being deaf to have a friend like that, what?

For my greatest inconvenience is being obliged to ask over. I get so tired of doing it that I often let things go.

Having given the matter much careful attention, I can aver that the people I hear most clearly are the ones of the greatest mentality. Whether celebrities, or mute, inglorious Miltons, the brain having ideas and erudition is almost invariably accompanied by a voice of clarity and force, and is, other things being equal, the most audible to me.

Once in my life I met a human being who always had something worth while to say, and who always said it so I could hear. Naturally, I married him.

But the rank and file of humanity, the average man and woman in the street, are like my friend who stammered: they c-c-can't s-say anything t-t-to me, and I c-c-couldn't hear them if they d-d-d-did.

"TIPS on How to Write Letters" is the subject of a peculiarly helpful article next month by E. B. ("Ad-Man") Davison, one of the world's greatest experts in the writing of business letters. If you have had trouble in making your letters as effective as you would like to have them, you will find the solutions of your problems in Mr. Davison's down-to-the-ground advice.

## Prevents Chapped Skin

"VASELINE" Camphor Ice will take the bite from winter winds. Apply a little to your lips before going outdoors, and liberally to your hands and face when you return. This will prevent the skin from becoming chapped and roughened.

If the damage has already been done, "Vaseline" Camphor Ice will soothe and heal. It comes in metal boxes and tubes. At your druggist's or department stores.

## "You Told Me to Do It Like That!"

(Continued from page 61)

One morning in the early nineties, a severe sleet storm put all wires out of commission for hundreds of miles. I got word of the storm early in the morning, and arrived at my office about eight o'clock to get repairs under way. But my chief clerk was there before me. He was a very capable chap. He told me the extent of the damage and what steps he had already taken.

There was a map of our lines in my office and the storm breaks were entered on it. Directions were being given just as rapidly as reports came in showing what was to be done. Our people all understood their duties, and in a short time, in spite of the very great emergency, there was little for me to do except to watch the progress of the work that had been started. About eleven o'clock Mr. Hall looked in at my office.

"I understand a good many lines are out of commission," he said.

"Yes," I replied, "I think they're in worse shape than they've ever been before."

"What are you doing now?"

"Nothing."

"What!" Mr. Hall exclaimed. "Do you mean you haven't anything to do?"

"No," I said; "everything is working smoothly. I've done all I can, and now I'm watching progress."

"I see," Mr. Hall replied. He eyed me sharply, and added, "Suppose you come along with me, then. I'm going to Brewster's to buy a landau, and I'd like to have your help."

"All right, I'll be glad to go along."

THOSE were the days before automobiles, and a landau was a small, fashionable carriage used chiefly in driving about town. The purchase of one occupied us for an hour or so. Then Mr. Hall suggested lunch.

"Let's go to Delmonico's," he said; "I haven't been there for a long time."

I fell in with the suggestion. We lunched in leisurely fashion—I saw that Mr. Hall was taking pains *not* to hurry!—and after we were through we returned to our building. His office was on an upper floor, mine lower down.

"Come in with me a minute," I suggested.

"No, I'll go on up," he replied.

"No, no; come in!"

I insisted. And he came. We looked at the map, and I asked the chief clerk how things were going.

"Very nicely!" he replied.

He showed us on the map just what had been done during the three or four hours while Mr. Hall and I had been away. Mr. Hall examined the map carefully. Lines were working on many routes. Fortunately for me, everything had worked out according to our plans and just as smoothly as if I had been on hand every minute to oversee it. Mr. Hall made no comment, except a snort of approval!

Now, could I have had anywhere nearly so effective an organization if Mr. Hall

## Write Ads for Big Pay

Ad-writing is one the highest paid professions in the world. Statistics prove this. Hundreds of ad-writers earn \$100—\$200—\$300 a week. Many of our most successful ad-writers never dreamed they could write ads until they tried. One of our star ad-writers was once a \$24-a-week bookkeeper. Another was a printer. Another was a shipping clerk. No special "gift" required. It's mainly a matter of training. Get the specialized training and opportunities open up to you everywhere.

## WANTED More Ad-Writers

Not nearly enough competent ad-writers! Look at the want-ads of your daily papers. Always a call for ad-writers. It's a wonder more ambitious men and women do not take up this work. It's not only lucrative, but *fascinating*! No work in the world more absorbing.

Become an ad-writer if you want to be the man in demand today. You can learn at home in your spare time. Page-Davis experts will teach you every phase of the work—laying out ads, writing headlines, describing products, selecting type, choosing illustrations, etc. Page-Davis Training has a reputation. It gives you a big advantage in landing the high-salaried job.

## 6 Try-Out Lessons FREE

Yes, free to you—a full set of six Try-Out Lessons in Ad-Writing! No cost even after you have completed the course. You can see for yourself the value of this training. It's not a "gift," but a portion of our training course and worth receiving. Write for these six Try-Out Lessons today. When you can do so, get an ad-writer. Try your skill at laying out ads, selecting type and illustrations, headlines, and reading matter. Everyone your work with that of ours will give you a \$100 to \$200 a week and more.

### Mail the Coupon

Test your latent ability on the 6 Try-Out Lessons. See how good an ad-man you really are. Write to-day for the lessons. Mail the coupon. Act quick as only 5,000 sets are to be given away. Full information on our course sent free and postpaid with six Lessons. Write today.

## Smoke ten cigars at our risk!

If, after smoking ten, you don't like our cigars—you needn't pay us.

Briefly our story is this: We make cigars and sell them by the box direct to smokers at only one cent of handling and one profit.

We simply put a box in a smoker's hands, invite him to try ten cigars at our risk and then decide whether or not he wants to keep the rest.

Our El Nidur is a 4 1/2 inch cigar—all long Havana and Porto Rico filler; Laniun Sumatra leaf wrapper.

Based on customers' estimates, you save upwards of 75 on each of these cigars. We sell them at less than 50 each by the box. Friends tell us the cigar is equal to any like smoker, some rate it better.

These cigars are made by adult makers in clean surroundings.

Buy the worst and we'll send you a box of 50, postage prepaid. Smoke ten. If after smoking ten cigars, the box doesn't seem worth \$3.75, return the 40 unsmoked cigars within ten days. No obligation whatever.

In ordering please use your letter-head or use the coupon, filling in the line marked "References." Also tell us whether you prefer mild, medium, or strong cigars.

You take no risk. Money back if the cigars don't please. No "red tape." Send your order now.

Send for free catalog.

HERBERT D. SHIVERS, Inc.  
29 Bank Street, Philadelphia, Pa.

Send no Money—  
just the coupon

HERBERT D. SHIVERS, Inc.  
29 Bank Street, Philadelphia, Pa.

Please send me a box of 50 El Nidur cigars. If after smoking ten, I decide the box is worth \$3.75, I agree to send you that amount. If I decide it isn't worth that amount, I agree to return the 40 unsmoked cigars within ten days with no obligation to myself.

## The Business for You!

Quick answer possible anywhere—cities, small towns, villages. Amazing market—candy stores, drug stores, bakeries, delicatessens, etc., wholesale to grocers, etc. No experience. Little capital starts you on road to phenomenal earnings.

Write—Get My Help—Begin Now!

Others are making money—lots of it. Letters just received during this year tell of successful operations. You can succeed, too. Offer to all you need. I'll gladly help you. Furnish everything—complete outfit, materials, secret formula, full directions, equipment, etc. Send your card for illustrated book of facts. Tell how to start. Explain most successful methods. Give all information. Write now!

LONG EAKINS COMPANY  
313 High Street Springfield, Ohio

had been a nagging boss? What would have happened? No doubt he would have come into my office a good while before eleven o'clock, worried about the storm. He would have demanded a full account of what I was intending to do. Probably he would have disapproved of this or that, and suggested how *he* would do it. In a short time I would have become nervous and fidgety, and I would have passed my nervousness along to those under me. The work would probably have taken twice as long.

It was *my* job to get those lines in working order, not Mr. Hall's. It was *his* job to see that I did it. And so long as he was satisfied that I was doing it, it was merely good common sense not to interfere with my manner of doing it. The chief virtue of a nagging boss is the excellent alibi he furnishes the employee:

"You told me to do it like that!"

But the virtues of such a man are very slight indeed, if the thing you are trying to do is to build up an organization, with people who work together to the best advantage.

MR. HALL, I believe, was one of the first men to draw up a chart of a business organization. That is another thing that helps to make an organization effective. You can bring the hidden weaknesses out in a chart more quickly than in any other way.

He and I made such a chart for the New York Telephone Company more than thirty years ago. We first set down everything just as it was. Then we drew up an ideal chart as we thought the organization should be, and it was adopted. Later we made organization plans and charts for other telephone companies. Such charts are now as much a part of the equipment of telephone companies as are the office buildings and the cables and exchanges. They are placed around conspicuously where everybody can see them.

One result of our plan was that *every* employee knew his boss. Another was that *no* employee had more than *one* boss. These are two very important points.

In the telephone company each clerk gets his orders from his department head and from nobody else; the department head gets his orders from his superior; and so on up to the presidents of the affiliated companies.

Does this create red tape? It does *not*! It does just the opposite.

Another thing: The telephone company could not have grown as it did had it not equipped itself to make the best use of everybody's good ideas. It *had* to have ideas, because there were so many problems to be met, and so many difficulties to overcome. But it is also true that no one head is ever big enough to create everything in *any* organization, and keep all parts of it running smoothly and making progress.

I happened to make a number of inventions myself, and learned how improvements develop. Among other things, for example, I patented some of the devices and directed the development of much of the work by means of which electric light bulbs are made to serve as signals on switchboards.

Before this annunciators were used for that purpose. Then some of the Chicago engineers experimented with large lamps.

## Corns

Lift Right Off

Drop a little "Freezone" on a touchy corn or callus for a few nights. Instantly it stops aching, then shortly you lift it right off. Doesn't hurt a bit.

You can lift off every hard corn, soft corn, corn between the toes, and the "hard-skin" calluses on bottom of feet. Just get a bottle of "Freezone" at any drug store, anywhere.

Edward Wesley and Co., Cincinnati, O.

**YOU CAN** have a business profession of your own and earn big income in service fees. A New system of foot correction; readily learned by anyone at home in a few weeks. Easy terms for training, openings everywhere with all the trade you can attend to. No capital required or goods to buy, no agency or soliciting. Address: Stephenson Laboratory, 16 Back Bay, Boston, Mass.

Two brothers, Alton and William Livingston, both born with Club Feet, were treated at McLean Sanitarium with the splendid results set forth by their mother in this letter:

My oldest boy, Alton, was treated for Club Feet when 3 years old at the McLean Sanitarium with such satisfactory results that when William was born with Club Feet, 10 years later, we took him to McLean when 22 weeks old. 8 weeks later we brought him home with straight, perfect feet. Inquiries gladly answered.

MRS. CLARENCE LIVINGSTON,  
205 Washington St., Salisbury, Maryland

Pictures show William at 11 weeks, and his present condition.

### CRIPPLED CHILDREN

You may know some. Tell their parents of the McLean Sanitarium, a thoroughly equipped private institution devoted exclusively to the treatment of Club Feet, Infantile Paralysis, Spinal Diseases and Deformities, Diseases of the Joints, Wry Neck, etc., especially as found in Children and young adults.

Write for their book, "Deformities and Paralysis," and "Book of References," mailed free.

The L. C. McLAIN ORTHOPEDIC SANITARIUM  
835 Aubert Avenue St. Louis, Mo.

## Rich Flakes Hide 25% Bran

Pettijohn's is soft rolled wheat. Not common wheat, but special wheat—the most flavory wheat that grows. In countless homes it has become the favorite morning dainty.

Each flake hides a bran flake—almost unnoticed. So this dish supplies whole wheat and bran—two great food essentials. You will find this the finest bran food you have ever tasted. Try it.

**STANDARD BUSINESS TRAINING INST.**

Buffalo New York

Name \_\_\_\_\_ Street \_\_\_\_\_ City \_\_\_\_\_

They did not get the idea into practicable shape, but their work suggested to me the idea of the perfected device.

Take better-known cases. If it had not been for the telephone, it is extremely doubtful whether Mr. Edison would have perfected the phonograph. And if it had not been for the telegraph, Mr. Bell might never have invented the telephone.

For the most part, invention is evolution. Ideas grow, they don't just pop! That is true not only for machines but also for the ideas out of which businesses spring, and the ideas that keep businesses going. They originate usually because somebody starts to do some little thing better, and adapts and builds on what others have already done.

Big things are seldom reached complete by a single mind but by a number of people working along similar lines. They correct one another's errors and stimulate one another by suggestions. This shows how foolish it is to be too jealous of your ideas.

If what you are working on is worthwhile, somebody else is probably working along the same lines, or at least on the same problem, or else somebody has worked on it at some time. You will get furthest with your idea if you find out what others have done or are doing. Get together with them. Compare notes. Correct your plan by their ideas and give them the benefit of yours.

A BIT of telephone history will show how a few ideas are wholly new: If you were to ask a radio fan what he considered the most recent marvel of science, he might very well reply, "Listening to a concert miles away!"

But as far back as 1885, nearly forty years ago, they were broadcasting concerts and operas and speeches! They did it over telephone wires instead of by ether waves. But the idea was otherwise exactly the same.

They started in Budapest, and called it the *theatraphone*. The idea spread to Paris and London, and for a while in these cities it was almost as much of a fad as is radio to-day. But the novelty wore off.

Several years ago a man working under me told me he was troubled with insomnia. He also told me that he went to bed with a pad of paper tied to a string around one wrist, and a pencil tied to the other, so that he might always have both handy. While he was lying there awake he would jot down ideas about the business. He tore the sheets off the pad and threw them on the floor. In the morning he gathered them up. He thought it was a great stunt!

"Do you know," I said to him, "what I want you to do with the next batch of ideas you get that way?"

"No—what?"

"I want you to throw them into the waste basket. They will most certainly not be approved!"

The middle of the night ought to be a time for rest. If a man cannot sleep, he should at least think about something besides his business. If he does not pay at least as much attention to resting his brain as he does to using it, he will soon find his ideas going 'round and 'round and 'round in the same circle, and their value will gradually and surely decrease.

## "I'm Going to Make More Money!"

"I'm tired working for a small salary. I know I have just as good a head on me as Fred Moore and Bob Roberts, for we used to work side by side. But they've gone far ahead of me.

"Why? Because they saw the value of special training, and I didn't.

"But I know better now. If the International Correspondence Schools can raise the salaries of men like Fred Moore and Bob Roberts, they can raise mine, too!

"If they have helped others to advance, they can help me. To-day—right now—I'm going to send in this coupon and at least find out what the I. C. S. can do for me."

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 7469-C, Scranton, Penna.

Without cost or obligation on my part, please send me a copy of your 16-page booklet, "Who Wins and Why" and tell me how I can qualify for the position or in the subject before which I have marked an X:

## What I Owe My Father

(Continued from page 25)

I will speak of just one more thing, the one which seems to me the most remarkable trait of his character. As I said before, he is ninety-one years old. Yet he is taking just as constructive an interest in life now as if he were *twenty-one* instead of *ninety-one*. That is what I meant when I said he has taught me how to grow, while growing old.

I tried to explain how, from the very beginning, he taught me to use my mind, to *think*. When I was a child he used to take long walks with me. I looked forward to Sunday, because it meant a walk with him. Sometimes we went into the woods. But we didn't just meander around, using nothing but our feet! We saw dozens of things about which we talked endlessly.

And it wasn't just the big, obvious things which you couldn't help seeing. Anybody can see trees and houses and hills and rivers. If he did call my attention to anything of that sort, it was to make me dig down into something that would lead me to think!

"Why does that stream over there flow east? And why does this one flow south?" ... "Why does that robin run along on the ground, while that hummingbird hovers over the flowers?" ... "Why is this hill rounded on all sides, while that one, across the valley, has a rocky bluff on this side?"

DO YOU see how he brought to my attention the wonders of nature and made me think out their explanation? At least, I tried to—and that is the kind of practice that leads to thought, if you keep it up.

But he was always teaching me to look beyond the superficial and obvious. If we passed a stone quarry he would hunt around and find some fossil imprint and tell me its history. If we sat down under a tree to rest he would show me the empty shell of a locust still clinging to the bark. He would pick a leaf from some shrub, get out a magnifying glass he always carried with him, show me the exquisite structure of the leaf, and explain how it functioned. These are things which, in one way or another, any father could do.

Sometimes he took me to the sawmills in our town; explained the machinery; told me where the logs came from and how they were brought down the river in rafts. I learned a great deal in this way; and I learned it eagerly, because it was just "fun."

But the greatest thing I learned was to *want to know things*; to have an enormous and insatiable curiosity about the world in which we live. That, and the impulse to *think* about things, to figure them out, are the most important mental assets I possess. I owe them to my father. It happens that they have been worth a good deal of money to me since I have grown up. But they are worth more than money. If they never would bring me another dollar, I would not exchange them for all the money in the world. They

are what makes life interesting to me. If I, too, should live to be ninety-one, they still will make life interesting—just as they make it interesting to my ninety-one-year-old father.

He continued the active practice of his profession until he was eighty-seven. He has done some professional work since then, although not very much. But he is still working! Not just working for the sake of doing something; but working for the sake of finding out new facts that may be useful.

Someone said to him not long ago: "Why do you put your strength and time into these experiments? At your age, you probably will not be able to apply the knowledge you are seeking."

He smiled his quizzical smile, half-serious and half-humorous.

"Well," he said, "you know the world isn't coming to an end when I die! Quite a lot of people will go on living. And quite a lot of new ones will be born. Maybe I'll find out something that will be of use to them."

To hear him say that, and to know that his life has been a consistent living of that idea—this is the crowning part of my debt to my father. His mind has never dwelt in the past. His purpose has not been bounded by the present. Everything has been forward-looking, a searching for a new and better way to do things.

I REMEMBER that sometimes we were impatient with him, because he experimented with everything, from hand lotion to electric fans. He would study over them and make changes, trying to improve them. Sometimes he succeeded and sometimes he didn't. But I can see now that the important thing was not whether he succeeded or failed; the important thing was that this indomitable desire to go forward, to find a new and better something, was the basis of his mental life. It is to the men who, like my father, are always seeking, always planning, always working to reach a new and higher goal, that the world owes its progress.

And it is this constant effort to go forward, to grasp something beyond, to learn, to achieve, that is the motive power of character. It is this that helps my father to grow *while* growing old. He is not just drifting along, going through the daily round of eating and sleeping. He doesn't say: "I'm ninety years old. I've worked hard all my life. I've earned the right to sit back now and just look on. Anyway, what's the use? I may die to-morrow."

That isn't the way my father feels! He says instead: "I may die to-morrow, so I'd better make the most of *to-day*! But, no matter how much longer I stay here, whether it is a day, a year, or ten years, I don't want to be like a dead leaf hanging on a tree. I want to live. And *work is life*! To be interested in the world about me is to be a living part of that world."

These things, which I have learned from my father, seem to me to be the keys to all that is best in life: To find real joy in work; to keep as close as one can to an ideal of honesty; to be interested in the world about one; and to be kind to one's fellow wayfarers—these are the simple but great factors in the journey we all are taking.

Quietly, unassumingly, without noise or

show, my father has done these things. Just a quiet old gentleman who never had medals presented to him, or was waited upon by committees, or had to go out on the front porch to make a speech to his admiring fellow citizens.

But if you ask me, I'll tell the world—and no slang about it either—that, as a father, my dear old dad is all to the good! The debt I owe him is a debt for value received. From the very beginning, he has been my comrade, my teacher, my friend. He never has played me a shabby trick. When I think of him, I hold my head up in pride—and I bow it in respect. That's the way I feel about my father.

I said before that there is something wrong about this father business in general. Countless people have talked to me about the influence their mothers had on them; but precious few have talked to me that way about their fathers. And yet most fathers have fully twenty wonderful years of daily opportunities to make good with their children.

All of us start life with a father; and usually he is still on hand when we have grown up. His face is one of the first things we learn to know in a strange new world. As the years go by, we size him up. Sometimes, it is true, we make mistakes about him. We don't understand him. But more often, I think, we get a pretty shrewd idea of him.

Then, in time, those of us who are boys grow to manhood, and in most cases become fathers of another crop of children. Then the sizing-up process begins all over again. This new generation of fathers has a chance to help their boys and girls to get hold of life by the right handle. They can try to be something more than a sort of animated tin bank out of which you shake pennies, or perhaps dollars, if it happens to be a bank that yields big money.

THERE is something wrong with your share in this father business if your children, when they speak of you, do not do it with a stirring of pride and love and gratitude in their hearts. As I write this, a letter which came from my father lies before me; six pages of clear, firm handwriting, telling of his work, his experiments, his observations of life. There are flashes of humor, touches of imagination; an altogether delightful letter, which a young man of twenty might be proud of having written. And at the foot of the last page are these two lines:

"May God graciously bless you and keep you.

"Your loving Daddy."

When a man is more than ninety years old, he feels very close to the Great Unknown. He may be no closer than the rest of us; but he thinks the door may open at any time and he be summoned to enter. And this is the final item in my debt to my father; an example of how to walk unafraid up to that door of mystery. He has no fear but that his God will graciously bless him and keep him. But meanwhile he doesn't just sit and wait, saying that the day is almost over and the signal to quit may come soon. He is not the kind of workman that soldiers on the job while he is waiting for the whistle to blow! He wants to live so long as life lasts. May it last a long time yet—for it won't be the same to me, without my father.

## Can You Make Yourself Do a Difficult Thing?

(Continued from page 33)

difference lies in the mind's knowledge of that awful depth, and its inability to blot it out.

A curious incident occurred during a musical contest between the grade children in a Missouri town. A prize was to be awarded to the winning school, and a well-known musician of St. Louis was to be the judge. Some general training was to be given by a supervisor, who divided her efforts fairly among all the schools, and the rest of the training was to be given only by the regular teachers. This made the chances very slim for one particular group whose teacher could not even tell one tune from another. On the night of the contest, however, with the very atmosphere seething with rivalry, these youngsters stood before the audience and won.

Knowing their teacher's inefficiency in musical matters, the defeated ones were so perplexed that they even hinted at unfairness in the award. The teacher, they whispered, was a relative of the judge and had got a persuasive, spellbinding friend to stay with the judge from the minute he stepped from the train until the very second that he was ready to pronounce the decision.

THE real truth was that the teacher, realizing that his pupils were handicapped through his own inability, did his best to give them at least a fighting chance by instilling into them a confident determination to win. For days before the contest every word he spoke to them was filled with that suggestion, and on the night the last word he spoke to each one as they passed to do their turn was, "Win!" So filled with the idea of victory was every head and heart, that they had on ready tap the very last iota of their musical talent, and gave the best they had. In every endeavor of life it is not the amount of talent stored up in a being that counts—it is the part that "gets across."

Brains whirling with thoughts of failure have played havoc with geniuses who would have marked history had they focused their attention on achievement instead. Famous actors have been driven from the stage to obscurity through an overpowering fear that they would forget their parts. Because they dwelt on what they should not, singers possessing the divine spark have remained mediocre; and many an orator, who could have sent his audience to their feet wild with exultation, has stood before that same audience tremblingly uttering dull commonplace things, simply because he was overwhelmed with a dread that he would do exactly what he did do. The genius is outstripped every day and his place in fame usurped by the less gifted one who knows how to use what talent he has.

The writer once witnessed an illiterate wandering lecturer bring round after round of warm-hearted applause from a body of college men. The man's English

## You've no idea what nice things you can make

MAKING useful, inexpensive things with LePage's is easier and quicker than sewing—a surprise to all who try it.

### To make cretonne wastebasket

THE cardboard for this wastebasket cost 5 cents; the cretonne 30 and the braid 25. You can easily make one.

Cut six pieces of cardboard  $4\frac{1}{2} \times 14$  inches, with quarter oval cut out of two corners. Cover whole of one side of each with LePage's and place side by side, close together, on wrong side of cretonne  $18 \times 32$  inches, allowing 2 inches of cretonne top and bottom and 5 inches at one end. Smooth carefully.

Fold in and LePage cretonne top and bottom, slashing around quarter ovals. Join first and last pieces of cardboard by LePaging the extra 5 inches of cretonne over the first section, cutting it off to match figure in cretonne. LePage plain material inside for lining, first turning its edge under all around and LePaging a narrow hem.

For bottom use heavy cardboard. LePage small blocks of wood under it to sides of basket for support. LePage band of upholstery braid around outside for decoration.

### To cover flower pot with cretonne

FIRST wrap paper tight around pot. Let ends overlap and LePage together. Cut around top and bottom of pot, leaving cuff around pot but not fastened to it. Slit vertically, use as pattern.

From pattern cut out cardboard leaving 1 inch extra at one end; lap over and LePage to other end. Cut out cretonne, leaving  $\frac{1}{4}$  inch top and bottom and 2 inches at end. Coat entire outside surface of cardboard with LePage's and draw cretonne smoothly over it. Where cretonne overlaps, cut neatly around the design and LePage. Fold over the extra  $\frac{1}{4}$  inch top and bottom and LePage to inside.

For lining, cut enamel cloth a little smaller than pattern; LePage smoothly to entire inside surface. To cover saucer, spread coat of LePage's on outside surface and glue cretonne all around top edge first, drawing it smooth and close over sides and underneath in pleats. LePage upholstery braid around top of pot and saucer.

### To make a doll's cradle

TAKE a round cardboard oatmeal or salt box. Remove paper wrapper. Cut box in half lengthwise, leaving cover and bottom for headboard and footboard. LePage the cover on. Cut circles of cretonne to fit inside headboard and footboard. Coat each with LePage's and put smoothly in place.

Take strip of cretonne wide as cradle is long, and long enough to fit outside and inside. Coat cradle outside and inside with LePage's and fit cretonne over it, slashing where body and rim meet. Cut cretonne for outside of headboard and footboard  $\frac{1}{4}$  inch larger all around; LePage in place; slash edges and LePage over rim. LePage blue strips of cretonne inside and outside of rims, first LePaging narrow hem in them. LePage bow of ribbon on headboard.

RUSSIA CEMENT CO.,

Laboratory and Factory: 51 Essex Avenue, Gloucester, Mass.

# LE PAGE'S GLUE

Watch LePage's advertisements for new things to make

THE STOPPER IS ALSO THE SPREADER

A flower pot can be covered easily in 30 hours, at a cost of 20 cents.

$\frac{1}{2}$  square yard of cretonne was enough for the box we used, making the cost of the cradle just 10 cents.

For the active girl  
lustrous Stockings  
that wear.

Iron Clad  
No. 98  
Mercerized  
Hose

ACTIVE girls, like active boys, are hard on stockings. That's why we make Iron Clad No. 98 with double sole and four-ply heel and toe. They need all the durability Iron Clad stands for.

Girls want good-looking stockings, too. That's why we make these fine-ribbed, mercerized hose with an unusually bright

lustre—giving the smart appearance of silk. Colors: Black, White, African Brown. Prices: 50c a pair, sizes 6 to 10 (East of the Rockies).

There's value here; get several pairs. If your dealer doesn't carry No. 98, order direct, enclosing remittance and state size and color desired. Your order will be promptly filled, postpaid.

COOPER, WELLS & CO., 204 Vine St., St. Joseph, Mich.

was full of glaring faults, his delivery bad, his appearance unkempt; yet he had a straightforwardness that was aimed so point-blank at you that it seized you, and you could not help yielding to his trend of thought. Half of his hearers would have given all their schooling to possess that man's ability to do what he started out to do.

The merchant who keeps his mind pinned upon threatening bankruptcy is but extending a beckoning hand to that disaster; the traveling salesman who, before he approaches his customer, fears for his order, has already jeopardized his sale; the minister who dreads that his congregation may fall asleep under his nose administers through his words and actions an opiate no congregation can withstand.

These men possess the inherent ability and the courage to succeed, yet they graze and miss success by the vital hair's breadth, the lack of which renders useless all their years of struggle.

A FEW days ago, while stalking for material, the writer dropped into a club-room. An exceptionally good player was losing heavily in an innocent game of chance. His countenance revealed the thought of defeat that was rampant within him. Critical plays demanding stern judgment on his part were puerile, feeble, and senseless, born of the fact that his mind was on losing rather than winning. At last he declared himself beaten—a pitiable product of his own negative suggestion.

At this point, however, his friends came to his rescue, encouraging him, urging him, and almost demanding that he really try, all the while bearing down upon him with the truth that he could win, as he had in the past. Gradually a change came over him as he sat again in the game. He took heart, his countenance assumed a new look, his form grew erect and confident. Weak plays gave way to strong ones. Repeatedly he scored on his opponent. Why? His old-time assurance had returned, releasing his ability. All idea of losing had been crowded out by confidence in winning. In the end he was six games ahead.

Your brain, the center of all your activities, is by its very nature sending out at all times a multitude of discharges that direct every movement, physical or mental. This is true even in sleep.

Just what these discharges are and the direction in which they are sent depend entirely upon you, the superior being who stands ruler over this powerful king, the brain. Every suggestion you make, whether consciously or unconsciously, to this ever-working king is faithfully transmitted by it and becomes part of your active life.

For instance: Desiring to post a letter, you say to yourself, "I must not forget this letter."

As the meaning of this sentence slowly fades away, what single word remains last as the strongest message to the brain?

It is—*forget*. Can you hope to remember to post the letter when all the delicate machinery of your system is set to respond to the hair-trigger *forget*? You need but refer to your own past experience in mailing letters for undeniable proof.

On the other hand, suppose you, without

a shadow of doubt, say, "I shall remember this letter."

Here the vital suggestion is *remember*. It is positive, and the more firmly it is dwelt upon the more completely it crowds out any other suggestion that may work damage to your plans.

A week's practice brings marvelous improvement; but, as with every other accomplishment, the person who begins with the simple performance and keeps growing is the one who in the end carries the laurels.

What seems almost a paradox is that people who are notorious for their constant failures, and whose espousal of any enterprise is deemed a sure omen of disaster, are the most brilliant successes when once they learn to guide their brains. It is their extreme sensitiveness to suggestion that makes them failures. Change the tenor of these suggestions, and they become as remarkable successes as they were failures.

"ONE of the World's Richest Men—in Friends" is presented to you next month in a business romance that is bound to inspire and instruct you. If you want to learn the secret of winning friendship, pay particular attention to this recital of the experiences of James E. Gorman, president of the Chicago, Rock Island and Pacific Railroad.

## Scattergood Becomes a Private Detective

(Continued from page 49)

Goodrich talking to Scattergood, and stopped, her hands flying to her throat. Then she ran, ran to him, and there, in the face of the village, threw her arms about his neck:

"You didn't do it. You didn't do it. . . . I know. He didn't! He didn't!"

"Now, Mattie," said the young man gently. "Now, Mattie."

"Everybody's against him. Everybody hates him. It's cruel, cruel!"

"Now, honey. . . ."

"But they can't turn me against him. He's mine. I—I love him. I'll follow him to the end of the world. I'll follow him into a prison cell. . . ."

Scattergood was watching the young man's face. It was grave, yet the brown eyes glowed with such a light as one seldom sees in the eyes of a man.

"There. . . . There."

Mattie burst into sudden tears. "Oh, I'm ashamed. . . . I've told him this, and he—he's never asked me. . . . I've— Oh, what have I done."

Goodrich pressed her head back and looked into her eyes. "I haven't asked you, honey," he said softly, "because I hadn't the right to ask you. . . . But you knew I loved you. I—whatever happens now—I don't care. It can't take this away from me." He turned to Scattergood and said, with awe and wonder in his voice. "She . . . cares for me . . . and she would stick to me even through this."

"Mattie," said Scattergood, "I calculate you done foolishness enough fer to-day."

839 People Wrote to Tell Us Definitely what Boncilla had Done for Them

839 individuals, men and women, told us in just what ways Boncilla had improved their complexions.

447 said that it removed pimples and blackheads.  
105 said that it removed their wrinkles and gave the facial muscles a youthful firmness.  
47 said it removed the oil from their skin.  
119 said it closed the pores.  
213 said it gave them color.  
45 said it gave them that vigorous feeling.  
8 said it took away that sallow look of the skin.  
17 said it removed tan—sunburn—and bleached their freckles.

These letters are direct evidence that **Boncilla** Clasmic Face Packs do everything we claim for them. Every letter breathes sincerity and enthusiasm.

**Boncilla** is Guaranteed to do these six definite things for the face or your money will be refunded

1. Clears the complexion and gives it color.
2. Cleanses and closes enlarged pores.
3. Removes blackheads and pimples, and eliminates excess oiliness of the skin.
4. Lifts out the lines.
5. Rebuilds drooping facial tissues.
6. Makes the skin soft and velvety.

**Boncilla** Beauty is Deeper Than Skin Deep

**Boncilla** Beautifier is a smooth, grayish clasmic pack that is simply spread over the face and allowed to dry. It goes to the very depth of the pores, cleansing them thoroughly and bringing your natural beauty to light. While it is drying you can feel its soothing, rejuvenating action; you can see its remarkable results after one application. Feel, See, Know **Boncilla**.

Three Complete Facial Packs Only 50c

The **Boncilla** Pack of Beauty is a remarkable value. It contains enough **Boncilla** Beautifier, **Boncilla** Cold Cream, **Boncilla** Vanishing Cream, and **Boncilla** Face Powder for three to four complete facial packs. It costs only 50c and is a splendid way to find out for yourself just what **Boncilla** will do for you. The coupon below may be used by those who do not find it convenient to get to the store.

More than 10,000 letters endorsing this throat tablet have been received from general practitioners and throat specialists

## Why throat hygiene is vital to your health

**Y**OUR physician will tell you the throat and tonsils, with their numerous folds and crevices are the ideal breeding ground for all sorts of malignant germs. These growths gather here for a favorable chance to invade the body.

Your duty to yourself and others demands that you wage unceasing war against these crafty foes of health, lest they infect you or those near you.

Unlike many other methods, the action of *Formamint*, the germ-killing throat tablet, is continuous and thorough, and is recognized by physicians the

world over as a trustworthy means of protection against throat infection.

Little tablets, delicately flavored, dissolved like candy in the mouth, release a powerful, yet harmless, germicide. This turns the saliva into an antiseptic, bactericidal fluid which bathes the entire living membrane of the throat, checking and destroying germ life wherever it exists.

Exhaustive experiments in the Lederle Laboratories, New York, have proved that *Formamint* actually kills germs.

Remember: the germ-killing power of *Formamint* is positive, acknowledged by science and proven by experience. *Formamint* should be used whenever your throat is irritated or scratchy. Use it whenever there is danger of infection—it's the safe way.

# Formamint

GERM-KILLING THROAT TABLETS

*Formamint* is our Trademark—It identifies our product

To acquaint you with *Formamint* we will send a trial tube on receipt of 4 cents in stamps to defray the cost of mailing. Address The Bauer Chemical Company, 114 West 18th St., New York, N. Y.

Loyal alumni find here for their daughters the familiar atmosphere of culture and refinement combined with modern equipment and teaching methods. Supervised out-door sports. For catalogue address:  
MRS. H. N. HILLS, A. B., Box C.

You go right home and stay there." "Yes, Mattie, do as he says," Goodrich said, and he bent over her, careless of the staring eyes of Coldriver, and kissed her lips. Then he turned to Scattergood and faced him. "Well," he said, "what are you going to do about it?"

"Dummed if I know," said Scattergood. "If I'd seen you commit them depredations, and a good girl like Mattie stood up and declared she knowed you was innocent, why, I calc'late I'd have doubts of my eyesight. I'm all set to hold back my judgment."

"Mrs. Watts has put me out," said Goodrich.

"Um. What ye calc'late to do?"

"Stay in this town," said the boy, "and make them like it."

"Looks to me like you'd be spendin' your time under the post office." (The local jail was situated there.)

"Is it as bad as that?"

"Wuss. . . G'-by, young feller. G'-by."

Presently Sheriff Watts ambled up the street and Scattergood called to him.

"Mornin', Sheriff. Business on hand?"

"Kind of figgering if I got evidence enough to arrest that desperado."

"Which one?"

"Only one we got. The circus feller."

"Um. Sheriff, s'posin' you come back into the store. I got a matter to lay before you," said Scattergood, and he heaved himself onto his feet. The sheriff followed him to the rear of the building, where the old hardware merchant maintained his office, and there they talked in low tones for half an hour.

**A**T THE end of that time Scattergood walked to the bank, where he drew two hundred and fifty dollars in money and, holding the bills in his hand, came out onto the street to recross the bridge. He encountered Pliny Pickett, conductor of the passenger train, and Deacon Pettybone.

"Carryin' that money kind of conspicuous, hain't ye?" asked the deacon.

"Guess it's safe enough right in town in broad daylight," said Scattergood. "What's worryin' me some, though, is takin' it out to Plummer's to-night. Had a leetle deal on with him."

"Goin' alone?"

"I be. I've been a-drivin' these roads alone for thutty year, and no one bandit's goin' to scare me off of 'em."

"Durn foolish, I call it," said Pliny.

"Walkin' my way, Pliny?"

"I kin."

Now it was safe to place dependence on the deacon's tongue. It would wag. During the rest of the day the old man would scold about town, describing querulously Scattergood's pigheadedness and his general foolishness. The whole town would be informed that Scattergood was driving alone to Plummer's.

"Pliny," said Scattergood, "kin your brakeman run the train fer a day?"

"He kin; but I hate to trust him with it. Tain't every man that's fitten to handle responsibilities."

"That," said Scattergood, "is why I'm pickin' you."

Pliny threw out his chest. "Ye might do wuss," he said.

"Um. I've an idee young Goodrich'll be goin' some'eres out of town this mornin'. I want you should keep your eye on him 'thout his seein' you."

"That desperado! . . . I got a wife and children."

"Go armed," said Scattergood. "Go armed, but don't fire 'thout it's necessary. You keep right on his heels."

It was eight in the evening when Scattergood closed his store and clambered into his buggy to drive out to Plummer's. At nine o'clock his horse was plodding up the mountain through the close-growing woods, when suddenly a man armed with a shotgun, face covered with a red handkerchief, leaped into the road.

Scattergood jerked on the lines and reared back in his seat.

"Hands up," said the highwayman. "Stick 'em up quick."

It was a deep, guttural voice, disguised. "Evenin'," said Scattergood.

"Shut up and pungle out," said the man. "No fooling. This gun goes off easy."

"I hain't got a cent, young feller."

"You've got two hundred and fifty dollars. Hand it out."

"Kind of well-informed, hain't ye?"

"No back talk. Toss that money into the road." The man approached the buggy and Scattergood saw on his wrist the leather strap. He also noted a slight limp and, crossing the back of the left hand diagonally, a brownish scar as from an acid burn like young Goodrich's.

"Um. . . Here she is," he said, tossing down his roll of bills, "and much good may it do ye."

"Don't you worry about me, mister. I'm able to take care of myself. Now sink the gad into that nag and mosey."

SCATTERGOOD moseyed. He drove on for a mile, then turned his rig and headed back for town. For a man who has just been robbed of two hundred and fifty dollars he was singularly placid. He even whistled.

He put up his horse, telephoned Sheriff Watts to arrest James Goodrich as soon as hands could be laid on him, and went into his parlor, where he took off his shoes, propped his feet on the sofa, and dozed. It was close to midnight when he was awakened by Pliny Pickett's knock on the door. For half an hour he talked to Pliny.

"Calc'late we got him," he said finally. "You be to Justice Bender's court in the mornin'. This time I figger the scalawag'll git his come-uppance. G'-by, Pliny. G'-by."

In the morning the town rocked with the news that Sheriff Watts had placed young Goodrich under arrest and had him under guard in the jail. He was to be brought up for preliminary hearing before Justice Bender at nine o'clock. Cold-river was present *en masse*; as many of them as could crowd into the justice's office were there, the street outside filled with an excited overflow.

Mattie Watts was there, pale, wide-eyed, but tearless.

Presently the sheriff appeared with his prisoner. James Goodrich entered with compressed lips. His red hair seemed to bristle. Anger was reflected from him rather than alarm.

"Fetch the pris'ner before the bar," said the justice, making the most of the occasion. "Has he been searched thorough? No weepers on him nowheres?"

"Guess I know my business, Judge," said the sheriff.

"Call the fust witness, then."

"I had never earned more than \$60 a month. Last week I cleared \$306 and this week \$418."—Geo. W. Kearns, 107 Park Pl., Oklahoma City.

"Last week my earnings amounted to \$554.37; this week will go over \$400."—F. Wynn, 4103 Forty-Second St., Portland, Ore.

"The very first month I earned \$1,000. I was formerly a farmhand."—Charles Berry, Winterset, Iowa.

"After six months of success in a position secured through you I am earning \$92 a week."—P. W. Broedel, 726 Benedict Ave., Woodhaven, N. Y.

## You Might Call It Luck

If Only One Man Had Jumped to Such Amazing Earnings—

But Hundreds Have Done It!

WHEN a man steps from a \$50 a month job as a farmhand to a position that pays him \$1,000 the very first month—is it luck?

When another man leaves a job on the Capitol Police force at a salary of less than \$1,000 a year and then in six weeks earns \$1,800—is that luck?

Probably the friends of Charles Berry of Winterset, Iowa, and of J. P. Overstreet of Denison, Texas—the two men mentioned above—call them lucky. But then there is F. Wynn of Portland, Ore., an ex-service man, who earned \$554.37 in one week—and George W. Kearns of Oklahoma City, whose earnings went from \$60 a month to \$324 in two weeks. And C. W. Campbell of Greensburg, Pa., who quit a clerking job on the railroad to earn \$1,502 in thirty days. And there are so many others that a whole book could be filled with stories of amazing jumps from low pay to magnificent incomes.

There is nothing exceptional about these men. They live in all parts of the country—they had been engaged in all kinds of work. Many had been clerks, bookkeepers, mechanics. Some had already achieved successful places in the business world.

### No Limit to the Opportunities

And then in one swift stroke, they found themselves making more money than they had ever dreamed possible. The grind of routine work—the constant struggle to obtain even a slight increase in earnings—the discouraging drudgery of blind-alley jobs—all this was left behind for careers of immediate and brilliant success. Today they know the thrill of independence, for they come and go as they please—they are no longer ruled by an office clock. There is genuine enjoyment in every hour of the day, for their work is filled with a gripping fascination. No wonder they are overflowing with enthusiasm, for they have found not only the most interesting, but the best paying of all branches of business. And great as are their earnings today, they are looking forward to increasing them constantly—in fact, there is no limit to the amounts they may earn—only their own efforts can determine that.

The remarkable quick success of these men sounds like luck—the sheerest kind of luck. But of course it cannot be that—not when hundreds have found the way to such amazing good fortune—all through the same method. There must be a definite, practical, workable plan behind their sudden jumps to big earnings.

### The Back-Bone of Business

And there is. In the first place they discovered a vital fact about business. They discovered that the big money is in the selling end of business. Salesmen are the very life blood of any concern—upon them depends the amount of profits made. The men who can put a product on the market and boost its sales are absolutely indispensable. No wonder that men for men Salesmen receive the highest pay.

And for the men who are in the "Star" class—who are Masters of Salesmanship—there is practically no limit to their earnings. Some of them receive almost fabulous amounts.

And that is how the men whose pictures you see above, and hundreds of others like them, found the way to their present magnificent incomes. They are all Master Salesmen now.

### New Way to Enter This Field

Yet previously they had no idea of becoming Salesmen—many didn't even think it possible to do so. But they learned of an amazingly easy way by which any man can quickly become a Master Salesman—and in his spare time at home! Through the wonderful system of Salesmanship Training and Free Employment Service of the National Salesmen's Training Association, success is made easy. This great organization of top-notch Salesmen and Sales Managers was formed for the express purpose of fitting men for the great opportunities in the field of Salesmanship and helping them to positions in the lines that most appeal to them.

### Secrets Only Master Salesmen Know

Salesmanship is not a natural gift—it is an art and science that is open to any man. There are fundamental rules and principles that anyone can put into practice—there are secrets of selling that put any man who knows them into the "Star" class.

The proof of this is in the wonderful success achieved by men who, without any previous selling experience, have suddenly become Master Salesmen through the National Salesmen's Training Association. Step by step—in their spare time at home—they were taken through every phase of Salesmanship. Every underlying principle of sales strategy was made as simple as A-B-C.

Then as soon as they were qualified and ready, the Free Employment Service of the N. S. T. A. helped them to secure good selling positions. Almost before they realized it they were in the big money class.

### Startling Proof Sent Free

The same opportunity that brought them their good fortune is open to you. Whether or not you have ever thought of becoming a Salesman, you should examine the facts about the tremendous possibilities for big earnings in this fascinating field. Read the extraordinary stories of others and see how easily you can do what they are doing. The PROOF is so overwhelming that it may mean the turning point in your life, as it has in so many others. Simply mail the coupon below. It will bring you by mail the whole wonderful story, and in addition a great Book "Modern Salesmanship" and full particulars about the remarkable system of Salesmanship Training and Free Employment Service of the N. S. T. A.

Think what it has been worth to others to send for the facts. It can be worth that much or more to you. Right now—tear off the coupon and mail it today. It costs you nothing to do this—it obligates you in no way.

"Scattergood Baines," bellowed the constable, and Scattergood took his place beside the sheriff's desk and made oath to tell the truth and nothing but the truth about the matter pending.

"Wal," said the justice, "what in tunket d'you know about this here?"

"I was robbed of two hundred and fifty dollars," said Scattergood, "by a feller about the size of this here Goodrich. He had a handkerchief over his face; but the' was a leather like that on his wrist, and a scar across his hand like that, and he walked with a kind of a limp. I seen it clear. . . . Find anythin' on him, Sheriff?"

Sheriff Watts reached into his pocket and tossed a roll of bills on the table. "Two hundred and fifty dollars," he said; "and there she is."

MATTIE WATTS struggled to her feet with a little cry. She forced her way through the spectators and to Goodrich's side.

"I don't believe it," she sobbed. "They can't make me b'lieve it. You never did it, and—and—no matter how hard they prove you did, or how long they send you to prison, I'll be here waiting for you. I'll . . . be waiting . . . for you!"

Goodrich took her hand and smiled into her eyes. "You make me very happy," he said. "Let's wait and see. Don't lose your courage yet."

"Silence in the court," bellowed Justice Bender. "Any more evidence before I bind this feller over for trial?"

"Maybe jest a mite," said Scattergood. "I been a-lookin' over these here bills. Um. Mind standin' over by the door, Sheriff? Plumb cluss to the door. Uh-huh. That's it. . . . The's more'n one two hundred and fifty dollars. Mebbe this hain't the one."

"What d'ye mean?" asked the court.

"W-al, the two hundred and fifty I lost was in all kinds of denominations, like this here mess; but every one of my bills had my initials printed on 'em in red ink. Kinda small, but there, right under the number of the bill. I can't find no sich markin' on these bills. . . . Don't happen to know any other feller around that's got two hundred and fifty he can't account for, do ye?"

"What ye gittin' at?"

"It'd be quite a chore," said Scattergood; "but I kind of wisht the sheriff'ud search every man in this here court-room, just kind of to give satisfaction, and see if he could find any bills with red-ink initials onto 'em. Be illuminatin' if he did." He winked hard at the court.

"W-al," said Justice Bender, bewildered but accustomed through the years to Scattergood and his ways. "I wouldn't be jest reg'lar, but we kin manage it."

"Constable," said Scattergood, "you might move over cluss to the winder. Seems like I see a feller edgin' toward it. . . . Better commence by searchin' him, Sheriff. I'm a-lookin' straight at Gus Naddicks. . . . Grab him!"

Then there *was* excitement. Sheriff Watts lunged toward Naddicks, who leaped for the window only to collide with the constable. He was pitted against the largest two men in the township, and his struggles were futile. In a moment Sheriff Churchill's hand emerged from his pocket with a roll of bills, which he examined before the light.

"S.B. in red ink onto each of 'em," he said.

"Kind of figgered so. . . . Ye see, I had Pliny Pickett foller up young Goodrich yistiddy, so I knowed the robbin' couldn't 'a' been done by him; likewise, Pliny see how the young feller come by this two hundred and fifty. Kind of smart, too, seems as though."

"How'd you know Naddicks done it?" the justice asked.

"W-al, years ago I ketched Gus Naddicks stealin' a jackknife out of my store. Leopards don't change their spots. I knowed he had a grudge agin Goodrich, and when the robber fixed himself up so's to throw suspicion on Jimmy, why, I figgered Gus was mixed into it. It's the kind of a trick Gus would up and invent. Then I seen Gus spendin' consid'able money, which his pa never give him. Whilst folks was watchin' Goodrich, I watched Gus. And last night I recognized him as plain as if he didn't have no handkerchief on his face. Ye can't disguise them funny ears of Gus's. Know 'em amongst a thousand."

"But how'd Goodrich come by this money? Kind of suspicious, too, hain't it?"

"I got cur'ous, I admit. That's why I sicked Pliny onto him. . . . He's smart, that boy, and I got a job for him in my lumberin' business if he wants to stay in Cold-river. Want to know what he was up to?"

Evidently folks wanted to know.

"Ferns," said Scattergood. "Ferns."

"Eh? Ferns. What ferns?"

"The kind that grows all over our mountains, and that nobody never saw nothin' in before. For more'n three weeks this young feller, secret-like, and not usin' his own name, has been workin' out of Hampton. Yes, sir, hirin' men and wimmin to pick and bundle ferns. Sells 'em to florists in the city to pack with flowers. He's got him a little warehouse in town, and three or four fern pickers. . . . An' I thought he was lazy! Say! That boy's a business man. . . . Jimmy, d'ye want a job with me?"

"Sorry, Mr. Baines, but I can't accept. I've got contracts to carry out. This year I'll make a clear living, and next year, when I get more warehouse room and equipment, I'll begin to make money—real money. No, sir, I'd like to work for you, but I can't afford it."

"I suggest," said Scattergood to Justice Bender, "that you clear the court. I sh'u'dn't be s'prised if these young folks had surbin' to say to each other."

THE sheriff led away his new prisoner; the court-room was cleared of all save Scattergood and Mattie and Goodrich. Scattergood patted the boy on the back. "I knowed," he said, "when a good gal like Mattie was so sure of ye, that you couldn't be bad. An' I got a suggestion. . . . Justice Bender here kin do other things besides hold over for trial."

They looked puzzled. Scattergood chuckled.

"The law gives him," said he, "the power to unite in marriage. . . . Kin ye support a wife, Jimmy?"

"You bet I can!"

"Shall I send fer your ma, Mattie?"

Mattie came close to him and put her arms around his neck, much to his embarrassment, and kissed him on the leathery cheek.

"Send for her—quick," she said.

## "Income-Taxidermy"

(Continued from page 53)

poor, eh Bill, and I will do it again next month, so come on, let's blow this, what's the good of saving, I am on my way to a million dollars. You will know the kind of bird. Pretty near everybody has got one in the family. He is on his way to a million dollars but will still be traveling in that direction by the 15th day of March. There sure are a lot of people which do not realize that one deal does not make a fortune, just as there are others who do not believe that one swallow does not make a drunkard.

Well anyways, Writers, of which I am alleged to be one, and painters, both house and portrait, come under the part-time headlines, too, and we get our money so irregular, and we got so many uses for it when it does actually show, that somehow it is real hard for us to remember that the income tax is waiting and will not be denied. It's one of them unpleasant subjects we like to forget until forcibly reminded. I, personally, myself always have a hope the Government will forget it this year—you see I am by nature one of these happy, optimistic souls you read about. But so far the Govt. has greatly disappointed me in this matter. And one of the outrages I want Congress should pay particular attention to as a result of this article, is the outrage of having mine and other artistic temperaments upset this way year after year. How can us Americans ever produce any great Art if we are going to be worried to death over mere trifles all the time?

OF COURSE Congress may come back at me with some nasty cracks about people who haven't got sense enough to save up in advance for the income tax will never have brains enough to save for anything else, either. Or maybe Congress will sling me a little mud to the effect that since this tax is now as regular as Christmas and after all not much more costly or bothersome, we might as well learn to read that dog-gone tax sheet the same as we learn to read our wife's pencil-written Xmas gift-list, and pay up with the same feeling of resignation with which we yearly fork out for a pink silk hand-painted cigar case for that old nuisance of an Uncle Henry, or a new cocktail shaker for dear old Grandma, God bless her, she won't be with us long! The only advantage of the Govt's over our own private Christmas is that at least you are not giving it to your relatives. Well, as I say, Congress will undoubtedly come back with some such well-chosen, ill-considered remarks, but it is barely possible that in the meanwhile, this holler of mine will of made them think. George says no, impossible, but I insist he may be wrong.

Another outrage which Cong. will please note, is the increase of insanity on farms. We read a lot of stories once in a while in the papers about people going crazy on farms, the lonelier the crazier. But up to pres. writing nobody seems to of called any attention to the income tax in this connection. Well, if you want to know the real true reason why some farmers goes crazy, give a look at Section 7 of Instruc-

## Your European Trip need cost you little ~ ~

IF you are planning a trip to Europe learn today at what a moderate expense you can have the vacation of your life! Your Government has prepared a booklet of suggested itineraries and their costs. It is now possible to go to Europe and return on one of the finest ships afloat, first class passage, spending three weeks abroad, for only \$750!

### Great Government Ships

U. S. Government ships, operated to Europe by the United States Lines, are marvels of luxury, speed and safety. A voyage on the famous George Washington, the President Harding, or President Roosevelt, constitutes a supremely memorable experience. The ships ply between New York and Plymouth, Cherbourg and Bremen. You should know about them. You will be proud of your ships, and the unsurpassed service they offer at low cost.

### Write Today

Send the information blank today for full details. Get your Government's handsomely illustrated descriptive booklet showing actual photographs of interiors on U. S. Government ships. Learn how economically you can make your trip to Europe. Send the blank today.

# What good are white teeth,

-if your gums are not healthy?

YOU may think, as so many people do, that you are relieved from worry about your teeth if they are white and free from decay. But unless your gums are healthy, pyorrhea will develop. Even the whitest and soundest teeth fall out or must be extracted if pyorrhea runs its course unchecked.

You can avoid pyorrhea by doing two things. See your dentist regularly. Brush your gums, as well as your teeth, vigorously twice each day with Pyorrhocide Powder.

In addition to keeping the teeth white and clean, Pyorrhocide Powder tones and strengthens the gums. This is due in part to its medication with Dentinol, a healing agent widely used by the dental profession in the treatment of pyorrhea.

Pyorrhocide Powder is the only dentifrice whose specific value for preventing and treating pyorrhea has been demonstrated in clinics devoted exclusively to pyorrhea study and research. It keeps healthy gums healthy. It aids soft, tender, bleeding or receding gums to regain quickly their health and vitality, thus preserving the foundation on which white, sound teeth must depend.

The economical dollar package contains six months' supply. All good drug stores and dental supply houses sell Pyorrhocide Powder.

Buy a package today.

keeps the gums healthy

tions for Individual Return and you will see where Farmer is required to not alone fill out the one blank, but is obliged in most cases to go get a extra blank and make it up as well or worse, and attach it to the first one and turn in the both of them, thereby giving the Govt. two causes for complaint against him. And if that ain't enough to cause insanity I'm wrong again.

But there is one place where the wealthy farmer averaging let us say @ \$3,000 per annum most annuums, gets really the best of the Govt. This is in the exemption clause, and what I mean is that part where it refers to dependent mental defectives, being chargeable off @ four hundred dollars per each. This clause is what makes the Am. Farmer so notably wealthy, on account he can, by one of them deft little twists which we all so love to give to our returns, well, by one of them gentle, white lies as you might call them, he can interpret "mental defective" as "bug"—a bug in the vernacular (as slang is called in Boston) being a well-known word for crazy person. It is not the farmer's fault if he takes bugs literally in any sense, and charges 'em off at the above figure. What with the yearly average of potato bugs, this had ought to prove quite a saving.

Also he can get considerable benefit out of that line about physically defective folks which are dependent for their living on you. Well, now as to that, I don't want to insult any class of the public, yet I have seen some so-called laboring men who had every appearance of coming under this head, and they was not all holding down municipal jobs by any means, but I got a farm up in the country myself, and I know what I am talking about. You may pay these creeping paralysis cases as high as \$4.50 a day, but believe me they are dependent on you just the same: dependent on the length of your patience, on whether you are a good shot or not, and on how lonesome the farm really is.

SOMETHING must be done about all this suffering, and done at once. If Congress does not attend to it immediately by passing a resolution, or the plate, or the buck, or something, why something will happen to the country, there is no doubt about it: Something Fierce! We Americans simply won't stand for any nonsense, because we are an independent people and we have our rights. Moreover, we are the hope of civilization and the standard of finance the world over to-day, and our beloved flag is the high-sign of success. We must keep the independence for which our 4-Fathers fought and died! I tell you, fellow citizens, that the time has come when something must be done! Yes, something—but what? Why, our blanks must be properly filled out and turned in by the fifteenth, that's what!

Now, in closing, Mr. Chairman, I want to suggest a few real simple and practical ways of attacking this inescapable task. I am not one to criticize and then offer no improvement. And I do make the criticism that most people go at making out their returns in the wrong way. By that I do not mean to say that they make 'em out wrong—that much is taken for granted. What I am endeavoring to get over is a line about not picking up the old self-filler and the blank as if it was a bill-of-fare or something, and reading it care-

## Why Good Dancers Are Popular

Everyone admires and wants to dance with the person who knows the latest steps. There is no need of being a wall flower! Arthur Murray, America's foremost dancing teacher, has perfected a wonderful new method by which you can learn any of the newest steps in a few minutes and all of the dances in a short time.

Even if you don't know one step from another, you can quickly and easily master any dance without music and without partner, right in your own home. Your success is guaranteed. The Vanderbilts and scores of other socially prominent people have chosen Mr. Murray as their dancing instructor. More than 90,000 people have learned to become popular dancers through his easy learn-at-home methods.

### New Easy Way

To show you how easily and quickly you can learn his new way, Arthur Murray has consented to send, for but a limited time, a special course of sixteen dancing lessons for only \$1.00. This extraordinary offer is made to prove you will enjoy learning the newest steps in the privacy of your own home—without undressing to embarrass you. You need not send any money now. When the postman hands you the 16 lesson course, just deposit \$1 with him, plus a few cents postage, in full payment. If within five days you are not delighted, return the lessons and your money will be promptly refunded.

This unusual offer may not be made again. Write today for the sixteen lesson course. If you prefer, send the dollar now and we will pay the postage. The lessons will be sent promptly, in plain cover. Learn at home and surprise your friends. Act now and be a good dancer soon. Arthur Murray, Studio 617, 801 Madison Ave., New York City.

### One Minute Now

will put you in the way to earn from \$5.00 to \$20.00 a month extra, in your spare time, acting as our representative for The American Magazine, Woman's Home Companion, Collier's Weekly, The Mentor, and Farm and Fireside. Write for particulars to Chief of Subscription Staff, Desk 51-A.

### Finish This Picture

Fill in the missing lines. See how close you come to the original drawing. The above picture was drawn by Student Wynn Holcomb. We have a great number of students and graduates whose work appears in magazines and newspapers all over the country.

## Can You Draw?

If you like to draw write for our book. Read about our new method Home Study Course in cartooning, illustrating, designing. Learn at home, by mail, in spare time.

### Become an Artist

Illustrators, Cartoonists, Commercial Artists make big money. You can earn \$25 to \$100 a week and more. Learn under personal direction of one of America's most famous newspaper, magazine, advertising artists of 30 years' successful experience.

### Book and Outfit Free

Complete outfit free to new students. Write for handsome book, "How to Become an Artist." Tells what Course includes, shows many drawings made by many of our students.

### Write Postal NOW

Don't miss our book. Even if you have no previous knowledge of drawing, our Course will enable you to become a successful cartoonist or illustrator. Many students earn money while they are learning. If you are ambitious to get ahead, to earn more money, write for our free book and special offer now. You can do as well as our other successful students! Write now for free book, "How to Become an Artist." Mail letter or postal.

Washington School of Art, Inc.  
Room 1964, Marden Bldg. Washington, D. C.

### Short-Story Writing

A practical forty-lesson course in the writing and marketing of the Short Story, taught by Dr. J. Berg Easenwein, famous critic and teacher. Editor of The Writer's Monthly.

One pupil has earned over \$5,000 writing in his spare time—hundreds are selling constantly to the leading publishers.

150 page catalog free. Please address  
The Home Correspondence School  
Established 1897  
Dept. 134 Springfield, Mass.

'Aha! They stole my idea and gave it to another author to work up into a play! We would be perfectly innocent—but it would be hard to make Mary Jones think so.

"A play may have a good idea, yet be hopeless in the way it is worked out. In that case we can do one of two things: If we think the author is capable of rewriting it so that it will be possible, we can have him try to do this. Or, if he evidently is incapable of this, we can try to persuade him to let us have an expert 'doctor' it.

"But this 'play-doctor' must be a real expert. There is no use fooling with another incompetent. We must get a man of the highest ability. The most conspicuous example of a play-doctor is probably Winchell Smith. The trouble is that a man like Smith can write his own plays; so it is almost impossible to get him to rewrite those of other people. But some of the most brilliant records in the theatre—that of 'Lightnin'' for example—have been made by plays which 'Bill' Smith rewrote. The same may be said of George M. Cohan, the miracle man of the theatre, but when George rewrites a play he does so for his own production.

"WHEN a play is accepted, the next step is to sign a contract with the writer. This is a very simple thing nowadays, for we use the standard form approved by the Authors' League. It used to take a week, sometimes, for our lawyer to draw up an elaborate contract and for us to discuss all the details with the author. But we can finish the transaction now in fifteen minutes.

"There are special arrangements with certain authors, but the general custom is this: The author receives five hundred dollars as an advance on his royalties. After the play opens, he receives each week five per cent of the first four thousand or five thousand dollars of gross receipts; seven and one-half per cent of the next two thousand or three thousand dollars; and ten per cent of all the receipts above this amount.

"His five hundred dollars of advance royalties are first repaid to the producer. After that, the author is paid every week on the scale I have outlined. If the gross receipts for one week are ten thousand dollars, for instance, the author would get about eight hundred dollars as his share. A successful play will earn from one hundred and fifty thousand to more than a million dollars.

"An author who is already an established success may receive a flat ten per cent, or even fifteen per cent of the gross. He may get a good-sized bonus in advance. And he sometimes stipulates that he is to receive a percentage of the profits also. But these are exceptional cases.

"English playwrights are on a different basis from American ones. As a rule, an English play is bought for this country after it has made a success in London. The author, therefore, is selling something more than a mere manuscript. His play has been produced, and has proved, to a certain extent, that it is worth something. So he can ask more for it—and he gets more. Bernard Shaw, for instance, receives a large advance bonus from an American producer.

## WE TEACH COMMERCIAL ART

**Meyer Both Company, the largest  
Commercial Art Organization in the**

**World** offers you an unusual opportunity for practical training. If you like to draw develop your talent. Study this practical course—taught by the nationally known Meyer Both Company, with twenty-two years' success—who each year produces and sells to advertisers over 15,000 commercial drawings. Our teachers give you the double advantage of being instructors of proven ability, as well as artists in this widely known organization. Meyer Both instruction is the difference between successful fact and experimental theory. Commercial Art is a highly paid, intensely interesting profession, equally open to men and women. Home study instruction.

### Get Facts Before You Enroll in any School

Ask the Advertising Manager of the leading newspapers in your city, anywhere in the United States, Canada, England or Australia about the Meyer Both Company—let them tell you about us. Write for our illustrated book "YOUR OPPORTUNITY"—for one-half the cost of mailing—four cents in stamps.

### Avoid Imitations—Substitutes

"Several years ago, we took a play called 'Three Faces East,' by Anthony Paul Kelly, a play which really started the present epidemic of mystery plays. Mr. Harris promised Kelly to produce the play; but as time went on we became very dubious of its chances, and we would have been mighty glad not to put it on. We were not legally bound to produce it. We could have paid Kelly his advance royalties and given him back his play. But Mr. Harris felt morally bound, because he had promised Kelly a production. So we engaged a company and started rehearsals, although we felt that the piece would be a failure.

Reilly & Lee—Publishers—Chicago

"when virtue brought a big reward, for the play was a decided success. However," he added, "it was due to something more than merely virtue. When you find yourself facing a tough proposition, you take off your coat, roll up your sleeves, and try to lick it. That's what we did this time. And we made 'Three Faces East' a success after all."

"How much does it cost to put on a play?" I asked.

"From ten to fifteen thousand for the average play," said Forrest. "A musical comedy costs a great deal more. A show like the Music Box Revue costs still more. People wonder why we charge five dollars for orchestra seats at the Music Box. They don't know that the piece has cost close to three hundred thousand dollars before it even opens. The expense of the last week of rehearsals alone are about sixty thousand dollars, because for these rehearsals we pay full salaries to the actors, musicians, and a small army of people behind the scenes."

"When I say that it costs ten or fifteen thousand dollars to put on the average play, I mean that this covers only the expense of the scenery, costumes, properties, and lights. It does not cover advertising, salaries, wages, or anything like that. The actors rehearse four weeks without pay. As a rule, rehearsals last only two or three weeks before the play is presented. They continue after this, for there are always changes to be made. But rehearsals while the play is running are not paid for; they are part of the regular procedure."

"WHEN it has been decided definitely to produce a play, the first thing to be done is to engage a cast. We begin, of course, with the leading characters. An important actor, or actress, always reads a play before accepting a part in it. The minor characters do not. We give them an idea of what their parts are, and they decide whether they will take them or not. But the important actors read their parts carefully before accepting them."

"Having engaged the company, we call them together for the reading of the play. Perhaps you have seen an old engraving of Augustin Daly reading a play to his company. I don't follow his custom. I have the company read the play to me. We sit around a big table on the stage, with a couple of strong lights standing beside us, while the rows of empty seats out in the auditorium, half visible in the shadows, seem to suggest a ghostly audience."

"At this reading of the play we go through the entire piece. There is no acting. We just sit around the table and the actors read their lines. But they try to read them with intelligence and the proper expression. We occasionally stop to discuss what is the proper expression. We talk of the meaning behind the lines and of the personality of the characters, their relations to one another, and their motives for the things they do. In short, I want them to absorb the spirit and meaning of the play; to begin to feel that dual identity which is to be theirs."

"Next we begin the actual rehearsals. Generally we take one act at a time, starting with the first. We probably work on this for several days before we

jury that can give a real verdict is the public. We take that verdict and try to profit by it. But to consult an individual—that is foolish. One man's word is as good as another's, and three men might give you three absolutely contradictory suggestions. No; be as sure of yourself as you can be—then carry out your own ideas."

"How soon do you know whether a play is a success?" I asked.

"Sometimes immediately—sometimes not for several weeks," said Forrest. "You can't always tell by the next morning's papers. The critics may praise a play—as in the case of 'The Big Idea'—and the public refuse it. Or the critics may roast a play, and the people take it to their hearts. In the latter case, we have to wait until the 'word-of-mouth' advertising goes the rounds. But if we know that this advertising is going on, that people are telling their friends it is a good play, and that they ought to see it, we possess our souls in patience, knowing that the box-office returns will soon begin to reflect this most valuable of all advertising. However, if a piece is a rank failure it is generally known pretty quickly, and the play is taken off after a week or two; for the expense of keeping it going runs into thousands of dollars a week."

"YOU spoke of the cost of the costumes," I said. "Do you pay full price for them? We read on theatre programs: 'Gowns by So-and-So,' 'Hats by So-and-So,' and all that sort of thing. Don't these people furnish the gowns, hats, and so forth, for nothing—or, at least, at a reduction—because of the advertising they get out of it?"

"Certainly not!" said Forrest with a gruff smile. "Those notices are put on the program because it will make the people who furnish the things take more interest in them, if it is to be known who made them. But I think managers pay more, if anything, than private individuals have to pay. Of course there are some things we don't pay for. The automobile used in 'Six-Cylinder Love' was furnished free by the manufacturer, because of the publicity he got out of it. But as we didn't injure the machine it was returned to him in good order; so that is a different case. But we pay for other things. The actors do not pay for their costumes. The manager foots all the bills."

"There is one thing every regular producer has to have. And that is—a storehouse. It is a sort of cemetery; or rather, a house of ghosts. When a play fails it is 'sent to the storehouse.' At the end of a run, scenery and other paraphernalia that are still in fair condition are 'sent to the storehouse.' Some of it perhaps can be used in another production. Scenery can be repainted—sometimes. Furniture can be done over. Period costumes may possibly be available for another play. The storehouse holds a vast conglomeration of silent ghosts. I often think what tales they could tell: of dreary failures and brilliant successes; of lost dreams and lost dollars; of hopes and discouragements. For that is where they all end—all the myriad plays that are written with such high expectations and produced with so much painstaking care. That is the Finis for them all: 'Sent to the storehouse.'"

## Every Day I Send Checks To Women Who Want Money

A Simple Way To Add To Your Regular Income. Interesting Home Work That Pays Well—and That You Can Do In Spare Time

EVERY day about 4 o'clock a bunch of checks is brought to my desk to be signed.

Most of these checks are made out to women. A few are sent to men.

They are in payment for interesting spare-time work done at home. Work that can be done entirely at one's own convenience—started and stopped just when one finds the time or feels in the mood for it. It's a profitable and dignified kind of work that needn't interfere a particle with other duties.

The checks I send out to our home workers range all the way from \$3 to \$5 up to \$10, and occasionally as high as \$15 or \$20 or more.

Some of our workers get a check every week. Some only once a month. How often each worker receives a check and the amount of the check depends on the amount of time given to the work. Each worker is free to do as much or as little as he or she chooses. Therefore, the amount earned is in each worker's own hands.

### Extra Money for Any Purpose You Wish

Whether large or small, these checks are earned in free time that might otherwise bring nothing to show for it. Thus each check means just that much extra for the person receiving it—extra money for more clothes; for the savings bank; or to pay debts; or to help pay for a home; extra money to help out in any way one wishes.

The way these people earn their checks is by knitting wool socks on our famous Home Profit Knitter—a simple yet amazingly skillful little knitting machine that is many times faster than hand-knitting. That's why this work pays so well.

Fast or slow, just as you turn the handle, this skillful little Knitter knits and shapes each sock from cuff to heel and toe. It knits either a ribbed or solid weave, and either a plain or fancy top. Also sweaters, Teddy Bear Suits and other articles.

### The Rate of Pay Is Guaranteed

One doesn't have to know a single thing about knitting to take up this work. Complete instructions that make everything plain and clear come with the Knitter. With practice, anyone who follows directions and really wants to earn money instead of merely wishing for it, can

soon be turning out perfect socks—and be well paid for every pair.

The pay is sure. The Home Profit Hosiery Company guarantees to take every pair of socks you knit on a Home Profit Knitter in accordance with our simple instructions, and pays you a fixed price for each pair as fast as you send them in. There is a big and steady year-around demand for genuine home-knit wool socks, and the Home Profit Hosiery Company wants all it can get. But if preferred, you have the privilege of selling part or all of the socks you knit direct to friends or neighbors or local stores, at your own price, instead of sending the socks to us.

### I Want To Start More Home Workers

Right now the Home Profit Hosiery Company wants at least a thousand more home workers. If you have been wishing you had more money coming in—then here is your chance. All you need is a Home Profit Knitter and a little spare time—and the willingness to use it. How much you earn will be in direct proportion to how much time and effort you give the work. You are always "your own boss." Moreover, other members of the family can help you along—for with practice almost anyone can knit socks on the Home Profit Knitter. And whether you knit a dozen or more pairs every day or only a dozen in a week or month, you can be sure of good pay for all the finished work you send us.

In fairness to yourself and your pocketbook, at least let me send you full information about this spare-time home-work plan that is bringing in extra money for so many others. That won't cost you anything. Yet it can easily make a vast difference in your life—it can easily mean hundreds of dollars a year to you. Simply fill out and mail the coupon at the bottom of this page—and it's a good idea to do it now—before you forget about it.

The Master Knitter

Wm. Campbell  
The Original  
Fireless Cooker  
Man

Made in  
one, two  
and three  
oven sizes

### What It Will Do

Roasts all kinds of meats, fowls and fish; a 5-pound roast uses electricity about 20 to 25 minutes.

Cooks all vegetables—Eight medium-sized potatoes require electricity about 8 to 12 minutes.

Does all baking—A pan of biscuits, a cake, buns, use electricity 12 to 15 minutes.

A boiled ham uses electricity 30 to 35 minutes. Cooks a bread dinner complete—using electricity about 40 minutes.

Free-Toasts-Stews-Makes Coffee-Boils Tea-Kettles. No other stove needed.

It cooks for you to eat, while you are out.

## An Electric Fireless Cooker Saves 50 to 75% Cost Fuel

HERE is the easiest, cheapest method known to prepare the family meals. With the same electric current that lights your home you can do all your cooking at one-fourth to one-half the cost of any other method. It is a new, simple, practical invention that gives you every cooking, baking, roasting, frying, boiling and broiling facility of the expensive electric range, plus every advantage of the fireless cooker, at less than you would pay for even a good gasoline or oil cook-stove.

### Better Meals—Less Cost

Use Electricity,  $\frac{1}{4}$  to  $\frac{1}{2}$  Cooking Time

You prepare the entire family meals with less effort and less cost than ever before. High priced cuts of meat can be discarded for lower priced cuts and inexpensive food made equally appetizing, more nutritious and healthful. No "pot-watching." No worrying about burning.

**No Special Wiring** Not a penny additional expense for wiring and fixtures. Attaches to any electric socket, the same as electric iron or toaster. You prepare the food for cooking, the same as you have always prepared it. Put it in the cooker, turn on the switch, and leave it. No clocks to set. No dials to regulate. No thermometers to watch. No radiators or dunes to heat. You use electricity only to bring the food to the cooking point. It, then, automatically shuts itself off. The heat you pay for is used for only one-fourth to one-third of the cooking time. Guaranteed Wear-Ever aluminum griddles furnished with it. It is aluminum lined throughout—won't rust or corrode.

WM. CAMPBELL CO., Dept. 297, Detroit, Mich.

## Human Nature in a Hat Store

(Continued from page 43)

typical "dip" to their hats; indeed, you can frequently identify an Englishman from this alone.

Nowadays men wear their hats pulled down further on their heads than they did a few years ago. This is one reason why the average hat is one eighth of a size larger than it used to be. Motoring has something to do with this. Many men do not care for a cap, or do not look well in it; and they have found that if a soft felt hat is big enough to pull well down on the head it will stay on, and afford shade to the eyes as well. Another reason is that the smaller hat has a tendency to blow off—and no one enjoys the sensation of chasing a truant head-piece for the length of a city block.

We find that the average size is  $7\frac{1}{4}$ . About one man out of four buys that size. The largest size we carry in stock is  $7\frac{3}{4}$  and the smallest 6 $\frac{5}{8}$ . Almost never is there a call outside this range, which has a variation in circumference of about three inches.

If a man's head happens to be over size he is usually proud of the fact, but if it is under size he never mentions it. Not long ago a giant of a man, about six feet five inches tall and weighing fully two hundred and fifty pounds, strolled up to one of our clerks, with a broad grin. "I'll bet you can't fit me with a hat!" he said—the invariable remark of the man with an abnormally large head. We found in this case that the customer was telling the exact truth. He needed a size eight. A factory made the hat to order, and he came back a couple of days later and bore it proudly away.

**YOU** would probably be surprised if you could see the exact shape of your head as taken by the "conforming" device that is carried in every up-to-date hat store. You would find it much longer than you imagine and decidedly irregular in outline. It might be bigger either toward the back or toward the front. In either case it would not be exactly symmetrical; that is, it would bulge more on one side than on the other. The drawing above is made from the impression of an "average head." Any other head would show marked variations.

Chinese and Japanese come nearer to having symmetrical heads than any other races. Their craniums are often almost round and so small that we occasionally have to refer the would-be buyers to the boys' department. Incidentally, these round heads are the hardest of all

to fit. If a man's head is long and "bumpy" you can make a hat fit it exactly by the use of the conformer—that takes an impression of the head and allows you to shape the hat to the impression. But if a man's head is round, you cannot compress the normal elliptical-shaped hat to fit it.

Very few men wear the derby to-day. It has been almost entirely supplanted by the soft felt, which outsells it at least in the ratio of twelve to one. Some manufacturers say that just now there is evidence of a slight swing back toward the derby, but most of them feel that its day is done. The soft hat is more comfortable, and comfort is one of the things to which men are paying increasing attention.

We find that the average man is pretty logical in picking out a hat. He refuses to be stampeded by any new departure in style. Only last fall the manufacturers launched a vigorous campaign to feature the green hat; the expected avalanche of orders did not come, however, because the green hat was a novelty, and green is a trying color for most men, particularly city men, who are inclined to be sallow.

Real changes in men's hats come not in seasonal fads but in slow-moving cycles, such as the sweeping change from the derby to the felt hat within the last few years. Every season there is a slight change in the height of the crown or the width or curl of the brim; but men do not seek new styles for the pleasure of wearing something new.

THE same styles and shapes of hats are worn pretty generally in different parts of the country. Chicago, however, seems quicker to adopt new styles than any other city—and that includes New York. But the rest of the country looks to New York for leadership in such slight changes as occur from year to year.

Of course the broad-brimmed hat which we always associate with cowboys and stockmen has a good sale in the West. Most of the hats sold on the sunset side of the Rockies tend to be wider in brim and higher in crown than the average hat worn by an Easterner.

Manufacturers say that the picturesque "Kentucky Colonel" hat, particularly in colors such as light tan, has a steady sale, and many retailers carry them in stock. The city of Washington has quite a demand for them. They are worn by Congressmen from the West and South, and other temporary residents.

Occasionally we have a customer who buys the first hat he tries on. This is likely to be a duplicate of the hat he has been wearing. Other quick sales are made to men who have been "window shopping;" they have seen a style in the show window that captured their eye, and all they have to do is to come in and give their size.

I have known a man to try on as many as twenty hats before finding one that suited him. Such a shopper looks at himself from every angle in every available mirror. In the end he may decide that he has been unable to find anything that was just what he wanted.

Men pick out hats for themselves more than they used to. Only a few bring along their wives. You might suppose that with their wives along the sale would be

One of the advantages in owning an insured-service Westinghouse Standard Battery is that, no matter where purchased, any Westinghouse Battery Service Station is authorized to fulfill any of the provisions of the Westinghouse Guarantee and to send us the bill if a charge is incurred. You pay nothing. Service everywhere, and a battery for every car.

*The Wubco Special, for the lighter-weight cars, is of full Westinghouse quality, but is differently designed and costs less.*

## Make the Most of Your Spare Time!

Through no other work can you obtain such a vast amount of fascinating, valuable, broadening information, in those spare minutes that otherwise would be lost to you forever.

### Every page holds your attention

Open a volume anywhere. You will find before you some refreshing, alluring page which you will read to the last word, all in a few minutes. It may be the history of Joan of Arc, a travelogue of Yellowstone Park, a chart of the planets, the story of a great painter or of an immortal piece of literature. Or, you will come to a handsome full-page plate (one of 720)—a painting of the Mayflower, a portrait of Napoleon, a famous cathedral, or some other beautiful picture on heavy, specially made plate paper. Every page contains something you will not only want to see and know, but something you will thoroughly enjoy.

The best minds in America have built this MENTOR Library—great scientists, artists, critics, mountaineers, musicians, writers and travelers. And every article is embellished with beautiful gravure and color plates and with a rich profusion of splendid text illustrations.

### Always timely—for every age

Every MENTOR subject is one of lasting value—literature, science, art, music, history, travel, etc. These handsome volumes widen your cultural background, bring you a thousand new and fascinating interests, round out your knowledge of the world's accomplishments, and give you a firmer standing among well-informed, successful men and women.

The man in his business, the woman in her club and among her associates and friends, the student in high school and college, will all find these volumes profoundly and genuinely helpful. And they will be just as fresh and living to your children's children years from now as you will find them to-day.

### Owned by tens of thousands

The set is handsomely bound in pebbled green cloth with genuine leather backs, gold titles, numbers, and designs. This durable binding is not only dignified and beautiful but will survive long years of the most constant handling.

### Send no money now

We shall send you the set on approval. You can pay for it in small monthly installments of \$3.00. After a week's free examination, you may return it to us at our expense, if not entirely satisfied, and we shall cancel your order. But lose no time! Only a limited edition is printed and they will quickly be exhausted. Mail your order to-day and receive the most beautiful and richly illustrated library ever published.

*Simply sign and mail this coupon to-day!*

The Mentor Association,  
416 West 13th Street, New York City.

Send me, on approval, your Mentor Library in five volumes, with the special cross-reference index. If not satisfied, I may return the set to you, after a week's free examination, and you will cancel my order. Otherwise, I will remit \$3.00 each month until the full price, \$36.25, is paid. Until that time, title will remain with you.

### The Five Volumes Contain

720 handsome full-page gravure and color plates, thousands of beautiful half-tones, over 2,000 pages of the world's most fascinating reading.

harder, because there are two people to please. That is not actually so, because the wife, standing by, can tell whether or not a hat is becoming. She sees the salesman's point of view and generally approves it. Were the man alone he might be inclined to question the salesman's judgment. Of course at times a man may want a certain kind of hat and the wife will want him to buy another; then the sale is doubly difficult.

A man may purchase two or more suits of clothes, but he seldom buys more than one hat at a time. The principal exception is the out-of-town visitor, making his annual trip to New York. Sometimes he stocks up for the year. An occasional customer will buy a derby and a felt, a felt and a straw, or even a silk hat and one of the other kinds; but almost never does a man buy two felts or two straws at the same time.

Most city men buy two straw hats a year and one felt hat. The wearer of a derby may make it last two or more years. Many customers buy a straw hat late in the season when prices have been reduced, so that it will last over the next spring until the early high prices have started to recede.

THE second consecutive warm day in spring usually starts an avalanche of buyers toward the hat stores. The first warm day served as a reminder. In New York, and most other big cities of the East, there is an unwritten law that the straw hat must be donned on May 15th and taken off on September 15th. The opening of the spring season is not very religiously adhered to, however. If the weather is really warm before May 15th you will see straw hats everywhere, and if it is a backward season a good many men will wear their felts until the temperature rises. The closing date, on the other hand, is generally followed, even if the weather is still warm. I suppose that the freemasonry of the streets, causing many boys and young men to feel they have the privilege of smashing a straw hat worn after the official closing date, has had a good deal to do with this.

Two thirds of the caps are sold in the spring, because in most places, particularly in New York, they are worn only for sport. But the felt, as I have said, is coming to replace them to a degree. Even straw hats can be worn with considerable comfort by the modern motorist. Many makers fit the brim with a yielding elastic band, which holds the straw pretty firmly to the head without discomfort. But a panama hat sticks on much better than a stiff straw.

If you ask the average man where his panama was made, he will think there is some catch to the question. "Panama, of course," he will say, if you press him for an answer. The fact is that these hats are not made there at all, but in South America, principally on the coast of Ecuador, in Colombia, and in Peru.

The reason for this general impression is simple enough: About 1846, when the Panama Railroad was being built, a hat dealer in Panama City imported some of these straws from Ecuador. They were of fine quality and they sold quickly to Germans, French, and Americans. So popular did they become that many of

them were shortly imported to America and to European countries. There they were called "panamas," after the city that distributed them.

The toquilla straw from which they are woven is made from the immature unexpanded leaves of screw pines, which grow six or eight feet tall and look like fan-shaped palm trees. They are found in the wild, humid regions of Peru and Colombia and in the dense tropical forests on the coast of Ecuador. In these countries thousands of natives are at work constantly in front of their picturesque straw huts, with a wooden hat block between their knees and a bucket of water beside them, endlessly weaving, and dipping the hat at intervals to keep it pliable. Its texture is fine as damask and its fibers are as delicate as threads of the finest linen. It is said the best grade of panama is *six months* in the weaving.

After the hats are finished they are washed in cold, clear water, coated with a thin solution of gum, polished with dry sulphur and smoothed by pounding. In the countries that import them they are bleached, trimmed, lined, and made ready for sale.

**H**ERE is a tip for the panama hat owner who is interested in preserving it; any considerable drenching injures the straw. After it has been rained on, the hat should be dried and pressed. During a long dry spell you should moisten your panama occasionally to keep it flexible. In winter it ought to be packed away in a box containing camphor. When you take it out in the spring it will be in good shape for another season.

During the Spanish-American war, the United States Government contracted for a number of panamas, which they distributed among the soldiers to protect them from the hot Cuban sun. When the men returned they not only brought back these hats but others which they had purchased for relatives and friends. This gave the sale of panamas in this country a decided impetus.

The ordinary stiff straw hat is manufactured extensively in America. The specially grown barley, wheat, and rye straw from which the braids are made is imported largely from China; but Japan and Italy furnish most of the supply.

The colored hat band is seen on more straws to-day than ever before, but the men who wear it are still in the decided minority. Not one customer in twenty buys a hat with a colored band; but quite a number of men have formed the habit of wearing the plain black band for a month or two and then, when it begins to show signs of usage, replacing it with a colored band.

Brown is a fairly popular color in straw hat bands. Blue with red stripes, blue with white stripes, and plain blue are also in demand, especially among younger men. College men are inclined to be partial to the colored hat band, particularly those featuring their college colors. Leading stores keep the colors of all the big universities in stock. But let me say here that, on the whole, I have found the typical college man inclined to be much more conservative in his choice of clothes than the comic papers give him credit for.

## Main entrance hall of the notable and historic White House in WASHINGTON

To mingle with the many patriotic and curious visitors who daily cross the portals of this mansion, and wander through its rooms, is an experience no American should miss.

To see the great Capitol building with its many attractions; the treasures in the National Museum; the National Library with its one hundred miles of shelves and nearly three million volumes; the Treasury, where our money is made, handled and distributed to the people; the Smithsonian Institution, with its rare and curious relics—to see this much, little as it is of Washington, is something you will never forget.

See Washington if it means only for a few hours as a stop-over on your way to another destination. The ideal way to reach the Capital City is over the lines of the Baltimore & Ohio—the only route east and west passing directly through Washington. Besides this convenience, you will enjoy the excellent dining car service provided, and be impressed with the courtesy and hospitality displayed by Baltimore & Ohio employees.

Much of interest about Washington is entertainingly presented in a new 48-page "Guide to Washington" issued by the Baltimore & Ohio. A copy of it will be mailed to you free on receipt of coupon below.

Just now there is a slight indication that a striped band on the soft felt hat is going to come into favor. A black band, with two narrow white stripes, is very effective on a pearl-gray hat. A blue band with red stripes looks well on a taupe or mouse-colored hat. Manufacturers and dealers are experimenting with other colors.

You have noticed, of course, that the band on the soft felt is seldom the same color as the hat. Black hats are about the only exception to the rule. Brown bands are usually worn on brown hats, but the shades are different. Gray hats almost invariably are banded with black. The effect is fine.

During the last two or three years, I am told, there was a curious craze for fancy linings among the buyers of cheap and medium-priced hats. Manufacturers were hard pressed to meet the demand. Some purchasers would look at the lining even before they examined the outside of the hat, and if the lining was gaudy and flamboyant enough the sale was as good as made. I cannot explain the psychology of this craze, which, fortunately, is beginning to subside. Men who can afford to buy high-grade hats are seldom concerned as to whether they are lined or not. Indeed, most of them seem to prefer unlined headgear, except in the velours and beaver, whose special process of manufacture leaves a rough interior surface.

MEN usually ask to have their initials put in their hats. They prefer the perforated band to gilt letters pasted in. Customers tell me that these perforated initials, besides helping them find their hats in public buildings, often aid them to identify themselves in banks and other places.

I recall the case of a man, not very long ago, who had a new sweat band put in his hat, but forgot to have a new set of initials punched in it. Shortly afterward, on leaving a restaurant he protested that someone had taken his hat. "This looks like mine," he said, pointing to his own hat; "but my hat is better-looking and has my initials punched in the band. I'll swear to that!"

There has been a slump in the sale of silk hats during the past few years. This is partly due to the fact that the dinner jacket has so largely taken the place of the full evening dress, except at the most formal functions. Most men find themselves more comfortable and less conspicuous in the derby or felt that fashion permits them to wear with the semi-formal dinner jacket.

Several attempts have been made to invent a new style in headgear to take the place of the silk hat. Clemenceau, the former French Premier, has even taken a hand at it. His creation is a low, close-fitting hat, made of panned velvet with a sharply turned velvet brim, resembling the overseas hat of the American soldier—the kind they say lets the rain down the back of their necks.

Did you ever notice how a man will keep his hat on sometimes in the presence of ladies and take it off at other times? In the department-store elevator he will remove it when ladies enter, while in the office-building elevator across the way he will keep it on. Perhaps in the

## THE INVISIBLE BEDROOM

LATE AFTERNOON sunlight drifting through sheer-curtained windows. A slender beam aslant the big Kroehler davenport—its lovely, rich coloring aglow with light. The tea-cart drawn close, silver glinting, kettle singing.

How charmingly luxurious and restful the room appears! How inviting the davenport—low and easy of line, deep and soft of cushioning!

Nothing to mar the good taste of a delightfully furnished room. Indeed, a subtle air of distinction, in which the fine lines, subdued coloring and soft luxury of the Kroehler davenport play an important part.

Yet, when bedtime comes, that same Kroehler davenport will provide the extra sleeping space which the presence of an overnight guest requires.

No disrupting of the household. No hurried making of a makeshift bed. Just one simple motion, opening the Kroehler davenport bed. Revealing

sheets, blankets, pillows all in place. Offering nighttime comfort as great as its daytime beauty—all the restfulness that such a wide, roomy bed, deep, yielding springs and thick, soft mattress can give.

Surely you would wish to have the convenience and beauty which a Kroehler davenport offers. And you would gladly save the expense of an extra bedroom.

Kroehler davenport beds may be had in overstuffed, colonial and period designs, in any wood finish, with chairs to match; upholstery of mohair plush, tapestry, velour, genuine leather or leather substitute. In prices they meet any requirement.

Leading furniture dealers everywhere sell Kroehler davenport beds for cash or easy payments. Do not accept a substitute; look for the Kroehler name-plate, shown here, on the back. Write for illustrated booklet and nearest dealer's name.

## Brings You This Genuine UNDERWOOD TYPEWRITER

### Rebuilt Like New

An up-to-date, standard, four row, single shift keyboard, thoroughly tested machine, with two color ribbon, back spacer, stencil device, automatic ribbon reverse, tabulator, etc. Every machine is stripped right down to the frame, then—**fully rebuilt** right in our own big factory by mechanical experts. All worn parts replaced with new type, new enamel, new nickel, new lettering, new platen, new key rings—a complete, perfect typewriter.

### Full Five Year Guarantee

This is your complete assurance of satisfaction or your money refunded. Use the machine ten days. If unsatisfactory in any way return it at our expense and your deposits will be promptly returned. We guarantee any Shipman-Ward Rebuilt Underwood purchased from us for a period of five years to be free from any defects in material or workmanship.

### Easy Monthly Payments

Our easy monthly payment plan makes it possible for YOU to own this splendid machine without having to pay out any big sum of money. You will hardly know you are paying for it. Payments same as rentals. **REMEMBER**, you have the full use of the machine, just the same as though it was fully paid for.

### Shipping Direct Saves You Money

Everyone knows the advantages of buying direct from the manufacturer. Our plan of selling direct, with limited selling expense, makes possible big savings. These savings are passed on to you in the form of lower prices.

### Ten Full Days to Decide

Under the terms of our liberal **FREE TRIAL** offer you may use this machine for **TEN DAYS** on your own typing work without any obligation to buy. Why can we make this offer? Because we know that if you need a typewriter and will give this Rebuilt Underwood a thorough trial, you will decide to keep it.

### Mail Us the Coupon Below

Fill out and mail us the coupon. We will send you our big typewriter book absolutely free. In this book we illustrate and describe all of the various processes of re-enameling, re-nickeling and assembling the splendid Underwood. Or, if you, like so many others, know the quality of Shipman-Ward Rebuilt Underwoods, simply send us \$3.00 with the coupon and we will ship you a machine. You'll get the same genuine Underwood. Try it for the ten days. Then decide if you want to keep it.

STATE \_\_\_\_\_

department store he feels that he is invading the woman's private stamping ground—for women do nearly all the shopping for the family. Likewise he feels that the business world is his domain. There he meets a woman on an equal basis and he does not feel called upon to be over-polite.

There are many other curious notions and superstitions about hats. I have been told that Charlie Chaplin insists on having his hat on when he writes out his ideas for photo-plays, and I have known newspaper men who insisted that they "couldn't think" unless they wore their hats when they sat down to a typewriter. Then there are other people who will not wear a hat on any occasion.

I remember one New York man who attracted public attention for years because he always walked through the streets bareheaded in the coldest winter weather.

I suspect that not one man in a hundred has the glimmer of an idea as to the fascinating process which turns out the felt or derby hat that he wears so nonchalantly. Indeed, I doubt that he even dreams what it is made of. "Some textile material, probably wool, with the various pieces woven, compressed, or stuck together," he probably would say if you insisted on getting his view point. . . . Wrong on all counts!

**IT MIGHT** be interesting for you to look at your felt hat for a minute. Feel its fiber, notice its extreme toughness. Then prepare for a shock. That hat is made of nothing in the world but *fur and hot water*.

Not a single ingredient is added to hold the fur together—unless you call "elbow grease" an ingredient. For generations the process of hat making was a mystery even to the makers themselves. They knew what they did, but they could not understand how they obtained such extraordinary results.

Moreover, there probably are about half a dozen kinds of fur in your hat, in carefully assorted proportions. Most of the fur used by manufacturers comes from rabbits or hares raised extensively for this particular market in France, Scotland, and Australia. Our native muskrat and the South American beaver, *castor*, also furnish considerable amounts.

If you were to examine an individual fur fiber (what you call a hair) under the microscope, you would find that around the hollow center is an outer layer of cells made up of the same material as your finger nails or the scales of a fish. All these scales point *from* the root toward the *other end*.

Take hold of each end of this hair and pull. If it does not break you will find that the fingers at the root end will hold their grip, because they are pulling against the little invisible barbs, while the fingers at the other end will slip, because they are going *with* the barbs.

Now, what makes possible the toughness of your hat is the fact that in the process of manufacture these barbs grip one another and actually *interlock*. The interlocking is brought about when they are shrunk by hot water and worked together by hand. As an interesting sidelight on this mysterious process, it is said that felting was discovered by a

## Their First Investment— 15 Minutes a Day

WHAT SHOULD a family's very first investment be?

Bonds? A home? Insurance? There is one thing even more vital than these. Their future success is going to depend principally upon *his* and *her* mental growth.

Will their social acquaintances find her interesting, or mentally commonplace? Will men in business be impressed with his range of information, his capacity to think straight and talk well?

More than 150,000 families have found the answer to these questions with the help of Dr. Charles W. Eliot, for forty years President of Harvard.

These families are spending 15 minutes a day with the most famous library in the world,

### Dr. Eliot's Five-Foot Shelf of Books

You know something about this great library, but every American household should have a copy of the little book which tells the whole story. The book is free and will be sent by mail; the coupon below will bring it.

Out of all the great mass of books (more than four million volumes) Dr. Eliot and his associates undertook to select the 418 great masterpieces that contain what he termed "the essentials of a liberal education."

These he combined in fifty volumes and arranged with notes and reading courses so that they can be thoroughly mastered, even though

you read them only fifteen minutes a day.

Fifteen minutes a day with the world's greatest travelers, scientists, poets, essayists, biographers and historians. Fifteen minutes of the sort of reading that made Lincoln a well-read man, though his formal education never went beyond the common schools—surely this is the most valuable investment that any household can make.

Especially when the money cost is only a few cents a week.

Decide today that no matter how little time you have for reading you are going to make every minute count. Let Dr. Eliot guide you in this important department of your life as you would

let a physician guide you in matters of health, or a banker in the care of your savings. His guidance is free; it is contained in the little book "Fifteen Minutes A Day." Send for your copy now.

Send for this free book that gives Dr. Eliot's plan of reading

## A Profitable Pleasure

CONN instruments place a world of pleasure, unnumbered opportunities for profit, at your command. For two-score years they have been recognized supreme by the world's greatest artists in concert bands, symphony, opera and popular orchestras.

Exclusive features make Conns easier to play. The most celebrated artists, including the great Sousa, use and endorse them because Conns are more perfect in tune and tone, have more reliable action, are easier to blow, more perfectly balanced, artistically designed and finished.

More Conn saxophones are sold than any other make in the world. Simplified key system, patented tuning device, perfect scale, and many other exclusive improvements make them the choice of the great "jazz" kings. You want the best; be sure you get a Conn.

**FREE TRIAL, EASY PAYMENTS.** Send now for information on how to get any Conn instrument for trial in your home. Conn is the only manufacturer of the complete instrumentation of a band.

Highest Honors at World Expositions. All Exclusive Conn Features at No Greater Cost.  
Dealers and agents throughout the country. Factory branches in many large cities.

C. G. CONN, Ltd. 301 Conn Bldg. Elkhart, Ind.

Eddie Elkins of New York, (top) and Max Fisher of Los Angeles, (bottom) are among the popular orchestra directors who endorse Conn instruments.

medieval churchman who, one morning as he was starting on a long walking journey, put some rabbit's fur inside his hard shoes and discovered at night that he had a tough, one-piece inner sole.

The process of hat making is far too intricate to attempt to describe in a few paragraphs. In Colonial days no one was allowed to qualify as a hat maker until he had served an apprenticeship of seven years. Even to-day, when most of the work is done by machine, there are twenty-five or thirty distinct steps. A few of these, however, may give you an idea of the whole process.

First the furs are washed with whale oil soap and a solution of nitrate of mercury. This gets rid of the grease and opens up the microscopic barbs I have referred to. Then a truly marvelous shearing machine clips off the ends of the hair fibers which are too coarse to be used and shears the soft, downy fur from the pelt. The fur is fed out of this machine looking just as it did before. Indeed, hardly a fiber is disarranged. But if you were to examine it closely you would find that the pelt had been entirely removed.

The different kinds and qualities of fur are then mixed in the desired proportions by a fearful and wonderful machine called "The Devil"—because of its tremendous tearing power. Thousands of teeth tear the fibers apart and thoroughly mix them. The fur is next conveyed into a blowing machine, where it is blown about constantly by a light current of air. Matted pieces, coarse hair, and bits of fur to which the skin still sticks, drop through a set of sieves, and the valuable part of the fur is left for further treatment. This process is kept up until nothing but the very best fur is left. It comes out so fine and soft and filmy that it scarcely bears a touch. It is then put into boxes which hold enough for a dozen hats—each hat taking from two and one-quarter to five and one-half ounces of fur.

THE next apparatus with which the fur comes in contact is the "former," a tall, slender copper cone perforated with many holes and having an exhaust fan at the bottom, which causes the outer air to be continually sucked through these holes. As this cone revolves on its axis, the fur is fed out and drawn against the surface by the suction. Soon a coating of loose fur has accumulated on the surface and is held there. When the cone is covered with sufficient fur to make a hat, a damp cloth is wrapped around it and a perforated tin cover is next slapped on. Cone, fur, and cover are then immersed in a vat of hot water. When it is taken out, a moment later, the hair is welded together in a matted cone about three feet high and a sixteenth of an inch thick, and just strong enough to be handled without falling apart.

Then the embryo hat is subjected to various shrinking processes: It is dipped again and again into scalding hot water and vigorously kneaded by hand—and that is what I meant when I mentioned "elbow grease." Finally it is brought down to near the proper size. The felt grows stronger and smoother with each shrinking as more and more of the barbs interlock.

# This Is Your Chance To Earn More Money

*The True Story of E. A. Sweet of Michigan May Point the Way to Your Big Success*

This is the story of E. A. Sweet of Michigan—as he told it to us—the story of a man whose income suddenly jumped to more than a thousand dollars a month. It is worth reading, for it tells exactly how others can do the same as Mr. Sweet did and equal his success.

"For a good many years I worked for a salary. I was an electrical engineer making from \$150 to \$300 a month. Like almost every other man who works for a salary I was dissatisfied, for I felt every day that if I were only working for myself instead of someone else I would make more money. It wasn't only that, either. I just didn't like the idea of having someone to boss me—someone else to tell me how much I was worth—to hire me or fire me just as he pleased.

"How did anybody know what I was worth? How did I know? I didn't, and that is what worried me. I wanted to know. Maybe I was worth five, ten or even twenty times as much as I had been getting. In other words, after a good many years of hard work with a certain measure of success I came to the conclusion that I was getting nowhere and that it was high time for me to do something on my own hook if I ever wanted to be more than just somebody's employe.

"That was only a few months ago. Today I am making more money than I ever dreamed of making. I am my own boss and last month my net profit was more than \$1,200.

"This is how it happened. One day I read an advertisement in a magazine. The advertisement said that any man could make from \$100 to \$300 a month during his spare time, or that he could make \$200 a week if he only had the necessary ambition.

"It was only natural that I should hesitate a bit before answering this

advertisement. It seemed almost too good to be true. Frankly, I doubted whether it was possible. But I thought to myself that certainly there could be no harm in writing, so I clipped out the coupon and mailed it.

"I realize today that mailing that coupon was the most important thing I ever did. All that I have today—all the success that I have earned—began with that one little act of mine.

E. A. SWEET

"My work has been pleasant and easy. I am the representative in this territory for a manufacturer of raincoats. This manufacturer sent me a little eight-page booklet that tells any man or woman just what it told me. It offers to anyone the same opportunity that was offered to me.

"This raincoat manufacturer is The Comer Manufacturing Company of Dayton, Ohio—one of the largest manufacturers of high-grade raincoats in America. These coats are nationally advertised, but they are not sold through stores. All that I do is to take orders. I do not have to buy a stock of coats. I do not have to invest any money, and the beauty of the proposition is that I get my profit the same day that the order is taken.

"The little eight-page booklet which the Company will send to you will tell you exactly how you can do as I have done. It will tell you how

to get started right in your own territory. It will tell you where to go, what to say, and give you all the information you will ever need.

"In my first month as a Comer representative I made \$243. That was a start, but it was only a start. My second month netted me \$600, and last month I hit the bull's eye with a net profit of more than \$1,200 for my thirty days' work.

"One year ago my life was limited to a \$200 a month income. I worked eight hours a day. Today my income is from \$600 to \$1,200 a month and I work four hours a day. A year ago I was not sure of my position. Today I am the sole owner of my own business. I still consider myself a greenhorn and I expect my profits to grow just as much in the future as they have grown so far."

\* \* \*

If you are interested in increasing your income and can devote all your time or only an hour or so a day to this same proposition in your territory, write at once to The Comer Manufacturing Company, Dayton, Ohio. This is their special offer. They will send you, without any preliminary correspondence or red tape, a complete selling outfit with full instructions, samples, style book, order book and everything you need to get started. Sign and mail the coupon now and in less than a week you can be making more money than you ever believed possible.

## Mail This Coupon at Once

THE COMER MFG. CO., Dept. SJ-511, Dayton, Ohio

I am ready to start as a Comer representative if you can show me how I can make from \$50 to \$200 a week. Please send me, without any expense or obligation to me, complete outfit and instructions.

# Simple!

## only 10 KEYS to operate

**B**USINESS men everywhere are marveling at Sundstrand simplicity. "So simple anybody in our office can use it," says one. "Its 10 keys do the work much faster and easier," says another. "So easy to carry to different desks and jobs," says a third.

It is because of these modern advantages that Standard Oil Company, Sears, Roebuck & Company, International Harvester Company and many other leaders use 15 to 100 Sundstrands each.

At your convenience inspect the Sundstrand. Lightly lift it. Put your fingers on its simple keyboard. See how you control everything with only one hand—your left hand is always free to follow figures or turn checks.

In fact, investigate all the features of this new day machine—its automatic column selection—its improved correction features—its simple, easy method of multiplying, with automatic shift—its valuable protection features.

Eight years ago many of these ideas were entirely new. Today their complete success is everywhere conceded. "The re-orders tell the story."

ADDING AND FIGURING  
MACHINE

After the hat is dyed, its brim is stiffened a little by dipping it into a very thin solution of shellac. Derby hats are given a shellac bath all over, but nothing except hot water is ever used on the crown of the felt. It is then blocked, and smoothed with emery paper and ironed with an electric or gas iron, and the brim is moistened and shaped on wooden flanges.

**T**HE velour and the beaver are both popular winter hats, and more expensive than the ordinary felts. The beaver is the better-looking and more expensive of the two, being felted entirely from the best fur of the beaver. Compared with less expensive felts, the process of manufacture is very slow, because much of it is hand work done by experts. The hats are shrunk, formed, and blocked in much the same way as other hats. Then, however, the fur, instead of being smoothed, is scratched up by hand with a metal comb. The roughened nap, which is now extremely shaggy, is clipped off to a uni-

form length with a "lawn-mower" shaving machine, which is built like an old-fashioned horse-clipper. The nap is then sponged off and blown up by compressed air and the short hair remaining has that much talked of "kitteny" look and feel. Beaver and velour are cold-weather hats, being worn chiefly with the winter overcoat.

While they are popular with people who can afford expensive things, yet they have a surprisingly large sale among Poles, Austrians, and Italians. That is probably due to the fact that the velour was first made in Austria. To-day, however, manufacturers in this country turn out the finest grades of velour and beaver hats.

The most expensive beaver that I ever heard of was the large sombrero worn through several of his campaigns by Pancho Villa, the Mexican leader who was bribed to let up on his activities against the new republic. This hat was trimmed with pure silver and was said to be worth more than one hundred dollars.

## Stella Dallas

(Continued from page 59)

"Good gracious! Of course I do! We wondered how such a person ever got in here, and then decided she must have come, just for the day, from that unspeakable place on the other side of the lake."

"Notice her, Laurel," laughed Deborah, giving Laurel a little squeeze. "I believe she is coming down toward the pier. Take her in. She's a perfect scream. Paint about an inch thick, and plucked eyebrows, and dyed hair, and not a day under forty. Oh, she's a mess! You remember her, Richard, don't you?"

"Yes, I remember her. Awful dame! Horrible creature!"

Behind Laurel lay only water; on either side of her lay only water. She could not turn and run. She watched her mother take the gravel path that led to the pier. "She is; she's coming this way, girls!" delightedly ejaculated Deborah. Then suddenly Laurel exclaimed, "I've lost something."

"Lost something?"

"My watch!" She held up an empty wrist. "It must have dropped off in the canoe."

She turned back immediately. Richard turned back, too.

"Shan't we all come and look?" Deborah offered.

"No, please," Laurel called back.

"You all go along," Richard ordered. "We'll find it."

"I think it must be among the cushions somewhere," said Laurel.

All during the torturing ten or fifteen minutes when she and Richard shook the cushions and pillows, each separate one, and then ran their hands into every possible corner and crevice of the canoe where a watch might lodge, Laurel kept constant watch of the shore. She saw her mother walk slowly down the path toward the lake, arrive at the water's edge, hesitate, and then sit down on one of the rustic seats built on either side of the pier where it joined the bank. She saw the group

which she had just left approach the rustic seat, draw nearer to her mother—pass her mother! Thank kind heaven above, they didn't stop. Her mother didn't introduce herself to them, after all! Laurel breathed freer. But only for a short time. It soon became evident that her mother was going to wait for her at the rustic seat until her errand at the end of the pier, whatever it was, was finished.

Laurel couldn't keep up the silly search among a half-dozen sofa pillows and one canoe indefinitely. She must go back along the pier and pass the rustic seat, with Richard Grosvenor beside her, in a minute or two. Should she tell him now—immediately, that the "awful dame" was her mother?

"Well, I guess my watch isn't here, after all," she said, with a catch in her voice, with almost a sob. It was over, all over. And so unbecomingly, so hideously.

"If the watch isn't here, it's probably up at Stag Island. If we both paddled hard, we can get there before dark. Jump in. We'll find it."

**L**AUREL gave Richard a look that was like the look of a dog to the god who releases his foot from the jaws of a steel trap. "Oh, you are good!" And she jumped into her place in the front of the canoe, he jumped in behind, and they were off, out of sight, out of sound, in three minutes.

They didn't find the watch. They hunted until it was dark on Stag Island and paddled back by the light of a slowly rising July moon. They hardly talked at all. Richard was aware of a high current of feeling that seemed to be coursing through this mysterious girl ever since the first moment that she had noticed her wrist was bare. It awed and silenced him.

It wasn't until they were returning from Stag Island that he remarked, "You must think a lot of that watch."

She replied, "I'll never forget your coming to help me find it."

*Which play would you make?*

Cribbage — Pone has played 3, 5 and 6; dealer 7 and 4. Dealer holds 7 and 6. What is the obvious play? What is the best play?

## Are you foresighted?

In life, as in cards, some play for the next trick while others look ahead to the ultimate score. But people who make it a habit to

### *Play Cards for Recreation*

soon develop foresight. They play to win the game, not merely an immediate point or two. What other amusement so sharpens the mental qualities that are necessary for business and social success?

"But we haven't been successful."  
"That doesn't matter. I'll never forget it. Never, never, never, never."

A similar high current of feeling coursed through Richard, too, at the sound of her low voice earnestly repeating the single word to him.

It was after nine o'clock when Laurel and Richard reached the pier for the second time that evening. It was deserted. So, too, Laurel observed, with a fresh wave of gratitude for the boy who had saved her, and her mother also, was the rustic seat.

"I'm going in by a side door," Laurel said to Richard as they walked toward the lighted hotel. "You go in the other way. You see 'the crowd.' I want to go right up to my mother as quickly as I can."

"But you'll be down again?"

"Not to-night."

"You haven't had any dinner."

"I'll have some sent up."

"But—"

"Please!"

"Shan't I see you again to-night?"

"Not to-night."

"When shall I see you again?"

In ten minutes—five minutes—when "the crowd" told him, he wouldn't want to see her ever again. "To-morrow," she managed to smile.

"Yes. Don't forget. We're going to have lunch together to-morrow."

"I won't."

"I've only four days left," he went on eagerly. "Give me the morning before lunch to-morrow, too, will you? Please. We'll go somewhere alone." They had reached the side door now. Laurel had one hand on the knob. "Will you? Please answer. Will you?"

Laurel turned and looked up at him, and nodded.

"Right after breakfast?"

She nodded again.

"Promise?"

For the third time she nodded, then suddenly reached out her free hand and touched Richard Grosvenor on his arm, drew her hand back quickly, and whispered, "Good night." Her eyes were as black as the lake beneath the moon.

"Laurel!" Richard moved toward her, but she had turned, she had gone. The big door with its heavy spring closed softly upon him.

LAUREL found her mother propped in bed.

"Well, of all things! Where have you been?" she exclaimed as Laurel came into the room.

"Didn't anyone tell you?"

"Not till just about half an hour ago; then that Mrs. Grosvenor sent a bell boy with a note, saying not to worry; you had lost something and had gone back to the island with her son to hunt for it. What did you lose, Laurel?"

"My watch!"

"Your watch! Why, don't you remember, you said this morning you wouldn't wear it because it might get wet? There it is on the bureau!"

"Why, that is so."

"Gracious! What's the matter with you?"

"I must be losing my memory, I guess," smiled Laurel wanly.

She crossed the room and slipped the watch onto her wrist.

"Had a good time to-day?" Stella inquired.

"Wonderful."

"You must tell me about it. Every word. I'm crazy to hear."

"I will. How have you been, Mother?"

"Where have I been, you better ask."

"Well, where have you been?"

"Down-stairs!" she announced, with a triumphant nod of her head.

"Down-stairs!"

"It's a wonder you didn't see me. I saw you. The doctor was here this morning, and said it would do me good to get up and around as soon as possible, now. At first I thought I better wait till to-morrow morning. Then I said to myself it would be fun to surprise you. So I dressed about four o'clock and sat around on the veranda for a while. I felt just fine, and when I saw all your party coming down the lake in the canoes, I walked down to the pier to meet you. I saw you when you went off with that young man, heaven knew where. I supposed you would be right back. I waited for over an hour in that little summerhouse on the pier. I thought it would be so nice to meet him like that, offhand, and I was looking rather well."

LAUREL, occupied before the mirror—slipping off the lavender sweater, removing her hat and giving her hair gentle little presses and pokes—inquired casually, "Did you stay down-stairs to dinner?"

"No, I didn't. Though I felt all right. But I thought this way—it would be nicer to meet all your friends when you were around to introduce me. I'll go down to breakfast with you to-morrow morning. I feel just great."

"Then you didn't meet anybody?"

"Not yet."

"Mother," said Laurel, turning toward her from the mirror, "I'm going down-stairs just a moment, if you're all right. I won't be long!"

"Mercy! Don't think about me. Stay as long as you want, and have a good time. Gracious, you deserve it. I'm as contented as a clam, as long as you are happy, Lollie. But you can't go like that, in that wrinkled waist and your hair all mussy."

"Oh, it doesn't matter."

Laurel did not take the elevator down-stairs. She walked. The elevator would leave her the whole length of the foyer away from the hotel office. The stairs came down just behind it. Laurel felt fairly sure that none of "the crowd" would be near the office at this time in the evening. She was right. Nobody was near the office. The clerk was alone.

"We're leaving to-morrow," she told him.

"Leaving! I thought your mother—"

"My mother is much better, and something has happened that makes it necessary for us to go home immediately."

"Why, but—"

"Oh, I know we've engaged the room for the season. You'll have to charge us for it, if that is the way you do. We have got to go, anyway." There was something very convincing about Laurel. "We're going on the early train," she said.

"Oh, but the early train isn't necessary. The train that connects with the Boston Pullman at the junction, sixty miles below here, doesn't leave until evening."

# Are You Ever Tongue-Tied At a Party?

**H**AVE you ever been seated next to a man, or a woman, at a dinner and discovered that there wasn't a thing in the world you could talk about?

Have you ever been tongue-tied at a party—actually tongue-tied, you know, and unable to say what you wanted to say, hesitant and embarrassed instead of well-poised and at ease?

It is humiliating to sit next to a young lady or a young man, at a dinner table and not be able to converse in a calm well-bred manner. It is awkward to leave one's dance partner without a word—or to murmur some senseless phrase that you regret the moment it leaves your lips.

Embarrassment robs so many of us of our power of speech. Frequently people who are quite brilliant talkers among their own friends find that they cannot utter a word when they are among strangers.

At a party, do you know how to make and acknowledge introductions in a pleasing, well-poised manner? Do you know how to mingle with the guests, saying the right thing at the right time? Do you know what to say to your hostess when you arrive, and what to say when you depart?

Does conversation lag every time it reaches you? Are you constrained and ill at ease throughout the evening?

The difference between being a calm, well-poised guest and an embarrassed, constrained guest is usually the difference between a happy and a miserable evening.

## Are You Ever "Alone" in a Crowd?

**T**HE man who does not know exactly what is expected of him at a party or a dance, feels alone, out of place. Often he feels uncomfortable. He imagines people are noticing him, thinking how dull he is, how uninteresting.

The woman who does not have a pleasing, engaging manner invariably has the "panicky" feeling of a wallflower. She is afraid of making blunders, constrained and embarrassed when she should be entirely at ease.

Good manners make good mixers. If you do not want to feel "alone" in a crowd, make it your business to know exactly what to do, say, write and wear on every occasion. The man or woman who is able to do the correct and cultured thing without stopping to think about it is the man or woman who is always welcome, always popular, always happy and at ease.

### The Easiest Art to Master

Music, painting, writing—most arts require long study and constant application. Etiquette, which is one of the most useful arts in daily life, can be mastered in almost one evening.

Etiquette tells you everything you want to know about what is worn and what is done in good society.

By telling you what to say and when to say it, by explaining exactly what to do under all circumstances, etiquette gives you a wonderful poise and ease of manner. Instead of being tongue-tied, it shows you how to be a pleasing, interesting conversationalist. Instead of being "alone" it teaches you the secret of making people like you and seek your company.

### Mistakes That Condemn Us As Ill-Bred

There are countless little blunders that one can make at a party or a dance. For instance, the man who motters "Pleased to meet you" over and over again as his hostess introduces him to the other guests is revealing how little he really knows about polite society. The woman who says "Mr. Blank, meet Miss Smith" makes two very obvious mistakes.

At the dinner table, in the ball-room, with strangers and with one's own friends, one must avoid the little social blunders that can cause embarrassment. An easy, calm, engaging manner is of much greater importance than a pretty gown or a smart new suit.

### The Book of Etiquette—Authoritative and Complete

The Book of Etiquette, in two large volumes, covers every phase of etiquette. It solves every problem that has ever puzzled you.

In the Book of Etiquette you will find absorbing chapters on

dinners, on teas, on weddings, on engagements. You will find a most fascinating chapter on the bride's trousseau, and a wonderful chapter devoted to the business woman. There are chapters on introductions, on correspondence, on speech, on dress. Nothing is omitted, nothing is forgotten.

### Sent to You Free for 5 Days' Examination

Won't you let us send you, entirely free and without obligation, the two-volume set of the Book of Etiquette? No money whatever is necessary. Keep the books for 5 days and examine them thoroughly. Within that 5-day period decide whether you want to return the books without one penny's cost to you, or keep them and send us only \$3.50 in full payment.

You will be the sole judge. This is a free proof offer—the Book of Etiquette is sent to you free for examination before you purchase it. You are urged to take advantage of this offer at once.

Just clip and mail the coupon, and the Book of Etiquette will be in your hands in a day or two. Nelson Doubleday, Inc., Dept. 583, Garden City, N. Y.

"We're going in the morning," Laurel announced.

"MOTHER," she remarked ten minutes later, "you must lie there in bed and watch me pack the trunks."

"Pack the trunks!"

"We're leaving this place to-morrow morning, at half-past seven."

"What are you talking about?"

"We're leaving. We're going."

"What do you mean?"

"What I say. I've just been downstairs and told the clerk."

"Have you lost your mind, Laurel?"

A faint smile drifted across Laurel's features, softened, for a moment, her firmly set jaw and chin.

"Oh, I'm sorry, Mother! I'm ever so sorry."

"What's happened? What's the meaning of this?"

"Oh, I just don't like it here any more," shrugged Laurel. "I just can't stand it here any more."

Stella's eyes narrowed. She nodded her head slowly up and down. "Sounds mighty like a quarrel with your young man, to me."

"Oh, don't say 'my young man,' Mother."

"There you go! Just like your father again! Criticizing my language every other minute! Well, then, Richard Grosvenor. Sounds mighty like a quarrel with Richard Grosvenor, to me."

"Mother," said Laurel, "I never want to see Richard Grosvenor again as long as I live!"

"I knew it! I knew it! Come, Laurel, don't be a little goose. Mercy, I never saw such a pepper-box! You can't fly out of a hotel like this, on a moment's notice, just because of a little lovers' quarrel. Heavens alive! You come to bed and sleep on it. You'll feel entirely different in the morning. So will he. Gracious! I know how those things work. Quarrels make the heart grow fonder. There's a saying something like that. You come to bed, Laurel."

"Not till the packing is finished," said Laurel. She turned her back upon Stella, crossed the room to the bureau, pulled out a lower drawer, and removed a pile of underclothes.

"You don't mean to say you're going to pack up and clear out of the only place we ever even had a 'look-in' at?"

"Yes, Mother."

"Where do you think we're going to at this late date?"

"Why, back to the apartment."

"Back to the apartment in July?"

"Yes, Mother."

"Do you mean to say, Laurel, you're thinking of putting me in a train in the condition I'm in?"

"I stopped and asked the doctor. He said it wouldn't hurt you to travel, he thought."

"And what about the expense of this room?"

"The clerk said we wouldn't have to pay for it. But even if we did, it would make no difference. Oh, Mother, don't talk. Don't argue. We're going, anyway."

Laurel was emptying all the bureau drawers now. Stella, from the bed, stared at her speechless, as helpless, as powerless as if she were the child. She recognized that look in Laurel's eyes.

"I've brought you up all wrong," she sighed.

Laurel made no reply to that. Swiftly, effectively, she sorted and piled. Swiftly, effectively, began filling the trunks.

"Laurel, you're doing a crazy thing," Stella broke out afresh; "and for the life of me, I don't know how to stop you."

"Don't let's go all over it again."

"You're throwing away the best chance you've ever had. Listen to me: Most of these people here come from Philadelphia. I had it all worked out in my mind that if we got the right sort of a start with them this summer, here, we might take an apartment down around Philadelphia somewhere next fall. Then you'd have some of the right kind of friends to play around with, and when the time comes for you to 'come out,' why—"

"Where's the tissue paper, Mother? I think I'll do the dresses next."

Five minutes later Stella became tearful. Laurel brought her a handkerchief.

"I should think," she wailed, after she had vigorously blown her nose, and mopped her eyes, "you'd want me to have a little of the good times you've been enjoying these three weeks while I've been cooped up here in bed. I like nice people, and things going on, myself. You know I do. But just the minute I am able to get out of bed and take in a little of the gayety and excitement, you let a silly quarrel with a young fellow you never saw three weeks ago cheat me of it all."

"Where are the shoes for your satin slippers? Do you know?" called Laurel from the closet.

Laurel and her mother spent all the next day, from ten in the morning until eight at night, in the waiting-room at the junction. The waiting-room at the junction was hot and dusty. It swarmed with flies, attracted by discarded lunch boxes and paper bags. It smelled of cinders and hot steel. There were settees built around the edge of the waiting-room. They were painted mop-colored gray, divided by iron arms into spaces, so that no one could lie down upon them. Laurel arranged the suit cases as best she could, for her mother's feet, and rolled up a traveling coat into a pillow for her head. All day Laurel hovered solicitously about her mother, offering frequent drinks of water, which she brought in a paper cup; trying to tempt her with crackers and cheese and sweet chocolate, which she procured from a general store half a mile up the road; asking her from time to time how she felt; showing concern, anxiety, but not the slightest sign of yielding or regret. Stella, resigned now and stoically submissive, sat silent and unresponsive all day long. At measured intervals she sighed deeply, eloquently.

AT EIGHT o'clock in the evening, a Pullman car was backed up to the junction and side-tracked there for an hour or so to await several incoming trains from various points of the compass. Laurel and her mother crawled in between the sheets of a lower berth in the Pullman car a little after nine.

Laurel was on the inside of the berth. Stella's obdurate back was turned toward her. As Laurel stretched her long slim body down beside her mother, she slipped her hand under her mother's arm—around her waist, as she always did when

## This Kind of Music Helps ANY Career!

Do you realize this? Business cares that follow you home, *harm!* Every hour you spend playing a Gulbransen Player-Piano makes you a better man or woman. You enrich the coming day with Gulbransen music! It shows in your work!

Here's why. When you, yourself, play the Gulbransen your attention is focused. You are doing something very interesting. You "lose" yourself in the wonderful music you are playing. It's a fact. Thousands of men get away from their troubles every day by playing good music the Gulbransen way.

Another thing! The Gulbransen isn't a selfish enjoyment. Your wife and children will become expert musicians also. Instruction Rolls are provided.

So strong is this appeal of personally playing good music that every Gulbransen dealer invites you to "play it yourself." The result? The Gulbransen is the fastest selling player-piano made! See your dealer, soon. You'll never regret it!

she went to sleep (though she hadn't last night).

"Mother," she whispered, "aren't you going to forgive me pretty soon?"

Stella pressed the precious hand, drew it closely around her.

"Of course I am, you crazy kid," she whispered back. "I don't care what you do, just so I've got you to do it. Gosh, I can't stay mad with you any longer!"

Laurel's arm tightened. That was all right, then. Oh, if only Richard—if only he—her arm loosened, grew limp. Laurel fell to sleep almost immediately. So did Stella. They both had been asleep for an hour or more, when the hotel train whistled into the junction at half-past ten.

**L**AUREL was just drifting off into unconsciousness for the second time when she became aware of her name being spoken just outside the heavy curtain of the berth. She had been dimly aware of voices conversing in low tones for five or ten minutes before the sound of her own name prodded her wide awake. The section opposite had not been made up when she and her mother went to bed. Probably, Laurel concluded, some of the people who had come down on the evening train were sitting there and chatting.

"Yes, that very pretty dark girl who was so popular with the younger set—lovely eyes. Laurel Dallas. Such an odd name."

"But how is it possible? She seemed so very refined, so distinctly nice in every way."

"Well, I asked the clerk. He told me—"

"You mean the woman in the striped dress?"

"Certainly, certainly. She is that lovely child's mother!"

"What a handicap to the poor girl."

"I should say so. All those people she's been playing around with had no idea what her mother was like, I suppose. She's been ill ever since she came. I wish I could have stayed a few days longer and seen just what would have happened when that woman appeared on the scene."

"What's the woman's story?"

"I don't know. I never heard of her before. Dallas is her name. From Boston."

"Poor girl. It's like having a ball and chain around her ankle to be obliged to drag a woman like that after her wherever she goes."

"Yes, but those things happen. Once I knew of a young man—most finished, such aristocratic manners, and he came from the commonest family. Of course, being a man, he could escape his family; but a girl—a young girl like that—" The train began to move. "Perfectly helpless—branded." It moved faster. "A shame. Such a pity—Richard Grosvenor—" It moved still faster. The voices were drowned in the rumble of flying steel.

Oh, had her mother heard? Was her mother awake? No, Laurel thought not. Her breathing was heavy, and slightly audible. The hand that had grasped hers so tightly a little while ago was limp and lifeless now. Her whole body was limp and lifeless. It moved slightly with the motion of the train, as unresisting as the curtains.

Oh, had Lollie heard? Was she awake? No, Stella thought not. Her soft breathing was as regular as the swinging of a pendulum. The arm that encircled her

waist was as unconscious as a sleeping baby's.

So, that was the story! Oh, what a fool she had been! A handicap to Laurel! And not because of unfair stories, of whispered scandals (these women didn't know who she was, didn't even know she wasn't living with her husband), but just because of herself. Was she so awful—so God-awful then?

Stella had been listening to the voices for ten minutes before Laurel had become aware of them. She had heard herself described in detail, in cruel detail. She didn't suppose anybody knew that she "touched" her hair a little now and then. Why, even Lollie didn't know it. Up to two years ago it hadn't been necessary, but she did so hate the soft-boiled-egg look when yellow hair begins to turn white. Other women kept themselves young and attractive without being criticized. She had tried not to become a perfect sight, for Laurel's sake; to keep in the running, as far as appearances went, so the child never need be ashamed of her, as she had been of her mother and the mouse-colored wrappers. But she had failed. Why, it was the same story right over again. Laurel was ashamed of her mother, too! It was as plain as the nose on your face. That was the reason Laurel was leaving the hotel. She would die rather than confess it, of course. That was the way Laurel was—as considerate, as gentle, as delicate with her common, ordinary, vulgar mother (weren't those some of the words the voices had used?) as with the charming Mrs. Grosvenor or the flawless Mrs. Morrison.

Well, what was to be done about it? Now that Stella knew the truth, knew that just her own personality, just her own five senses and the old hulk of a shell they lived in, was like an iron ball tied to Laurel's ankle (pleasant to learn that about yourself in the middle of the night, when you so wanted to be wings for your child) well—now that she had learned it, what was the next number on the program? Laurel, being a girl, the voices had said, couldn't escape, couldn't break the chain to the ball. Well then (Stella's fingers very gently closed over Laurel's. She still slept—and she really did sleep now), well, then—It would be pretty awful without her, wouldn't it? Dear little Lollie. . . . Let's see, let's see. No. . . . No other way.

A narrow ribbon of sunlight was shining into the berth through a crack by the tightly pulled window shades at Laurel's feet when she stirred and woke. Stella was waiting for her, had been waiting all night.

"Well, honey!" she said lightly, "had a good night?"

Their eyes met.

"Splendid. Have you?"

"Great. Feel lots better."

"No, she didn't hear," thought Laurel.

"No, she didn't hear," thought Stella.

**H**ELEN MORRISON sat in the big library-sort of room where Laurel had first watched her serve tea. She sat by one of the long windows that looked out upon the willow-shaded avenue that wound up to the front door, by the same window, it chanced, out of which she had run to meet Laurel the first time she had come to visit her, four years ago. She was dressed very

## TYPED WORDS ARE WINGED WORDS!

IN the building of the bridge, words—surely as steel—have their part.

In every field of life—the boy's study, the man's work, the woman's social activities—*words* play a leading rôle.

Let them be *winged* words—typed on the responsive keys of the Underwood Portable. Then they

are words easily written and pleasurably read—words that are forceful, accurate and clear.

Because it is built by the makers of the world's Standard Typewriter; because it embodies features that are exclusively Underwood, this Portable makes it possible for anyone to do *Underwood Typewriting* anywhere.

PRICE \$50  
in the United States.

The Portable is obtainable at Underwood offices in all principal cities, or direct by mail.

Cased:  
Weight 9½ lbs.  
Height 4½ inches.

For the most helpful letters describing your use of Sherwin-Williams products.

The object of this contest is to get actual true stories that can be used in our advertisements to prove the beauty, economy, convenience, long life, or increased value resulting from the use of Sherwin-Williams paints, varnishes, stains, enamels, or other products.

Less credit will be given to the wording or literary style of the letters than to the information they contain. You must be able to prove the statements you make, and evidence in the form of photographs, dates, the names and addresses of people familiar with the facts on which the letters are based, etc., will be very helpful in winning these prizes.

Millions of home owners must realize the need for painting with "The Right Finish for Each Surface" because they have bought and used Sherwin-Williams Products. We, too, believe that Sherwin-Williams House Paint, for instance, covers more square feet per gallon, lasts longer, and is therefore more economical. We also believe that Mar-Nor Floor Varnish is a superior product because it is made especially to be walked on, etc.

But in order to *prove* these things and more, we want your letters telling of your actual experiences so that we may have our own beliefs confirmed. You have probably used Sherwin-Williams products. Write us your letter. Take your time. Gather your facts and evidence, and make your statements as carefully and exactly as if you were on the witness stand. This contest is limited to persons who have bought and used Sherwin-Williams products prior to January 22, 1923.

The contest closes May 15th, 1923. Results will be published as soon as possible after the closing date. No letters or photographs will be returned. It is understood that all matter submitted in this contest becomes the property of the Sherwin-Williams Co. and may be used in advertising matter.

much as she had been then (it was morning and July), in white skirt and waist and low shoes. She sat in front of a desk, writing, in a dilatory fashion. Every little while she glanced out of the window down the willow-shaded drive, then back again to her pen.

Looking at Helen, as she bent over her writing, she seemed not to have changed at all in the last four years, or in the last fourteen years; the same young-girl slenderness, the same young-girl lightness, as she sat poised on the edge of her chair, which was tilted forward on its two delicate front legs. But when she raised her head and looked back at the clock, then one saw without a shadow of doubt that she was no longer a girl. It wasn't only her hair—for in the last four years the few white threads Laurel had discovered had become a definite streak of silver cloud that drifted about the left side of her brow and reached backward to the still dark coil in her neck—it was something more convincing, but deeper rooted.

THERE was on Helen's face a look of settled calm (or was it settled hopelessness?) that hadn't been there four years ago, when she had rushed out of the long window down the lane to meet Stephen and Laurel. There had been laughter and anticipation in her eyes then. Now there were only quiet smiles and submission.

To-day, again Helen was awaiting the arrival of an automobile. She had sent the car down to the station to meet the train, due at ten-forty. It was now after eleven. It was only five minutes to the station. The train must be late. She finished her letter, then rose, crossed the room, and stood looking out of another long window that opened out upon the terrace. Helen was awaiting the arrival of Laurel's mother, of Stephen's wife. She had telephoned last night from New York.

"I'm Mrs. Stephen Dallas," the strange voice had announced. "I want to talk with you. Will you be home to-morrow morning if I come out?"

Helen had replied, with no surprise in her voice, that she would be glad to come in town and meet her there if she preferred.

"No. I'd rather come out."  
 They had arranged the trains. Helen had told her she would have her met.

When finally the bell rang and the maid announced Mrs. Dallas, Helen crossed the hall to the reception-room with a sensation as near dread as she had ever felt in her life when about to meet a guest.

Stella was standing up. She had on a dark blue tricolette suit, and wore a summer fur—white fox, fastened behind. The dead animal's head hung half way down her back. Stella's coat was tightly buttoned and fitted her generous bust and hips without a ripple. Her hat was large and broad-brimmed, and didn't take a veil well. Therefore she had adjusted her veil over her bare head before putting her hat on. The veil was drawn tightly over her generous cheek and chin, and it, also, fitted without a ripple.

Helen looked at nothing but Stella's eyes as she came toward her smiling with her hand outstretched.

"Good morning, Mrs. Dallas," she said. "I hope the chauffeur found you."

"No, he didn't. There was quite a crowd. I walked."

"Oh, I'm sorry. It is such a warm

morning. Let me send for some water." She made a movement toward the bell.

"I don't want any water." Why, her hair was snow-white on one side! She couldn't be a day under forty.

"Well, do take off your coat and unfasten your fur."

"No, thanks."

"And sit down. Let us come into the other room. It's pleasanter."

Helen led the way across the hall, shoved a comfortable arm chair in front of one of the terrace windows. "I always like it here better on a warm morning, looking out on the shadows rather than on sunshine. And there's usually a breeze."

Opposite the arm chair Helen placed one of the straight-backed Sheratons for herself. She made a little waving motion toward the arm chair. "Sit down, please," she said; "take that chair."

Stella complied—at least partially. She took the extreme edge of the chair. It was one of those low, deep affairs; she'd have a frightful time getting out of it, if she sat back. Helen sat down, too. There was a pause—a pause that threatened to become awkward.

"Is it very warm in town this morning?" Helen inquired.

Stella ignored the question.

"I suppose you think it's funny, my coming here."

"No, I don't," earnestly Helen assured her, leaning forward, clasping her hands upon her knees. "You and I have a great deal in common. I don't think it's funny at all."

"Well, funny or not, I had to come. I thought of writing at first; but, gracious, if a thing is important enough to you, you'll do it the right way—at least the way that seems right to you—whatever anyone thinks. There are some things I had to know that nobody but you could tell me, so I decided to come right down here myself and ask them."

"That was the right way."

"I've heard a lot about you."

"And so have I . . . heard a lot about you."

"From Laurel, I mean."

"Yes, I mean from Laurel, too."

"I suppose you know it, but Laurel thinks a lot of you."

HELEN smiled. "And I suppose you know it, but Laurel thinks a lot of you."

"Well, I'm her mother. She has to. But she's got what they call a sort of 'crush,' 'mash' we called it when I was a girl, on you. She hates to have me call it that. She won't talk about you very much now. Thinks I might be jealous or something, I guess. Perhaps I was a little, at first, though I hardly knew it. Laurel did, though. Trust her. She's the sort of child that knows what you feel before you do yourself almost."

"I know. Sensitive, isn't she—oh, so sensitive! I think a great deal of Laurel, Mrs. Dallas. You have a beautiful child, I think."

"She is a nice kiddie," said Stella.

For an instant the two women's eyes met. Was that bright look tears, they both wondered.

Stella was the first to look away. She coughed, cleared her throat to speak again. Might as well take the bull by the horns, she decided.

(To be continued)

## Your Five Miles of Pores *Are They Open Roads, or Closed?*

**E**ND on end your millions of pores would make a pipe line five miles long. Are they *open* roads or *closed*? Are they carrying their normal traffic, or is the "closed" sign diverting it to other channels and so causing congestion and lowered vitality? In other words, are you *really* clean or only *nearly* clean?

*Real* cleanliness is *pore-deep* cleanliness. And *pore-deep* cleanliness demands a soap which will not leave behind a residue to clog the skin. For this reason more and more people everywhere are adopting *American white*

*cleanliness* which calls for *white* soap, a soap that soothes as well as invigorates, a soap which makes every pore an *open road* to health.

So, the ever-growing demand is for Fairy—the *whitest soap in the world*—soap in its purest form. In America's foremost baths, clubs and athletic institutions—*wherever cleanliness is a business*—there the one choice is Fairy Soap. There may be "prettier" soaps. There may be "smellier" soaps; but when it comes to honest-to-goodness, deep-down cleanliness, the call is for Fairy. It comes clean, it looks

clean, it is clean through and through, and it does a clean job.

Entrust your skin to Fairy. It works no harm—it does great good. It *more* than cleans; it helps the body *breathe*. And every *clean*-thinking man or woman knows how essential that is to well-being. Its shape is handy. It floats. It gives instantly a wealth of cleansing, quick-rinsing lather. It wears without waste to a thin wafer. It is a *really-clean* soap for *really-clean* people.

**THE N. K. FAIRBANK COMPANY**

*The Whitest Soap In the World—The Soap of Really-Clean People*

*Ritz-Carlton Hotel*  
*Grand and Madison Streets*  
*Philadelphia, Pa.*

The N. K. Fairbank Company,  
New York City.

Gentlemen:—

The choice of a soap to be used in a representative hotel is a matter of considerable importance. We have found that Fairy Soap meets the particular demands of a high-grade clientele. Its whiteness, quick-cleansing quality and gentle tonic effect on the pores contribute largely to this preference.

Yours very truly,  
RITZ-CARLTON HOTEL

(Continued from page 16)

to be given a chance to become citizens, and that the ordinary institution did not give them a chance. Therefore they put up this great building and barred from it every institutional feature. They built on Fifth Avenue, not because another cheaper and perhaps better site could not be found but because they wanted to draw attention to the fact that the country has homeless children, and that dumping them into a bleak, unhuman children's home is not the way to make citizens out of them. They did all of this very quietly, shoving the institution and its purpose up into the foreground but keeping well back themselves.

That is characteristic, and it is the reason why August Heckscher, although very well known in the higher circles of business, is not at all known generally, in spite of the fact that he was many years ago one of the leading coal operators of the country and was for ten years the general manager of the New Jersey Zinc Company, which owns, only sixty miles out of New York, the greatest zinc mine in the world. He is to-day one of the largest individual holders of real estate in the Forty-second Street district of New York. He is an officer or a director in dozens of companies, including several banks. He was born in Hamburg in 1848, the year of the German Revolution. His father was a noted lawyer and once served as Premier.

"I never knew my father very well," Mr. Heckscher told me. "He married late in life, and he seemed so old and so far away from me that I was always a little afraid of him. My mother was the only one with whom I could have any confidences. One day, when I was about thirteen or fourteen years old, my father began to examine me on what I wanted to do when I grew up. I think he intended that I, too, should be a lawyer.

"I want to be a merchant," I told him.

"A merchant? Well, what is a merchant?"

"I stammered about a bit and he soon saw that I could not answer.

"You little fool," he said, roughly. "You want to be a merchant and you do not even know what a merchant is. But if you want to be a merchant, that you shall be."

"**T**HEN and there he changed my whole course of study. He took me out of my school, sent me to a school in Switzerland, and then brought me back and apprenticed me for three years to an exporting house in Hamburg.

"They made me do everything in that Hamburg office. I learned about ships and shipping, trade customs, the values of foreign moneys, the tricks of foreign exchange, the values of a wide variety of goods and commodities, where they were made, who sold them, and who bought them. And finally I had it forced into me that two plus two always equals four—which is another way of saying that although imagination plays a very large part in business it cannot be used in surveying accounts. A sale has to result

in either a profit or a loss. The big thing is to know a profit when you see it, or to know a loss when you see it—and to act accordingly. It is the easiest thing in the world to imagine a profit to be greater than actually it is or to imagine a loss to be less than actually it is.

"When I was nineteen I wanted to come to the New World. I had many relatives in America and most of them were doing well. Neither my father nor my mother favored the project. The family had no money to spare, and they could not see how I could be set up in America and do anything without capital. But I had no idea of crossing the Atlantic as a capitalist and so I proposed to my mother:

"If you will give me enough money to pay my passage, with a little over, so that I can learn the language before I start to look for work, I will never ask you for any other money as long as I live."

"**W**ECLOSED the bargain. My mother gave me the equivalent of five hundred dollars. I took passage for New York and arrived there after a slow, uncomfortable voyage of some three or four weeks. That was in 1867. I knew, before starting, that the War of the Rebellion had just closed and that, although the North had been victorious, the whole country was pretty well worn by the struggle. I did not intend to look for a job until I knew the language, but if I had wanted one it would have been hard to find. Everyone was talking 'hard times.'

"I hired a room on lower Third Avenue. Then I set to work to learn English in the shortest possible time, not just to learn enough words to get along but to get in a position where I could express myself as easily in English as in German, and if possible without an accent. And all of this I had to do before my money gave out.

"I decided that hiring a teacher would not only be too slow but too expensive, so I mapped out a course of my own. I joined the Mercantile Library on Astor Place, and for twelve or fifteen hours a day read English books. At first it was very hard to make much progress, but at the end of two or three weeks I could read almost anything without the aid of a dictionary. I tried to pronounce every word to myself. Of course I got a great many of them wrong; but by listening carefully to the conversation of people who seemed to be educated, and by talking whenever I could with native-born Americans, I soon managed to gain a rather fair command of the language.

"In three months I was really speaking English—not the *patois* of those who pick up their language from foreigners, but real English. And incidentally I already had a wider reading than many of those who had known English all their lives. One can cover an astounding number of books in a couple of months.

"My cousin had a coal mine near Shenandoah, Pennsylvania. He asked me to take a place with him. I knew

nothing of coal mining. Two weeks after I reached the mine, my cousin fell ill and, willy-nilly, I became the manager of the company. The managership of that mine was no empty title. We had no big bank account to fall back on. The wages had to be met out of what we sold. During the first week or two of my cousin's illness I more or less marked time, expecting him to be back; but then the doctors decided that he was in for a long siege and that if he did get well he would have to go away to regain his strength. Actually he was away from the office for two years, and in such a condition most of the time that he could not give me the least direction. I had to go forward entirely on my own responsibility.

"I did not have to know very much about the mining of the coal. The mine superintendent attended to that, but I had to keep a close eye on the cost of mining, that is, how much the coal set us back at the mine head. Then I had to see that the coal was sold at a price, that we got coal cars to take it away in, and that the whole cycle of the business revolved to meet our wages and bank obligations and leave something over as a profit. I very soon found out that my apprenticeship in the trading house abroad had given me a knowledge that exactly fitted the situation. I had to learn only coal practices and coal customs. I had all the accounting and general business sense needed. There was, however, the human factor, and it was a very big factor.

"**C**OAL mining at the best is rough work, but in the early seventies in Pennsylvania it was especially rough and dangerous, for those were the days of the Molly Maguires, the worst band of cut-throats that ever existed. They were a secret organization running through the coal regions, and no one ever knew exactly who were and who were not members, although we usually had a pretty fair idea. The members were sectionally organized, with each division under the direction of a 'body master,' whose word was supreme.

"At first they were organized for protective purposes—to protest against injustice; but as they grew in power they became arrogant. Any owner, any mine boss, any superintendent, anyone who offended a Molly Maguire was as good as dead. The member who had been offended reported to his 'body master,' he got in touch with another division, and this division sent a man to do the killing. No man ever killed in the neighborhood in which he lived or where he might be recognized. The killing was always done by strangers, and if the killer was located and identified a conviction was quite impossible, because he always had a perfect alibi. Ten or fifteen people would come to court and testify that at the exact hour of the murder they had been sitting with the alleged murderer in a town twenty miles away.

"Sheriffs became afraid to make arrests. Juries became afraid to convict.

# Vitralite

*The Long-Life Enamel*

Practical painters choose Vitralite, *the Long-Life Enamel*, because it flows so smoothly, covers so well, and saves time; women delight in its immaculate, permanent, porcelain-like surface, which is so easy to clean; and men vote for it because it is so durable and lasts so long that it saves them money.

Pratt & Lambert Varnish Products are used by painters, specified by architects and sold by paint and hardware dealers.

Write for Color Card, Sample Panel finished with Vitralite, and Names of Local Dealers.

PRATT & LAMBERT, INC., 61 Tonawanda St., Buffalo, N. Y. In Canada, 3 Courtwright St., Bridgeburg, Ont.

Save the surface and  
you save all the money.

75<sup>th</sup> Anniversary

Even judges were intimidated. The Molly Maguires terrorized the whole region. If one of them demanded a week's wages, the ordinary mine boss, even though he knew that the man had not done a stroke of work or been near the mine, would put him on the pay roll. If a wage were disputed, the boss always agreed with the Molly Maguire. It was sure death not to.

"One of the most desperate Molly Maguires in our neighborhood was Tim Hurley, a lad of eighteen years. He took what he liked anywhere, and it was rumored that he had shot at least a dozen men. One night four of us were playing whist in our boarding-house when a miner rushed into the room crying:

"Gomer James has been shot."

"JAMES ran a little saloon down the road, and, according to the story, Tim Hurley a few days previously had quarreled with him; that night Tim walked into the saloon, put a bullet through James's heart—he was an unerring shot—and walked out again. It was one of the few instances where a man had killed in his own neighborhood and without any attempt at concealment. Tim Hurley thought he could do anything around Shenandoah, and he was not far from right.

"Let us go down and get the body," I suggested.

"You can go. I won't," answered the man who had brought in the news. "Tim says he will shoot the first man who touches the body."

"I felt different. Four of us walked down the road, a black, dusty, unkempt road bordered by weather-beaten shack-like houses, the road of a coal-mining town. But it was not ugly that night. The light of the full moon transformed its unsightliness. We marched down bravely, more bravely than we felt, for Tim Hurley had a way of keeping his promises. We picked up Gomer James and carried him back to his mother's house. One of us went ahead to tell her. Nothing happened. Tim Hurley must have had enough for one evening. Some time later the Molly Maguires were broken up through Jim McParlan, a wonderfully brave Pinkerton. He joined the society, became secretary of the Shenandoah division, learned their secrets; then, with a mass of evidence in hand, arrested and brought great numbers of them to trials that sent some to the gallows and some to prison. Tim then fled to Colorado and was afterward killed in a brawl.

"Although our division of the Molly Maguires was reputed to be the most murderous in the whole state, I never had any personal trouble with them. I tried to be fair and they seemed to respect me. Our mine was not a profitable one, but we kept going, turning over a little margin year after year for more than fifteen years. A railroad company thought it needed our mine. It thought it needed it enough to pay three hundred thousand dollars for it, which under the circumstances was a fair value.

"With a number of friends, I had been interested in a zinc works at South Bethlehem. I put my coal money into it. Our big competitor was the New Jersey Zinc Company. Our costs of production were high. Their costs were low. We could make out only when zinc was selling high. Our sales department dozed for a time and we suddenly found ourselves with our warehouses full of zinc and very little money in the bank. There was but one thing to do—to clear out all the zinc for whatever we could get for it. We just managed to get by.

"Knowing that our works could not in the end compete, we bought a tract of land in Sussex County, New Jersey, near that of the New Jersey Company. We opened up a mine and found the richest of all zinc deposits in the country. And then began one of the most celebrated lawsuits that the country has ever known. The New Jersey Company asserted a title to the zinc in the land that we bought, although previously it had decided that the tract was worthless. They won in the lower courts and they were sustained by the highest court in New Jersey. The suit started in 1887.

"We did not give up in the face of an apparently impregnable decision against us. I went over to Belgium, where they then knew more about zinc than anywhere else in the world, and found that the deed on which the New Jersey Company based its mining rights to our land had been made before zinc was considered as other than an impurity in iron ore.

"Therefore it seemed reasonable to suppose that the intention had been to give to that company the right to mine iron, and not zinc. Of course this is putting the case very baldly. There was a mass of technical detail. We fought the case with all our resources. We had eleven lawyers, and every penny that each of us had was either in or pledged to that suit. In the midst of it, in 1890, came the Baring failure; the bankers with whom I had my funds failed. Unless I could raise fifty thousand dollars at once my whole interest in the zinc business would have been sold at auction, because it was pledged for a loan. I had no money left. And although the pledged securities were worth more than fifty thousand dollars, they would not have brought that at auction, for they had no general market value.

"I HAD been very careful all these years to keep every promise. I was then forty-two years old. Around forty, by the way, I notice, is the time when reputation begins to count most solidly. Between thirty and forty a man builds his reputation for integrity, but it is seldom until he is past forty that he begins, so to speak, to cash in on his reputation. I went in to a bank president in Philadelphia whom I had known slightly, but with whom I had never had any business, and told him the full story. He said:

"I think you will be good for fifty thousand dollars. You can bring the zinc stock down if you want to. I do not

care much about it. I will lend the money to you."

"I was dumfounded. I had not even dreamed that I could borrow so much money without security. I had been thinking entirely of how to persuade the bank that the zinc stock was good for the loan. A man who is careful of his reputation, who works hard, whose purposes are honest, and who does not lie, is bound to be surprised when the test comes. He will find he has builded greater than he imagined.

"We went on with the suit. In 1897, ten years after it had started, the Appellate Court of New Jersey reversed itself and confirmed our title to the land. From that moment myself and all my partners were rich men. We eventually merged our interests in the New Jersey Zinc Company and I became its general manager.

"THE other enterprises with which I have been associated have moved more or less evenly. Some have moved evenly up and some have moved evenly down. Perhaps the most interesting of them is real estate.

"Buying real estate to me is a matter of observation and mathematics. I values are increasing, I find out why they are increasing. If the rental of the building already on the ground or of the building to be put up will carry the interest and depreciation with a fair margin of profit over, and it seems that the values will increase rather than decrease, then the property is a buy—if you happen to have the money to spare to buy. I never buy real estate or anything else at the top or at the bottom. The Rothschild advice not to wait to buy at the bottom or again to wait to sell at the top is as good to-day as when it was first given.

"Keeping physically fit to battle with the larger problems is perhaps more difficult than the battle itself. It is well enough to talk about conserving one's health, about putting health first, and all that, but if a man is absolutely determined to win out there will come—then must come—periods when health has to be put aside. For instance, during the big suit I worked day and night for years. When I could no longer keep my eyes open I would drop on a couch for half an hour, and then go on again. When the suit was over and we had won, I broke down. If I had been a stronger man perhaps I should not have broken down but my fight has been to make a not very robust body do the work of the most robust.

"It does not do for one to try to work continuously at pressure. And also it does not do to be afraid to work at pressure. There must come periods of long continued strain. One cannot have success and also ease and comfort. An athlete prepares carefully for his race, not so that he can come through a contest without strain, but so that he may strain himself to the utmost without cracking. The value of health and training in business is to enable one to go through the great, important trial—the big trial—that makes or breaks—without cracking."

MERLE CROWELL will tell you next month the wonder story of Aaron Sapiro, who was born in poverty and reared in an orphan asylum—yet fought his way through to the leadership of the greatest agricultural movement of present times. The article is called, "Nothing Could Keep This Boy Down."

*The Standard of Comparison*

## A Quality Business Car At a Modest Price

### *Especially Useful in Business*

In addition to its smart appearance, the luggage trunk is useful for carrying business samples and literature, and shopping bundles as well as the baggage when touring.

<b>Fours—</b>	<b>5 Pass. Touring \$1195</b>

Prices f. o. b. Buick Factories;  
government tax to be added.

For the business man who seeks a refined, handsome closed car for his work—one that provides complete protection in all weather—this Buick four cylinder touring sedan meets every requirement.

The design of the beautifully finished Fisher-built body gives the intimacy of a coupe with the carrying capacity of the sedan, five full grown persons. The interior setting is harmonious and tasteful, with the proper atmosphere for the most formal motoring.

Provision for business samples, books and papers is made in the handsome trunk, carried outside on the rear and the trunk also provides luggage and bundle space for touring and shopping.

And the price of this fine closed car makes it a value without comparison.

## Success

**FORTUNATE** is the man who eventually is crowned by his fellow men with the laurel wreath of success. It is one thing everybody understands. It is one thing that makes for power, contentment, the gratification of every reasonable wish, opportunity for one's children, and a hallowed memory.

Few indeed achieve success and yet the road to the goal has been plainly marked by the footsteps of the successful.

Read any speech, any published article, any reported interview of a successful man today and the foundation of his success is clear for you to follow. This foundation is thrift. At some time in his life he has put aside a nest egg. In adding to it he has developed habits of thrift.

He has learned to enjoy the laying by of money, accumulating money, and he has made his money work for him and has directed its working to the end that he has become independent.

Send for booklet C-1321 and learn how you may start on the path to independence and success today.

## THE FAMILY'S MONEY

### How We Make Our Family Budget Meet Every Emergency

**E**ARLY in our married life, my husband and I concluded that the very important problem of domestic finance is best solved by compiling a budget of each and every item of expense, and adhering to it strictly. Our subsequent experience has served to confirm the soundness of that conclusion. For ten years we have enjoyed the freedom from worry over family money matters that comes only to those who live within their income.

Our method of compiling a budget is simple. First we list fixed charges, such as payments on our home, interest on mortgage, taxes, fire and life insurance, coal, gas, electricity, telephone, water rent, yearly pledge to church and college endowment fund. Then we deduct the total from our yearly income. The balance is allotted in proper proportion to food, clothing, personal spending money, vacation, and "incidentals"—the last a most inclusive term. If our income is increased after making up the budget, we increase the amount of those items where a little more latitude is considered necessary or pleasant. And we always *save* a fixed percentage of the total.

Our personal spending money allowances cover individual amusements, personal gifts to friends and family; small dues to various associations and other incidentals. My husband pays for his own cigars and I buy my own stamps and stationery. Wedding gifts, church contributions, magazine and newspaper subscriptions and diversions enjoyed in common, such as football games, plays and dances and like expenditures are paid for out of a joint incidental account. And, too, the occasional doctor's or dentist's bill is a charge against this fund.

**A**FTER making up our budget with its yearly totals, we look ahead for the next six months and allot our income according to the demands to be made upon it during that time. We don't take one twelfth of our clothing allowance and a twelfth of the amount apportioned to other items each month. One may have to pay an insurance premium during the second month of the fiscal year, whereas a new winter overcoat may not be needed for five months. So we plan to reserve money to meet obligations that fall due at specified times. Then we use the money listed for clothing and other adjustable items when necessary and convenient, never spending more than the amount set aside for a particular purpose. As we pay cash for all purchases, we take regularly *each month* the sum allotted for operating expenses of the home. We also take some incidental and personal allowances each month, though the amount is apt to vary.

After buying a home two years ago and assuming all the obligations we felt we could handle, my husband's salary was cut 10 per cent. Instead of wasting time worrying over the temporary reverse, we

set about lowering expenses to conform to our decreased income. The fixed expenses could not be changed, so the logical thing to do was to cut the ten per cent off the allowance for food and clothing and luxuries. We really didn't mind *so much* sacrificing our summer vacation, with a brand-new home in the country to enjoy. This expedient enabled us to meet our obligations promptly and we came out even at the end of the year. When the ten per cent was restored this summer, we had the pleasure of "spending it ahead," instead of having to use it to make up a deficit.

"But suppose there's a serious illness or an operation and an enormous bill, what happens to your budget then?" a friend asked me.

"Suppose you have no budget—how would you manage to pay such a bill?"

**W**ITH a budget you will have some savings in reserve either in cash or securities that can be marketed if immediate payment is demanded. Under the budget plan you can determine which items can be cut down, and just what savings can be effected toward meeting that bill. If you like, you can make payments on the instalment plan. If you are a "budgeteer," your standing at the bank will doubtless be good enough to warrant a loan. On the budget system you will pay back that loan much more quickly than if you conduct your plan of living on the "Robbing Peter to pay Paul" method.

If you've never enjoyed the peace of mind that comes to those who have unraveled their financial tangles, there is no time like the present to begin over again on the budget plan. It is a very simple matter to *compile* a budget—the harder task is to make it *function*. The longer you have worried along in a haphazard way, the more difficult it is going to be to get out of the habit. Commence by adopting the percentage tables found in articles on domestic finance. For the most part they are compiled by theorists, but they help a great deal. Having once made the start, your common sense will point the way to practical application.

Systematic saving of money is a very important factor in the budget program. The best time to start is at the very beginning of married life, although it is infinitely better to commence late than never to begin at all. Small sums regularly put aside will form the habit. Once it is established, it is very easy and natural to increase the amounts as opportunity offers.

We have always included savings as a fixed charge in our budget. Ten years ago we started by saving fifty cents a week. During that period no one has left us a legacy, nor did my husband hold a highly remunerative wartime position. By systematic saving alone, we have paid a comfortable sum on a fourteen-thousand-dollar home and we are entirely free of debt; so the principle must be inherently sound.

MRS. W. D. K.

Its owners prize the Hupmobile Coupe for its uncommon beauty, its graceful proportions and its snug comfort.

But they prize it still more highly for those sterling Hupmobile virtues which make its beauty so much worth while.

The fact that the Coupe is often spoken of as the "doctor's car" is eloquent of meaning.

It brings to mind thoughts of superior reliability for which the Hupmobile has become famous; the ability to keep on performing at its best for months on end without petting and coaxing.

Beauty in such a car becomes an element of greater value, no less than the staunch inner construction which prepares and fortifies the closed body, the chassis—the entire car—to resist for years the rigors of constant service.

Hupp Motor Car Corporation, Detroit, Michigan

# Hupmobile

## Enough to know —it's Premium

Many a woman achieves a reputation for serving wonderful meals by selecting only those brands of food which have themselves won distinction. In buying bacon, for instance, if it is marked Swift's Premium that is all she needs to know.

For this premium mark has long been an assurance of highest quality—of distinctive flavor and unusual tenderness.

Experienced housekeepers find that, with a family of any size, the economical way is to buy a whole side of Premium Bacon. Still, the sanitary half-pound and pound cartons of thin, even slices are many times a great convenience.

Whichever way they buy it, women of discriminating taste make sure the bacon bears the mark Swift's Premium.

Swift & Company, U. S. A.

NEWTON, Mass.

## Schools and Colleges for Girls

## LASELL SEMINARY

Est. 1851. Aims to develop a truly intelligent and cultured womanhood, cultivating the arts of home making and management. Prepares for women's colleges and offers elective courses, Music, Art, Secretarial, Home Economics. In beautiful Auburndale, 10 miles out of Boston. 80-acre campus with lawns, gardens, and trees, 15 buildings. All athletes.

Woodland Park—The Junior School for Girls.

Send for Catalog.

Camp Tuxton opens July 1st.

GUY M. WINSLOW, Ph.D., Principal

CHAS. F. TOWNE, A.M., Assoc. Principal

141 Woodland Road, Auburndale, Mass.

## The Scudder School

West Seventy-second Street at Riverside Drive, New York. 7 buildings. 200 students. Usual practical courses: (A) SUBJECT RIGHT IN SCHOOL—Preparatory and general. (B) POST GRADUATE:—1. Domestic Science and Home Management; 2-year course with diploma. 2. Secretarial; includes Spanish, French, Library Methods, etc. 3. Social Welfare and Community Service; training for compensated or volunteer work. Classroom instruction and actual field work. Gymnasium, swimming, etc. Distinguished like college life. Address Miss A. M. Scudder, New York City, N.Y., 244 W. 72d St.

## LINDENWOOD COLLEGE

A Standard College for Young Women with Classical, Vocational, Music, Art and Scientific Departments. 114 acres of campus for outdoor sports. Golf, Hockey, Tennis. An invitation from St. Louis. Catalogue upon application.

J. L. ROEMER, Box 923, ST. CHARLES, MO.

## CHEVY CHASE SCHOOL

A school for the girl of today and tomorrow. Courses: preparatory, two-year advanced for high school graduates, special. Unrivalled location at the national capital. For catalog, address

CHEVY CHASE SCHOOL, Box A

Frederic Ernest Farrington, Ph.D., Headmaster, Washington, D.C.

PENNSYLVANIA, Chambersburg.

## PENN HALL

Antique Box Building. College. Preparatory. Modern language and Special Courses. Gifted privileges. Rooms with private bath. Sixty-four year school at Atlantic City. Work continues without interruption. New gymnasium and swimming pool. Dates, 1929, Lafayette and views. Address: Thos. J. MAHON, A.M., Penn Hall Box 11.

Box 104, Barryman-on-Hudson  
New York  
Summer School of Training

## National Park Seminary

For Young Women. Suburbs of Washington, D.C.

James E. Annet, Ph.D., LL.D., President.

In beautiful Rock Creek Valley. Two-year courses in college work. Art, Music, Expression, Domestic Science and other vocational courses. College preparatory for young girls. 60-acre campus. 22 buildings. Athletics. Horseback riding. A home-like club house furnishes ideal social life. Address: Knighton, Box 141, Forest Glen, Maryland.

## GIRLS' COLLEGIATE SCHOOL

1008 West Adams Street, Los Angeles, Cal.

Three-year and four-year courses. Accredited. Office General, College Preparatory, Domestic Science, Art, Music, Expression, Physical Education, Cultural. Beautiful Spanish buildings. Garden life a reality.

Miss Parsons and Miss Donnan, Principals.

## GUNSTON HALL

1412 Florida Avenue, Washington, D.C.

A school for girls. Established 1892. Preparatory and academic courses. Two-year post-graduate and college work. Music, Art, Expression.

Mrs. Herbert B. Mason, Principal.

## HOLLINS COLLEGE for WOMEN

Hollins, Virginia

Founded 1862. Standard College Course for Bachelor of Arts and Bachelor of Music degrees. Avoidance of residential examinations. 225 students. For catalogue address

M. L. LEE, CURRE, SCOTT, Box 344.

## SULLINS COLLEGE BRISTOL VIRGINIA

For Girls. High School and Junior College Courses. Music, Expression, Domestic Science, etc. New buildings every room connected bath. Swimming Pool, Horseback Riding, Mountain climbing. 100-acre campus with beautiful lake. W. E. MARTIN, Ph.D., President, Box 1.

## ABBOT ACADEMY

A School for Girls. ANDOVER, MASS. Founded 1825.

## CULVER SUMMER SCHOOLS

Lake Maxinkushee, Culver, Indiana

Developed as a scientific and practical contribution to the summer training of young Americans, with the belief that vacations should develop character and give aspiration, as well as provide wholesome recreation. The popularity of this conception is attested by the enrollment of more than 1,000 boys in Culver each summer.

Because Culver is not conducted for profit, you may afford your son the advantage of an unsurpassed equipment and personnel at a cost not exceeding that of the average camp.

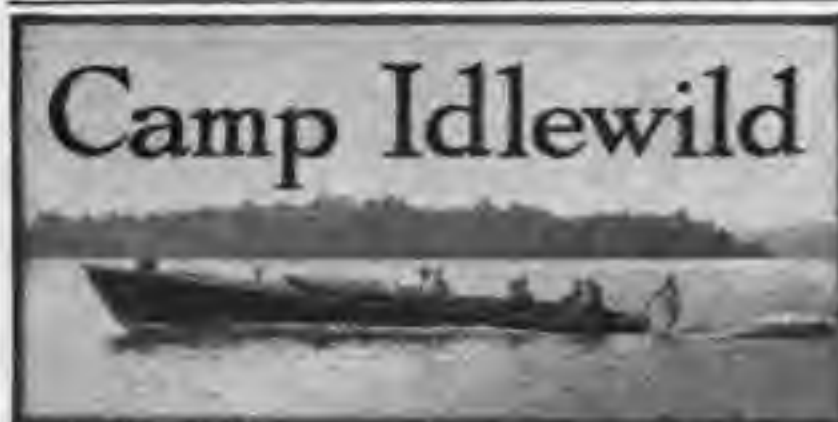

Write Dean's Office for catalog of Naval, Cavalry, Artillery, Aviation or Woodcraft Schools.

Summer Camps

THE CROWELL PUBLISHING CO.  
216 West 12th St. New York City

Modern Corporations prefer to recruit the executive staff from the ranks whenever possible. "Given two men of equal experience, the trained man is the man to promote," said the President of one \$20,000,000 industry.

## Have they got you safely tagged?

**AGAIN AND AGAIN**, in directors' rooms, this conversation is heard:

**FIRST DIRECTOR:** "I wonder whether the man we are looking for isn't in our own organization? How about Madison?"

**SECOND DIRECTOR:** "I don't see how we could consider him. He is just a salesman" or "He is just an accountant" or "He is just an engineer."

So Madison, who has made a creditable record, is passed over in favor of someone from the outside. His job has tagged him and pigeonholed him. He has done the work well for which his superiors employed him but they think of him as a fixture in that work.

### A man who refused to be tagged

One of the outstanding young business men of the Pacific Coast is John W. Sparling of Seattle. He is senior partner in the firm of Sparling and Clark, manager of Pacific Ports, Inc., and he is chairman of the State Board of Accountancy; yet he has not passed his thirtieth birthday.

How does a man reach such a position of responsibility and profit at so early an age? He began in the accounting department of a large company, and might easily have continued to be hidden there for the

rest of his business life. But looking around him he saw the tags being tied constantly and more firmly onto men; he saw the danger of letting it be said, "Sparling is a good accountant, but of course he's just an accountant." He determined to do something while he still had youth and energy to keep himself from being tagged.

### The "something" consisted in Sending for "Forging Ahead in Business"

In the pages of "Forging Ahead in Business," a booklet published and distributed by the Alexander Hamilton Institute, Mr. Sparling read the story of the Modern Business Course and Service. He made a decision then, and three years later, he wrote this letter:

"It has been on my mind for some time to write and express to you my sincere appreciation of the assistance and inspiration your Service has been to me in the past few years.

"When I enrolled for the Modern Business Course and Service I had been specializing for some time in accounting. The deeper I got into it the more I realized the danger of specializing too much. I could feel that I was creating a limitation for myself. . . . I realized that to make a really large success in business I must be able to read the story back of all the figures that were to come under my supervision, and not be content to be merely a good compiler of figures. . . ."

### The executive wears no tag

The Alexander Hamilton Institute gave him the thing he needed. It did not make him a salesman, but it gave him the fundamentals of merchandising and sales management; it

did not make him a factory superintendent or office manager, but it taught him the essentials of factory and office control; it did not make him a banker, but it gave him the outstanding principles of corporation finance. In a word, it fitted him to be an executive—to employ specialists and direct them.

That is the service of the Alexander Hamilton Institute in a nutshell. It takes the man who is in danger of being tagged as "only a salesman" or "only an engineer" and provides him with a working knowledge of every other department of business. Such information makes itself apparent in every talk between a man and his superiors; it is the one certain means of attracting notice and inviting promotion.

### Send for the book he sent for

The Alexander Hamilton Institute offers to every thoughtful man a copy of the book for which Mr. Sparling sent, "Forging Ahead in Business." The book is never sold; it is sent gladly to any man who will give it an hour of his time. The rewards of executive training are so large, and the number of men who have it relatively so few, that it will be worth your while to send for this book, no matter what your position in business.

For your convenience a coupon is attached. Fill it in and the book will be mailed immediately, without obligation to you.

"Twenty."  
 "Twenty-five."  
 "Forty."  
 "Fifty."

No, this isn't an auction sale. It is just some of Sally Jollyco's friends answering her question, "How much do you pay for your toilet soap?"

"Speak up, Bee Westbrooke, you haven't said anything, and you have the best complexion of us all."

"Oh, I'm not in the running at all when you talk of these high prices," says Beatrice. "I use Ivory. Dr. Verity told me I couldn't get a better complexion soap and I've been using it for—uh, two or three years."

Scene: A hotel bedroom.

Eliot Larcom, Leffingwell (Mr. Jollyco's business partner): Henry, look here! Ivory Soap in a hotel bathroom!

Mr. Jollyco (with friendly condescension): Well, Larcom, is this the first time you've seen it? You're 'way behind the times. It's been in most of the best hotels I've stayed in for the last six months. But, of course, you haven't been traveling much lately.

Mr. L. (warmly): Feels like home doesn't it?

## How to care for the skin?

Let this well-known physician answer:

He says:

*"With a healthy skin of normal resistance the only care needed for the face is to keep it clean and to protect it from damaging influences. The way to keep the face clean is to wash it, sometimes with soap and water, sometimes with water alone."*

*"A soap should be bought not as a panacea for skin troubles, but for its humbler quality of cleansing the skin."*

These paragraphs are quoted from "The Care of the Skin and Hair," the authoritative book by Dr. William Allen Pusey, whose opinion every physician respects.

**Cleanliness!**

That is the basis of all complexion care.

**Cleanliness!**

That is the only good reason for using soap at all!

Ivory Soap cleans and cleans safely—these are the only claims ever made for Ivory.

Ivory Soap is pure, mild and gentle. Ivory Soap is white and delightfully fragrant, as the finest soap for the skin should be. Ivory Soap quickly produces a rich, cleansing lather, rinses off promptly. And Ivory Soap floats!

The "magic" of Ivory is simply the magic of delightfully refreshing, healthful cleanliness, the prerequisite of all complexion beauty. Ivory has provided such magic for forty-four years!

When our Julia walks abroad in one of her mistress's last year's blouses, who will say she is not easy to look upon?

The particular blouse she is wearing today is a year old, yet its colors are just as fresh and dainty as when Mrs. Jollyco bought it. It has always been washed, you see, in Ivory Flakes, which is simply the flaked form of the same good honest Ivory Soap that Julia and Mrs. Jollyco both use on their faces.

# The Ten Most Important Books In the World

*By H. G. Wells*

Author of "The Outline of History," "A Short History of the World," etc.

**A**BSURD questions sometimes make the most interesting discussions. Some time ago a clever interviewer asked a number of people to name the Six Greatest Men. Quite a large proportion of the replies began by pointing out how impossible such a question was; one said it was "idiotic" and another "futile;" how were we to measure greatness? and so forth; and then followed the most interesting and suggestive comments: great figures were named and discussed, and endless people were set thinking very profitably and sent to their encyclopedias and histories and biographies for refreshing and stimulating reading.

Now here is another question of much the same sort. I do not put it; it has been put to me. It is mixed with the same sort of interviewer's bird-lime. It repels and holds. What are the Ten Most Important Books in the world? And following the precedents, I will first show how unreasonable a question it is, and then give myself up to its insidious fascination. It has already made me read over again two books that I have not opened for years and to read one I had never read before.

For in the first place what is a book? Is the Bible a book? Is an encyclopedia? Is "Half Hours with the Best Authors"? Or the Plays of William Shakespeare? It would be easy to put down the Bible as No. 1 in our list. But the Bible, I hold, is not a book but a whole literature.

The Old Testament is almost all the Hebrew literature that existed before the third century, B. C., and the New is most of the Christian literature of the first century of the Christian era. If these are to count as single books then we must reckon "The Masterpiece Library" as a book. I am for counting each of the books of the Bible, since they were written by the most various hands under the most

various conditions, as a "book" within the meaning of this question. Genesis and the Book of Kings and the Gospel according to St. Mark must each count as a book. And so, unless we are going to reduce this discussion to asking which are the ten most important books in the Bible, then it seems reasonable to pick out a book or so as a representative to stand for all those two bodies of thought and literature—the Old Testament and the New.

Is there any book in the Old Testament that expresses more than any other the creative forces that brought together the Hebrew Bible, that proclaimed and exalted the idea of God's rule in the earth, embodied the Jewish tradition, and consolidated the Semitic peoples in their political decline about that tradition? It seems to me that the book of Isaiah is such a book. It was in Babylon, in Babylon already overshadowed by the Aryan Medes and Persians, amidst a group of Jewish and Babylonian scholars, and not through any legendary Moses, that this tremendous conception of a people chosen to manifest One God to the world appeared, and it is in the book of Isaiah that it finds its culminating assertion. So I would choose that book to stand for all the Old Testament. I think, indeed, it is the quintessence of the Old Testament. It is the crown and inspiration of Judaism. It is the earliest complete statement of the unity of mankind under God.

**I**T IS not so easy to pick out the essential New Testament book. Clearly it must be a Gospel, but there are four Gospels and we must choose between them. But the critics tell us that three of these four Gospels derive from some common original, and that the Gospel of St. Mark is certainly the one most like that original. St. John's Gospel, they say, is a freshly written gospel story, more unified and com-

plete, more theological and later in date than the other three.

Now, here a certain amount of theological bias is inevitable. I have to tell the reader frankly that I am not theologically a Christian and naturally my judgment here is affected by that fact. I think that Jesus Christ was the greatest of teachers, and His particular doctrines of the Universal Fatherhood of God and of the Kingdom of Heaven have profound meanings for me, in which I believe entirely. But the theology of Christianity does not hold me. It would not be fair to the reader if I let him suppose that it did.

So I choose the Gospel of St. Mark, because that gives a greater proportion of the life and personality of Jesus and less doctrinal matter than the others. But I think a sound orthodox Christian would certainly prefer the Gospel of St. John and that he would also want to add to our list St. Paul's Epistles to the Corinthians (which we may perhaps be permitted to count as one book). Even on my own ground a good argument could be made for these books. They contain in them the seeds of enormous controversies, which have strained Christendom to the breaking point and stamped upon it those exclusive characteristics which seem to bar out the possibility of any religious unification with the broader religious feeling of Islam and the farther East. But then I am heretic enough to think that Christianity went back from the teachings of Jesus to older and darker forms of religiosity when it began to think of trinities, sacrifices, and priests, and so I omit from my Ten any separate mention of the writings of both St. John and St. Paul.

I am making Isaiah and St. Mark each stand for a starry cluster of associated books, and later on I shall have to do the same by some book by Aristotle. But clearly all the difficulty would be solved

here if I could persuade myself and the reader that it was legitimate to set down No. 1, the Old Testament, No. 2, the New Testament, and still easier (and still less fair) to set down No. 1, the Holy Bible.

There are equal difficulties to those that obliged us to pick and choose among the books of the Bible when we come to ask what books have served to form and preserve the ideas sustaining the Chinese civilization. Even more than Judaism and Christendom is China a book-made and a book-preserved civilization and even more difficult is it to pitch upon *the* book in the Chinese case. Its great teacher, Confucius, did indeed write a book; but it is, we are told, a poor, bare chronicle, the "Annals of Lu," and the reality of his teachings is to be found in a number of books by various disciples. "The Great Learning," I am told, is the chief of these. I have never read any translation of it, but I feel that it has a strong claim to a place as the crown and representative of a group of creative works surrounding the figure of Confucius. So again, taking one bright star for the whole cluster, let us write down No. 3, "The Great Learning."

**T**HE Indian civilization, on the other hand, is not nearly so book-made as either the Eastern or the Western. It is more profoundly traditional. Buddha taught before letters had reached India; his maxims were memorized—and corrupted; and there is no Bible of Buddhism and no book to add to our list on his account. Of the Brahminic Sanscrit, epic and speculative literature which was being written down from oral tradition almost contemporaneously with the spread of Buddha's teaching, of the literature we call the Vedas, there is, to a Western intelligence, nothing of such outstanding power that we can put it beside Isaiah or the primi-

tive Gospel. It is a great and remarkable literature, but there is no evidence that it molded men, changed the direction of their thoughts, and shaped human destiny.

But a fourth book, that, in spite of

second only to the Bible. Its power lies perhaps in its simplicity of assertion and in what it denies and repudiates. In its refusal to have any dealings with priestcraft, sacrifices, and such like priestly mysteries; in its emphatic assertion that the

prophet was a man and not a god, and that the pilgrimage to Mecca was purely an observance for discipline, it is perhaps—what shall I say?—not the most iconoclastic book, but the book most preventive of idolatry and such like corruption that the world has ever seen.

**I**T HAS kept Islam together in a sturdy fellowship under Allah, a fellowship transcending race, color, and language, that makes the bonds of Christian brotherhood seem a futile sentimentality. People say that the Koran is saturated with intolerance, that it is full of self-sufficiency and sterilizes the mind. But the old story that the Library of Alexandria was burnt by the Arabs because "the Koran was enough," is now known to be false. On the other hand, we have evidences of a great outburst of scientific inquiry in the Arabic world in the centuries immediately after its diffusion. Possibly the Koran, like the Bible, may become a terrible engine of intolerance in the hands of fanatics, but it may be also that its hold over the heart and spirit is greater than its hold over the intelligence, and that for reasonable men, capable of gauging its literary quality, it is a guide to brotherhood rather than a restraint upon thought.

This blaze of the Arab mentality that followed the Arab conquests was no doubt directly due to the stimulus of the Aristotelian literature that the Moslem found still read and treasured in Persia. But the conquests that put the Arabs into a position that made their development of chemistry, arithmetic, astronomy, architecture,

H. G. WELLS

A writer of amazing power, penetration, and versatility, Mr. Wells has been an outstanding figure in the English-speaking world for more than two decades. Probably he is the most widely known and widely discussed individual now writing in the English language, and towns and cities, individuals and associations are still taking up arms for and against his "The Outline of History," of which more than a million copies have been sold. In many ways this is the most remarkable book ever published. It tells the whole history of the human race from the dim recesses of unrecorded time to the present day; it is full of keen and iconoclastic criticism, in which many traditionally great figures are unmade and new ones set in their places; it lends to every event of world importance the light of practical philosophy and bold criticism. This magazine has asked him to select "The Ten Most Important Books in the World" because in his exhaustive preparation for "The Outline" he made an extensive survey of the world's literature and its effect on the development and destiny of men. Mr. Wells—whose full name is Herbert George Wells—was born on September 21st, 1866. His first novel was published when he was twenty-nine; since then he has produced between fifty and sixty books, with an astonishing range of theme. Such early stories as "The War of the Worlds" were highly imaginative tales woven around the wonderful possibilities of science. Later he wrote other realistic novels, in which were discussed religion, marriage, education, and various topics of absorbing interest. "Mr. Britling Sees It Through," his war novel, was the greatest achievement in fiction of its period. Nearly a million copies of this book were sold

much feebleness and literary poverty, has to be inserted in our list is the Koran. This is indisputably one single book, the work of one man; and it has been a creative and cohesive power in the world

erature that the Moslem found still read and treasured in Persia. But the conquests that put the Arabs into a position that made their development of chemistry, arithmetic, astronomy, architecture,

decorative art, and speculative philosophy possible were achieved only through the unifying and inspiring drive of the new teachings in the Koran.

And this takes us back nearly a thousand years in time to the Greek scientific literature.

When we turn now to the creative expression of the Greek mind we find again the same difficulty in naming a definite book, or one or two definite books. Of course, when I speak of the creative Greek mind I mean the intellectual activities between the sixth and third centuries before Christ and not the Homeric epics. These epics, generally interesting, often delightful, in places extremely beautiful, sometimes puerile, and frequently very tedious, over and above the real pleasure they have given have been productive of an enormous amount of cant and forced enthusiasm throughout the ages. Let us not add to it.

But the significance of these men of Athens and Asia Minor and the islands, whose speculations and discussions mark the real adolescence of the human mind, cannot be made too much of. The general judgment of mankind has picked out two names for preëminence among them, Plato and Aristotle. Of Plato there is, to my mind, one outstanding book, the "Republic." It came early among his writings, but it is the most characteristic of them all. It was the first of Utopias. It is the most liberating book in the world. It asserts the completest release of human thought from traditionalism; it questions every institution; it is saturated with the faith that man can make his life and future what he will. It is easy and pleasant to read, and I do not know why it is not read more widely than it is. I read it first when I was a boy of sixteen on the Downs above Harting, in Sussex. It was one of the great events of my life, and when I recall

it that wide and varied prospect of the Sussex Weald comes back to me also, and a sense of fresh air and liberation and enlargement.

It is not nearly so easy to pick out a book that will stand for all that Aristotle was to mankind. He produced a literature covering the whole ground of human knowledge. His "Works" make a formidable list, shading off into students' notebooks, doubtful books, imitations, and forgeries. He reviewed our instruments of thought and the grounds of our beliefs. He discussed the spirit and constitutions of human societies. He made a systematic survey of the whole field of knowledge. He organized the systematic collection of new facts, and their critical examination. On the whole, I should reckon the last the greatest of his multifarious activities.

It was his crowning contribution to the life of our race. It led directly to the founding of the (Continued on page 88)

## Sid Says:

*These astronomical discoveries must teach us something—maybe it is this:*

**I** SEE by the papers that they have discovered a new star cluster indicating for the known universe a diameter of 2,100,000,000,000,000 miles.

Known by whom?

Why, by us.

And that is what amuses me. Who are we? Mighty small fry. So small that I doubt our capacity ever to discover or comprehend anything except other small fry. An ant might get some idea of the cupola of one of the hotels at the foot of Pike's Peak. But you know that an ant will never discover the whole Rocky Mountain range. And even if it did it would only be starting to learn. So with us. I can't get much exercised over our discovery of a new huge star. Any star we discover must be nothing but a speck, relatively, in the scheme of things. I am afraid that if we puny little creatures, with our weak little instruments, can "know" a universe 2,100,000,000,000,000 miles wide the whole thing must be an awfully small part of the main show. In other words, all of these discoveries just emphasize our own unimportance and comparative tininess. Here we are, on a globe which, if the whole thing went up in smoke some night, wouldn't make a blaze that would look like a five-alarm fire from the distance of Venus, the nearest planet. It would hardly be observed as far away as our Sun, and that is a very short distance—only some 90,000,000 miles. Why, they have discovered one star, Betelgeuse, the diameter of which is three times the whole distance between us and the sun! Stop and take that in. A star nearly 300,000,000 miles in diameter. Yet I contend that Betelgeuse must be relatively a peanut—if we little creatures can measure it.

We human beings and our discoveries must be about like potato bugs and their discoveries. I imagine that a hundred years ago the potato bugs may have

held a convention and exhibited a wonderful new telescope.

Can't you see them all gathered together out there in the garden—with old Doctor Ten-Legs giving a demonstration of the powerful new instrument. "Gather around, boys, and take a look. Marvel of marvels!" What they see is the haystack in the back pasture. It is 21,000 potato bug miles away. No such distance was ever dreamed of before.

A century passes. Again the potato bugs gather to witness the stupendous wonder of the ages, an instrument of such incredible power that through it they can see a distance of 21,000,000 potato bug miles. The bugs draw near, and Professor Stripe-Back Crawl, Ph. D., the demonstrator of the new telescope, shows them the greatest discovery of all time. The bugs take a look and gasp in amazement, for through the telescope they have looked millions of potato bug miles past the haystack—and discovered the barn on the next farm! Think of it—the barn! Probably within the next fifty years they will have discovered the town clock across the valley.

So don't get excited over what we have discovered about the universe. Probably all we have seen is the haystack in the back pasture.

The moral of these sad reflections is this: Everything is relative—everything has untold possibilities. You have seen no farther than the haystack into the possibilities of your job, or the development of your talents, or the refinement of your character. In other words—don't get the swelled head over what you have accomplished, or how much you know. It isn't much. Instead of sticking out your chest, go ahead with your study. See whether, before you die, you can't get a look past the haystack and maybe as far as Deacon Oldguy's brand-new windmill.

"It's Oliver," she says, running to me and throwing her arms about my neck. "He's calling for you . . ."

# Paying an Old Debt

A burglar's story

By Carroll John Daly

ILLUSTRATIONS BY PAUL MEYLAN

ONCE a criminal always a criminal, there's them that say that. Is it true? Search me. I'm not going to deny it. I ain't one to throw bouquets at myself. No sir, not me.

How did I start on the short and crooked? That's my secret. If I was telling it to a bunch of sob-sisters what use 'to hang 'round the prison I'd put it up to a sick wife or child. But I'm a bachelor. And I won't cry over it. I'll just lay out the truth. It ain't elegant and it ain't sentimental, but it's fact—gospel. I went up to the Big House first for another man's crime. I've been up a lot since, but not doing another's trick. Each time I come out a better man. I'd learned a thing or two and resolved to be more careful.

Now, how I happened to come honest: Mind you, I ain't giving myself a lot of credit, the thing come easy, sort a slipped on me. Perhaps there's a tear or two hidden away, but I ain't aiming to turn on the weeps. Perhaps there's a laugh.

I was young, not much more than thirty in years the last time I went up. But I was old in the game and had a record that many an old-timer might have envied.

I was sent to jail by a pal, a squealer, Spike Dawson. He swore me up for from five to twenty years. I don't know but if I'd 'a' had a gun I would 'a' made the chair right there in the court. But you don't carry guns to court. No more, anyway. But I did vow right there and then that I'd get Spike when I come out; that I'd carry my gun, hung in my sleeve, which was my way, for the rest of my life, if it took that long. That I swore.

How I made the Board believe I was a reformed man ain't no credit to me. But I done it, and that's how I come to serve the minimum instead of the whole of that sentence put on me by that double-crossin' liar Spike Dawson.

Six months after getting out finds me in Boston as free from money as a bluefish is from wings. But I'd done pretty well, considering, and was getting back some of my old-time color.

I didn't look none of my old-time friends up, being always one for going it alone. I'd learnt my lesson, and for all I knowed they might have put something else off on me. I never did take much stock in that "honor among thieves" stuff, and after that same little "honor" so nobly displayed by Spike had sent me up for a long spell I didn't take no stock at all in it.

I ain't one for the stick-up game, it being a little below my professional dignity;

but it was popular and easy now, so I picked out a nice spot on a quiet street, deciding to gather in a little loose change. Being without money is a bum stunt.

And now comes my falling in with Oliver and the beginning of the change.

It was about one o'clock at night that I spotted a fat guy turning into the dark street. It was the right time, too, for the cop wasn't due back for twenty minutes and cops never beat out a schedule.

Well, this gent I lamped was slow on his pins. Across his vest I catch the glimmer of a broad gold watch chain what I calculate would weigh into me for about twenty-five bucks.

I turned to tie my handkerchief over my mouth when I hear my prize give a snort. Looking up sudden I seen that two other lads have the jump on me. Yes, there's my meat with his mitts in the air and two cheap thugs about to take my watch and money.

NOW, I don't know just what was under my hat when I hopped out with my gun and ordered that team to beat it. I guess I was just mad. It ain't none to my credit that that pair of birds trotted when I give the word. It ain't none to my discredit neither. Fair's fair!

Well, that fat boy just gushed all over when that team of half-baked crooks did a double around the corner. He thanked me for saving his life and wanted the world to know it. After the oration he spilled I couldn't very well go on with the business of the evening. It was just my poetic nature.

It seems that he took me for a dick at first, and when he finds out I wasn't just doing my duty he starts all over again. Well, he gushes out after a while, and coming to a last gasp asks me what he can do to reward me. I asks you flat. Could I 'a' taken his watch then? He pulls it out, too, and looks at the time. It was gold and as big as a turnip. He never could know how near he was to parting with that family heirloom.

He asks me to call on him next day and I lays awake half the night wondering what I can make outa this millionaire. The next day I sees him and gets a laugh. He's like me. He ain't real. Just a butler; works for the Burton Joneses outside New York City.

The Burton Joneses. He gets off the name like it was a knock-out. But he reads me wrong. It don't throw me. I never heard of the party. Then he asks me what my lay is. He was kinda polite

and servant-like. "I'd like to ask you to dine with me—if I could," and that sort of stuff. I get his meaning. He's an English servant and takes me for a gentleman.

"I'm in the same line with you," I says, wantin' to do a square meal. "Use to be a sorta under-butler in London."

"Good!" he says, and grabs his hat, and out we go for a feed. Later he outs with his offer. The Burton Joneses are needin' another man. Sorta "upper" footman. I get the drift that the upper part is just his way of being polite. But the thing is funny and I'm just about to do a laugh when an idea strikes me. Why not?

So I stopped and thunk. I was pretty good at playin' character parts, and more than once I done a servant when I was tryin' to get a lay on a plant. So I toned down my language and drawled like an English duke.

"Just so, Oliver." Sweet! I should say so. But I didn't lose my head in dreamin'. Not me. I was feared Oliver might ask for a recommendation, so I beat him to it.

"I lost all my letters," I tells him. "Burnt in a fire." Then I thought I might just as well finish all question of them letters for good. "I wrote for others, but they never come. That's why I'm so stony."

The word stony got him. It's an old standby of mine when I wanta do the English.

Oliver was in Boston visitin' his sister. He tells me it was his first vacation in twenty years.

TWO days later we take the boat to New York. We room together and that old watch of his kept tickin' like the town clock. I'd lay there and listen to it and tell myself what a fool I was. Why not take the clock and Oliver's roll and do a double? Talk about temptation! "Get thee behind me, Satan," was goin' big with me that night. I got thinkin' of my luck and the funny position I grabbed, and just laughed myself to sleep. That's me—my poetic nature.

So we arrive at The Willows, what is the home of the Burton Joneses. There was four of them. Ma and Pa and two kids—a boy and a girl. The boy was away at school, but the girl was there. A pretty little slip of a thing about eight. Her name was Edna, but they called her Ed-die. Which hit her about right.

My, but they give Oliver the glad hand! It was just like grandfather returning.

Then there's another report, a sharp stab in my shoulder, and as Spike

And Eddie—she just crawled all over him. And then he begun to unload and give her things what he had got in Boston. And Ma and Pa just stood there and beamed all over.

Well, the Joneses were what you'd call new rich. Their money showed all over them. But it hadn't spoiled them none. And it hadn't helped them none either, if you're lookin' for class.

Old Jones was out lookin' for money, and gettin' it too. Mrs. Jones was out lookin' for society and not doin' so well. Altogether it was a tough job for Oliver. He was a sorta social instructor.

"They're fine people—none better," he tells me. "Mr. Burton Jones ain't much on society, but Mrs. Burton Jones is—

though like as not she'll do the wrong thing no matter how often I tell her." He shook his head a bit and moved his lips a little, which was his way of smiling. I think he must 'a' laughed a good deal inside, for there was many a laugh at the Joneses. Mrs. Jones sure was a card.

**T**HEY all liked him, and Eddie adored him. Mrs. J., the big amazon, was afraid of him. I seen it the third day I was there. She bawled me out for something I done wrong. Oliver comes into the dining-room right in the middle of it, and she stopped and grew kinda red.

"A lady never loses her temper," he says very quietly; "that is most important, madam, especially before the servants."

Ten minutes later, when Oliver was out of the way, I heard her send her maid upstairs for the book on etiquette. She was checking Oliver up. But that wouldn't bother Oliver none. He knew that book backward.

As for Old Jones—well, I seen him when he was giving a dinner: "Just see that it goes right, Oliver," was all that he said. It was all up to Oliver. He sure was the cheese, and on his say-so I started in as an "upper footman." I did the work and Oliver did the ordering and—watching.

But it wasn't such a bad life, and when I used to go into the garden and smoke my cigarettes I tell you it was the real thing. No worry—no danger. Then I took a step nearer that old home stuff and that sort

falls at my feet I remember that little wop and realize that I've been hit

of thing. I went in for a pipe—something I never could see before.

One day I was feeling so good and so foolish that I just up and told Oliver that it was my birthday. And darned if he didn't tell the kid, and she come across with a pipe. Maybe I smoked it 'cause Eddie give it to me. It's hard to tell, for I sure got a poetical nature. Child business and that sort of rot.

Now, I stayed out there about six months and was gettin' to be a first-rate servant. Why, if I was to write the way I talked no one could understand me.

What I enjoyed most was Eddie. She used to talk and beg me for a story. She kept asking about burglar stories and once, just to frighten her out of it, I up

and told her one. But this burglar business was too much like a voice from the past.

The way that kid lapped it up was a caution. Shooting and murder and diamonds, that was her middle name. I never met no one before what had so much respect for my trade. I seen I was in a fair way to cut Oliver out. His fairies and brownies couldn't hold a candle to my finished work.

**N**OW for that plan what was running through my head. I had my eyes on the diamonds what Oliver put away in the safe every night. Twice he let me do it while he was standing right by and counting them. There was a hundred thousand

dollars' worth of sparklers there at least. Sweet Potatie!

And I was a good servant. Talked, walked, and acted different. Twice I served judges at table and once a district attorney. Did my hands tremble as I passed the soup? Not so you could notice it.

I kept an eye on those diamonds. Why, the way Mrs. J. use to go out all diamonded up was a crime. I'd worry so that I couldn't sleep. It seemed like she was being careless with my personal property.

Now, there was another thing that bothered me at first. It was that gun in my sleeve. I had kept my vow, being superstitious, and (Continued on page 132)

# Nothing Could Keep This Boy Down

Born in poverty, forced as a child to sell matches and newspapers on the streets, kept for six years in a badly run orphan asylum, Aaron Sapiro lived to reorganize the asylum, and to fight his way to the leadership of the greatest agricultural movement of present times

*By Merle Crowell*

**A**ARON SAPIRO is a lawyer with more than half a million clients—composing about one tenth of all the people in the United States who make their living from the land. Since most of the half million are the heads of families, it is safe to say that Sapiro is the legal guardian of the livelihood of between two and three million human beings.

This sounds like an extraordinary statement, but it is even more extraordinary when you consider that two or three years ago this thirty-eight-year-old attorney was almost unknown to the public, save on the Pacific coast, where he was recognized as the genius of a new cooperative movement among farmers and fruit growers.

Since that time he has organized and become counsel for groups of farmers, whose memberships tap every state in the union, and who raise and sell every conceivable product, from milk to maple sirup, from potatoes to prunes, from berries to sugar cane. Seventeen states have changed old laws or enacted new ones to make these enterprises possible.

Cotton is the greatest single staple crop in the United States. In two years more than one hundred and fifty thousand cotton farmers in nine Southern states have signed contracts to deliver their entire crop for the next five or seven years to associations that Sapiro has organized. In a normal year the cotton raised by these growers is worth *two hundred million dollars*—which, incidentally, makes theirs one of the very largest business enterprises in the United States.

Less than two years ago Sapiro's first cooperative tobacco contract was signed. To-day he is the moving spirit of five such organizations, having more than two hundred thousand members, and raising and selling more than two thirds of the American tobacco crop. And these are only two of some three-score organizations that the dynamic Westerner has wound up and set going.

To his half-million followers Sapiro is a Moses leading them from the Wilderness to the Promised Land. His "six fundamental principles of successful cooperation"—which are designed to put farming on the strictly business basis of group production and group marketing—are to-day being quoted so generally that at least half of their protagonists have forgotten who worked them out in the first place.

A New York banker remarked the other day that Sapiro is just now the most

prune growers of California, whom he pulled out of one of the worst holes that a group of agriculturists ever found themselves in. If you were to write to him there, your letter might be forwarded to Canada, where he has been requested by the Minister of Agriculture to organize the dairymen of the Dominion. In the past two years Sapiro has spent less than nine weeks in San Francisco, where he has a home, a wife, and three children. The rest of the time he has been traveling and organizing.

A typical scene was enacted a few months ago in Abilene, Texas, where twenty-five hundred farmers followed Sapiro for more than a mile through the streets, trying to find a meeting place big enough to hold them. When arrangements were finally made to use the First Baptist Church, the biggest building in town, the crowd rushed there pell-mell for several blocks, so anxious was everyone to get a seat. Once the farmers were jammed into the church, they stuck there to the last man for three hours while Sapiro was expounding his gospel of cooperative marketing.

Sapiro does not claim to have originated cooperative marketing. California had a number of organizations of this sort when he was appointed counsel for the State Market Commission, in 1915. At that time he had been making a study of the subject for four years—as it operated both here and abroad. Taking the records of the California cooperative groups for a

basis, he analyzed each of them to bed-rock. By discarding the factors of failure and coalescing the factors of success, he arrived at a "model plan." Under his guidance several groups of growers got together and organized marketing combinations.

Up to this time, nineteen out of twenty of such organizations had been failures. Those fathered by Sapiro turned out, however, to be uniformly successful. Just how successful they were may be indicated by the fact that (Continued on page 136)

## Score Another for Uncle Sam

**W**HEN you read a story like this it renews your faith in the United States as a land of boundless opportunity. Any human being will have his ups and downs—he will run against inequalities and injustices; but a country that makes it finally possible for him to struggle through from the very bottom to the very top is essentially sound. So long as brains and character can continue to break down barriers and gain their uttermost goals, we need not fear for the future of the nation.

THE EDITOR.

sought-after business man in the country. This seems hardly an overstatement. One week he is straightening out problems for the Arkansas Rice Growers' Cooperative Association; the next he is organizing the potato growers of Maine; a fortnight later he is out at Tekoa, Washington, conferring with the officers of the Hangman Valley Timber Association, having stopped off en route for a session with another of his organizations, the New York Canning Crops Association; and within a few days he will be found in consultation with the

Photo by Pirie MacDonald

### *Aaron Sapiro*

**MR. SAPIRO** is the recognized leader of the coöperative marketing movement among farmers. He has organized, and is counsel for, scores of coöperative associations, with a total membership of more than half a million persons. Mr. Sapiro's life is an epic struggle against hardships and handicaps. Born in San Francisco thirty-eight years ago, he lived in the bitterest poverty until he was ten years old—when he was committed to an orphan asylum, whose archaic

routine might well have crushed all ambition and individuality within him. But the youth struggled ahead and led his classes in grammar school and high school. Following his release from the orphan asylum, he worked his way through college and law school—again leading his classes. While holding public office in California his sympathies were aroused at the injustices which crop growers had to combat—so he decided to dedicate himself to removing some of these injustices.

Photo by The Standiford Studio

*Judge Florence E. Allen*

IN JANUARY of this year, Judge Allen took her place on the Supreme Court of the State of Ohio, the first woman in the world to occupy that office. She was born at Salt Lake City, where her father was a teacher of languages in a Congregational school. After graduating from Western Reserve University, at Cleveland, Ohio, she studied law and in 1914 was admitted

to the Ohio Bar. She practiced law until 1919, when she became Assistant County Prosecutor. In 1920 she was elected Judge of the Court of Common Pleas at Cleveland, the first woman to sit in such a court. In 1922 she was elected to the State Supreme Court. In both elections she was an independent candidate, in competition with men of the regular political parties.

ment to issue the notes. We've had those notes some time."

I had stepped hastily back from the iron grill before the plain packing cases that contained so much wealth.

"But," I asked, "aren't you afraid? Don't you have an immense amount of trouble keeping all these things secret, and keeping them guarded? If anyone could get to this money, or, better still, get some of the dies, or even copy them, the possibilities of forgery would be beyond reckoning."

"We haven't had any trouble so far," replied Mr. Woodhull soberly. "We keep everything under lock and key, and well guarded, of course, by a complicated system of checking."

"BUT the people who work here," I persisted; "and in the other plants you told me of in Chicago and Ottawa. How do you account for a hundred years without a single betrayal of trust?"

"Training in fidelity," replied Mr. Woodhull. "Call it atmosphere. We try to get at the bottom of it because we are asked again and again why we never have a leak of information, how we can print stocks and bonds and send them out without a whisper of their coming going out before them, why no one of our people has ever betrayed the company in his own interest. I don't know, except that, as I know them, human beings are in the main faithful, loyal, and honest. Even the most ordinary business depends for its success on that, upon the good will of the people in it. No one can guard against the effects of bad will; nobody can buy good. Good will is something the workers give to a business or they don't give it, and without that one factor any firm can be wrecked at any time. We believe and we work on the principle that all anyone who works for us wants is a square deal, and that people can be trusted. Then we help all we can to make that true. No one in the company is bonded except in the treasurer's and the cashier's departments."

"From the officers down we look on our work as printing on paper, nothing more. I spoke to you of money to-day, but your visit is extraordinary; no one here speaks of the value of a bank note or of a stock or bond, we talk only of the beauty and quality of the workmanship. The amount each sheet is worth is printed upon it; but we disregard it. We handle money by millions as so many sheets of paper. In time it comes to mean just paper; if a sheet of bank notes is lost in one of the rooms we hunt for Sheet No. 145, not for eight bank notes of fifty dollars each. In time, we come to think of sheets of paper, not of money, and when that point is reached, temptation has gone."

"We check on ourselves, as we go along, and every scrap of paper, every mistaken print, every blurred piece, every damaged and rejected note is collected

with the perfect sheets, and every inch of paper issued has got to be there. Everybody in the plant helps to this end, cheerfully and willingly. It is easier as the years pass, because the traditions of a company as old as this carry themselves on in large measure."

"When a man comes here to work, no one lectures him on the traditions of the company, but the older employees soon make him feel that he is a part of a cen-

PHOTO BY THOMAS J. HENNING

Thirty-six years ago Daniel E. Woodhull took a job with the American Bank Note Company. The job was so minor it didn't even have a name. To-day he is president of the organization, which is the largest business of its kind in the world, with plants in Ottawa, Canada, Chicago, and also in New York City, where its executive offices are located. The stories of Mr. Woodhull and of the company he directs are very similar. Step by step the organization has grown, and step by step Mr. Woodhull has risen. Three thousand five hundred people work under this man who, as a boy just out of high school, started at the bottom. He had no pull; but he did have integrity, energy, intelligence, and patience. The combination of these qualities explains his fine story. In his opinion "It pays most men to stick"

tury and a quarter trust, and he lives up to it. He finds that he likes it. For most people are not only loyal and honest but they like to be. We know that people away off in China are trusting us, that Brazilians have faith in us, that the entire people of Canada look to us for all their paper currency and stamps, sent to them inviolate with all the protection we know how to give. Every man and woman who works here has that sense of responsibility to the work and to other people. In our force we have men and women who represent families that have been with us to the fifth generation; we have had

grandfather, father, and son working here at the same time, all just alike in this matter of honesty and loyalty."

"There have been many times in the past hundred years when just the exercise of the knowledge gained in the plant, put to personal use, would have brought big returns. I remember one such time some years ago: A certain great railroad had asked us to print an issue of stock. The utmost secrecy was to be maintained. The stock was to be delivered on Monday, but on Saturday we received a hurried order to get the stock to the company offices on that day. It was necessary to take three men into confidence in order to get the stock delivered. Those three men knew that the stock was out, and by trading on that knowledge they could have made quite a small pile of money. They did nothing. Why? Simply because they, like most men as I have known them, want fortune to come straight. That is the reason we can keep secrets here, and the keeping of them does not give us gray hairs. It is with us just as with any individual. You know you are honest, don't you? Yes, but you are mighty careful. We're just that."

THE man who heads this large and secret business certainly gives the impression of being free from any weight of care. If he has gray hairs after thirty-five years of service they are so few as to escape notice. An aggressive, active, well-muscled man of medium height, with an abounding enthusiasm, a ready laugh, and an unusual frankness of attitude, Woodhull came into his position so straight that not an employee in the company grudges him one bit of it. He came to the firm a boy of eighteen, with no friends, and no backing, to take a job at seven dollars a week. He is still called "Dan" by the older workers of the company when they are speaking of him among themselves.

"Dan came here a boy," one of them said to me. "He had no relatives or friends in the company, no influence. He was the handsomest, jolliest, most active boy I ever knew. He began by carrying the engravers' plates from one room to another; but he used to get all around the place, and then, after a time, he got on the order desk, and from there to be salesman, and then over to one of our foreign offices and back to be vice president. He was vice president nine years, and when our former president died he got the presidency. Nobody here but knows he worked every step of the way, and earned it."

I had a hard time getting Mr. Woodhull to talk about his rise in the company. "I don't mind talking about those years," he said; "only I can't see them as a hero story. I got ahead mainly by studying the operations of the business from start to finish, remembering everything I learned, and 'sticking.' I didn't believe once in (Continued on page 154)

### *Judge Florence E. Allen*

IN JANUARY of this year, Judge Allen took her place on the Supreme Court of the State of Ohio, the first woman in the world to occupy that office. She was born at Salt Lake City, where her father was a teacher of languages in a Congregational school. After graduating from Western Reserve University, at Cleveland, Ohio, she studied law and in 1914 was admitted

to the Ohio Bar. She practiced law until 1919, when she became Assistant County Prosecutor. In 1920 she was elected Judge of the Court of Common Pleas at Cleveland, the first woman to sit in such a court. In 1922 she was elected to the State Supreme Court. In both elections she was an independent candidate, in competition with men of the regular political parties.

ment to issue the notes. We've had those notes some time."

I had stepped hastily back from the iron grill before the plain packing cases that contained so much wealth.

"But," I asked, "aren't you afraid? Don't you have an immense amount of trouble keeping all these things secret, and keeping them guarded? If anyone could get to this money, or, better still, get some of the dies, or even copy them, the possibilities of forgery would be beyond reckoning."

"We haven't had any trouble so far," replied Mr. Woodhull soberly. "We keep everything under lock and key, and well guarded, of course, by a complicated system of checking."

"BUT the people who work here," I persisted; "and in the other plants you told me of in Chicago and Ottawa. How do you account for a hundred years without a single betrayal of trust?"

"Training in fidelity," replied Mr. Woodhull. "Call it atmosphere. We try to get at the bottom of it because we are asked again and again why we never have a leak of information, how we can print stocks and bonds and send them out without a whisper of their coming going out before them, why no one of our people has ever betrayed the company in his own interest. I don't know, except that, as I know them, human beings are in the main faithful, loyal, and honest. Even the most ordinary business depends for its success on that, upon the good will of the people in it. No one can guard against the effects of bad will; nobody can buy good. Good will is something the workers give to a business or they don't give it, and without that one factor any firm can be wrecked at any time. We believe and we work on the principle that all anyone who works for us wants is a square deal, and that people can be trusted. Then we help all we can to make that true. No one in the company is bonded except in the treasurer's and the cashier's departments."

"From the officers down we look on our work as printing on paper, nothing more. I spoke to you of money to-day, but your visit is extraordinary; no one here speaks of the value of a bank note or of a stock or bond, we talk only of the beauty and quality of the workmanship. The amount each sheet is worth is printed upon it; but we disregard it. We handle money by millions as so many sheets of paper. In time it comes to mean just paper; if a sheet of bank notes is lost in one of the rooms we hunt for Sheet No. 145, not for eight bank notes of fifty dollars each. In time, we come to think of sheets of paper, not of money, and when that point is reached, temptation has gone."

**H**ENRY WILSON dismissed his secretary from his private office with an imperious wave of a large hand, and Miss Florence Reynolds, unaccustomed to such summary treatment, gave him a look of dignified resentment as she left the room. Her employer did not see the look. If he had, it would have impressed him as much as her abrupt dismissal had impressed Miss Reynolds. Those two, in their association of the past year, had formed the habit of somewhat carefully considering each other's reactions. But this afternoon Wilson intended to wrestle with a Problem, and, though Miss Reynolds was deeply concerned in it, neither her presence nor her assistance at this stage of his reflections was desired.

It was the help of someone else he needed. The best way to approach that person, the best way to obtain that help, must be thought out now. That his mind might put its ablest efforts to the task, Wilson had waited till the day's work was practically done, the last afternoon mail cleared off his desk. He had now three quarters of an hour for consideration of the Problem—not a long time in which to upset the present status of three lives and make those lives over. But Wilson felt equal to the task. That is, he felt equal to it at moments. There were other moments when sick doubts overwhelmed him, doubts of the two whose lives he was about to readjust—doubts, doubts, and another feeling that, at times, amounted to an actual horror of himself.

He settled back in his big swivel chair, fixed his eyes upon the wall above his flat-top desk, and tried to think. But his thoughts, for once, acted like undisciplined things. Instead of the clear, consecutive thinking he had planned, a vision suddenly floated before him. It was the vision of a plump, middle-aged, matter-of-fact, plain little woman with a kind face, placidly swinging back and forth in a big rocking-chair, and mending a sock whose worn toe was stretched taut over a darning ball. Her lips moved as if she were singing to herself. A work-basket stood on a low table beside her. A huge mahogany bedstead loomed behind her. At her right were two big windows through which she saw stretches of blue sky. On the room's walls were several crayon portraits of old persons—rather dreadful portraits of well-meaning, gentle faces. On another wall was an elaborate framed design made of human hair—the hair of the owner's various relatives and friends. Crowded into the foreground and dimly showing in the background were several pieces of walnut furniture ornamented with carved grapes.

In short, the big bedroom was the sort of room which was found in half America's middle-class homes thirty or forty years ago, when the Victorian influence was at its height. It was the sort of room very rarely seen in New York, yet its present setting was New York, and not only New York but the East Seventies. It was the conjugal bedroom of Mr. Henry Wilson, and the plump, comfortable little woman who was now darning his sock was Mrs. Henry Wilson.

Henry Wilson exhaled a deep sigh. Undoubtedly the picture was correct. That was what Mary Wilson was doing this minute—rocking in her bedroom and darning his socks. The fact that the hus-

band never wore these socks after they were darned did not discourage the wife's activity. Pretty soon she would roll her work into a neat ball, drop it into her work-basket, go down-stairs, enter the kitchen, and set about the preparation of one of Henry's favorite desserts. The fact that, by doing this, she would outrage the sensibilities of the Wilson cook, would not disturb her in the least. She had made Henry's favorite desserts ever since she had married him, a quarter of a century ago. She had made them when he and she were so poor that she had been hard put to it to get the materials for the pies and shortcakes Henry liked. In her judgment, the fact that he was now a very rich man gave her no excuse for ceasing this labor of love, nor was it any reason why she should discard the bedroom furniture they had used from the first, and which Mary's mother had used before her. Henry could carry out his new-fangled notions down-stairs, "as much as he'd a mind to."

Mary made that concession, as well as that of coming to New York City to

live. Indeed, she often tried to meet and approve of Henry's "new-fangled notions." She had even allowed him to have two servants—though the good Lord knew there wasn't more than work enough in the new house to keep an active woman like herself busy and happy. He could have the cook and the waitress girl if he wanted to be bothered with 'em around, but the best of the cooking and a lot of the cleaning would be done by the hands that had always done it—the hands of his wife. Everyone knew what servants were these days, and how everything they handled went to rack and ruin. So much from Mary.

Henry Wilson had heard her say it all a hundred times. He could hear her say it now, as she hummed and rocked and darned. In short, Henry Wilson, millionaire, was living in New York in 1922 very

said formally, "you will not ring. You will come yourself, and tell me you want me"

# Needed a New Wife

*Jordan*

HERMAN PFEIFER

much as Henry Wilson, modest young business man, had lived in Hanover, Massachusetts, in 1900. It was true he had a brownstone house which he had bought and moved his wife into without consulting her. Also he had some good furniture down-stairs, which he had also bought without consulting Mary, and a few really fine paintings whose prices, had she known them, would have given Mary the sensation she described as "a bad turn"—a sensation, by the way, which her husband was affording her with increasing frequency. For the rest, the Wilsons lived a life of compromise. Mary worked and Henry submitted to being made comfortable. Neither was satisfied.

Now, however, all that was to be changed. There were to be no more compromises for Henry Wilson. This fact, and all that went with it, Mary must be

made to understand and accept. She must be prepared kindly for the great change—kindly, but firmly and finally. Henry Wilson's great form settled deeper into his chair. His coarse gray hair, tousled by his big, nervous fingers, stood on end. He considered verbal leads, follow-ups, and counters. And as he considered, and led, and followed up and countered, the figure of his wife remained persistently before his eyes as she rocked and darned, and darned and rocked.

**WILSON** thrust his latchkey into the door of his house at nine o'clock that night with a face set to express the strength of his new resolution. He had telephoned his wife that he was detained at the office and would dine down-town, but that he wanted to have a talk with her when he came home. Though he had thought himself through with concessions, he had yielded to concession in these actions. He had invited that talk to tie himself down to it—yes, in fear of a cowardly backing out of it at the last moment.

Mary heard his latchkey and met him in the hall. That was among the objectionable things she did—listening for the sound of his latchkey, waylaying him in the hall, fussing over him when he came—trying to help him with his overcoat and even offering to take off his rubbers! To-night he gave her no opportunity for these ministrations.

"Go into the library, Mary," he said curtly. "I'll be along in a minute."

His tone was harder than he had meant it to be. He had simply meant it to be firm. The look she gave him aroused an amazing sensation in him. It was a sensation wholly unexpected. It almost amounted to physical nausea. For Mary's look was a look of fear. He had seen it in her eyes before, but had not minded it much. He minded it now, because to-night, at last, Mary had something to fear. She left him with a little flurry, with something of the effect of one scuttering out of sight. He hung up his coat and hat, drew off his rubbers and kicked them under a hall table. At the library door he hesitated an instant. Again that odd sensation approaching nausea had swept over him. He pulled himself together, set his teeth, opened the door, and walked into the room.

It was a beautiful room—a room in

which he had carried out his own ideas and his developing sense of beauty. Even Mary liked it, but that really meant no development on her part. She would have liked any room where he was—but her real choice, any time, would be the chamber of horrors up-stairs. The library's attractions included a huge fireplace, on whose andirons great logs were now burning. There was no rocking-chair in the room as a concession to Mary's taste. She had to content herself with a low easy chair, in which she now sat close to the great fender, with a bit of sewing in her hands. Her husband nodded, swung a big chair to the opposite side of the hearth, and sat down facing her.

"I'm glad we've got a fire," he said, trying to speak naturally. "It's a nasty night."

There was pathos in her quick response: "Yes, I lit it myself. I know you like a fire."

HER husband cleared his throat. Mary's hour had struck. There was nothing to be gained by exchanging commonplaces.

"Mary," he said firmly, and unconsciously his voice hardened again in its effort at steadiness, "you and I have got to have a show-down."

"Yes, Henry."

Her sewing suspended for the moment, she looked at him. He realized that she had not the faintest conception of what he meant to say. She was simply prepared for a disagreeable talk—for one of the innumerable and painful discussions between them which never led to anything.

"We haven't been getting on very well," he continued. "That's no news to you, is it?"

"I ain't complaining, Henry."

Mary had resumed her sewing, and her husband understood why. She did not wish to look at him.

"Perhaps not—but I am."

That impressed her. She stopped sewing.

"What about?" she asked, not brusquely, but almost wearily, as one going into action heavily and against her will.

"About a lot of things. Now, see here, Mary,"—Wilson drew his chair closer and looked at her steadily till she raised her head and met his eyes—"we're going to get right down to brass tacks. We're not going over all the old ground again. That takes up too much time and it doesn't get us anywhere. Each of us understands how the other feels, all right. My complaint is that you and I look at everything from different standpoints, and that I can't make you see my angle. You've had twenty-five years to see it, and failed. I want to move with the times. I want to live in accordance with the position I've made for myself in the world. I want to live the way my business associates live. I want to entertain. I want my house run the way it ought to be run."

"I guess your house is run all right, Henry," said Mary Wilson crisply. "I guess no one can say it ain't."

"A flyver runs all right, too, but I don't use one," said Henry Wilson. "I've bought a Rolls-Royce."

"Whatever a Rolls-Royce is, I s'pose it give you a chance to spend some money," was his wife's comment. It was an unfortunate one. Under it, the man hardened still more.

"You and I," he said coldly, "haven't spent one tenth of our income for the past ten years, notwithstanding all I've given to charity. Can you give me any good reason why we should hoard money?"

She whitened at that and her eyes dropped. With hands that trembled a little she again picked up her sewing.

"I'm as sorry as you be that we ain't got children to leave it to," she said in a

standing fact is simply this: We want to live in different ways. All right, let's do it. We've got enough. You live your way, and I'll live mine."

She laughed a little. There was relief in the sound. If that was all Henry wanted—

"I guess that's what we've been doing right along," she said cheerfully. "I guess that won't need much change."

"Oh, but it will. I haven't been living my way, Mary. My way is a big way. I want a big establishment, conducted on a big scale. I've always wanted it. I'm—going—to—have—it."

He spoke very slowly and distinctly, but even yet she did not take in his meaning. He felt an uprush of resentment against her obtuseness and the incredible complacency that nothing seemed to shake, for under it was the bedrock of her faith in him.

"Then I reckon you'll have to get someone else to run it," she observed good-humoredly. She had given him his opening, and he seized it.

"That," he said, "is precisely what I am going to do."

EVEN now it was his tone, rather than his words, that caught her attention. She was awakening, but she was not yet alive to what was coming.

"What do you mean?" she asked slowly.

"I mean, Mary,"—her husband spoke very gently—"that, with our different ideas, you and I can't go on together. I mean that hereafter you will live your life, in your way, anywhere you please, and that I shall live my life, in my way, here in New York."

It was out at last, but it was a long time before she took it in. Then her hands, still holding their neglected work, dropped limply into her lap.

"You mean—separate?" she said at last, speaking barely above a whisper.

"Yes, Mary, separate. I needn't tell you that you'll be a

rich woman. You will be able to do anything and have anything you want."

Henry Wilson did not like the sound that came from the opposite chair after this statement. It was not a laugh. Neither was it a sob. After it, there was another long silence. He stared into the fire, giving her time. Finally she spoke again.

"Who's goin' to take care of you?"

The question was so unexpected that he started and winced. And yet, why hadn't he expected it? It was, of course, the first thing Mary would think of and ask.

"I'll look out for myself," he replied stiffly.

"There, there," she was saying, "don't you take on so, Henry. I know it's hard for you too. You'll feel different by and by"

low voice. "I'd have welcomed ten, if they'd been sent to us, and you know it."

"I don't want you should think I'm reproaching you." To his deep annoyance, Wilson sometimes fell into his old vernacular when he was talking to his wife. One of his grievances against her was that she had refused to follow his example and improve her speech. Under the influence of the lapse his voice hardened as he went on.

"As I've told you, I'm not going all over the old ground again. We've done that too often. It doesn't help. The big, out-

# You Can't Kill These Fifteen Immortal Jokes

Human beings have always laughed at them and always will

*By Carolyn Wells*

CAROLYN WELLS is a famous writer of mystery stories, humorous verse, and general fiction. Next month she will begin in THE AMERICAN MAGAZINE a new serial novel entitled "Wheels Within Wheels." At present she is at work collecting material for a volume to be entitled "An Outline of Humor." This is really to be a history of humor. Because of the author's extensive study of the history of jokes we asked her to prepare this article.

THESE Fifteen Immortal Jokes have won their position by the said test of Time.

They are like the elements of the Universe; they may be analyzed, dissected, weighed, or measured, but they cannot be destroyed.

A true solution of the mystery of why a joke makes us laugh has yet to be found. To the mind of the average human being anything that makes him laugh is a joke. Why it does so, there are very few to know and fewer still to care.

Nor are the knowing ones in much better plight. A true definition of humor has been attempted by many great and wise minds. Like squaring the circle, it has been argued about repeatedly, it has been written about voluminously. It has been settled in as many different ways as there have been commentators on the subject. And yet no definition, no formula, has ever been evolved that is entirely satisfactory.

Aristotle promulgated a theory that is, perhaps, more generally subscribed to than any other.

This ancient thinker declared that all pleasure in laughing at a comic scene is an enjoyment of another's discomfiture. Yet it must be only discomfiture, not grave misfortune or sorrow.

If a man's hat blows off and he runs out into the street after it, we laugh; but if he is hit by a passing motor car, we do not laugh.

If a fat man slips on a banana peel and lands in a mud puddle, we laugh; but if he breaks his leg we do not laugh.

another that makes a joke, not the serious accident; and, though there are other types and other theories of the cause of humor, by far the majority of jokes are based on this principle.

From the circus clown to Charlie Chaplin, episodes of discomfiture make us laugh. Every newspaper cartoon or comic series hinges on the discomfiture of somebody. The fly on the bald head, the collar button under the bureau, the henpecked husband, all depend for their humor on

and though there are subtler jests the type we refer to has a grip on the risibilities that can never be loosened.

And the fifteen Immortals, by reason of their essential appeal, stand forth, invincible, unassailable, indestructible.

They are the universal subjects that are comic in all lands and in all ages. Age cannot wither them, nor custom stale their infinite variety.

Printing was not invented until the middle of the fifteenth century.

But no sooner was the printing press in good running order, than these jokes were set forth in black and white.

Ages before that, however, the Fifteen were handed down by word of mouth; there was never a time when they were not current.

Many stories told as new to-day may be traced back to the Middle Ages, to classic times, and to the earlier Oriental jesters.

Nor was that the beginning. As old as language, as old as any sort of interchange of human intelligence, so old are our Immortal Jokes.

Can we doubt those long days and nights in the Ark were enlivened with jests and good-natured railery? Can we think that during the forty years in the Wilderness nobody poked fun at anybody else?

And, having studied deeply the true inwardness of all the jests of man, past and present, we subscribe to the Immortal Fifteen as being the essential elements of Humorous Human Nature.

They are the jokes that have been laughed at since Time began, and will be laughed at so long as there is humanity on the earth.

They will be welcomed uproariously by each successive generation, and each new dawning sense of humor will respond to them as inevitably as the sunflower to the sun.

For, like the sun, they are eternal and they shine for all.

**I. Mothers-in-Law:** Just why a mother-in-law should be a joke, when the father-in-law is (Continued on page 111)

## The Funniest Story I Ever Heard

### Prize Contest Announcement

READ the yarns told by Carolyn Wells in this article—you will get dozens of laughs out of them. Most jokes, she tells us, grow out of the ridiculous discomfiture of others; but not all of them, as you will see. This collection of anecdotes will suggest to you your own favorite funny story. It may be a personal experience, a comical mishap that befell some friend, a yarn that has been told to you, or an absurd situation of one kind or another, real or imaginary. Whatever it is, write it out. It makes no difference whether your story is old or new. Tell it in fifty words, if you like, or tell it at any length up to four hundred words.

For the best letter of not more than 400 words we offer these prizes: \$20, first prize; \$10, second prize; \$5, third prize. Competition closes on April 20th. Winning letters will appear in the July number.

Address Contest Editor, THE AMERICAN MAGAZINE, 381 Fourth Avenue, New York City.

Contributions to this contest cannot be returned, so make a copy of your contest letter if you want to preserve it. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

the trifling misfortune that makes its victim ridiculous.

An enjoyment of this discomfiture of a fellow man is inherent in human nature,

# Things People Look For In Buying a Home

The points that appeal to women, and those that attract the men—Some inside advice for home seekers and many interesting side-lights on human nature

*By L. Ward Prince*

**B**UYING a home is for most of us an event that ranks next to marriage in importance and solemnity. It reminds one of marriage in other particulars, too. My eighteen years of experience as a real estate man have taught me that it is no more possible to foretell what will appeal to a person in the way of a home than to foretell what will appeal to a person in the way of a husband or a wife. In both cases the final choice may be as much of a surprise to the chooser as to any of his friends.

Recently, for instance, a very wealthy man told me that he *must* have a house containing gas and inbuilt shower baths—and one that was so fresh and new that he wouldn't have to do any decorating. What he actually bought was a house in a community where there was no likelihood of gas being installed for years. Moreover, the house hadn't a single shower bath; it was fifteen years old, and it showed its age badly as the result of neglect.

Evidently this man—like so many young people who announce positively, and describe accurately, the kinds of husbands and wives they are going to select—must have found qualities that more than compensated for the lack of those he had specified. In this case, we never knew just what the compensating qualities were.

I recall another man, a retired manufacturer, whose mental processes were quite unfathomable. For two years he had professed to be looking for a country place where he could make his retirement complete. And for two years a big, broad-shouldered, good-natured salesman in a suburban real-estate office just outside New York had been showing him all kinds of attractive houses—without getting even a nibble!

Try as he might, this salesman never seemed able to obtain from his prospective customer anything definite about the type of house he wanted, or how much he was willing to pay for it. The only thing to do was to show him place after place on a blind chance. Once or twice, indeed, he had seemed mildly interested; but his interest proved only momentary.

Finally, one winter morning, after a

heavy snowfall, this customer made one of his numerous appearances at the real-estate office to find out what new places had been listed. The salesman who had been handling his quest was not in. One of his associates, however, got him on the telephone.

"That hard-boiled proposition!" he growled, from his safe vantage point at the

other end of the wire. "I bequeath all my rights in him to you. Take 'em and welcome!"

Although far from pleased at the prospect of wasting his time, the salesman put on as good a face as possible. He invited his customer to motor around with him to such places as had been listed since the last visit of the home seeker.

It was shrewd business for the manufacturer to look for a country place in the depth of winter, when buyers are scarce. He sat back complacently, while the salesman forced his car through three miles of snow-filled roads to a very attractive country estate that had recently been put on the market at a reasonable figure. The customer gave one look at it.

"Nothing doing!" he announced, in his best "hard-boiled" manner. "What else yuh got?"

It was on the tip of the salesman's tongue to answer, "That's all!" But he restrained himself, and explained that there was a fine place of three acres that had just been listed.

"But it is for sale furnished," he added, "and the owner isn't likely to take a cent less than forty thousand dollars for it, and it's probably seven miles from here, in the opposite direction."

"Lemme look at it!" ordered the customer.

When the car finally arrived at the new place the salesman turned rather perfunctorily to his passenger.

Despite its attractiveness and splendid location, there seemed no special reason to think that it would appeal particularly to a person of his exacting and unamiable nature. But after looking the house over for a moment, the man growled:

"Let's go in!"

Now this place had been listed only a day or two before, and no arrangements had been made for showing it. The salesman had taken a chance on driving over and, as luck would have it, there was no one at home. He rang and rang, and tried all the doors and windows. The house was as silent and tight as a tomb. Meanwhile, however, the manufacturer had been walking around the outside of the house. He came back with almost a smile on his face.

"Fine house!" he was exclaiming.

L. Ward Prince, who was graduated from the University of Michigan's law school in 1903 when he was twenty-one, is the head of Prince and Ripley, a leading brokerage house specializing in the real estate of Westchester County, which adjoins New York City on the north. With headquarters in New York, Mr. Prince's firm has branches throughout this territory. In the eighteen years he has been dealing in Westchester real estate, both as an employee of another firm and as the head of his own, his sales have amounted to \$25,000,000. During the World War he acted as the confidential agent of the United States Government in the purchase of several million dollars' worth of property for camp, storage, and manufacturing purposes. As an expert on realty values, he is frequently retained in the legal proceedings of great corporations, like the life insurance companies, and in public condemnation proceedings

"Fine trees! Fine arbors! Fine view!"

What an irony of fate! Finally to arouse the recalcitrant customer's interest and then not to be able to get inside! The salesman, however, was lean, lithe, and persistent—three things that served him well in an hour of need. At the back of the house he found a sliding panel through which the iceman filled the refrigerator, and just below it was another panel used by the milkman. The former opening was the larger, but the heavy refrigerator was backed up against it. So he decided to try wriggling his wiry frame through the smaller aperture. Despite the cold, he stripped off his outer garments, for he knew it was going to be a close squeeze. He struggled heroically, and a final shove from his now admiring customer pushed him through. Although he lost some shoulder flesh that he could ill spare, he congratulated himself on having been able to perform a stunt that would have been quite impossible for the big broad-shouldered salesman who had "wished" the prospect onto him. Once inside, he unlocked the back door and let the customer in.

**T**HIS enterprising bit of work resulted in an immediate sale—for the woman who owned the house was reached by telephone that afternoon, and that very evening the customer signed a "binder." And the lean salesman's commission was more than one thousand dollars!

But one of the most illuminating parts of the story is yet to follow. It shows that the first salesman was quite justified in his selection of the adjective "hard-boiled" as applied to the customer—and it contains a lesson that everyone who sells a house outright may well bear in mind.

I have mentioned already that the furnishings of the house were included in the sale. In consummating the deal, the buyer and seller agreed that the purchase price should cover everything in the house except the seller's personal belongings.

Now, one would think that it would be easy to determine what *are* and what *are not* personal belongings; but it did not prove so in this case! Even it appeared that the buyer was bent on claiming everything that by any stretch of the imagination could not be classified as a personal belonging. Trying to act as an umpire for the disputants that lean salesman had an unhappy time.

At one time the lady who was the seller—and it should be brought out that she was an elderly lady—became so exasperated by the buyer's claims that, dumping

out the contents of a bureau and revealing garments so intimate that they made the salesman blush, she turned on the buyer and exclaimed, "There! Perhaps you will say that *these* are not *personal* belongings!" Actually, both the buyer and the seller at length resorted to the employment of a lawyer, and no less than three wrangling meetings were held before compromises were reached, so as to keep the case out of the courts. Among the articles disputed over were the lady's homemade pickles and preserves. Here the compromise reached was that the buyer should take two jars of each kind of pickle and preserve!

Plainly, such disputes, however funny

sion that the average home buyer is unreasonable. Most people try to be fair in this, as in all other business dealings. I suppose, however, that it is the unreasonable human beings whom we real-estate folks remember longest.

I shall never forget, for instance, the case of a young man who offered \$10,000 for a house held at \$16,000. That was rather nervy to begin with; but the real beauty of his nerve appeared in his proposal that the owner should accept \$5,000 in cash, and take back a second mortgage for the balance of \$5,000—this second mortgage to be discharged over a period lasting five years.

"A second mortgage!" exclaimed the owner. "Are you sure you don't mean a first? Why a second?"

Finally it came out that this enterprising young man had been shopping around among those who had money to lend on real estate, and had discovered that he could borrow \$6,000 by giving a *first* mortgage on the house in question.

"So," said the owner, "you propose to give me \$5,000 out of the \$6,000. And what, may I ask, do you propose to do with the other thousand?"

"Oh," replied the young man, "I shall need all that for repairs and alterations!"

Though the owner of the house felt compelled to discourage such enterprise he readily agreed that if there were such a thing as lifting one's self by one's bootstraps, that young man was destined for a great career.

**A**NOTHER example of close figuring was provided by a man who set out to buy a house held at \$14,000. This house carried a second mortgage of \$2,500 and a third mortgage of \$1,700 in addition to the first mortgage of \$5,500, and had been leased furnished by the owner. The buyer readily gathered from the mortgages and the lease that the seller was in financial straits. He took advantage of this to beat down the price of the house (the furniture was not included in the sale) from \$14,000 to \$11,500. Then, figuring that the holders of the second and third mortgages had lent money to the seller

through friendship, and therefore would look upon the return of their money largely as a godsend, he got them to accept a ten per cent discount for immediate cash. But still he wasn't satisfied. When he bought the house, the lease on it still had a month and a half to run, and he tried to get the broker through whom the sale had been made to figure what part of the rent for the month and a half would represent the house and what part the furniture, so that he might compel (Continued on page 163)

## Tips for Those Who are Thinking Of Buying This Spring

**D**ETERMINE as nearly as possible what size and type of house you want, how much ground you could use, and the maximum sum you can afford to pay," says Mr. Prince. "Then seek out a broker who is worthy of your confidence, and give it to him. On this basis he may save you needless searching by pointing out anything in your requirements that may be clearly unreasonable.

"Deal with your broker as candidly as you would with a lawyer. If your income is limited, tell him what it is; for with this information he may be able to save you from undertaking too much. Remember that you must consider not only the first cost of the property, but the annual cost of carrying it. This carrying charge depends upon variables like taxes, insurance, and heating—things about which the right kind of a broker is fully informed. If you have put yourself into the hands of a reputable broker as his client, he will want you to look around until you are fully satisfied that you have found, from your individual viewpoint, the one best property in the locality he covers.

"Having found the place you want, you will then have to consider such questions as the right price, the character of the neighborhood, the restrictions there may be on the property, whether the street improvements are in and paid for, and, above all, the validity of the title. Here again the reputable broker will be able to give you valuable advice; but it will be for you to satisfy yourself, by due inquiry or negotiation, that the price and neighborhood are right. So far as restrictions, street improvements, and the title are concerned, you will need the services of one of the title guarantee companies or of a lawyer of recognized standing, preferably one specializing in real estate.

"In the last analysis, of course, the burden of the decision must rest on you. Do not decide, then, until you have all the facts. Remember, however, that in connection with any enterprise some chance must be taken, and when you have done your best to reduce your chances to a minimum, do not be afraid to decide positively and affirmatively."

they may appear on the surface, show the danger that lies in understandings of general nature, and thus point to the need not only of reducing agreements to writing, but also of having everything set forth *in detail*. I recall, in fact, that one big real-estate deal broke up in a general row when the time came to close it, simply because the seller had failed to specify in writing that a certain chandelier of a very special nature did not go with the house.

I do not want you to gather the impres-

# What Have You Got in Your Medicine Closet?

Practical advice about home remedies—What you may safely have and use—What drugs are dangerous in a household—Women use more drugs than men—How to guard against dangerous mistakes

*By Dr. John F. Anderson*

Vice President and Director of the Research and Biological Laboratory, E. R. Squibb and Sons

**J**UST after a good dinner, including hot muffins and a lemon pie, you settle down to your cigar with an absolute assurance that all is well with the world. An hour later you are not so certain. Something seems to be going wrong. You begin to realize that the source of uneasiness is in your stomach.

The minutes pass, the uneasiness becomes actual pain. If you are one of nine hundred and ninety-nine men in a thousand, you march upstairs to the bathroom, open the medicine cabinet, take out a liberal pinch of bicarbonate of soda, wash it down with half a glass of water and go down-stairs again.

The pain is still there, but you know it is going to diminish rapidly. And it does. Half an hour later all is well.

Five years ago you would in all probability have taken a drink of whisky for the same pain. In pre-Volstead days alcohol was usually the first home treatment for ills of any kind, even among people who called themselves "temperance."

But with prohibition and the increased price of alcoholic drinks, plus the price of the prescription necessary to get them, the virtue of alcohol as a family medicine is becoming more and more doubtful in the mind of the man who foots the bills. Stomach aches that in the past yielded to whisky or gin are now almost universally treated to a pinch of bicarbonate of soda, the "best seller" of all drugs in the market to-day.

The firm with which I am connected alone put out over a million and a half pounds of bicarbonate of soda in the past twelve months, and in the refined form in which bicarbonate is sent out from a drug house it is used for medicinal rather than other purposes. And this firm is but one of many manufactur-

ing the same drug. It is impossible to estimate the total output or to say exactly what becomes of it all, but it is certain that a huge amount of it gets into the aching stomachs of American citizens. It does some good there, too, temporarily relieving the hyperacid condition common in stomachs, a result of the three great American failings: hurry, worry, and a faulty diet. Probably sodium bicarbonate

is the most practical drug found in the home medicine cabinet of to-day. After you have eased your stomach ache you can apply it to a mosquito bite, or a hive, spread it over a painful burn, dissolve it in water and use it as a throat wash, or, also in solution, use it as a wash for your tired feet.

Small wonder that it occupies first place in the American medicine cabinet.

Next to it in popularity comes Epsom salts, an old-fashioned remedy which is mounting in popular favor, with castor oil as a close third. These two perennials have almost replaced the family standby of a generation ago, calomel, and with good reason. Calomel was at one time second only to alcohol in its universal application for anything that ailed you. In those days there was no medicine cabinet. Dad had the whisky and so forth down-cellar, and Mother had a couple of bottles behind—and often in—the clock on the mantel, and the rest of the drugs fraternized with the preserves in the cupboard. But along with the intelligence in the use of drugs that gives them a white sanctuary in that abode of cleanliness, the modern bathroom, has come a better knowledge of calomel. Too many calomel addicts found their teeth coming loose and their gums receding, and other unpleasant consequences. To-day calomel is known as a dangerous drug and is rapidly becoming a back number.

Opposing these three most popular drugs—bicarbonate of soda, Epsom salts, and castor oil—is the rarest drug sold, hydrocyanic acid, one of the most deadly poisons known. You don't even have to take a dose of it to leave this world. One whiff of it, and away you go! You are literally gone before you can draw another breath. This

Dr. John F. Anderson, vice president of E. R. Squibb and Sons, New Brunswick, New Jersey, served for eighteen years in the U. S. Public Health Service, and for nine years in the government service as director of the Hygienic Laboratory at Washington. Seven years ago he joined the forces of E. R. Squibb and Sons, one of the oldest and largest manufacturers of drugs and biological products in the United States. He was born in Fredericksburg, Virginia, in 1873. He has studied extensively in America and abroad. His scientific writings include many discussions of the results of serum, toxins, and anti-toxins, based upon original investigation. His home is in New Brunswick

deadly poison is sold and used because it is the most efficient destroyer of insects and vermin that has as yet been found. The United States Government uses it at ports to exterminate rats and mice, which may carry the bubonic plague. In California it is released beneath orange trees. The trees are covered with white caps and the operator drops a pinch of the preparation into a prepared flower pot beneath, holding his breath as he does so and then running away while the mounting fumes kill every insect on the tree.

Not long ago in a hotel some of this acid was used to exterminate vermin in one of the bedrooms. Shortly after, a man and a woman, guests of the hotel, were found dead in a room directly above the one sprayed. Investigation showed that the deadly fumes had traveled up through a crack in the plaster running around the steam pipe. But hotels rarely handle this terrible drug. The way it enters your household is in peach pits. Children like to eat peach kernels. Look out for them. In twelve peach kernels there is enough hydrocyanic acid to kill an adult. In six there is enough to kill a child.

**T**HE drugs that find their way into the home as family remedies are inexpensive drugs. Epsom salts is not only second in popularity but holds first place as the cheapest drug on the market. The most expensive drug sold is thyroxin crystals, the price of which is one hundred and thirty-seven thousand dollars a pound! It is used in the treatment of disorders due to a lack of functioning of the thyroid gland.

The medicine cabinet in your home is indicative of the common ills of mankind. In addition to the left-over drugs from the prescriptions filled at past illnesses, the average cabinet contains sodium bicarbonate, castor oil, Epsom salts, liquid petrolatum, carbolic acid, bichloride of mercury tablets, hydrogen peroxide, boric acid, tincture of iodine, some lotions, calomel, cough syrups, throat washes, vaseline, headache remedies in the form of powders, tablets, or pills. That means it contains remedies for the most prevalent ills, which are constipation and indigestion, skin affections, coughs, colds, and headaches.

Liquid petrolatum, commonly known as mineral oil, is a new drug—which is not really a drug at all, since its action is chiefly mechanical. In the comparatively short time this oil has been on the market it has achieved an amazing popularity.

The firm with which I am connected alone sold over two and a half million bottles last year, and there are many other firms which put out a like product. It belongs with the laxatives, and is one of the very few drugs that can be taken for almost indefinite periods without ill results.

If quantity is taken into consideration there is no such thing as a "safe" or "harmless" drug. Common salt is very

in the death of the dogs. No good thing but can be abused by overdoing. Any drug can be dangerous if it is taken regularly day after day.

In the matter of taking drugs human beings are a reckless lot. Take the ordinary "headache" pills found in the ordinary medicine cabinet. Almost every cabinet has them, headaches being a universal ill. These pills are likely to contain acetanilid, which in too large quantities is always a dangerous drug, and the sufferers are likely to keep on taking more and more of the remedy, flying to the cabinet for every little ache or pain until this class of pain killers becomes the subject of more abuse than any other drugs used.

Bichloride of mercury, one of the most dangerous drugs and the cause of many accidental poisonings, is still found in most medicine cabinets. The firm with which I am associated recognizes this and puts out the tablets in the form of a coffin and colors them blue, in the hope that anyone taking a blue coffin-shaped tablet will at least think twice. The bottle containing these miniature blue coffins is made in corrugations, so that any foolhardy person who gets up in the dark to take a headache tablet will know at once by the rubbing of the little knobs that he has hold of a bottle containing stuff that is not good for him.

**C**ONSIDERING the many deaths which have occurred recently from accidental bichloride of mercury poisoning it is remarkable that men do not make a clean sweep of their medicine cabinets and clear the thing out, particularly as its value as an antiseptic is one that can be easily replaced with a much less dangerous drug.

While poisoning from carbolic acid (another antiseptic which appears in most medicine cabinets) is less frequent, mainly because the odor and form of the carbolic act as a warning, still this is another drug which can be replaced by one as safe and efficacious. Carbolic acid is one of the drugs that are going out of fashion. Time was when you smelled it the moment

you entered a hospital. The operating-rooms reeked with it. But go into a modern hospital and sniff as you will you won't find a trace of the old choking smell. Chloramine solutions, which are a form of Dakin's solution, have largely replaced carbolic acid. They could do the same in the home cabinet.

If any medicines ordered by your physician are dangerous when taken, except under (Continued on page 104)

## The Ideal Home Medicine Chest

**W**E ASKED Doctor Anderson to make up a list of the drugs and first aids that should make up the contents of the home medicine chest. Here are his recommendations:

**For indigestion and constipation:** Bicarbonate of soda, Epsom salts, castor oil, liquid petrolatum (often called mineral oil)

**For general disinfection:** For use on wounds, sores, cuts, eruptions—Tincture iodine, chloramine T., boric acid

**For use as ointments:**

For insect bites—Benzoinated cream

For itchy poison, etc.—Zinc ointment

For covering wounds that are healing, etc.—Chloramine T. paste

**For eye wash:** Boric acid

**For mouth wash:** Milk of magnesia

**For headaches, pains generally, colds in the head:** Aspirin

**For coughs:** Ammonium chloride and licorice tablets

**For nervousness, giddiness, nausea, as a harmless stimulant:** Aromatic spirits of ammonia

**For chafing of skin:** Zinc stearate, talcum, baby powder

**For applying ointments, dressing wounds, etc.:** Sterile cotton, bandages, and gauze

Add a clinical thermometer and you will have a practical aid in all common ailments.

"Let me hasten to say," concluded Doctor Anderson, "that these home remedies are in no sense cures for any kind of disease. They relieve, but they cure nothing. The home treatment of a disease is practically always a treatment of symptoms, which disappear under certain conditions while the basic cause remains. Chronic headaches yield to headache pills and tablets and to the aspirin I listed; but you cannot expect these drugs to cure you. They give temporary relief. In many cases, continued self-administered relief is dangerous. Eye strain may be causing the headache, and there may be an urgent need for glasses. Or there may be a tumor on the brain which requires special attention. On the other hand, the headache may be a symptom of a passing ill and the relief afforded by home treatment may not be needed again in months. No one ought to continue to take drugs for any symptom unless advised by his physician. Calomel, tonics of various kinds, fever remedies, remedies for rheumatism, and many laxatives are bad for the human system when taken for continued periods. Heart stimulants, such as strychnine and digitalis, or depressants, such as bromides, are dangerous when taken day after day. When we consider how many people do keep on with such dangerous drugs, the marvel is that they survive."

poisonous in doses of two ounces or more. But nobody is likely to keep on taking that much salt. Even pure water, regardless of temperature, has recently been shown by Dr. L. G. Rowntree, of the Mayo Clinic, to be highly toxic if taken in too large quantities. When given to dogs at the rate of a pint every half-hour it produced convulsions and coma. Keeping on with the water feeding, after the appearance of these symptoms, resulted

Nor was this the imagining of a jealous lover. Hadn't the girls seen her and Bassett having tea at the Claremont last week

# A Combination That Couldn't Be Beaten

A story of love and business

By C. H. Markey

ILLUSTRATIONS BY RALPH PALLAN COLEMAN

**K**ENNETH GILES, weary and depressed, trumped his partner's ace. It was his second palpable misplay of the evening, and the slender girl opposite him looked up with surprise and concern in her fine gray eyes—and with something of chagrin.

"Sorry, Alison," he apologized.

"It doesn't matter; but you usually play such a good game, Ken. Don't you feel well?"

"Just tired," he explained. "I've lost considerable sleep lately."

"Tired! Why allow yourself to get tired?" asked Mr. Raymond Bassett, a man verging on forty, as he pushed his chair back from the card table. "I never do."

"Never allow yourself to get tired!" exclaimed Alison Trenchard, the hostess. "Why, how can one help getting tired sometimes, with so many things always coming up?"

"Should one let the things that come up govern one, Miss Trenchard, or should one govern the things?" Bassett asked bluntly, with the businesslike air of a man who knows exactly where he stands on every proposition.

"We'll, I suppose one should do the governing," Alison admitted hesitantly. "But is it always possible?"

"Always!" boomed Mr. Bassett. "If one has sufficient will power. I make it a point never to go out two evenings in succession. To-night I'm playing cards. To-morrow night I'll stay at home and get in some profitable reading. I never accept an invitation unless I feel that I'll be repaid, either in entertainment or edification, for the time expended. A man's time and his health are his most valuable assets, and should be guarded as such."

A pause followed this oration. "No doubt you're right," Kenneth agreed, but without enthusiasm.

"Let's not get philosophical," laughed Miss Hammond. "Come on, Alison, and sing for us. Mr. Bassett will accompany you."

Mr. Bassett looked across at his hostess and bowed smilingly:

"With pleasure, Miss Trenchard."

Alison led the way into the drawing-room, and there, a little flushed, selected a song. Bassett confidently seated himself at the piano. A moment later the introductory chords died away and the girl swung softly, sweetly, into Kenneth's favorite ballad, a haunting melody of long ago.

While he leaned back in a great upholstered chair, with his eyes fastened

upon her, there was a strange, swelling tumult within him—a bitter-sweet uprising of pain and pleasure. And as Alison stood with the soft light from a shaded lamp glinting among the waves of her golden hair, outlining the delicate modeling of her brow and nose and chin, revealing her grace and youthful beauty, she was an enchanting picture. But it was not only her beauty that affected Kenneth Giles. This girl, who had been a "pal" to him as long as he could remember, had, in the last year, come to be infinitely dear, the one woman in the world for him. Now he felt himself surging with an ambition to do something splendid, something to make him worthy of her. Then, like an icy blast that chilled the hope in his heart, his failure of to-day, the bad news he had for her, recurred to him. And added to this was the danger of losing her.

**IT WAS** a very real danger. For the smug, polished, self-satisfied creature who accompanied her at the piano so excellently, and looked up at her with a peculiar intensity, was a rival to be feared. Never before had Kenneth had the opportunity of observing the famous Raymond Bassett at close range; and now that he had, he could not deny that the man had an interest-compelling personality. He could now see why wives held him up as a shining example to their husbands; why mothers did the same with their sons; why daughters exhibited their charms before him; why women everywhere sought him out, lauded and flattered him. Men, it is true, felt different toward this paragon. They gave him credit for having fought his way, unaided, from a newsboys' home to a handsomely-furnished suite in an exclusive club; from nothing to the position of district attorney, with the senate clearly in view; but they did not like him. They considered him an insufferable egotist—a cold, calculating creature whose every thought and act revolved around himself.

Fair-haired, blue-eyed, lovable Kenneth Giles felt this antipathy as he watched Bassett play. He was surprised and resentful at finding him here, in the Trenchard home. Still, it was just the sort of home that Bassett would worm himself into. And Kenneth was hurt that Alison, too, Alison of all girls, should fall under this fellow's spell.

The young people rounded out the evening with dancing. Ken's head ached, and he felt alternately chilly and feverish. Guiding his partner through a fox-trot was a painful effort. But Bassett, radiant and animated, taught the girls new steps.

"Allie," Kenneth said as soon as Miss Hammond and Mr. Bassett had left, "this has certainly been my off day."

"What's wrong? What's happened, Ken?" Fear of what she was about to hear, and sympathy for Kenneth, regardless of what it might be, were nicely balanced in the girl's tone.

"Well, in the first place I felt rotten, ached all over, had no pep, was absolutely wooden; and then Blake of the Morgan Metal Company chose this day of all days to give out his contract for a year's supply of coal."

"And you lost it? I mean, you didn't get it?" Alison asked breathlessly.

"No, I didn't get it," he answered slowly. Then, "Oh, Allie! It meant so much to us!"

His plural caused a rosy flush to spread over Miss Trenchard's face.

"And for a whole year I had counted on it! I'd planned just what I'd say to you when I landed this contract." He paused and regarded her tenderly.

"It's a shame, Ken, a miserable shame! You certainly had a right to think you'd get it. But wasn't there something else the matter to-night. Why were you feeling so bad?"

"Well, last night Agnes Hall was over at the house, and you know how it rained! The girls tried to get her to stay all night, but she wouldn't. And so of course I took her home in a taxi. I wish she didn't live clear across the city. And then when I came home I had to wait forever for a street car, and got soaked to the skin."

**"YOU** shouldn't have done that. You should have taken a taxi back." The inclination to protect, to mother, was strong in Alison.

"Gee Willikens, Allie! I'd spent a month's salary on that drive as it was. If a fellow ever hopes—I mean, a fellow just has to save sometimes, doesn't he?"

"So you got wet and took a bad cold and lost a big contract all because Agnes Hall wanted to spend the evening at your home?"

"Oh, say now, Allie, it's hardly fair to put it like that!"

"Those are the facts, no matter how you put it. But that only accounts for one evening. You said you had lost considerable sleep lately."

"You said it! The night before I took the girls (the girls were his sisters) to the theatre, and then on to the Royal to dance a while. That's their conception of a wonderful time. And the night before that we played bridge at the Bolland's. You know how late they keep it up!"

"Tired? Why allow yourself to get tired?" asked Mr. Raymond Bassett,

Alison stiffened. Norman Wainwright was Kenneth's best friend, and Norman was engaged to Edith Bolland. And Edith had an unmarried, unengaged younger sister, a brunette beauty, just the type to attract Kenneth. He and Alison were both fair. People often remarked that they looked enough alike to be brother and sister. An awkward, tense silence now fell between them, broken at last by Alison:

"Do you think that any of those engagements repaid you, either in entertainment or edification, for the—"

Kenneth's infectious laugh interrupted her query. "Good lord, Allie, you don't expect me to weigh every action, to apportion my time exactly with an eye to the gain, as Bassett does?"

Alison did not join in the laugh. For once she was unsympathetic. "Perhaps it would be well if you did," she answered seriously. "Mr. Bassett wouldn't let himself in for that—for that sort of thing."

Kenneth regarded her with surprise. "Why, Alison, you know that Agnes Hall, crippled as she is, doesn't get much pleasure out of life. Spending an evening a week at our house means every—that is, she seems to enjoy it."

"Certainly she enjoys it, and Felice Bolland, even though she isn't crippled, enjoys playing bridge, and—"

AGAIN Kenneth laughed; this time reminiscently: "I'll say she does! Felice plays the snappiest game of bridge ever, and she *does* enjoy it."

For the second time during that brief conversation Alison did not laugh, and Kenneth felt that they were out of harmony with each other. He groped for the reason. Then he found it. It was that man Bassett! Why in the kingdom had Marjorie Hammond brought him over? Marjorie was eternally getting enthusiastic over all sorts of queer people whom

she called celebrities. It was all right for her to entertain him—but for Alison, well, that was different.

"If Mr. Bassett should accept every trivial invitation that he receives he wouldn't be where he is to-day," she was saying.

"But, Allie dear, surely you don't admire Bassett?"

"I certainly do admire Mr. Bassett," she responded with unusual feeling. "He does everything, and he does it well: plays an excellent game of bridge, dances superbly, is well read, converses entertainingly, and is a successful lawyer."

"Yes, and is examined from head to toe every three months, and keeps a chart of his precious anatomy, and—"

"And plays golf expertly," put in Alison.

"Sure, and uses three different tooth brushes a day, and always takes his exercises, *his* exercises, that were especially

as he pushed his chair back from the card table. "I never do"

arranged for him. No hand-me-down, built-for-the-mob exercises for our distinguished attorney. You should hear him tell about himself in a speech."

Alison did not smile. Her sense of the ridiculous, that Ken thought so delightful, seemed to have deserted her. Strange that she couldn't see how absurd, what a prig, this fellow Bassett was.

"Ken," she said evenly, "you are well born, your family is not only estimable but charming, you've had a classical education, and have always had a good social position. Mr. Bassett has had none of these advantages, still—"

Kenneth went quite white. "Still, he's a success and I'm a failure," he finished the sentence for her. Then, without waiting to be disputed, he got to his feet, said "Good night," closed the door behind him, and with dignified tread, so unlike his usual buoyant manner of swinging along, left the Trenchard home.

Kenneth Giles, ordinarily so even-tempered, was furiously angry. So angry that he didn't realize how deeply he was wounded. So hurt that he didn't know how ill he was. Resentment and fever both blazed within him. His heart and his head ached. So Alison admired this coarse-grained, selfish—he could think of no epithet opprobrious enough to fit Raymond Bassett. Well, let her have him! He, Kenneth, would *never* call on her again.

BY THE time he had reached his home his mood had somewhat softened. He was determined to give up Alison; but he loved her so much! She was so sweet! But she hadn't been sweet this evening. What in the kingdom had possessed her! Not to want him to take poor, little, lame Agnes Hall home, or to escort his kid sisters to the theatre? That was so unlike Allie. That she might be jealous of Felice Bolland never occurred to him.

After a week's bout with the grip, Kenneth was a chastened young man. He admitted that Alison had been quite right in her estimate of him. He was a jellyfish, an easy mark, always following the path of least resistance, frittering away his time, accomplishing nothing.

And she was justified in her admiration of Raymond Bassett. And Bassett had the right idea! He did the important things. He went after the prizes, and he got them. Why shouldn't a girl like Alison demand that the man she marry have a little will power, amount to something? He'd been a presumptuous fool to think that all he had to do was to offer his magnificent self, and she'd flutter into his arms. Alison! who, as she had said of Bassett, did everything, and did it expertly!

There was her voice, her clear, sweet soprano voice that people went into raptures over. Of (Continued on page 168)

# "One of the World's Richest Men"—In Friends

That is what people say about James E. Gorman, president of the Chicago, Rock Island and Pacific Railroad—In the stories told here of Mr. Gorman's boyhood, you will find the real secret of his ability to win friendship

*By Keene Sumner*

**Y**OU can't tell much about a man from the income tax he pays. A millionaire may be a crab; and a pauper may be a prince of good fellows. For there is more than one kind of wealth; and that which is measured in friendship is a better clue to character than that which is counted in dollars.

A man who has known James E. Gorman a long time described him to me as "one of the world's richest men, when it comes to friends." That alone would not have made him president of a great railway system—the Chicago, Rock Island and Pacific. But if it hasn't been one of the most important factors in his career, then this man is mistaken, and I am, too.

His hosts of friends are a living proof of the fact that we like the people who like us. Ever since he was a boy, Gorman has *liked* people. He hasn't made a bluff of doing this because he thought it would "pay." But it *has* paid. It always does pay. If it is easy for you to like people, you are lucky. If it isn't easy—do it anyway.

Before our real interview, I had a preliminary talk with Mr. Gorman. He said it was "to prepare the patient for the operation." But it wasn't that, as I soon found out.

When he wants to he can make the best conversational barrage I ever heard. You sit there and listen and laugh, having the time of your more or less young life.

And then suddenly you realize that your hour, or half-hour, is up, and that you haven't got in a single shot! He hasn't been your target for one minute!

But when he does want to be direct, he gets straight to the point. He did it on this occasion by saying abruptly:

"When I was a kid my father used to put in a good deal of time, especially during meals, telling me how I ought to behave and what I ought to do. My mother, who had her share of the wonderful wis-

dom of mothers in general, would wait until the stream of paternal eloquence had subsided. Then she would look up, smile at me and say:

"What your father means, Jimmie, is for you to do as he *tells* you—not as he does himself."

"Now, I'm going to be honest with you," said the man who was once Jimmie Gorman. "If I should start in to preach to young men, I'd have to exhort them to

"With that understanding," he said with a smile, "do you still want an interview?"

"More than ever," I replied. "Because now I'm pretty sure you won't try to put over on me anything that is bunk."

We shook hands on that and settled on four o'clock as the hour for the "operation." It was one minute past four when the caller ahead of me departed and, through the always open doorway of Mr. Gorman's office, I heard a friendly summons to "come on in."

It was more than two hours later when his private secretary walked with me out to the elevator. Some men's private secretaries would have wanted to drop me down the elevator shaft if they had been kept at the office until almost half-past six. A private secretary's attitude under such circumstances is a straw that shows which way the wind blows. This one talked about his chief as we went along the corridor; and I gathered the impression that his boss was the kind for whom a chap would wait *all night*, if necessary, and not have a ghost of a grouch, either. That's something to think about, when the boss is a man you are trying to size up.

We had talked, Mr. Gorman and I, for more than two hours. And when we stopped, we still were talking about the boy, Jimmie, and the young man, Jim, of a good many years ago.

But I was glad; for the boy is father of the man,

and the James E. Gorman of to-day, president of a great railroad, with many thousands of employees, is the direct descendant of Jimmie Gorman, the boy. He is a good deal of a boy, even now.

"I was born right here in Chicago," he said; "over on the West Side, the oldest boy in a family of ten children. My name will tell you that my father and mother were from Ireland; and I'm a railroad man because my father was one before me. He was a (Continued on page 202)

## Why It Pays To Like People

**"IT CAME** easy to me to like people," says Mr. Gorman. "I liked the men I worked *for*; and when you like people you inevitably want to serve them and to please them. So I was eager and enthusiastic about my work. This made my employers friendly and kind to me.

"I liked the men I worked *with*; so I was glad to run errands for them and to help them out of a tight place when I could. They might have made things very hard and unpleasant for me. They might have resented the fact that a mere boy was given a position above their own. But I *liked* them. I *showed* them that I did. And as it is human nature for us to like those who like us, I got along finely with my office companions."

do as I tell them—not as I did myself when I was a young man. That doesn't strike me as a good text for a sermon, so I decline to preach one.

"There were times when I was a young fool. But I don't like to think of my early follies; and I'm certainly not going to talk about them, even to preach piously to other young fools. If you want to write anything about me that's bunk—" he shook his head and clipped out, "there's nothing doing!"

Photo by Moffett

*James E. Gorman*

**MR. GORMAN** has been connected with railroads almost continuously ever since he was a boy. At thirteen, "Jimmie" Gorman went to work as an embryo yard clerk for the Chicago, Burlington and Quincy road. He made his way up through the freight departments of the Burlington, the Northwestern, the Illinois

Central, and the Santa Fé, until he became freight traffic manager of the last-named road. In 1909, he went back to the Rock Island as first vice president, later becoming chief executive officer for the receiver. At the termination of the receivership, he was elected president of the system, which position he still holds.

*Michael Mindlin*

THESE two young men—Mindlin is twenty-nine and Goldreyer is twenty-five—gave the old and experienced theatrical managers a shock this past season. Goldreyer got hold of "The Last Warning," a play which had been unanimously turned down by producers; and he and Mindlin scraped up a little money, put on the

*Michael Goldreyer*

play, and made it an enormous success. The story is not one of luck, however, but of courage, ability, and hard work. Both of these "Mikes" came to America as children, went to the public schools for a while, then got a job. The romance of their recent big success had a preface of more than ten years of hard work.

# The Two Mikes:

## A Romance of Broadway

The story of how two young men, almost unknown, and practically without any money of their own, took a play which nobody else wanted, put it on, and made it a success which has brought them a fortune

By Mary B. Mullett

ONE evening last October—it was Tuesday, the twenty-fourth—two young men were pacing nervously up and down in the alley back of the Klaw Theatre in New York City. From his post just inside the stage entrance, the doorkeeper occasionally peered out at them, then settled back, shaking his head sympathetically. A little after nine o'clock, he came out and said:

"Curtain's down on the first act."

Thereupon one of the two men hurried around to the front of the theatre; but the other one stayed in the alleyway until his companion returned. Then, after a brief conversation, they resumed their nervous pacing up and down.

At the end of the second act, the doorkeeper again came out; and again one of the young men hurried to the front of the theatre, to return in about ten minutes, apparently bringing important news.

But still they stayed where they were, walking and walking, until the doorkeeper appeared at the end of the third act. This was the signal for another excursion to the front of the house. And this time, when the younger of the two men returned, his dark eyes sparkled as he reported:

"Heywood Brown says it's a sure-fire hit, Mike! It looks like a winner; but I'm not going to get excited until I see the receipts!"

"Yes," said the other one soberly, "and wait until to-morrow night! Even if the critics like it, the public may not."

"No," agreed the first one. Then he added, with a laugh, "What do you think Vreeland of the 'Herald,' just said to me? He said, 'Well, it looks as if you two boys could afford to eat now!'"

The "two boys" were Michael Goldreyer and Michael Mindlin. They are not really boys, for the first Michael is twenty-five years old and the second is twenty-nine. But on the sunny side of thirty one

is still in the magic land of youth. It is a land where there are many dreamers of great dreams; where too, every now and then, some bolder spirit dares risk his all to make his dream come true. And how we love it, when his courage and his faith actually bring the prize within his eager reach.

"Good boy!" we cry. "You're a lucky dog!"

### "A Box-Office Mind"

ONE of my friends recently defined a big man as one who can keep his feet on the ground when his head is "in the clouds." This is usually a test of business sanity. It's fine to have visions—to be flushed with hope and optimism—to let yourself take a ride on the wings of constructive imagination. But don't forget that you must still have in reserve "the box-office mind," just as Mike Goldreyer, the young theatrical producer, had. When the critics were praising to the skies the play on which he had staked everything, he remarked soberly to his partner, "Wait until to-night; it's the receipts that tell the story."

Don't squelch your fancies; they are often very valuable—but never forget to keep one eye on the "box office" of your business. There's where you'll find out whether or not your imagination is paying its own way.

THE EDITOR.

But in our enthusiasm we forget to ask ourselves whether, after all, this "lucky dog" was depending on luck; whether he didn't have something up his own sleeve; and what it would have cost him if he had failed.

For instance, inside of forty-eight hours after the night when the two Michaels kept their anxious vigil in the alley back of the Klaw Theatre, all Broadway was buzzing with talk about their luck. They had taken a play called "The Last Warning," which had been kicking around in

practically every New York manager's office. They had put it on and made it one of the biggest hits in town. The achievement instantly became a romance of the Rialto.

But there is more to a romance than just the glorious climax. A lot of other chapters come before that, and it is these earlier chapters that make the climax possible. So that was the part of the story I wanted to get.

Both these Michaels were born in Russia, came to this country when they were children, and attended the New York Public Schools. When Michael Mindlin was fifteen he quit school and went to work for A. H. Woods, who was then producing plays like "Nellie, the Beautiful Cloak Model."

Young Mindlin became assistant treasurer at the Thalia Theatre in the Bowery, a position which sounds very much more important than it really was. He did help to count the money and a few things like that; but, on the whole, he was the sort of general factotum which a fifteen-year-old boy would naturally be around a cheap theatre.

"As for our audiences," he told me with a chuckle, "the police officer on that beat used to say: 'If I should lock the doors when you get the people into your theatre, and then take 'em to court, half of 'em would get twenty years in the penitentiary and the rest of 'em ought to get more!'"

"I think the policeman was prejudiced," laughed Mindlin; "but if you gather the impression that our theatre was not attended by the élite, you will be absolutely on the safe side."

"It was to close for the summer; and I, with more nerve than knowledge, asked the owner to lease the theatre to me until Woods wanted it in the fall. Somebody had brought an opera company over from Italy, but it had failed up-town and the people were left stranded. I had an idea that if I could bring it down to the Bowery near where a lot of (Continued on page 214)

# Lost People

Each year 8,000 persons are reported missing in New York alone—  
Stories that show why people disappear; how they act and  
how they are found; curious cases and unsolved  
mysteries; runaway boys and girls

*By Captain John H. Ayres*

Chief of the Missing Persons Bureau, New York Police Department

SOME months ago, a well-to-do business man came to my office in the Missing Persons Bureau at Police Headquarters in New York, and informed me that his sixteen-year-old daughter, a pretty brunette with expressive brown eyes, had been missing since the morning of the day before. She had been sent to the bank by her father to make a deposit of two hundred and fifty dollars, but she had not been seen there.

Neither of the girl's distracted parents could believe that she had left home of her own accord, but thought that she must have been "kidnapped." Outside of a good description of their daughter, the information they were able to give to aid our search was very meager, consisting of this—she had never traveled alone, and she had never revealed to them any ambition to go on the stage or into moving pictures.

Locating this girl proved to be one of the most difficult tasks the Bureau of Missing Persons has had in recent years. Many people when shown a photograph or given a description are absolutely certain they have seen the person you are seeking. Consequently, when we began making inquiries, we found the trail not of one girl but of eight or ten. The real clue which enabled us to keep to the right trail we obtained at the very start when we searched the girl's room and found a great amount of reading matter which showed that she was a devoted follower of the careers of moving-picture stars.

Two discoveries convinced us that the

girl had left New York: We located a woman's outfitting place where she had bought a traveling suit and some underwear. Also, a ticket agent at the Grand Central Terminal remembered that a girl answering her description had asked him about hotels in Chicago when she was purchasing her ticket for that city.

on to serve as a waitress in the station restaurant of a little town in Arizona. She stayed there only four days, and then departed for Los Angeles.

Our search was immediately transferred to Los Angeles and Hollywood. The fact was readily established that the girl had not been employed by any moving-

picture producer. Also we learned that she had not given up hope of obtaining such employment, for she had told one man that she was determined to go on the screen, and that she intended to take employment as a "maid" and so remain in the city until she should get work as an actress. Thus it happened that just four hours after the girl had begun work as a "maid," and three weeks after her father had informed us of her disappearance, we found her in the home of the woman who had employed her.

Two years ago, a lawyer, Mr. Black, who represented a retired merchant, reported to me that his client's daughter, twenty-six years old, had disappeared from her father's home more than three weeks previously. At first, the father had suspected that his daughter had gone to an art colony with her art

teacher, a man considerably older than she was. The father had disapproved of their association.

When I asked the lawyer why he had not notified us of the facts in the first place, he said he had had little confidence in the ability of the police to aid in the search. He doubted still whether we could do anything, because he had "cov-

PHOTO BY EDWARD BRUCE

This scene takes place daily at 9 A. M. in the Missing Persons Bureau at Police Headquarters, in New York City. Capt. John H. Ayres, in command of the Bureau, is giving his staff of thirty detectives instructions and information concerning their search for persons whose disappearance has been reported by relatives or friends. "Missing persons" are reported to the department at the rate of from twenty to sixty a day—a total of 10,000 in a year. Of this number about 8,000 belong in New York, while the remainder are missing from cities and towns in all parts of the country. Three fourths of the total number of missing persons are boys and girls under twenty-one. Read in the accompanying article what Captain Ayres says as to the various reasons why people seek to lose touch with home and friends—and how the Police Department aids in finding them. Captain Ayres was born in Rome, N. Y., fifty-five years ago. He was graduated from Hamilton College in 1889. Since he became a member of the police force, twenty-five years ago, he has served on many important special assignments. He was placed in command of the Missing Persons Bureau in 1918. Under his direction the bureau has reached such a degree of efficiency that of all the persons reported as missing not more than one in 200 remains unaccounted for at the end of a year.

In Chicago, we found that the girl had stayed a short time at the Y. W. C. A. under an assumed name. She had gone to work in the office of a company which operates a chain of station restaurants throughout the West; but this position she had kept only a week, and had then asked to be transferred farther West. With her expenses paid, she had been sent

ered" the case from every possible angle. "You say the artist is a successful man," I observed. "Can you tell me what dealer sells his pictures?"

"A Syrian, Mr. Z——," answered Mr. Black promptly. "He is also a dealer in antiques."

"Have you asked Mr. Z—— where the artist is spending the summer?"

"Why, no," said the lawyer; "I didn't think of that."

The Syrian antique dealer was familiar to me. No charge had ever been brought against him, but I had accidentally heard a bit of information which seemed likely to be useful. It was said that Mr. Z—— had at one time manufactured in the basement of his art studios the model of an ancient Eastern temple, and that he had sold the model to a wealthy woman for fifty thousand dollars on the representation that the model antedated the temple itself.

WHEN I informed Mr. Z—— over the telephone that I wished to ascertain the whereabouts of Mr. X——, the artist, and requested him to come to see me, he declared firmly that he was a busy man and would not have time. Then I mentioned the fact that certain information regarding the model of an Eastern temple had come to me and that, if he ever did find time to come in to see me, he might be interested in what I had heard. His attitude changed at once, and he asked to be allowed to come that afternoon.

In my office the antique dealer denied all knowledge of the whereabouts of Mr. X——. So I gave him a few more details as to what I had heard concerning the model of the temple, and I noticed that whenever the temple was mentioned, he wet his lips or crossed his legs, and seemed very uncomfortable. Expecting that something would yet come of this interview, I made no further move in the search. Four days later, Mr. Black, the lawyer, came in.

"Captain," he exclaimed, holding up a letter, "this is simply marvelous, almost a miracle!"

"Hold on!" I said. "I've found that the miracles happening around here are usually the result of using a little common sense. What have you got there?"

Then he showed me the letter. It was addressed to Mr. Black and signed by both the artist and the merchant's daughter. They told of their plans for study during the rest of the summer, gave the address of the art colony where they were staying in Canada, and concluded in this way: "Please do not bother Mr. Z—— any further. He knows nothing of our whereabouts."

More than ten thousand persons are reported to the New York Police Department every year as missing. Of these about eight thousand belong in New York, while the remainder belong in other cities and towns scattered throughout the whole country. Three fourths of the total number of missing are boys and girls under twenty-one. Scarcely one person in a thousand of those reported to us disappear involuntarily from any cause, such as mental derangement or "foul play."

Girls who are missing have usually left home because of a desire to go on the stage or in the moving pictures, or to

missing person is successful within a month. Only a very small percentage of the persons reported to us as missing—about one in two thousand—remain unaccounted for at the end of the year.

A few weeks ago a woman reported to me that her husband had been missing for nearly a month. "If only I knew he was alive," she said, "I could be happy, even if he would not come home."

The facts of the case indicated to me that her husband had "dropped out of sight" because of business troubles and debt. He was a man thirty-five years old, a member of a manufacturing com-

pany in which he had succeeded to his father's interest. During the father's lifetime he had always been the "boy" of the firm, without much responsibility. Since his father's death his two uncles in the firm had kept the "boy" from exerting any influence in the business, so that he remained practically an employee without a share in the profits.

This man and his wife, in view of the profits they had hoped to derive from the company, had begun living beyond their income immediately after the death of the man's father. Finally, the husband had found himself in debt to a host of small creditors for about one thousand dollars. When these creditors had become pressing he had believed himself disgraced, and had started on a trip to the Southwest with his wife's knowledge and consent.

FOR six weeks he had written home regularly. The last letter, which had come some four weeks previously, was written from San Francisco on hotel stationery; but he had told nothing of his future plans. It was a simple matter for us to determine that the man had, in fact, stayed a few days at the hotel from which he had dated his last letter; but we have found no trace of him since he "checked out."

To-day, this man's wife still believes he is dead as a result of "foul play" or

some accident; but I do not. I have found that very often men who have been proud of meeting their obligations promptly, as this man was, suffer great mental distress when they are pursued by creditors. They suffer with greater keenness if they have got into debt through some weakness such as extravagance.

My idea is that this man became more and more convinced that he was disgraced and finally began to look upon himself as a fugitive. It may be that he is now trying to carry out a plan of starting life over again in some place where he is unknown, with the intention of later settling up with his creditors and of bringing his family on to join him. (Continued on page 173)

## Children Conveniently "Lost" for the Afternoon

**D**URING the hot summer months," says Captain Ayres, "it is nothing unusual for us to have as many as twenty lost children from eighteen months to three or four years old, in the police substations on the East Side. I have no doubt that some of these children are intentionally lost for a convenient but temporary period. When an East Side mother wants to go to the beach and finds herself incommoded by one of her younger children, she sometimes adopts the plan of 'losing' it on a street corner, or of sending one of the older children out to lose it. Some member of the family waits to see that the child is found by a policeman, who promptly takes it to a station house. There the child remains until the mother returns from the beach to make anxious inquiries about her young one. I know of no way to prevent mothers from losing their children where the police can find them, but some day it may be necessary to conduct an educational campaign toward this end, for our nursery accommodations are strictly limited."

escape from irksome home or employment conditions. As a rule, the actuating motive seems to be a wish to escape from the restraining influences of the home and to secure liberty to follow their own impulses or desires, be such impulses or desires for good or the contrary. Our experience has shown that in most cases the result to the girl falls in the latter class. Boys usually start out in quest of adventure. The man who disappears when in his right mind usually does so because of one of three reasons, or a combination of these reasons: business reverses, extravagances that have placed him in debt, or family troubles. In the great majority of cases our search for a

# Extraordinary Experiences Of a World Traveler

A close call with a lioness  
The best country of all  
Questions people always ask me

An adventure with a charging rhinoceros  
Where you find the most delightful climate

Across the Atlantic 78 times  
The pictures folks most like to see  
The most dangerous country on earth

*By E. M. Newman*

**W**HAT do you think would probably happen in the heart of Africa if you took an afternoon walk, alone and unarmed, and met a lion? Circumstances alter cases. But it has been my experience that if the lion sees you first and has plenty of time, he scampers away as fast as he can go!

I have walked for fifteen hundred miles and more in the wildest parts of Africa without any weapon more dangerous than a lead pencil. Often I was alone, miles behind or ahead of my party. And more

than one lion has run at the sight of me, though I am not a dangerous-looking person. I am very certain that scarcely any wild animal seems as terrible to man as man must seem to wild animals.

That doesn't mean that an animal will never fight. On the contrary! Once in Africa I happened to be at the head of our party. We were in the jungle, and as I came around a big rock I saw on a ledge, directly ahead and about twelve feet distant, a lioness fast asleep. She did not hear me.

It was an unusual chance for a picture.

I put up my camera to take it. The click of the shutter woke her. Instantly she was on her feet, and leaped at me.

Fortunately, one of the hunters had come up with me from behind. He had waited for me to get my picture. But as she leaped, he fired. She fell dead at my feet. That was as close a call as I ever had with a wild animal, and I have spent a great many years photographing them, men, and scenery everywhere. Of course then I was glad to have something more effective than a lead pencil at hand!

I have managed in the past twenty years to get to every country in the world. In the line of my profession I have had first-hand experience with practically every kind of weather and scenery and tribe of the human race. I have been caught in a typhoon on the Indian Ocean, when our ship was whirled round and round, helpless to help herself. I was once overtaken by a dust storm on the Sahara Desert; all of us were buried in our tents, and we had to go for two days without food or drink. I have been within nine degrees of the North Pole and within twelve degrees of the South Pole. I have climbed nineteen thousand feet of a mountain that rises nearly five miles above the level of the sea. I have seen the tropics pretty well around the equator,

Below: A busy monkey is this, intent upon his mental task of picking fleas from a woolly dog. The dog is evidently enjoying the practice as much as the monkey, for it serves the double purpose of ridding him of fleas and saving him the necessity for scratching.

Mr. E. M. Newman, shown here in a Zulu ricksha in Durban, southeast Africa, has been four times around the globe, seventy-eight times across the Atlantic Ocean, has climbed the Himalayas to a height of nineteen thousand feet, and visited every country of the world. He is an explorer, photographer, and lecturer. His program is to travel six months of the year, spend one month in preparing lectures, and five in delivering them. Just after graduating in medicine Mr. Newman took a world tour, and the love for travel so gripped him that he never did take up the profession for which he was trained. He was born in Cleveland, Ohio, in 1872. In the accompanying article he tells us it isn't so much the wild animals and savage people that are to be feared by the wanderer in uncivilized lands as the drinking water and the insects

from the Amazon to the Ganges and back again. I have crossed the Atlantic Ocean seventy-eight times.

Whether chance or irresistible necessity made me a world traveler is open to question. I was educated to be a doctor. But before I began to practice I took a trip around the world. It lasted two years. I found that I liked traveling and cared very little for medicine. As a result, I stuck to what I liked. I have been traveling, making pictures, and lecturing about my travels ever since.

**N**ATURALLY, I am asked a great many questions about my experiences. People have some queer ideas about the things to be done and found when a person gets away from his own land. Many imagine, for example, that the farther you leave home, the more dangerous the world becomes. I haven't found it so.

One day I was walking down-street in Lima, Peru, while an election was in progress. It was imprudent of me, for

Above: These tropical cats, known as cheetahs, are trained to hunt other animals. They are about the length of a leopard, but are taller and are wonderfully fleet of foot, for a short distance. They do not trail their prey, as does the dog, but run sight races with the fleeing game. The cheetah is distributed over nearly all of Africa, but is most common in the tropical jungles

Photo to left: Baboons digging a well. It is not a dry law but a dry season that is worrying these creatures. They are here seen digging for water in a parched river bed in Africa

Below: Native South Africans in full regalia for a religious ceremonial. The worship of primitive peoples is often highly ritualistic, and this picture is one of the hundreds taken by Mr. Newman revealing the outward form of the religious observances of African tribes

election and revolution, in certain South American states, are almost synonymous. The citizens on one side of the street were yelling "Viva Pierrino!" On the other side they shouted "Viva Bolano!"

Suddenly bullets began to fly in every direction. I ducked into a doorway nearby. The fight was a good deal like a tropical thunder shower: in fifteen minutes it was all over! I resumed my walk.

Dangerous? Slightly! But I doubt if the fatalities on that occasion were any more numerous than from street accidents, and bandits' pistols, and street cars in a city of equal size in the United States almost any day of the year!

I have already said that most wild animals, as I have found them, fear man more than man need fear them. Nearly all of them give a warning before they attack. The puff adder will strike you with its deadly fangs if you

step on it. An elephant stalked in elephant grass will charge you. But even the adder hisses before it strikes. And the elephant trumpets.

**T**HERE are, to be sure, man-eating lions. They are among the most feared animals of the jungle. What about them?

A man-eater is not nearly so bad as he sounds. He is merely an old fellow who has to let craft serve him in place of strength. Too feeble any longer to run his prey to earth as the young lions do, too slow to pursue and kill a hartebeeste, he is forced to stalk and fall on his prey when asleep. Some of these old lions stalk man in that way.

A charging rhinoceros once did give us some trouble. Two camera men in my party were filming him. Being photographed seemed to bore him as much as it does some people, and he headed directly for one of the cameras. The camera man kept on turning, relying

An African lioness asleep. But at the click of the camera shutter she awoke from her siesta and came within a second or two of putting an end to Mr. Newman's career. He slipped up on her, snapped the picture, and the next instant she was hurtling toward him. One of the hunters fired, and the beast fell dead at the feet of the photographer

on the hunter who was with us. But the hunter did not fire quite soon enough.

The rhino was almost on the doomed camera when the photographer jumped to one side. The hunter, watching the animal, fired. His shot went absolutely true, and the rhino crashed down dead on top of the camera.

In the course of an African hunt Mr. Newman's party came across these two rhinoceroses asleep. Motion picture cameras were set up, and a hunter ventured close to the huge creatures to make them charge. Because the wind was blowing toward the man the animals did not smell him until he was very close. Then they leaped to their feet and charged, crashing into one of the cameras. A rhinoceros is near-sighted and its eyes so placed that it cannot see well to either side. Therefore it is fairly easy to side-step him when he charges.

Photo in oval: Victoria Falls is second to the largest and, according to Mr. Newman, perhaps the most magnificent waterfall in the world. It is in Rhodesia, Africa. To the natives it is known as "Thundering Smoke" because of the great cloud of mist that rises after the river, nearly a mile wide, has plunged suddenly off a four-hundred-foot cliff.

The second camera man filmed the whole scene, and it made a great picture when we recovered the smashed camera from under the beast, saved that film, and combined it with the other. It required nerve in the camera man to stand his ground until the last moment; but of course he had confidence in the fellow with the gun.

Most dangers are those to which travelers lay themselves open through ignorance or the failure to take proper precautions. Several years ago I was in South

Above: A Congo village, in Interior Africa. These people have no paved streets, automobiles, baths, electric lights, or other accessories of civilization. But then neither do they have any housing problem, rent bills, traffic accidents, or income tax blanks to annoy them. The bits of clothing worn by the villagers show that the trader from the outside world has found his way to this primitive group.

To the right: The hippopotamus, one of the bulkiest of mammals, is native to Africa. Here is one of the huge creatures at bay. Just after this picture was taken the enraged animal bit a canoe loaded with natives, killing one of them and spilling the others into the water. They had paddled out to get a rise out of him.

America in company with a vice president of the National City Bank of New York. I was going to La Paz, the capital of Bolivia, which is situated 12,250 feet above sea level, in the neighborhood of Lake Titicaca. The vice president wanted to go too.

I advised him not to. He was a heavy-set man, with indications of a weak heart. The air pressure on the human body at normal eleva-

The African elephants in this picture look tame enough, but as a matter of fact not one of them has ever tasted peanuts or other confections which we toss to the big fellows in the circus. This wild herd was photographed by Mr. Newman from a blind. He hid himself and his camera and then for days and days he waited, finally getting this remarkable picture of the herd as it pushed along through the brush.

A warrior of the Kikuyu tribe, in British Equatorial Africa, displaying his idea of what a dress parade uniform should look like. His taste, obviously, runs to fuss and feathers, and such native cosmetics as he has used on his face serve to produce a fierce rather than a lovely expression.

tions is about fifteen pounds to the square inch. Ten thousand feet or so above sea level the pressure is reduced to about six pounds. My friend would not listen to me when I told him not to make the ascent.

"If you can stand it up there," he said, "I can too."

We took the train, and when we had completed the long, slow climb, he said to me with evident satisfaction:

"You see, I'm all right."

"But," I objected, "you've been sitting down all the time."

"Oh, I can walk around, too!"

He got up to leave the car, and fell dead on the platform!

If a man goes to the high mountains after he is fifty, he had better content himself with looking at them from a modest elevation, unless he is very sure of his physical condition. Up higher, if there

An African ant hill, forty feet high and sufficiently old to have fair-sized trees growing out of it. Mr. Newman is seen in the foreground gazing at this remarkable monument built by the indefatigable little insects. It is a community city, with passageways, store-rooms, chambers, nurseries, and so on.

is anything weak in him, it is likely to burst.

In getting the pictures that people want me to bring back and show them, however, there is only one thing I can do. I have to go where the pictures are. Fortunately, I have never been troubled with more than my fair share of timidity. The airplane has enabled us to get many kinds of photographs that were beyond us before. I got some splendid pictures from

An Egyptian stenographer. This man (on the left) is a professional letterwriter. His clients tell him what they want to say, he puts it in a letter, and collects a fee of some two cents for the service.

airplanes during the war.

Once I went up with d'Annunzio, the Italian poet and soldier. We flew over the Piave River and the Austrian front. It is an interesting experience to be fired at in the air. The Austrians tried to pot us, of course, and they did hit the wings in two or three places. But it was impossible while we were in the air, at least for me, to tell whether we had been hit or not. Shells were bursting all around us, and whenever one came especially close there was a sharp concussion and the plane suddenly dropped ten or a dozen feet. It was like walking along the street and falling into an unexpected coal hole! When we got back to earth I found some bits of shrapnel in my coat.

During the war the interest in all pictures of actual fighting was immense. There was only one way to get such pictures, and that was to go where they were fighting. I secured permission, and went with my camera (Continued on page 179)

# "How I Raised My Child— And Why"

*By Nina Wilcox Putnam*

**O**NCE in my life when a man said to me will you do something for me I said yes the first time, on account it was a lovely request. It come from the Editor of this AMERICAN MAGAZINE and he says say will you write me a piece about bringing up children or words to that effect, and I could hardly wait for him to get through talking before seconding the motion. It was a chance no normal woman could resist, and I am nothing if not normal, even though Normal School is one of the few places I have never been, but I understand it is the place where children are caught at the very wildest stage and brought back to normalcy.

Well, I am that way by nature and also because Life has christened me with a ax every time I tried to be otherwise. Which is what you call the school of hard knocks. And so being as normal as any woman is at any time, why of course I was enthusiastic to tell other people about my child and how to bring up theirs. Because it's a true fact, no matter how good friends you've got, if they have also children, or even one, why they can never seem to get interested in what you are telling them about your kid, but keep breaking in with remarks like that reminds me of what my Bobby said yesterday, and then they will insist upon telling it to you and when you hear it, why it is something which the thing you was telling couldn't possibly have reminded them of, but you have got to say how clever! So naturally I jumped at writing down all my favorite remarks about not alone my own young one, but also what ails the way the neighbors raise theirs. And the best part of it is, nobody can answer me back except maybe by mail, but not even that until I have completely finished and got through. Why, you can see for yourself, especially if female, that this was what our friends the French call some bon chance!

Well, now, I have got a very original plan about dragging my child up to the place where he will be capable of hauling himself on to a ripe old age, and believe me, ripe will be right if he keeps on going the way he has commenced. Well, anyways, this scheme of mine is quite the gnat's nightie, as the saying goes, and in order you should understand it even against your will, why we will have to

commence at the beginning, which is, as a person might suppose, the usual period previous to Junior's well-staged entrance into this Life's as you might call it drama—or comedy, which some of it fortunately is.

As a matter of fact we might go even backer than that, because the most unusual thing about my kid is that I really wanted him. I got the idea, see, and with me it's always no sooner said than done within the limits of human endeavor. And although I am a busy woman, why after being as much married as a childless woman ever is, which is only about 33⅓%, why after being that way for nine years,

opportunity to spill a few horrid truths, the net receipts was to the general effect that babies was little angels with the beauty of a Zigfield chorus, the perfume of a spring day, and the charm of a dollar more in the bank than you thought you had.

Well, in spite of all this female cooing, or maybe because of it, I felt there must be a catch some place. And there was. The baby was the catch. Not that I didn't love mine right from the word go and often experienced a interval where just to hold him made the rest of the plot worth while. This usually occurred when he was asleep. But on ordinary occasions, when he was making sure his lungs was still there, or—well, you know what they do—anyways, when he was on the rougher end of the job, I would often think well I certainly went through a lot to get him, and now I have got him, what am I going to do with him? And more than once if the nurse hadn't been looking, why I might of dropped him down the well if there had been any well. As there wasn't I never did, and on the whole have not regretted it except at times when he won't eat his dinner or puts molasses in his hair or something.

Well, my mother and my mother-in-law had a crazy idea they knew something about raising children on account they had several each, and they wanted to make sure I got the benefit of their knowledge, although why on earth they should expect me to believe they knew anything about how to bring up a child when they must of known I had seen the children they had done it to, is more than can be explained. Why, one

of the principal tropics of conversation on many an otherwise dull evening in our house had been for me to tell my then husband just where his mother should of raised him different.

And as for what had happened in Mommer's home, well, modesty forbids I should say a word, but outside of the dresser-mirror I didn't see that Mommer done so very well, either.

Well, when I pointed out their well-established ignorance it didn't make no impression on these two grandmothers, and for once in their life they got together on a subject and good land how they would pick that subject up when he had ought to of been left lay and cry it out!

## Fathers and Mothers, Please Copy

**A**ND that is about all the rules I have got about bringing up a kid," says Mrs. Putnam, "and so I have only got to tell the last half of the title, which is why I have brought him up. Well, the answer to that is, because I have a hunch that he may do some of the things which I have fell down on, later, when I have fell down for the last time. Because having this kid, that I helped make, actually speaking and thinking and moving about, is one of the chief miracles which prove the existence of God to me, because you can bet your sweet life no human ever made anything so wonderful without divine help. And I did it because I wanted to be a real woman, and a woman with no child is an old maid even if she has a living husband and four divorce certificates. Then again I did it because I wanted someone to love without having to put on the brakes every now and then the way a person has to with a husband, on account otherwise he might get too sure of you. And also because I like to think I contributed at least one American citizen to a country which needs more Anglo-Saxon ones; and if he don't make good, why I will lick the pants off of him. And then again I raised him because I like to make things—real things, and the more difficult they are, and the harder to produce, why the better I enjoy making them, even if I do crab a lot about how overworked I am, and etc.

"And also, I needed somebody to educate me and bring me up right, and believe me, there is no one can do it like your own kid will. If you have not already proved this, get yourself a copy of my special parent's outfit, consisting of two pairs of ear muffs, two sets of shock absorbers, an encyclopedia and a good strong common desk ruler, and take a chance! It pays!"

I wanted a child of my very own instead of picking one out ready-made at some Findings-Is-Keepings Asylum or some place, even if having a personal child did take up more time, and cut into business hours considerable.

Well, when I got this big idea, see, I felt like I was the first one ever thought of it, and the family treated me in a way which confirmed this suspicion strongly. What with two elderly ladies nominated for grandmother at the same time, and a flock of married girl-friends who had something on me by several years, meaning kids all the way from one to ten, why you can imagine I got slipped an earful. And while of course a lot of them took this

What was even further, they wanted he should have a celluloid doughnut to chew on, get fed whenever he was hungry, and be rocked to sleep. Well, believe me, with all them antiscientific methods going on I come near going cuckoo, and if anybody around that nursery was to be rocked to sleep it should of been them two Bolshevik grandmothers, and I mean rocked in the usual sense, meaning stones. Because if anybody in my house was going to break the rules of modern infant-care for the sake of a bit of old-fashioned comfort, why I decided it would be me.

Well, of course I and my husband had both grew up in spite of our mothers, and so our Junior also managed to survive them through the first year, which they all assured us would be the hardest, excepting the second year. And at about this time he commenced showing a few signs which even his father had to admit were of intelligence.

**N**OW it's a peculiar fact, but when Junior slept somewhere around twenty hours a day and lay in his crib the rest of the time talking Esperanto to himself, I used to long for the merry time when he would be big enough to romp around with me some. But just as soon as he begun to show a little ambition in that direction, why I commenced to long equally for them dear departed days when he could be parked in his crib almost indefinitely. And right here was where I had a head-on collision with the modern ideas on raising Cain and being Able, if you get me.

You see, when I got this bright idea to have a little sweetheart in our home, I also got all the books on the subject, and while Junior was completely helpless, why I could put into practice "The Modern Mother" @ 1.75 Net, and was able to put most of the dope out of "The Scientific Panhandling of the Infant" over on him. But just as quick as he commenced running around on all fours and saying Baa as good as any sheep you ever listened to in your life, I seen that "Self-Expression And The Growing Child" was no more good to me than a last year's time-table, and I wished I had my money back, and decided that all the book was fit for was to give away to our village library.

As for what was alleged to be the more advanced book, called "Auto-Suggestion as Applied to Children," well believe me, Junior sprung an auto-suggestion of his own the very first time I took him down-street with me, he picking it out instantly in the toy-shop window and creating as you might say, a murder-scene until I went in and bought it for him. And it was finding out that these books was the bunk forced me to have another idea by which I do not mean a second order like you think I do, but I mean a thought about this big original theory regarding children which I am telling you of—in time.

Now one thing a parent soon comes to notice in connection with raising their child is that each year you say well, this year is the worst, once it is over why the next year will be a whole lot easier. And so on up to the age when he comes home to tell you he has joined the police force

Nina Wilcox Putnam, who has extracted so many chuckles from the American public, is shown here basking in the Florida sunshine and watching her six-year-old son, John Francis, as he attempts to lasso a roving cat. John Francis is the real hero of this article in which Mrs. Putnam tells of the despairs and delights of bringing up a healthy, mischievous American youngster. In another five years he will have reached the age at which his precocious mother embarked on her literary career—for Mrs. Putnam has written stories and verse since she was eleven. What is more remarkable, even her earlier efforts were published. Among the latest of nearly a dozen books are "West Broadway," "It Pays to Smile," and "Believe You Me"—all written in her amusing lingo. In addition, Mrs. Putnam has written scores of magazine articles

CLARENCE, SUBTROPICAL, FLORIDA

instead of the ministry like you had always hoped. In other words, a child is a endless chain of trouble right up to the time when you are now too old to enjoy your freedom, and a person had better realize this right from the start and make the best of it. Because believe me I know there is a best to it. One smile and a kiss from those innocent-looking little lips will wipe out all the stolen jam in the cupboard and none knows it any better than me.

But just the same I am not one to add any lies to the cheap sentiment already on the shelves about the beauty of having kids and the comfort they are, when I know for a positive fact that for every comfort they give you, they will see to it that you get two midnight walks, or else

fly-paper in your bed, or something, and it is high time the public come down to earth and the true facts about kids, and laid off this conspiracy of Bunkum to lead on the younger set. For the facts of the case is, Kids is a terrible bother. But I don't really see how we can do without 'em!

Well, granting then that it is a good thing we should have children in the community, and by the way I may remark it is a pity that the American kids do not as a rule equal the foreign per capita of the same—well, anyways granting we have got to have them, and that they might as well be accepted as a good thing, the next big question is how will we bring them up to be as little objectionable as human beings ever are? Because it seems a kid is not born human—not civilized anyway, and civilization has got to be crowded into him by hook or crook—mostly crook.

**A**T THE age of one annum or less Junior commenced to show all the traits of the darkest African savage that ever existed in any travel-book yet written, including considerable skill at scalping and a appetite for glass beads, watches, and small hardware that amounted to a vice. From what I heard the neighbors say, I expect this is not so original in Junior as it then seemed to me. And their words was confirmed when I give the poor innocent his first birthday party which occurred on his third one, on account I thought well, by now he has got some incipient social instincts, I think I will ask in a few of these mothers around town to see how good I make ice cream, and incidentally we will watch our little (Continued on page 185)

# Captain Jackson Gives In

The story of a stubborn lighthouse keeper

By Hortense Seymour Hart

ILLUSTRATIONS BY PERC E. COWEN

**W**E WERE convalescing, my other half and I, from the "flu," when Mrs. Wiggin came. She was a Down-Easter, right from the State o' Maine, typically "sot" as to convictions, spare as to build, and high-pitched as to voice. Her nursing she had learned by mail, after Alvin, her husband, died; but working she had learned from life itself. Our baby was her especial charge, and after little Anne was tucked away for the night she would join us. Before we were up and about again we had heard many histories, among them her own.

The wind was whistling one night as we were sitting down after dinner.

"Now, listen to that wind," said Mrs. Wiggin. "Who'd think it was 'most April! It's because you're so high. I mind the winter I was in the lighthouse—"

"Lighthouse? Were you a lighthouse keeper?" exclaimed the male member of the group in simulated surprise.

Her blue eyes flashed scornfully. "Well, I guess you don't know much about lighthouses! I was housekeeper."

"And was he young and handsome?" egged on my husband.

"Handsome! He was the ugliest-tempered, stubbornest old devil ever set foot on this earth. Says I to him, more than once, when he was flyin' off, 'Ezra Jackson,' said I, 'you can't down me; I was brought up to just such a one as you.'"

"That was the year after I was dress-making outside Bangor. Such a year! Sickness and death! Land! Seems 'sif I lived ten in that one!"

"But where was the lighthouse?"

"Ever you hear of Satick's Point up north of Freemanville? Well, I don't know's I wonder. It's a small light, but it stands in a wicked place." And then she told us this story:

**S**ATICK'S POINT runs out about a half-mile from shore, a sort of island. On quiet days you could holler across and make yourself heard, providin' there was anyone to hear you. In the summer, there was plenty, because the hotel was open. I did most of the cooking there one summer.

Sometimes we called across for supplies, but 'most always for tobacco. Stella would bring it over. Stella? His girl. I was coming to her. Why, that man would most like to have a fit if he didn't have tobacco for that pesky stub pipe of his. That very fall we had a storm that kept us on the island for four days, and his tobacco give out. There he was, 'most sixty—and, as I said to him, old enough to use a little self-control. But no! He stomped up and down, a-growling and grumbling.

Finally I said, "Ezra Jackson, I declare

if you don't make me sick, acting so. I'd be ashamed," I says, "a gray-haired man, to be such a slave to a habit."

With that he turned on me and hollered, "Habit! Slave to habit! You're a slave to soap!" says he. And off he went again, pacing and muttering how I was always washing where 'twan't necessary.

The sea was still running high under a stiff wind when he made up his mind to go after some tobacco. Stella and I argued and reasoned with him, but 'twas breath wasted. He shoved off into the cut (that is what we called the piece of water between us and the shore). For 'most an hour he tossed around. The Cap'n could

handle a boat—was cap'n of his own schooner for years—but the cut's full of rocks.

**T**HE rollers slat him this way and that, but he finally made a landing and we could just see him making for the store. Bimeby he came out, with someone we rightly guessed was Gil Haskins. He kept lighthouse one year. I'll tell you about him sometime.

Gil told me afterward he was trying to get Cap'n to stay on shore, but Cap'n said, "Who'd tend light? Two fool women?"

Stella and I, we began to watch again.

"I'll never give you up, Stella, not in a hundred years; but I am getting impatient. . . . I'm saying it again before Miss Wiggin sa's there'll be no question about my feelings!"

Perc E. Cowen

The breakers would come rolling around and smash right on him. Time and again we thought he was swamped, with water sucking away from the rocks and taking him along; then all of a sudden there he'd be struggling on. Well, finally he had eased the dory in, and was standing up taking out the oars, when there come a wave that near stood the dory on end. In a second it righted and drove in to us, but it threw him flat across the seats.

We managed to haul him out and get him to the kitchen. Then he give way, wet as sop from head to foot, beard a-dripping, right on my clean kitchen floor. What do you suppose he'd done? Broke four ribs!

I says to him. "Well, Ezra Jackson, you're paid for your stubbornness. The Lord hath chastised you with broken bones."

STELLA and I got him to bed and I got out my lessons and went according to directions. When the doctor came, he said he couldn't have fixed him better. He never come but once after, didn't need to; but it was weeks before the Cap'n tended light again. That was when I tended it myself.

Stella wasn't any good to help. Timid about it—took after her ma. Her ma hated the water or anything to do with it. What she ever took to him for—though I reckon he'd ha' been called handsome enough then.

I've clumb those tower stairs. They went 'round and 'round, and, land—wasn't it hot when you got up there! Those lights eat up the air. But the heat wa'n't so much from the light as 'twas from the lenses.

Well, I was going to tell you, all the time the Cap'n was laid up, he was fussing about Stella. She was awful pretty, had lovely curly hair, sort of light brown, except when she stood in the sun; then it was full of gold threads. Her eyes were blue. Not like her pa's. His was blue, too—but did you ever notice how folks that loves the sea has eyes like it? His was blue and green all at once, and some days when it was stormy they was sort of gray. They always looked deep and cold, like when you look down and can't see bottom. When he was young his hair was sort of yellow—I can't just describe it, but you'd know it belonged on a sailor. It was as if the wind couldn't disturb it, it was curled so tight. I often thought he was like the ocean—cold and unfeeling.

But Stella was just the opposite. Her hair was soft, and her eyes just like cornflowers, with dark brown lashes that curled up at the end. No wonder True was took by her. True Christian Blaine, his name was. His ma was a Methodist, same as me.

Ezra Jackson didn't have a particle of use for anyone who wasn't something to do with the sea. And True, he allowed once in Ezra's hearing he'd like to go out West. The Cap'n was disgusted. Besides that, Sarah Blaine once had told him that

of believed her, because he never spoke to her again.

Stella had been seeing considerable of True that summer, because she'd been helping at the hotel. He didn't come across to the light point much—Stella wouldn't ask him. It put the Cap'n in the doldrums to see them together.

But when the old man was laid up I said to her, "If you want your beau over of an evening, or to supper, have him," I says, "like other girls. What some don't know, don't hurt 'em."

I knew the Cap'n would be piping mad if he caught on, but I was on to his notions. He didn't want Stella ever to get married, because he figured he was getting on and would have to retire on a pension before long. He intended to settle right down in Satick's Point and have Stella keep house for him till he died. He set a store by Stella, because she was like her ma, who was the only one ever dare stand up to him.

Cap'n was jealous of the sight of anyone who set eyes on his girl, but of course he specially hated the sight of young Blaine. True was always at Stella to get married; but she had her pa's stubbornness some ways, as well as her ma's loyalty. She loved her father, cranky as he was. Seems she told True once she'd never marry without her father's consent. True made the mistake of laughing at the idea. It made Stella that stubborn he couldn't budge her.

She kept on seeing True just the same, though. Whenever her father knew it he'd about take the poor child's head off. She'd stand with her pretty mouth in a straight line and her chin in the air. But sometimes, when he'd get so worked up, she'd feel sorry for him and say, "Father, I'll never marry anyone without you're willing," and then go to her room, white as chalk.

SOMETIMES he would start on me then, and like as not I'd say, "Pooh, pooh, Ezra Jackson! Don't fly at me with your nonsense! You can't go against nature. Young folks is bound to turn to each other. I did and you did, and Stella might do worse."

Sometimes he'd go on how True was a farmer and had a bad-tempered mother (bad-tempered, mind you), and was no match for a cap'n's daughter. He'd waggle his head and say, loud, so she would hear, "I'll never give my consent, never."

Well, I started to tell you. When he was sick, lying there all bound 'round like I had fixed him, he was always fuming and stewing about Stella; 'sif he knew he was missing a trick, as he said. It was October, but the weather was still clear, so often Stella would bundle up and sit on the stoop with True. Her pa's room was on the other side of the house. He was suspicious, though.

When there was a social or anything in the town, Stella was always invited. He hated to have her go, for she had to stay all night and he'd go through the same performance every time—how he wouldn't have his girl staying with shore folks, as if she didn't have a home.

"I guess she won't suffer none by it," I'd say. "She's got to have some fun, outside an old man and woman. She'll up and leave you," I'd say, "if you ain't reasonable."

The tower was awful high, 'count of the island being so low, and many's the night

his sulks and tempers was what hastened his wife's being took. I guess he must half

That always made him haul in his horns some; but he'd say, "She'll never leave." The thought made him nervous just the same.

My, but I was busy those days. Even Cap'n had to admit I done a good job.

Often toward twilight, I'd say to Stella, "Why don't you come up and see how good the light tower looks?"

She'd sort of smile, and admit, "I don't really know, but I hate the feeling of it. I like my feet right on the ground."

She did seem to love the earth. Not much like him. He didn't take a particle of interest in the flowers she raised in boxes. But he—he'd stand looking out to sea.

Once he said to me, "In those days, Jane Wiggins, there wasn't one could come nigh me, not one." I've thought more'n once it would have been better for everyone if he'd gone down with his ship in the last storm he weathered. Man like that has no business coming to shore to die like ordinary folks.

**W**ELL, the time come when he was up and around again. The hotel had been closed since September, so Stella was home 'most all the time. True was in Portland, and wasn't home except Sundays. Even at church, Stella didn't get much chance to see True, because her pa took a pious spell and went 'most every Sunday with her.

All the other young men used to be dancing around Stella like bugs around a posy, and one of them, a mate on a schooner, her pa favored more than the rest. But Stella had made her choice.

Finally I got sick of staying home every Sunday, knowing Ezra went just for spite, so I up and said, "I'm going to church next Sunday, Cap'n."

"I'll go with you," says he.

"Nonsense. What if it should blow up and we couldn't get back? Stella can't keep light."

Upshot was that Stella and I went after that. We could handle the dory fine in ordinary weather, or even in a bit of a blow.

One Sunday, True says, "Stella, why can't I come to see you?"

She looked at him hopeless-like, then she straightened up: "I'll ask Father this afternoon."

"Tell him," says True, "I've got something to ask him."

I made off to be reading the notices, but, land, they didn't mind me. They knew where I stood.

True says, "I'll never give you up, Stella, not in a hundred years; but I am getting impatient. I've got my chance to go to Texas next summer, and you must go with me. I'll never change my mind about you. I'm just saying it again before Mis' Wiggin, so's there'll be no question about my feelings."

"And you stick to it, True Blaine," I exclaimed, "because if it's right you should have Stella, and I'm convinced it is, the Lord will see that her pa gives in." With that he kissed her and came down to help us off.

Ezra was waiting at the boathouse for us, with eyes like ice. But he never said a word till we got in the house.

"You're late," says he, as we were taking off our wraps (it was awful cold).

"A little," says I.

Then he turned on Stella. Such an ugly face I never see—white as ashes and a red spot on each cheek. "Who pushed you off?" he demands.

She glanced at me, with them identical spots on her cheeks her pa had. I knew she wanted to manage it herself. "True Blaine," she answered.

"True Blaine. What right has that land-lubberin', dago-faced boy talking to a seaman's daughter?" His voice was a blast and he was shaking all over.

She bit her lip to keep steady, and replied, cold as a nor'easter, "He has the right because I give it to him."

"You!" he bellowed. "Who are you to be giving rights? Who's cap'n here? Are you commanding this ship or am I?" He was working himself up just like he used to when he was young. "Bringing shame on me. My girl behaving like a common—"

Stella drew herself up, and her hand come down on the table with a whack that made the lamp jump. "Stop!" she says, and her eyes was blazing. His mouth dropped open—dumfounded he was. "Stop! That's a lie and you know it. I've been a good daughter to you. I've lived all my life by the sea, hating it, for your sake. I've stood your tempers, and taken your hard words because you were the only one in the world I had to love. Well, there's another now. I love True Blaine. I'm asking you as a decent girl to a decent father: can True Blaine come here next Sunday afternoon to talk to you?"

He had calmed down some, but he was still shaking. "I'll never give my consent to your taking up with that fellow," he said. "Never. Put your thoughts on a seaman, and perhaps we'll see."

She answered, "I've made my choice," and without another word into her room she marched and shut the door.

**H**E SAT down, white and exhausted. "She'll get over it," he whispered.

"Over it," I snorted. "Shame on you for a stubborn old man! Over it, indeed. She's like her ma, Stella is, and once she made up her mind she wouldn't change it for parent or preacher. You ought to thank the Lord that Stella's set on someone who'll be good to her."

He was looking out toward the sea, all green and white with little scudding waves. Once he whispered, "Annabel," then he muttered, "Never!" and swore between his teeth.

When the next Sunday come I announced, "I'm going to church. Coming, Stella?"

"No," says she, lifeless-like.

As soon as I got things slicked up and the table set for dinner I started off. They both come down to the dory with me, and just as I was climbing in Stella handed me an envelope.

"Give this to him," she says.

"Who?" snaps out Ezra, but stops short at one look she flashes him.

After church, True come up. "Where is she?" he asked, and for answer I gave him the letter. As he read it, the color mounted up his cheek. I looked at him inquiring, and he held it out to me and says, "Read it."

It read like this:

DEAREST TRUE: It's no use for me to think about getting married; I have thought and

prayed, but I know in my heart that no one will look after him if I don't. I can't leave unless he's willing. Do not think I don't love you, because I do and always will. I will never forget you and I hope you will always be happy.

Your loving but hopeless

STELLA.

True smiled a grim sort of a smile, and said in that patronizing way men has, "Poor little girl! Mrs. Wiggin, I'm going West in July, and Stella's going with me if I have to take her by main force. But I'd give anything if that old codger would give his consent, for Stella's sake. I don't care. Why she's so set on sticking by him—"

"Well, Stella's loyal, and she'll be just as loyal to you when she's your wife. And mark my words, the Lord'll bring it about that he'll give his consent if that's all that's necessary. If He don't, I'll aid and abet the kidnapping idea."

**I**T WAS more than a month before any of us went to church again. Storm after storm come up, with snow and sleet, and it kept Cap'n and me both humping to tend light. Stella puttered around, helping where she could, knitting and sewing—and looking. When Cap'n looked he always turned toward the open sea; but she always looked toward land.

It come a beautiful spring. The summer folks were all up early to open the houses, and lots of them painted. That put the notion in Cap'n's head. He come home one day with paint galore and a jug of washing fluid to stew up all the sheets and underwear and clothes. Seems Ella Adams—she'd come back to tend store through the summer; regular social butterfly she was and a widow, too—seems she told him how 'twould fix everything up all white. "Yes, and eat 'em to nothing," I says.

Anyway, Cap'n painted the dory and the sheds and finally started on the cistern that held our drinking water—mostly rain water. Just as he got to the top the wind took his cap, and in reaching for it he pushed the paint pot right in the cistern. I was that provoked.

Ella insisted on the Cap'n's borrowing all the gallon jugs in the store, and with what we had at the light there was a grist of them. Every day or so we had to go across to the town pump and fill them up. He was so busy, he was real good-natured, and let Stella go over evenings quite often. No one ever mentioned True, except once when the Cap'n remarked he was glad Stella had got rid of her foolish notions.

Well, one day my kitchen sink got stopped up, and it was that dark underneath and cluttered up with empty jugs I couldn't do a thing with it.

"Jane Wiggin," says Cap'n, "women can't be expected to adjust matters requiring mechanical skill." With that, he peeled off his coat, got out his wrench and under the sink he goes with matches. He pushes all the water jugs aside with one sweep of his arm, and how he did puff and tug at the drain. He was wringing wet when he got it off.

I was hanging out curtains when he come out of the house a few minutes later, white as a ghost, and the drool running out of his mouth.

"Done for, Jane," he mumbles in a thick voice. "Whole glass washing fluid.

Cap'n had heard his voice and was standing in the sitting-room door looking like a thundercloud. True said, "Cap'n Jackson, I'll come right to the point: I'm here to ask your consent to marry Stella three weeks from next Sunday"

Thought I was drinking out of a water jug," he explained.

My heart stood still for a minute and my eyes swum. Then it came to me from the back of my brain what my lessons said: "Keep your head." I was making for the egg box when it flashed through me that the Lord had sent an answer to my prayers for Stella. "Ezra Jackson," I said, as I poured the white of an egg into him. "I can save your life, but it's on a condition," I says. "If you come through this alive, I demand you give Stella your consent to marry True Blaine."

I was calm by then, and all the time I was talking I kept putting white of egg in him. His eyes was bloodshot and he was fair writhing. When I had give him five, I says, "Do you give me your solemn promise as a cap'n and a sailor?" And he groans and nods, "Yes."

**H**E NEVER would of been afraid of going down at sea, but death by poison on land was too much for him. I give him all the olive oil he could swallow, and then I mixed up some mustard water. He was pacing up and down, clutching his beard.

When I offered it to him, he waved it away and let on he couldn't take anything more.

I never argued, but run down to the sheds. There on shore was a man cranking a car. I hollered across, "Git Gil Haskins." In no time Gil came a-running and I shouted, "Get a doctor, Cap'n's swallowed poison."

There wasn't a boat in sight on his side, but Gil never hesitated. The stranger started for Doctor Emery and Gil dashed right in the channel, on the rocks and off the rocks, plunging (Continued on page 103)

# Is Your Office Cluttered Up With Frills and Titles?

Many able men and promising businesses are kept from real achievement by drifting into silly, top-heavy systems and fussing with empty honors

*By D. C. Wills*

Chairman of the Board, Federal Reserve Bank of Cleveland

**N**OT long ago I called at a large bank and asked for a vice president, giving his name. The guard to whom I spoke evidently did not know whether the man was connected with the shop. He referred me, very politely and without moving from the spot, to the information desk a little distance away. I presume I should have noticed the desk at first, although it was not as visible as it might have been.

The information man directed me to an enclosure where a gate was watched over by a third man. I gave the keeper of this gate the name of the person I wished to see, and he sent a boy to inquire of Mr. So-and-so's secretary whether he could be seen. Why the keeper of the gate neglected to have the boy speak first to the secretary's stenographer, instead of disturbing the secretary herself, I do not pretend to know. It may have been that the stenographer was out of the city!

However, it is perhaps unfair for me to complain of the treatment I received. I had the privilege of pressing all the buttons with which the outer office was equipped. I learned how they worked. That knowledge might be useful sometime. And in the end I was led into the presence of the vice president!

Now, to me this incident is typical of the frills that mar lots of business enterprises to-day. And it indicates an all-too-prevalent weakness in executives who fail to accomplish as much as they ought to. There are four tests that I always apply to a man who is being considered for some important position. I ask: Is he more concerned about the *work* attached to his job, or about the frills in which the job is wrapped? Is he always try-

ing to decide whether a certain act will have a good effect on others, or is he satisfied to know that it is *right* and ought to be done? Does he think more about *where* he is going to work, or *what* he can make of himself and his job? Is he more anxious about the number of people he will have under him, or about his opportunity for *doing something worth while*?

Mr. Wills has been associated with banks for the past thirty-three years, his positions ranging from messenger to president. To-day he is chairman of the board of the Federal Reserve Bank of Cleveland, an office he has held since 1914. He was born fifty years ago in Pittsburgh, and at the age of seventeen, having been graduated from high school, he secured his first position with the Mechanics National Bank of that city. At the time of his appointment to his present post he was president of the Citizens' National Bank of Bellevue, Pennsylvania.

All of these points are important, but I am inclined to think that the first is the most important of all. More executives seem to get tripped up nowadays by getting their feet tangled in red tape than from any other one cause. By red tape I mean that sort of thing I found in that bank—and just to show the contrast to it I will tell you about what happened to me

in another bank I had occasion to visit.

Shortly after the experience mentioned, I went to this other big bank. There I was greeted by a good-natured, efficient individual, who seated me in a comfortable chair, handed me the morning paper, made me feel he had known me from my youth up, and delegated a young man to find out whether my bank officer friend was in and would see me. In the meantime, he seemed interested in me, conveying the impression that only by an act of Providence would I be prevented from seeing my friend; and I scarcely knew I was waiting. I couldn't help commenting to myself on the vast difference in this reception, and you may be sure that it left me much more amiable.

I have been brought up in the banking business, and my knowledge and observation lead me to conclude that in the second bank there was probably not as much costly machinery as in the first. I am pretty sure it was better managed and more profitable.

Of course, it's easier to follow a system than it is to *get down and work*. Somewhere, Roosevelt tells of a bureau chief in the War Department who was exasperated beyond endurance by the emergency calls and extra-routine demands occasioned by the Spanish War.

"Oh, dear!" he exclaimed, "I had this office running in such good shape—and then along came the war and upset everything!"

Getting a department to run smoothly and making it accomplish something are different things. Sometimes the more smoothly a department or organization runs the less it accomplishes, simply because it cannot meet emergencies. It ignores them. But emergencies, taken ad-

vantage of, are often the profit-makers of business.

This love of procedure and super-system seems to be getting almost the run of an epidemic in some quarters. Sometimes it may be confined to the outer office. But usually, if you find it there, it is reflected also in the accounting methods, the correspondence, and every other activity of the institution. Most of us like to think that we are very businesslike. But there is such a thing as making so much effort to *appear* businesslike, that we actually are *unbusinesslike*.

As I have said, my working experience has been wholly in banks. I started to work as a messenger when I was seventeen years old. That was in the Mechanics National Bank at Pittsburgh.

I'm not sure just how it was done, but in some way the idea was conveyed to us that the object of employing people in that institution was to get certain necessary work done; I think most of us understood that we were not engaged to overawe the public, nor to make a display of any private prerogatives. We were supposed to serve our customers, presumably with the object of helping the bank to make a profit. Perhaps the reason we got these ideas into our heads was because the boss was usually on hand, practicing them!

FOR thirteen years I continued with that bank, shifting from one job to another and learning the business. By the time I left for a better position in another bank, I had pretty well absorbed the atmosphere and fundamental ideas of the place, and they were all for facts and getting work done—not for frills. At one time or another I have occupied most of the desks and official positions in different banks, but I have never seen any good reason to change these ideas.

They were homely enough. For example: Anything that makes it more convenient—simpler, easier, quicker, less costly—to get work done, ought to be encouraged; anything that does otherwise ought to be discouraged. The big thing is the work itself; when a man is advanced to a higher position, it is done with the idea of giving him not more prerogatives and liberties but the chance to do bigger work and more of it.

But a business, like an individual, unless a strict watch is kept, is likely to let habits become hard-and-fast. Routine becomes the master instead of a servant, as it should be. The object to be accomplished is lost sight of in the manner of accomplishing it. It is all well and good

to have a way of doing things, a fixed procedure, a standard routine. But we are one and all in continual danger of slipping into some routine that outlasts its usefulness, so that finally we go through the motions of doing business without actually getting down to business.

At one time I was closely connected with the affairs of a philanthropic organization. It always needed money. Such organizations usually do.

In the old days, when the secretary found the exchequer running low he put

has an assistant in charge of the card file, and she runs it in a thoroughly automatic manner.

That seems to be at the bottom of a good many of the evils I am talking about—the loss of the human, personal element. The secretary, like some other executives I have known, is trying to let a *plan* take the place of a *man*. Periodically the assistant takes the cards out of the file and addresses form letters to the subscribers, asking those who owe to send in the money. If the first letter doesn't

bring the cash, the assistant tries a second one; that may be followed by a third and fourth, and perhaps a fifth; after that the names of subscribers still delinquent are put into a "dead" file.

If the secretary *does* make a personal canvass among certain important subscribers, it is no longer in the old informal manner. He makes a ceremony of it and sends in an expensively engraved card. You may believe me when I say that the shrewd business man observes that card the very first thing. Subconsciously he concludes that a part of his money must be going to keep the secretary in style, instead of for philanthropic purposes. Most people are not especially interested in keeping somebody else's balloon afloat!

WITH the added machinery and rigmarole, it costs a lot more to collect each subscriber's dollar now than it used to. The secretary, engrossed in maintaining the dignity of his position, is deluded with the belief that his plan and set of records, guided somehow by the law of averages and blind luck, can accomplish as good results as personal effort. They never do.

I remember a man who was asked to take charge of a certain department in an organization like that. The department had always been a lame brother, requiring frequent subsidies from the general treasury. This man came, not asking what his prerogatives and authorities were to be, but prepared to *do the job*.

He went to work at a second-hand desk. He sat in a second-hand chair and there was a second-hand rug on the floor. But he wasn't thinking about those things. He spent no time wondering whether his callers appreciated his greatness or admired his taste in office furnishings. He had his mind on the job. He did it, and he accomplished something that nobody had ever thought possible before—he ran the department *at a profit*.

If you depend too much on a mere plan yourself, the people who work for you will do it too. They (Continued on page 190)

## Passing the Buck in a Big Organization

**P**ASSING the buck is one of the evils that is likely to result in a big organization," says Mr. Wills. "This man or that gets to thinking that his time is very valuable. He wants to impress people with his importance. He feels that he must no longer be bothered with a lot of details. He begins to delegate, loses his sense of proportion, and after a while he keeps so busy trying to do nothing beneath him, that he literally does nothing at all!

"I begin to mistrust a man as soon as he begins to place an excessive faith in procedure, or system, or routine—call it by any name you please, 'red tape' if you want to! Very soon after he starts on that tack he is also likely to stress something else that is often carried to excess—I mean titles.

"A lot of people lay a great deal of store by titles. Very often, in standardizing or putting a concern on an up-to-date basis, or introducing efficiency methods, or revamping the existing set-up on some other pretext, the question of titles receives long and serious consideration at the hands of the gentleman performing the operation.

"Most of us protest that we are genuine democrats and don't care in the least about titles and decorations. But I doubt if we can get away with it. To look at some businesses, an impartial observer would have to conclude that we are the most title-loving people in the world. Did you ever notice how it pleases the prominent citizen to be called 'Colonel,' even if he received the handle for nothing more than being a member of the governor's staff for one year? . . .

"Now, I sum it up in this way: One can function under any title. We will do well if we pay less attention to titles. In our zeal to create and exalt them, we are likely to put the emphasis where it does not belong. It's not a question of what your position is. The question is: What are you, yourself, doing in it and with it?

"I have known men who were much more interested in knowing *where* they were going to work, and whether they would have a private office to themselves, and whether their business cards would be handsomely engraved, than they were in knowing *what they would be expected to do*."

on his hat and went down the street. He called on friends of the organization and explained the situation. If they had pledged aid, he drew their attention to that fact. He got the money.

Things are run differently now in that organization. The frills have begun to be uppermost. And the organization needs more money than ever!

There is an elaborate card file of subscribers. That is all right. But the personal element has vanished. That is *not* all right. The secretary's stenographer

Be especially careful between Friday and Monday—more glasses are broken then than in all the rest of the week

# Look Out for Your Glasses!

Strange stories of breaking, losing, and finding them again—Interesting and helpful suggestions about eyesight and eyeglasses—By using the tests accompanying this article you can tell whether your eyesight is good or not

*By Paul A. Meyrowitz*

A New York optician of 35 years' experience

**A** MAN and his wife, on their way to keep a dinner engagement with friends in Washington Square, New York, recently boarded a Fifth Avenue bus at Ninety-sixth Street, and took seats on top. The man was wearing eyeglasses which were attached to a silk cord fastened in his coat lapel.

Somewhere in the neighborhood of Sixty-fifth Street, the man drew his wife's attention to a flowering shrub in the park, and, as he did so, his eyeglasses were snatched from his face.

"Now, what do you think of that?" he exclaimed. "I've lost my glasses!"

His wife looked at him reproachfully, and said:

"How could you be so careless, John? If you would only tie the cord in your buttonhole more securely the wind couldn't possibly blow them away."

"I wasn't careless," said John, "and the cord was fastened. I believe it must have caught on an overhanging branch of the tree we were passing under. I felt the yank. Maybe if we went back to look, we could find them."

"Nonsense, dear," returned John's wife. "They're broken, anyhow, and you'd only make us late to dinner."

One of the topics at the dinner table that evening was the loss of John's glasses. Had they been blown away by the wind, or had they caught in the tree as he claimed? The verdict went against him.

That evening John and his wife returned home the same way they had come—on top of the bus. A little below Sixty-fifth Street, John said to his wife, "Please watch now, dear, and I'll show you the tree I think we were under when I lost my glasses. Now! . . . That's the tree! Are you looking? See how low the branch hangs! And there—by Jingo! There are my glasses hanging by the cord! The electric light's shining on them as plain as anything!"

With that John made a dive down the bus stairs, his wife calling after him that it was silly to think of leaving the bus to

climb a tree in an attempt to recover his glasses. But John had a good idea. He explained to conductor and motorman what he wanted. Then the bus was backed up under the tree, and John, exulting, plucked his eyeglasses off the limb and triumphantly placed them astride his nose.

"My dear," said John, "I don't know whether I am more pleased at recovering my glasses or at having my veracity vindicated. Please note that I am now securely fastening this cord to my lapel."

John was so struck by the unusual circumstances of the loss and recovery that he came in the next day to tell us about it, and we agreed with him that his experience was unique of its kind. Customers very often tell us of curious experiences they have had with their glasses, how they broke or lost them, or of acci-

dents which *ought* to have resulted in broken glasses, but didn't. Many people have told me of losing their glasses, but few who have actually lost them, and not mislaid them somewhere at home, have ever told me of *recovering* them.

Lost glasses seem to exert a strange fascination over the finder, who seldom makes an effort to return them to the owner, even though they are found in a case containing the name of the owner or the optician who sold them. The finder usually tries them on to see how well he looks in them. Sometimes he decides that he ought to wear glasses himself, and he gives those he has found a trial. There is hardly a chance that the lenses are suited to him, but even so I have known many people to keep on wearing glasses they had found until their sight was badly injured.

Many women lose their glasses when shopping in department stores. They may leave them on the counter where they have been examining materials or, having finished their inspection of goods, they start to slip them in a pocket, but instead let them slip down the outside of the coat or dress to the floor. Both men and women who carry reading glasses with them seem to have an inclination to leave them behind in restaurants where they have dined. They use their glasses in looking over the menu, then lay them down beside their plates. Upon leaving they forget to pick them up, and when they return for them the glasses are generally gone.

You probably realize, if you wear glasses, that they are usually broken by the most trivial accidents; but it often happens that a man goes through the most serious kind of an accident without damage to his glasses. A man I knew was hurled ten feet out of an automobile which collided with a telephone pole. He was picked up unconscious by other members of the party, but his eyeglasses were still on his nose and they were not bent or chipped in the slightest. A few days after he got out of the hospital he ran into a man on the street, and the force of the collision was enough to

## T D E C F

Have someone hold this page at a distance of twenty feet from where you are standing. Then you should be able easily to read the large letters on the line above. Make the test with each eye separately, and you may find that one eye has better vision than the other. Anyone who cannot read the letters easily with either eye alone should consult an expert refractionist. Remember, however, that good vision does not always mean easy vision. There may be optical defects that cause headaches and other disturbances, even when such defects are not indicated by less than normal vision

Due to be placed on strings or staples where powder or other high explosives are loaded, should always remain attached to the engine and under the direct control of the engineman until finally placed in position. Other cars must not be allowed to strike a car containing explosives and such a car must be placed in a yard or at a station where it will be subject to no little handling or possible. Under no circumstances should a car be cut off and run to under control of hand brakes (except that where cars are placed on or taken out of a spot string and it is impossible to keep the engine attached,

The average person holds his reading matter at a distance of about sixteen inches. At this distance, with normal vision, you should read without strain the fine print above. Compare this type with the printed columns on this page, and you will see how much smaller it is. The regular type used in this magazine is of such size that it minimizes the possibility of strain, and the quality of paper is such that it does not lend itself to reflections which interfere with your ease of vision

Hold the illustrations on this page at arm's length and look at them with one eye at a time. Does one of the balls appear darker than the others? If so, it indicates astigmatism; that is, the cornea of the eye, which is like a watch crystal, is curved more in one direction than another. Rotate the illustration, and you may notice that the ball which was most distinct becomes less distinct—and that some other ball becomes darker as it is brought into such a position that its lines now run in the same direction as did those of the ball which was darker at first.

break one lens and to cut his face slightly.

Glasses are usually broken through some kind of carelessness. Many people let them fall when putting them on or when cleaning them. Others make a practice of carrying their caseless glasses in a pocket, and break them when leaning against a table or bending over a chair. One of the commonest stories we hear in explanation of broken glasses is this: "This morning I laid my glasses on the shelf in the bathroom. When I got out of the tub and reached for them I knocked them on the floor." Men very often break their glasses while shaving, by hitting them with the back of a razor.

**YOU'D** be surprised at the number of people who drop their eyeglasses from their noses at the dinner table. If they are rimless lenses and strike against the edge of a soup plate or upon the silverware they almost always break. One lady said that her eyeglasses dropped in the soup and did *not* break, though the accident soiled her hostess's tablecloth. She was so embarrassed by the incident that in putting her glasses back on her nose she dropped them again. They fell to the floor and this time they did break.

Many people break their glasses by improper handling while cleaning. Just suggest to any one of your friends that his glasses need cleaning, and then watch to see how he does it. You will see that he holds them by the nose piece in one hand, while he wipes the lenses with a handkerchief in the other. Some day, when cleaning his glasses in this manner, he will hold the frame a little too rigidly and he will move the lens a little too much—and the lens will break off at the screw hole. The same little accident has happened to thousands of persons.

If you want to know how to clean your glasses properly, watch your optician the next time he is adjusting them. You will see that he uses but one hand for the operation. He cleans the lens by rubbing it with a cloth which he holds between the

thumb and forefinger of the right hand, and while polishing the lens he is careful *not* to keep hold of the nose piece. That is the proper way to clean your glasses to avoid breaking them. To avoid scratching the highly polished surfaces, always use a soft cloth. The scratches from a harsh cloth tend to make the lens opaque.

One Monday morning some months ago, a lady came in with three pairs of broken glasses—her rimless spectacles, her eyeglasses, and her shell-rimmed reading glasses. "Here they are," she said, "or what's left of them. I stepped on two pairs and sat on the third."

While reading her Sunday newspaper, she had dropped some of the sheets on the floor and on top of them had placed her

spectacles and her eyeglasses. Presently, inclined to doze, she had taken off her reading glasses and laid them beside her in the easy chair. On awaking she got up to look for her glasses, and walked on those that were concealed under the paper. Then she sat down again to think over what she could possibly have done with her reading glasses. When she remembered, she found she didn't have a whole pair of glasses to her name.

**MORE** glasses are broken between Friday afternoon and Monday morning than in all the rest of the week. This is because people are engaged in active sports over the week-end; but the reading of Sunday newspapers has a lot to do with it, too. I venture to forecast that a thousand newspaper readers in the United States will break their glasses this coming Sunday, and all the accidents will happen in just about the same way: A man will read his paper until about eleven o'clock in the forenoon, then he will throw the sheets on the floor beside the lounge and doze off. Presently, sound asleep, he will roll off the sofa, and when he wakes up he will realize that his glasses are sadly in need of repair.

One of our customers came into the store the other day, and said, "I must tell you of my good luck: I was leaning out a fourth-story window, and when I drew in my head I knocked off my eyeglasses. They landed in the awning on the first floor. I climbed up with a ladder to get them and found they had not broken. They're just as good as ever."

Then I told this man what I think was the most remarkable luck of the kind that ever happened. One evening, I was standing by the window of a room on the eleventh floor of an apartment hotel in Fifty-seventh Street, New York, when the maid opened the door, letting a draft blow through. At that moment I was cleaning my eyeglasses. They caught in the fringe of the curtain, were jerked out of my hands, and fell out the window.

To the astigmatic eye certain letters in this illustration will seem more distinct and blacker than others. To correct this defect, what is known as a "cylinder" lens is required to correct the abnormal curvature of the cornea. Remember that people who have but slight defects are the ones who usually suffer from headaches and nervous disturbances due to eye strain. Small errors can be overcome by the eye muscles, but the strain tells severely. Anyone who has eye-strain symptoms, even though his sight appears normal when tested by vision charts, should consult a refractionist.

With normal sight every line and all portions of an object are correctly pictured without strain. The lines and letters in this "normal" picture on the left should appear equally black and be clearly focused. To the right is a picture which shows how the lines and figures on the left appear to a person suffering from a pronounced degree of astigmatism. Notice that only the oblique lines are clear. Such distortions cannot be overcome by muscular effort. Eyes affected in this way not only see objects distorted, but they have greatly reduced vision. The eye tests on these pages were arranged at the request of this magazine by the Eyesight Conservation Council of America, of New York. School boards, health departments, or individuals having use for vision charts and literature pertaining to conservation of vision may communicate with this organization

The next morning, thinking I might at least salvage the gold nose piece, I hunted around in the area back of the hotel, but found no sign of it nor of any broken glass. I was about to give up the search when I looked up and saw my glasses hanging on the point of a fence picket—unbroken! The nose piece had straddled the point of the picket nicely and the spring had cushioned the force of the fall. I wore the lenses for months afterward, and I still have the frames.

When a man who has only one pair of glasses loses or breaks them, then he not only appreciates the value of his sight but also the advantage of having extra glasses. The other day a man from Chicago broke

his glasses by colliding with another man when he was getting on a street car. He came in with the broken pieces and implored us to make new lenses for him in the shortest possible time.

"I'm in a bad fix," he said; "I've been in New York for two weeks, and have been so busy I haven't had a minute to myself. I'm planning to take the midnight train to Chicago, and this evening I was going to the theatre; but if I don't have my glasses I won't be able to see a thing."

**IT WAS** then one o'clock. I promised the man that he could have his glasses at five o'clock, because we have a rush-order department especially for the service of

people who get into the kind of trouble he was in.

"But did you ever stop to think," I asked him, "that it would be a sensible thing for you to have an extra pair in your traveling bag? You wouldn't think of being without an extra suit of clothes; yet you have only one pair of glasses, and when you break them you are practically a disabled man."

"I guess I never thought about it in that way," he said, "and I've broken my glasses rather frequently, too. While you're about it suppose you make me up two pairs of glasses." (Continued on page 210)

This picture represents what the eye sees with correct vision. Many people who do not wear glasses fail to realize that their eyes give them false pictures of everything they look at. Compare the picture above with the one at the right

The scene below is the same as the picture at left, but the lens of the camera was made to record it just as it appears to a person with an extreme degree of astigmatism. Lots of people see everything distorted just as in this picture, but do not know that they need glasses. When a person has gone for years seeing things distorted, as in this picture, and finally has his sight corrected by glasses, he is apt to complain that his glasses make objects look unnatural, and he is likely to misjudge distances. After getting proper glasses, he actually has to "learn" to see things correctly

# Three Wonderful Dogs

The true story of Frank, Bryan, and Buck—three great hunting dogs possessing extraordinary intelligence and striking individualities

*By Samuel A. Derieux*

**T**HE dogs I am going to tell about were not prize-winners. They never heard of field meets. They lived far from the maddening crowd's ignoble strife, in a town where men hunted birds as they play golf in other towns. They were well-known characters. George Kirby's Thad passed home every morning on his way to business—when he wasn't hunting he hung around George's law office—and sometimes dropped into our back yard to wag his tail. Frank Thompson's Joe loafed around Thompson's hardware store, and was a great favorite with the children because he would let them ride him. West Harris's Frank had a home five miles away, but he regarded Doctor Nott, Mr. Allen, and my father as belonging to him, and he often came to stay with us in town. Ownership of Frank was a technical matter.

These dogs belonged to the landscape; they were intimate parts of the community. Men talked about them as they now talk about their score at golf. They borrowed them from one another as they now borrow golf sticks.

In such an atmosphere I was brought up. My father was a hunter and I was raised with a gun in my hand. I know a thing or two about bird dogs. The three I have selected to tell you about in this article were the finest I ever knew. I am proud to be the biographer of Frank, Bryan, and Buck.

Frank was a big, broad-chested Llewellyn setter, his coat satiny white, with one black spot on his flank, and another black spot that covered one ear and half his head, giving him a truculent, chip-on-the-shoulder expression, such as might be given to a powerful, handsome man who walks down the street with a beaver hat cocked on one side. His eyes were fierce and proud, his bearing aloof, and, toward other dogs, dangerous. He was an individual, was Frank, strong, self-reliant, truculent.

His origin and youth were shrouded in mystery. West Harris, hunting in the mountains twenty miles from town, ran across some mountaineers chasing rabbits with him, paid them five dollars and

brought him home, for West knew a high-bred bird dog when he saw one and just a glance at Frank was enough. But now let's go a little further back. Two years before, some Northern men who had been hunting in those mountains, on leaving the country ran for a time an advertisement in the local papers offering a liberal reward for a Llewellyn pup they had lost. This pup, so rumor ran, was a grandson of Gladstone, a famous dog who sold for some ten or twenty thousand dollars. It seems that they never found the pup.

Sometimes we would wake up early in the morning to find him in the back yard—he had come during the night. Old Aunt Cindy, the cook, had opened her cabin door and "dar he was!" She would bring him in the house with her just to show us who had come, and he would make the rounds of beds and cribs, looking affectionately into half-awakened eyes, bushy tail wagging, long ears thrown back—stately old chap, with such an air of dignity as I have never seen in any other dog or man.

I remember the honor with which he was treated, the breakfasts that were got for him, the warm place by the fire that was his. He came to town always in winter, during bird season; never in summer, which season he spent in the country. Like a wealthy and independent old bachelor was he, with no ties to hold him, but honored wherever he chose to go. His coming meant a hunt; we had to seize the opportunity when it presented itself.

And after these hunts he would lie before the living-room fire, waiting for his bed to be made up on the back porch. It must be a good bed, too, or he would leave. He preferred a light-colored quilt.

He had no use for other dogs. Toward our own he was decent, but that was all. The same independence he showed elsewhere followed him into the field. When birds are shot down a good dog retrieves them—that is, brings them to you in his mouth. This Frank would never do unless the bird fell in a canebrake or in a river, or some other place inaccessible to you. Then he would plunge in, retrieve the bird to the

shore or to the edge of the brake, lay it down and go on about his business.

Another thing: If he thought, after cursory examination, that it would be useless to hunt a field, no amount of commanding, entreating, or threatening could make him hunt it. He was a bit deaf in middle life, for thousands of guns had been fired over his head, and this deafness he would use to his own ends. I have seen him gallop past two men, both of them yelling themselves red in the face, gallop past as if he had (Continued on page 76)

## How Buck "Put One Over" On Mr. Derieux

**P**OOOR old Buck—there was one dish which he would incontinently steal, and that dish was salmon," says Mr. Derieux. "Let my wife fix up a salmon salad, put it on the table, and leave the room. When she got back the plate would be clean, and Buck would be lying before the fire, unashamed, licking his chops.

"Not only that, but he took advantage of me one day. Down the hill from our house was a clear running stream, with a rock on the shore. Here, when we didn't have a servant, I used to skin and clean the birds I had killed, wrap them in a cloth previously provided for the occasion, and bring them home. Now, in dressing them I would put the hearts and livers on the rock beside me, where Buck also sat, and at intervals tell him to 'hie away,' which meant he might eat them.

"At dusk one afternoon, engrossed in my task, I put two birds already cleaned on the rock, and Buck suddenly looked at me. I forgot I had put birds, and not hearts and livers, there, and told him to go ahead. The roar of the stream kept me from hearing the crunching of bones, and when I looked up Buck had eaten both birds. He showed no shame. The look in his eyes was bold and challenging, as it used to be. He had simply taken advantage of a technicality!

"I don't mean that he was a thief; he wouldn't steal anything but salmon; and I never had him take advantage of me again—though I never gave him another chance."

Anyway, Frank came to live among us—the greatest bird dog, my father said, and West Harris said, and Doctor Nott and Mr. Allen said, that ever went into the field. I mention them all because, in a way, they all owned him, for until his declining years Frank never acknowledged a master but spent his time going from one of these men to another. West Harris lived five miles north of town, Mr. Allen five miles south, Father and Doctor Nott in town. According to his whim, Frank came and went, and no man detained him.

# Dot Joins The Ladyslipper Club

A story of the high cost of society

By Fannie Kilbourne

ILLUSTRATIONS BY T. K. HANNA

**E**VERYBODY, I suppose, has an ambition. Father wants to be the exalted grand commander of his Lodge, Mother would like to live in Chicago, Will always wanted to be a sailor until he was one. My ambition was to join the Ladyslipper Club.

You always think of ambitions as something to work for for years, and then maybe not get until you're too old and feeble to enjoy them. That is why it almost took my breath away to have mine come true just three weeks after Will and I were married. On account of a misfortune to Mrs. Carstock, I was asked to join the Ladyslipper Club.

It was a tremendous honor. Dulcie Lane and Rosemary, Howard Merton's wife, were the only two others of the old Montrose crowd who belonged. The other members were the Hill crowd, wives of officials of the Harvester Company, which has just come to Montrose. They come from Chicago and have cars, mostly, and maids, and dinner at night even when there isn't company, and everything like that. They are not, of course, as Will's mother pointed out, the good old families; but I think it would be safe to refer to them as the Smart Young Married Set of Montrose.

The Ladyslipper was a three-table bridge club that met every Friday, and Dulcie and Rosemary nearly died of the honor of being asked to join. And when, just three weeks after I was married, I was asked, too, through the misfortune to Mrs. Carstock, words failed me. It is very seldom that you realize a life ambition just three weeks after you begin to have it.

What happened to Mrs. Carstock was this: She had kept resigning, not being a very good bridge player to start with and also being the kind who can't keep her mind on the game. This irritated Mrs. Curtis, who organized the club and paid for the pins and everything. Anything which irritated Mrs. Curtis always irritated the others, too, Mrs. Curtis's husband being the vice president of the Harvester. They didn't want to put Mrs. Carstock out exactly, so they didn't know just what to do about it.

"Then Mrs. Curtis thought of a peach of a way," Dulcie told me. "She suggested that they drop the club, disorganize, you know. Everybody but Mrs. Carstock was in on the secret, so they all agreed right away. They all gave their pins back to Mrs. Curtis, she having paid

for them, and said good-by. The next Friday, the other eleven met at Mrs. Curtis's and organized again, and Rosemary and I got them to ask you to join."

This is the way the honor came to me. The pins were beauties, too, silver, and made in the shape of a ladyslipper.

"Oh, for goodness' sake, don't let's shed

"I feel kind of funny about this pin," I told Will. "I just know it is the one that belonged to Mrs. Carstock, and it seems kind of like—like—"

"Like taking clothes off a dead man," suggested Will gruesomely.

It really did seem that sort of thing, but, after all, anybody who renigs oftener than just once in a while should have been prepared for the worst in any bridge club.

At the first meeting, which was at Dulcie's, we drew lots to see who should entertain when. To my delight, I drew number twelve, the last of all.

ALAS, could I but have looked ahead and seen how much better it would have been for me to draw a small number, and entertain among the first!

At Dulcie's, we had played just for fun, and had tea and cake for refreshments. Then at Mrs. Laidlaw's she had a prize and served sandwiches, too. Naturally, Rosemary, who had to entertain next, had to give a prize, too, and, wanting the

Hill crowd to see that the old Montrose bunch weren't slow, she had stuffed olives, also.

It was Mrs. Bennett's turn next. Mrs. Laidlaw and Rosemary had given just packs of cards for prizes, so when Rosemary won it at Mrs. Bennett's I expected she'd get another pack; but Mrs. Bennett brought out a mayonnaise bowl and ladle that never cost a cent less than two dollars.

"I feel mean about taking it," Rosie told me on the way home, "because it was Mrs. Bennett who won my dinky pack of cards."

And yet, heaven knows, Rosemary had thought she was doing everything that could be done when she had olives.

The next week, Mrs. Curtis entertained and, to my surprise, she invited us all to luncheon first. Mrs. Crowley, whose turn came next, I knew would follow suit and have us to lunch, too. Right then I began to get uneasy and wish I had drawn one of the earliest turns. Entertaining was getting flossier and more expensive

with each week. Goodness only knew what it would be by the time it got to me!

Will and I keep house on a budget, and I am very conscientious about sticking to it. In order to be conscientious, you also have to be very forehanded, so I began at once. That week we hadn't happened to have any company or even go to a movie, so I took the Entertaining and Amusement money and laid it away against my time to entertain the Ladyslipper Club.

"When does your party come off?" Will asked. "Next week?"

"Oh, no, not for two months."

"Well, for the love of Pete! You aren't beginning to save up two months ahead, are you, just to have a bunch of girls in to play cards in the afternoon?"

"It's like fire insurance, Will," I explained. "You pay for that long before you have a fire."

"Oh," said Will. But he still had a puzzled look.

Mrs. Crowley's lunch was much fancier than Mrs. Curtis's. She had place cards, hand painted, and salted almonds. Will's father gave him a two-dollar commission extra that week for renting the Hartley place, and Will wanted to put it with the five dollars that we had saved up toward buying a Songola sometime in a million years, one of the little ones that you can turn up the living-room rug and dance to, when you have company. I thought of Mrs. Crowley's place cards.

"No, Will," I said sensibly, "we'll just put that two dollars aside. I'll need it when I entertain the Ladyslipper Club."

"Great gosh!" said Will. "What are you going to have—a barbecue?"

I said nothing. There are some things you can't explain to any man.

BEFORE I was in the Ladyslipper Club, I had, I now realized, been almost unsophisticated. I had thought that once you got into society your troubles were over. I suddenly realized that getting in was no harder than staying in after you got in. I never realized how uncertain even an assured social position is until I saw what happened to Rosemary, who thought she was secure in the Ladyslipper for life. I didn't think so much about Mrs. Laidlaw that it happened to first, because she, you might say, brought it on herself.

Mrs. Laidlaw and Mrs. Curtis got to arguing about a hand, and Mrs. Laidlaw spoke a little sharply. Mrs. Curtis said:

"Oh, for goodness' sake, don't let's shed any blood over winning a pack of cards!"

Mrs. Laidlaw kept still then, her husband being Mrs. Curtis's husband's assistant. But she brooded over the matter. That night she called up Dulcie and said that Mrs. Curtis had said that about "winning a pack of cards" on purpose to be nasty, because when she, Mrs. Laidlaw, had entertained, she had given nothing but a pack of cards for a prize.

any blood over winning a pack of cards!"

On my way up-stairs I heard Mrs. Curtis tell Mrs. Oats to come to her house next Friday night. It was true, the flaming hope was a certainty—it wasn't a reprieve, it was a pardon!

She said that to me, too, and she must have to a lot of the other members, because after a while it got to Mrs. Curtis herself. She called the rest of us up and said it was perfect nonsense, she hadn't meant a thing by what she had said, and didn't we all think the club would be better off without anybody quite so touchy in it? We all said we did, but nobody wanted really to put Mrs. Laidlaw out. So at the next meeting Mrs. Crowley suggested that, as it was getting along toward spring, maybe we'd better disband the club.

Everybody agreed right off quick, so Mrs. Laidlaw couldn't say anything. We all gave back our pins to Mrs. Curtis, said what a nice club it had been and other

polite farewell remarks. The next Friday afternoon we organized again, taking in Mrs. Reed and giving her Mrs. Laidlaw's pin.

I MET Mrs. Laidlaw that Friday afternoon out walking with her baby when I was on my way to the Ladyslipper meeting. It seemed terribly sad to me: There, just two weeks ago, that woman had been in society. I turned and looked after her forlorn figure and thought of what the man said about the murderer who was about to be executed; and I said to myself:

"There, Dot Aldrich, but for the grace of God, goes you!"

Not that I would have been as tactless as to quarrel with Mrs. Curtis, but I

might easily have been in Rosemary's shoes. All that Rosemary did was to win the prize five times running. Mrs. Curtis mentioned it to Mrs. Crowley, and Mrs. Crowley spoke of it to Mrs. Oats, and they all thought it looked queer. Dulcie and I, having known Rosemary for years, told them that she had always been a good player and, besides, she had had good hands.

"Oh, I don't say she cheats, or anything like that," said Mrs. Curtis hastily.

"Oh, no," said Mrs. Oats, quickly, "nothing like that."

There was a queer little silence. Then Mrs. Oats, whose husband is efficiency man for the Harvester company and who knows a great (Continued on page 72)

# Tips on How to Write Letters

By Ad Man Davison

AD MAN DAVISON is E. B. Davison of New York. He is an expert on the writing of mail advertising campaigns, is author of "The Master Letter Writer" and numerous other publications on the handling of business correspondence.

**W**HEN you sit down to write a letter, obviously you want that letter to produce a certain result. This is true, whether it is a business or a personal letter. Outside of its mere practical effect, there is a deep gratification in having written something that won your point.

Suppose you are writing a sales letter. You want it to land an order. There must be no ifs or ands about it, you tell yourself. The letter has got to do the work. Therefore, you should straightway focus your mind on the reader's wants, and not your own.

Don't forget that the man who will read your sales letter is interested primarily in things that concern him. This is but natural and human. He is a regular business man, wound up in his own interests. So the letter which starts off appealing to that very much alive self-interest is most apt to make him sign on the dotted line.

Some good books have been written about sales psychology, and also some bad ones. We are likely to overdo this kind of thing. The less so-called psychology introduced into letter writing, the more common-sense study of plain human nature, the better. The person who is a real judge of human nature can write rings around your commercial psychology man when it comes to making people buy things or getting replies to his letters.

But to get back to the sales letter you are writing: You will agree that, after all is said and done, the most important thing about that letter is—the vital force that makes the reader act. Much depends upon the way your letter opens. Your first impulse is to put over a barrage of arguments about your goods or your proposition, whatever it may be. It is only natural that you're "full of your merchandise," so to speak. But experience has proved some things about letter writing that cannot be banished with a mere gesture of indifference. For instance, one is about the over-generous and reckless use of superlatives. Take it

easy, don't chloroform them altogether—but use a mild sedative. He writes best who is sparing with superlatives. They often act a bit like dynamite. They blast many a hopeful sale partly because they have become such an indiscriminate factor in the business letter of to-day.

Suppose you first take careful aim at the reader's desire for more profit. That's a great deal more interesting to him than the most enticing description of your goods. And the thing to do, of course, is not to talk about that which is most interesting to you, but that which is most interesting to him.

Mind, I do not assume that he must be a grasping person with no other thought than his eternal profit. But the merchant in him, we must remember, is foremost. His business instinct is always on the job.

exactly what I would do if I were you.

Think back a moment. Can't you remember letters you have received that started out in the very manner suggested? Somehow they got you to reading, somehow you were led on, somehow they made you stop and think. And often you wrote back, asking the price, or for more information, or you sent in your order then and there.

This letter about barn paint achieved a brilliant record as an order-getter:

DEAR SIR: That barn of yours! Think of it a moment—the storehouse of your farm. It holds the rewards of your season's labor until they're marketed. A mighty important building, you'll admit.

You wouldn't feel safe if it were not protected against fire; yet it is a fact that more barns are destroyed by paint neglect than by fire—and paint's a whole lot less expensive than insurance. It is the cheapest form of protection for you.

A run-down barn may require \$150 to \$200 to repair, when \$10 or \$15 spent for paint in time would have avoided most of that expense.

Everlasting Paint is strong and lasting, good for sides and roof, combining two important features for you—durability and economy.

You feel a fine sense of safety and saving about this barn paint once you use it. In your town Everlasting is sold by Wilson and French. See them to-morrow. It will preserve your property and your peace of mind.

Cordially yours, —

One of the hardest letters to write I believe is the letter that applies for a position.

When we look for a position, we are usually eager and sometimes in an awful hurry. We hear of a vacancy or see an advertisement that looks promising. We want the job, and as a rule want it badly. So we are likely to sit right down anywhere and dash off a

hurried application. Very naturally, we forget all about the appearance of the letter. The chances are that we are even careless about our English, and often, in our haste, we do not spell correctly. Sometimes we go to extremes in carelessness: we use a hotel's stationery without being the hotel's "guest." Or we use a cheap writing pad and an indifferent envelope that doesn't match.

Of course the employer doesn't know how hurried and worried we were when we wrote. He really ought to make excuses for the poor appearance of the letter, we seem to (Continued on page 194)

## Mr. Davison Tells in His Article Why This is a Good Letter

**D**EAR SIR: I have just read your advertisement. You evidently want someone who understands what are the real duties of a secretary. He must

- transcribe your dictation accurately, promptly,
- "proof read" his letters for possible errors,
- receive your callers politely, civilly,
- separate the important ones from those who should wait or come again,
- open and assort your mail,
- make a list of your engagements, reminding you of them at the proper time,
- keep your personal accounts,
- keep your business to himself.

My experience covers eight years of stenographic and secretarial service, with knowledge of bookkeeping. Age, 25 years. Unmarried.

Let me come and see you. I feel confident of fulfilling your requirements. My telephone is Main 6000.

Yours very truly,

It is often a very simple matter to set off the fuse that ignites the buying impulse. You can do it, not by dwelling too strongly on how good your merchandise is but by showing how good a business builder it is for him; not by revealing how badly you want the order but by showing how badly he needs the goods; not by reverting to canned selling arguments but by painting a picture in his mind of better business and more satisfied customers.

You will say it is hard to put aside your regular selling arguments entirely and think only of his wants, desires, or likes and dislikes, in your letter. But that is

"Oh," she sighed, her eyes resting mournfully on Laurel's back as she stood before the sink, "it just almost kills me to see you doing work like that, Lollie"

Her mother! Her wonderful mother! And they had called her  
"That woman!" "That awful creature!" "That damel!"

# Stella Dallas

The story of a great love

By Olive Higgins Prouty

ILLUSTRATIONS BY J. SIMONT

STELLA kept her eyes steadfastly fastened upon an urn spilling over with geraniums on the terrace outside when she spoke again. "How's Stephen now?" boldly she started out.

"I think he's well," smoothly Mrs. Morrison replied.

"I suppose you see him now and then?"

"No. The last few times Laurel has visited me, Miss Simpson has brought her and taken her away. Stephen and I haven't met for two years."

"Oh, that so," Stella looked back at Mrs. Morrison. Gracious! What had happened? The shiny look had all gone from her eyes and the light from her expression. She looked gray, ashen, and old, terribly old.

"Look here, Mrs. Morrison," Stella went on. "I'm not going to beat about the bush any longer; I've been thinking a good deal lately of the advantages to me if I got things fixed up between Stephen and myself. But before I do any more thinking, I want to find out how things are now between Stephen and you."

Helen's clasped hands tightened upon her knee, but she showed no feeling when she spoke.

"Mrs. Dallas," she said, "I don't want to be unkind; but self-denial, our duty to others, the toll that must be paid for mistakes, separation from each other—nothing will ever destroy that which exists, even though without form or expression, between Stephen and me."

Stella looked puzzled: "But what I want to know is, if Stephen was free, if I stepped aside, the way he suggested, would you two get married?" (Might as well come right out with the nub.)

"We would," Helen replied.

"Are you sure?"

"I'm sure."

"But you haven't seen Stephen for two years."

"I know, I know. Oh, I'm sorry, Mrs. Dallas. But the truth is best. I think you want it."

"It's what I came for."

"It's what I shall give you, even though it costs me Stephen himself."

"Well, the next thing I want to get clear is: if you two did marry, what about Laurel?"

"If we did—" Helen drew in her breath quickly. "Why, if we did—if we did—"

"Yes, if you did, what about Laurel?"

Helen let her breath out ever so carefully, ever so carefully drew in another.

"Oh, Laurel! Laurel is yours, Mrs. Dallas. A child is always her mother's, I think."

"You mean, Laurel would keep right on making her headquarters with me, the same as she does now."

"Why, of course. I am a mother, Mrs. Dallas. Once, I was the mother of a little girl. My little girl would be just Laurel's age now. As long as I live I shall never be guilty of robbing any woman of her only little daughter."

Stella glanced down at her shoe, out upon the terrace, back to her shoe again, cleared her throat, then boldly raised her

stop to ask, that Laurel was yours. Gracious, she's enough like you—dark and slim as a smokestack, and you've been her model for years, as far as ways and manners go; and when you begin to do things for her—like giving her, well—a coming-out party, or something—you know she's seventeen now—why then, the invitation cards, 'Mr. and Mrs. Dallas, and Miss Dallas' would read right, don't you see. I've thought it out. And later, if one of the nice young men in your circle fell in love with Laurel, and married her, why then again it would read right in the papers and society columns, where those things are printed. And the same way," Stella pursued, warming to her subject, "at hotels and places when you have to register—that is, if you should travel with Laurel in Europe, or California. Laurel

really ought to travel. It is so expensive, I couldn't manage it myself, what with all the private lessons in riding, and skating, and dancing and music, and heaven knows what not. "You'll find she's quite up in those things. Oh, really," earnestly, eagerly she hastened on, unaware of the increasing wonder and surprise in Helen Morrison's wide-open eyes, "really, if you do want a daughter of your own to take the place of that baby you spoke of that died, I'll say this, I don't think you'll ever be ashamed of Laurel. She takes after her father, and if you're crazy about her father, why, it popped into my mind, that—

honestly I can't see a trace of me in Laurel. Nobody can. She's so refined, and sort of elegant in her ways. Oh, you needn't have a minute's doubt about what sort of a success Laurel will make if you should bring her out in New York society sometime. Why, if that girl didn't have me shackled round one foot everywhere she goes, she'd just soar. And another thing I want to make clear to you, don't be afraid I'll be appearing at embarrassing moments. I won't ever. I've got some common sense, thank heaven. I know what sort of an impression I make, too."

There was no mistake about the tears in Helen's eyes now. She rose, went quickly over to Stella, sat down on the arm of her chair and put her arm about her shoulders: "I see! I understand!" she exclaimed softly.

eyes to Helen's: "But if the woman didn't want her daughter. I mean if she couldn't have her very well, if it was inconvenient—"

"Don't you want Laurel, Mrs. Dallas?" Helen exclaimed.

"Oh, of course, I want her; but, you see, she's a great expense now, and I haven't many maids—no one to leave her with. I'm quite tied down by her, and—"

"Oh," broke out Helen, and again her eyes were shining. "I'd love to have Laurel! I'd love to have Laurel, even if I had her without Stephen."

"No, that wouldn't do," said Stella, hard and practical, her eyes shining too, but not with tears—with triumph. "If you were married to Stephen your name would be Dallas then, and Laurel's name would be Dallas, too. Don't you see? And everybody would think, who didn't

Stella stiffened. Nowoman had ever understood before. She had never understood herself. The undercurrent of her life had been flowing beneath the surface waters, unnoticed, unobserved, for years, wearing a deeper and deeper channel, gathering strength and power in its hidden course. But not until Mrs. Morrison put her arm around Stella had anyone looked down through the flotsam and discovered the crystal waters underneath.

"Everything shall be as you wish," said Helen. "Everything. Travel and parties, and friends—everything that to you means happiness for your child. I'll treat her as my very own, but she will always be yours. You will not lose her. You shall see her often. We'll arrange that. Oh, I wonder if I could have done so big a thing for my little girl."

STELLA dabbed her eyes with her handkerchief through her veil, struggled to her feet, dabbed her eyes again, bit her lip hard. Good gracious, she mustn't break down and bawl like a baby.

"I'm an awful old fool sometimes lately," she murmured.

"Don't go. Sit down again, please. We've so much to talk about. I've got so much to learn."

"No, I can't. Laurel thinks I'm in Milhampton, and I must hustle along to Boston to-night, or she'll get suspicious. You've got my idea. There's no need of staying any longer. You tell Stephen I'm ready to get the divorce any day now, and the quicker the better. Only tell him, for goodness' sake, don't put that man Morley Smith on it. I don't believe I could meet that excrescence and be decent to him. Every time I think—but never mind. That's all over. Oh, by the way, one thing more: When Laurel is down here this September visiting you, don't tell her what's up. I can't stand long-drawn-out good-bys. I may mention I'm getting a divorce, but I sha'n't tell her what for. Don't let on a word till we're ready to shoot. You and Stephen get married, have Laurel down for a Sunday. I'll send her clothes on afterward. Something like that. I've thought it out. No soft-music, sob-stuff for me, thank you."

Eyes still big with surprise, heart still pounding with wonder, Helen gazed at Stella. She saw all the crudities, she heard all the crudities (how Stephen must have suffered!); she was aware of the cheapness, the unloveliness; but oh, there was beauty too—beauty that awed and silenced her.

Helen and Stephen stared at her. They

Unaware of Helen's deep contemplation, Stella inquired abruptly, "Is this the living-room?"

"Yes, this is the living-room."

Stella gazed at the high dignified walls silently a moment. "I can just see her in it, entertaining her young friends, walking around on that terrace with Richard Grosvenor—he's somebody your sons know, a young man that is just crazy about Lollie—walking along in her slow, grand way under the big aristocratic-looking trees down there; yes, it will suit her fine. That's why I wanted to come out—to see

what it was like. I walked by your city house last night. It was closed, but I could get an idea. I suppose you think that's funny, but I've picked out Laurel's clothes so much—" She stopped. "I couldn't see some of the other rooms, could I? I'll never be here again, and, well—you know, it's sort of nice to be able to think of a person in a house, or a room you've seen yourself, when they write. I thought Laurel and I might write."

"Of course you'll write. Oh, it will only be as if she were away at school or college, having all the things you want her to

had never felt the steel in Laurel before

have. Come out into the dining-room. Come out into the garden. Laurel loves the garden. And then come up-stairs. The violet guest-room is hers. Come up and see her pretty valanced bed."

STEPHEN sat in his office, fifteen floors above the sidewalk and street thermometer, that registered ninety-five. He sat in the gentle breeze of two silently revolving electric fans, placed slightly above his head. He sat in front of his desk in a big chair with his elbows on its arms, and his hands folded. He was dictating, gazing

out of the high window toward the northeast, with a look in his eyes as if he saw a hundred miles away.

To-day, as Stephen sat and gazed, searched and selected, he was aware of the heat, aware of the rumble of the city outside, aware of the loud, insistent pound-pound-pound of a riveter at work near by, aware of his own fatigue, too. He sighed deeply now and then. When Stephen was tired, and gazed out of the high windows in the direction of the green lawns and white beaches of Long Island, there was a Helen between every careful phrase that

he spoke. At a quarter of one that day, or thereabouts, Stephen raised his wrist and glanced at his watch.

"Time for one more, I think, Miss Mills. Pretty hot, isn't it? Can you stand it? All right. Ready."

He was attacking a difficult second paragraph when there was a repressed burr at his side. He frowned, turned away from his engrossed contemplation of the space outside his window, and reached for the telephone, supporting it upon his chest as he leaned back again and spoke into it.

"Who is it?" he asked.

"Long distance. Green Hills, New York, Mrs. Cornelius Morrison," the operator in the outer office announced.

IT WAS as if a current of electricity passed through Stephen. Though he didn't move a hand or foot, Miss Mills observed his sudden alertness, the sudden tightening of the muscles around his jaw and cheek bones. Discreetly she turned away.

"Connect me," she heard him say. Then he turned to her. His eyes were like spots of phosphorescence. "We'll finish that later. I'll call you." He nodded toward the outer office. She rose. "Please close the door."

Alone, Stephen leaned forward, placed the telephone on the solid foundation of his desk, drew his chair close to it, jerked himself to the edge of the chair, crouched over the telephone eagerly, cupping his hand over the transmitter.

Helen's voice sounded clear and sweet, as if she were in the very room beside him. He hadn't heard her voice for two years.

"Hello."

"Hello, Helen."

"Is it you, Stephen?"

"It's I, yes. What is it? Are you all right?"

He caught her little laugh.

"Oh, yes, yes! I'm all right. I called you up to find out if you had an engagement for to-night."

"What do you mean?"

"Well, have you an engagement?"

"No. Of course I haven't. But—"

"Then could you come down this evening?"

"Helen, what has happened?"

"Nothing awful. Could you?"

"About eight o'clock?"

"Yes, eight o'clock. All right. But Helen, please—"

"Eight o'clock to-night, then. Good-by."

She had sent for him! Helen had sent for him to come to her! At one o'clock, at half-past one, at (Continued on page 146)

There are tips here for salesmen, advertising men, editors, preachers, actors—everybody who is anxious to find out what people want

# A Man Who Draws a Crowd Because He Knows Human Nature

The story of W. L. Stidger, of Detroit, who understands how to reach folks through their eyes, their ears, and their hearts—he describes here some of the methods he uses to “get the people coming”

*By Allison Gray*

**T**HERE'S a preacher in Detroit who has written a book called “Standing Room Only.” A queer title for a parson's book! But if you interpret “queer” as meaning “unusual,” this particular parson—the Reverend William L. Stidger, known to hosts of his friends as “Bill” Stidger—is about as queer as they make 'em.

He was a newspaper man before he entered the ministry. While he was still in the high school at Moundsville, West Virginia, he began to work as a reporter. After he left school he became sporting editor and later city editor of the local paper. Then he joined the staff of the Wheeling (W. Va.) “Intelligence.”

All of this happened before he entered Allegheny College. There, and at Brown University, he paid most of his expenses by reporting. During those years of newspaper work, he “covered” everything, from a double hanging to a college commencement. As training for the ministry, it sounds “queer.” But “Bill” Stidger declares it was the finest ever.

“I wish every theological student had to serve at least a year as reporter on a daily newspaper before being allowed to graduate from the theological seminary,” he said to me. “It would teach him to know life; and a preacher needs to know that, more than anything else. In fact, every man and every woman needs that knowledge.

“In my newspaper work, I got to know

all kinds and conditions of people: crooks and clergymen and chorus girls; high-brows and low-brows; good people whom society labels ‘bad,’ and bad people who bluff the world into calling them ‘good.’

“A man may say that he doesn't need to know all these specimens of human nature because he doesn't have to deal with them. A woman may say that she couldn't learn

be a submerged clergyman in a crook. And I guess,” he added with a laugh, “there's a bit of the prize-fighter hidden in some of us preachers.

“Whatever success I have had as a minister is largely due to the fact that I have had contact with all kinds and conditions of people. I am constantly studying them. In my business as the

head of a church, I must do two things: I must get the people to come to the church. And when they do come I must make them believe in the gospel I am there to preach.

“I am literally ‘in business.’ I am ‘selling’ the religion of Jesus Christ. I believe in the ‘goods’ I am selling. I know I can make other people believe, if I can get them to come and let me tell them about it. But I can't sell the Gospel of Christ by talking to a lot of empty benches. So my first big aim is to fill those benches.

“A preacher once said to me: ‘I would do anything to get folks to come to my church! I'd stand on my head. I'd play dead dog. I'd climb a pole. I'd use pictures, dramatics—anything to get the crowd to come! I've got a message. But what good does it do

anybody if I don't have a chance to deliver it?’

“I know he wouldn't really do anything to draw a crowd. Neither would I. But I will do anything that is legitimate; anything which, from my knowledge of human nature, I think will attract and interest people and also prepare them to respond

PHOTO BY J. WELLS CHILSON, DETROIT

William L. Stidger is pastor of St. Mark's Methodist Church, in Detroit, Michigan. He prides himself on being “a regular fellow,” a friend and comrade to his people. He began newspaper work when he was a high-school boy and continued it as a means of paying his way through college. He says it is splendid training for the ministry because it teaches a man to know all kinds of people. St. Mark's is his third pastorate. In each case he has tackled a church which was struggling for existence. And in each case he has made the church a strong one, morally and financially. He believes in advertising and has a keen sense of how to do it effectively

anything from them that would be useful to her, because she doesn't have to meet anybody but her husband, her family, and her friends.

“But I want to tell you that every human being has a lot of latent possibilities within him. There is something of the madonna in every magdalen. There may

to the message I have for them."

That Doctor Stidger does know what attracts and interests people is proved by his record. He is now pastor of St. Mark's Methodist Episcopal Church, in Detroit. This is his third pastorate in the nine years of his ministry. In each case he has gone to a church which, figuratively speaking, was sending out an SOS call for help. And in each case, he has changed the SOS signal to S. R. O.—Standing Room Only.

**I**N OTHER words, his churches have been packed and hundreds have been turned away. Some people say he is sensational; that he uses "vaudeville methods." He doesn't agree with them and neither do I. He draws crowds, simply because he knows what appeals to our interest. He understands the human heart, the human mind, and the human body. And he believes that we have got to understand *all three*, if we want to "get the people coming" to us.

For instance, he knows the power of advertising. He thinks it is just as necessary to advertise religion as to advertise rubber tires. The first church of which he became pastor was Calvary Methodist Church, in San Francisco. It was a beautiful little building that had been erected out among the sand hills, on the theory that if the church was put there it would draw a congregation.

On the morning after his arrival the young preacher hunted up the janitor in charge of the church and went over to take a look at it. He found that a lot of sand had drifted in around the windows and doors, and he mildly suggested that it would be a good thing to get rid of this.

"Sure!" said the janitor.

PHOTO BY J. KELLY CHURCH, DETROIT

Every Wednesday night is "Food, Faith, and Fun Night" at St. Mark's. The picture at the left shows the crowd that comes for the "Food" part; a supper attended by several hundred, including many family parties. This is followed by the "Faith" part—the prayer meetings. The picture above shows only one of these meetings. Several of them are going on simultaneously in different assembly-rooms, the crowd being divided into Adult, Intermediate, Junior, and Primary. Afterward comes the "Fun" part, consisting of games in the basement gymnasium. The picture below shows a Sunday-night audience. It often numbers three thousand persons. In the accompanying article Doctor Stidger tells how he draws these crowds.

tor. "I'll sweep it out. But," he added grimly, "you'll find you'll need plenty of sand in this job."

**IT DIDN'T** take very long for Doctor Stidger to decide that the janitor was right. The first Sunday he preached to a congregation of only six persons! For several months that was the average attendance.

"I thought I knew what the trouble was," Doctor Stidger said to me. "The church was there—but the people *didn't* know it! The average person can pass a building every day in the year without being really conscious of it. There were plenty of folks in that district, I was sure, who would come to the church if I could wake them up to the fact that it was there."

"Now, here is something you may not have thought of: Night is a good time to advertise. Why? In the first place, night is the time when people are not occupied with their pressing affairs. They have time to look around them. They will notice things then that they don't even see when they are hurrying along in the daytime. During (Continued on page 124)

# Experiences of a Buyer

Last year we bought \$411,000,000 worth of retail goods—To do this we had to study your likes, dislikes, habits, and prejudices—As a result I may be able to tell you some interesting things about the people in various parts of the United States

*By Alfred Fantl*

A FEW months ago, a lady of Bloomington, Illinois, while turning over the leaves of a book of poetry into which she had not looked since girlhood, came across a pressed rose. What pleasant

reminiscences it evoked I do not know, but I do know that the lady said to herself: "There! That is just the color for my new georgette!"

Taking the flower with her as a "sample," she went to a department store and asked for georgette in just that shade of rose-pink. Instead of telling the customer that rose-pink georgette was not to be had, the clerk called the buyer for his department, and the buyer, finding that the customer particularly wanted that very color, promised to get it for her without fail. So the rose was sent to my headquarters in New York and I was advised that the store wished to fill the order for one of its regular patrons.

Two of my assistant buyers, specialists in silks, searched the New York market, but nowhere could the desired shade be found. Consequently, we bought white georgette, had it dyed the exact shade of the pressed rose, and forwarded it to the department store. When the material was delivered the customer was delighted and wrote to the proprietor complimenting him upon the unusual service.

Back of the pains taken to fill this order there is a very sound principle. When you go to a store and ask for some article which cannot be supplied, the chances are that you will go elsewhere in quest of it. Then, the store where you went first sustains a loss which is known as the "missing sale," and it sus-

tains a still further loss if, as a result of this first purchase elsewhere, you cease to be a regular customer. This is one of the reasons why many department stores throughout the country make a practice of having what is known as a "resident

originally set. Her trousseau had to be prepared in great haste, and the young lady's parents consulted the manager of a local department store. "All you have to do," said the manager, "is to give me the sizes, and I will undertake to have the trousseau here within two weeks."

An order for a trousseau to cost six thousand dollars was then telegraphed to me. My buyers immediately went into the market for hats, shoes, dresses, lingerie, and the complete trousseau was delivered in El Paso by the date set.

Some time ago a man went into a department store in Chicago and chanced to remark to the salesman in charge of the motor accessories that he was thinking of buying a certain make of French automobile which is not sold through any agency in the United States.

"I'd be glad to order it for you," said the salesman promptly.

"I don't know how you're going to do that," laughed the customer, "but if you can deliver the car inside of two months I'll take it. If not, I'll buy it when I go to Paris and bring it back myself."

Within a few hours an order for the car had been delivered to the makers through one of my buying representatives in Paris. The car was actually delivered to the customer in Chicago at the end of six weeks.

One day in January two years ago a lady in Reno, Nevada, went out

for a stroll, taking along her poodle. The weather was chilly, and she noticed that the poodle seemed to be suffering from the cold.

"Nice little Puggsy-Wuggsy," said the lady, "we'll go to the store and buy you a sweater just like mine."

ALFRED FANTL

Alfred Fantl is known as the world's biggest buyer. He acts as buyer in the New York market for 159 department stores and specialty shops, located in all parts of the country. Each of the stores he represents does a business of at least \$500,000 a year. The total retail value of the goods purchased by Mr. Fantl for these clients last year was \$411,000,000. While Mr. Fantl buys all kinds of merchandise required for the regular trade of his clients, he likewise executes any order an individual customer may place with one of his clients. No matter whether an individual customer in Boise, Idaho, or Ontario, Oregon, wants a particular shade in dress goods, an exotic perfume, or a foreign make of automobile, the want can be quickly supplied by the local store through the resident buyer in New York. Buying the vast quantities of merchandise required by his clients, Mr. Fantl employs forty-three assistant buyers, each a specialist in some one line of merchandise. He also maintains a large corps of assistant buyers abroad, fifty in Paris, twenty-eight in Berlin, and sixteen in Vienna. Mr. Fantl was born in Carlsbad, Bohemia, in 1866. When nineteen years old, he came to the United States to work as shipping clerk in a department store in Savannah, Georgia. After sixteen years' experience in buying and selling every line carried by the Savannah store he became merchandise manager for a department store in Brooklyn. He began as "resident buyer" in 1906, when he represented two clients—a store in El Paso, Texas, and another in Los Angeles, California

buyer" in New York. Besides purchasing goods to be carried in stock, the resident buyer fills all kinds of special orders.

Recently the date for the wedding of a young lady in El Paso, Texas, was advanced several months ahead of the one

At the department store where the poodle's wants were made known no dog sweaters were carried in stock, but dog blankets were shown the customer.

"But I want to get a slip-on sweater for him just like mine," she explained, opening her coat. "Could you get me one?"

"I don't know whether they are made or not, but I'll try," said the clerk.

The lady gave her order for the slip-on sweater and then, to protect Puggsy-Wuggsy during the chill interim, she purchased a dog blanket. When the order for the sweater reached us, we found that it was necessary to have it made specially as it called for heather mixture with a black and purple border.

When Puggsy - Wuggsy appeared on the street in his new slip-on sweater, the other dogs of Reno seemed to regard his comfort and stylishness with envy. There was immediately a demand for slip-on sweaters for dogs big and small. To meet the demand we had to have three dozen more made in small, medium, and large sizes.

A MAN in Terre Haute, Indiana, who wanted to give his married sister a fine bull terrier as a playmate for her children, laughingly said one day to a floor walker in the department store, "In which aisle will I find bull terriers?"

"Not in stock," said the floor walker; "but we'll be glad to order one for you."

As a result of the jest I received by telegraph one of the few orders I have ever had for dogs. The following day there appeared in a New York newspaper this advertisement:

Wanted: A Boston bull terrier with pedigree to eat everything and especially fond of children.

I had an idea that an advertisement reading that way would attract considerable attention. It did. More than a thousand dogs were offered to fulfill the specifications. In the end I had to employ a dog fancier to make the best selection. Finally, we shipped to the Terre Haute department store by express a very fine blue-ribbon specimen of terrier with a most admirable pedigree.

Late last spring a public-minded citizen of Peoria, Illinois, decided that he would give himself a treat by taking a hundred boys of his city to spend the summer at a camp in the Adirondacks. It was rather late then, as he thought, to make adequate preparations, but he went to the manager of a department store to inquire as to the possibility of getting prompt delivery of the necessary camp equipment. He was much surprised to learn that the

department store could deliver the equipment to him in the Adirondacks without any delay. The order was sent through my office and the entire equipment—tents, cots, bedding, cooking utensils, collapsible boats, even flashlights and vacuum bottles—was, in fact, delivered at the site of the camp within two weeks.

Years ago it was the rule for dry-goods and department stores to send their buyers to New York whenever stocks were to be purchased. Recently, however, many

fashion publications the people in the smaller towns are constantly in touch with changing fashions. They do not want to wait for New York or Chicago to be through with a style before trying it out themselves. From experience we know that styles in dresses, millinery, necktie fabrics, and sports clothes, which are seen on Fifth Avenue for the first time to-day, will be worn in Boise, Iowa, and Phoenix, Arizona, not much later than tomorrow.

As resident buyer I represent 159 stores, which are located in all parts of the country. Each of these stores does a business of not less than \$500,000 a year. Thus, my organization represents a tremendous purchasing power, the retail value of the goods we bought last year amounting to \$411,000,000.

It would be impossible, of course, for an individual to buy the goods required by all these stores. I have forty-three buyers, each a specialist in some particular line, such as piece goods, ready-to-wear garments, men's furnishings, children's wear, underwear, shoes, house furnishings, jewelry, stationery, leather goods, and toys.

BESIDES being specialists in these lines my assistants and I have to be specialists about *you*—the people who are going to select or reject the things we buy. We have to know your likes, dislikes, habits, and prejudices. As a result I may be able to tell you a lot of interesting things about the people in various parts of the United States.

A man in my office here in New York the other day said he would have to leave in a hurry because he was just starting on a trip to San Francisco, and on his way to the station he must buy a hat. I happened to know that he had not been West before, and so I asked him what kind of hat he was going to buy.

"A derby," he said. "That goes anywhere, and it does not take long to pick it out."

"Better buy a soft felt hat," I said, "or you may be lonesome when you get out West."

This man, like many Easterners who have not traveled much in the United States, was surprised to learn that very few people along the Pacific Coast and in the Middle West wear derbies. The fact is, however, that seventy-five per cent of all the derbies made are sold in the states along the Atlantic coast.

More umbrellas are sold in California during the rainy month of December than are sold in any other one state in two months. You may (Continued on page 220)

## The Man Who Wanted 365 Neckties

"THE largest sizes in men's and women's shoes," says Mr. Fantl, "are worn in northern Minnesota. Not infrequently we have to place special orders for men's shoes in size 14 and for women's in size 12. The largest dress ever made, I believe, except possibly for some circus fat lady, was one we had made to order for a woman who lived in the same region. She was six feet three inches tall, and her chest measure was sixty-two inches.

"More brightly colored socks and neckties are sold in California than in any other state. It is my impression, however, that the brilliancy of the hose worn in Seattle is second only to that worn in San Francisco.

"The other day a man went into a store in San Francisco and looked over the entire stock of neckties. When he had finished, he had laid aside twenty.

"Are these all the colors you have?" he asked.

"Did you want more?" asked the clerk in surprise.

"The time has come," returned the customer, "when I can afford to have a different-colored necktie for every day in the year, but all the stores I have visited are short of colors. My idea in wearing neckties would be to begin at one end of the spectrum, red say, and day by day advance one shade toward the other end until I reach the last gradation in violet."

"The result of this conversation was that we received an order for the year's supply of neckties. Finding it impossible to buy enough different shades to fill the demand, we had a manufacturer make them in crêpe that had been dyed according to the customer's specifications. There were neckties in thirty different shades of red, forty different shades of blue, twenty-five shades of green, and so on. The year's supply cost the Californian a trifle over five hundred dollars."

stores have found that it is impossible to supply the wants of the people of a progressive community unless they are represented by a buyer who is in New York all the time and in close touch with market conditions and changes in styles. The people in the small towns and cities want the same opportunity to get "bargains" that the people in the large cities have, and they are also very keen about having new styles in wearing apparel. Through the moving pictures, newspapers, and

# INTERESTING PEOPLE

## 21 Years of Begging—for Other People

MARTHA BERRY sat opposite me, talking rapidly, almost feverishly, about "the cause," to which she has given more than twenty years of her life. I had known about it before, and had been interested.

She wasn't asking me for money; she was just telling me the story of her work. But suddenly I was conscious of the note of weariness in her soft Southern voice, and I realized how many times she must have told that story with the hope that it *would* bring in money.

But when I said something about this she gave me a startled look, as if I had surprised a secret. Then she said slowly, "Can you understand what it means to have been *begging*, for *twenty-one years*? Always to be planning, hoping, praying, that people will give you money?"

"In the course of a year, I talk to hundreds of people and write thousands of letters. I don't come out bluntly and ask for money; but the plain truth is that I am always hoping to *get* money! I have been doing it—and *hating* the doing—for twenty years. If I live twenty years longer, I suppose I shall still be doing it.

"Of the money raised in this way, I never take a penny for my own use. I pay my expenses out of my personal income. I wouldn't beg *once* to get a million dollars for myself! But I will beg—by implication at least—a hundred times, if necessary, to get five dollars, or *one* dollar, for the work I am doing."

This work, for which Martha Berry has given her time and sacrificed her pride—has it been worth the cost? She was born in Georgia; was educated by private tutors and at a fashionable boarding-school; traveled in Europe; knew the ways of "good society," because she herself belonged in that class. She might have lived a life of ease and pleasure.

Twenty-one years ago, she fitted up a little cabin across the road from the family home. It was on a tract of two hundred acres which her father had given her.

This cabin, which had been her playhouse when she was a child, became a sort of private retreat where she could do her reading, sewing, writing—and dreaming.

One Sunday she overheard some children talking outside this cabin and found that they were from Possum Trot, a tiny settlement about eight miles away. When she asked them what they usually did on Sunday afternoons, they replied: "Noth-

ing," and she began to dream of a school where they could live and could be taught *how* to live.

Out of that dream has come what Theodore Roosevelt called "one of the greatest practical works for American citizenship that has been done." It is known far and wide as the Berry Schools. Miss Berry gave it the two hundred acres she had received from her father. She

planned the first building, paid for it herself, and, at the end of the first year, had about thirty boys living there.

Last year about seven hundred boys and girls, young men and young women, were enrolled. Hundreds of graduates have gone out of Berry School to become useful citizens. Large tracts of additional land have been acquired and three distinct schools, with a total of ninety buildings, are maintained. A staff of seventy-five men and women is employed. Several model farms are conducted, the work be-

ing done by the students.

Not all these students are from Georgia. Some have come from other states and have gone back to their homes to set up new centers with the same ideals and purposes. But all the students have been poor, without advantages, and without the means or the opportunity to obtain them. They work their way through the Berry Schools; but, even so, there are expenses that must be met. It is to meet these expenses that Martha Berry tells and retells the story of the "cause" to which she has given her life.

The schools are incorporated. There is a board of trustees composed of prominent men in various cities. There is a comparatively small endowment

fund. And the whole institution is a monument to the woman who not only dreamed a fine dream, but took her dream on her shoulders and carried the load up the long trail to its realization. That is what most people *won't* do with their dreams.

The school is supported by thousands of small contributions; chiefly those of from five to twenty-five dollars each. It has

In the upper picture Miss Berry is shown with one of the graduating classes. To the right and left are students and the faculty. Lower picture: Miss Berry tries her hand at Myrtle's plow. Myrtle, sixteen years old, was the sole support of her family. Even with the old mule's help, it was a tough job

in'." So she invited them to come again the next Sunday, promising to tell them stories. They came; and she did tell them stories—from the Bible.

Before long she had organized several Sunday-schools for other settlements back in the hills; and she had been appalled by the poverty and ignorance in which these young people lived. She realized how little could be accomplished by this once-a-

been praised by men like Roosevelt, Taft, Wilson; by United States senators; by members of Presidential cabinets; by judges, educators, preachers, business men, philanthropists. And it is all due to the tireless effort of one woman. No, that's wrong! Not "tireless" effort; but

effort that goes on and on, in spite of being tired. And always there is the hopeful looking ahead to a sufficient endowment. Over four thousand students, most of them boys and young men, have been graduated from the school at Mount Berry, that being the name of the post

office. Of this number, 62 per cent are trained farmers; 10 per cent are school-teachers; one per cent are ministers and social workers; seven per cent are housewives; the remainder are chemists, lawyers, machinists, and so on.

MARY B. MULLETT

## Blind, He Repairs Autos and Leads an Orchestra

**T**HE career of W. C. White, of Boyles, Alabama, may easily be called "unique," for, though he is totally blind, he works by day cheerfully overhauling automobiles, cleaning transmissions, and putting on tires, while at night he plays the piano and manages an orchestra.

When a child of three years, the future mechanic fell against the sharp corner of a table, his injury causing him to lose the sight of one eye. Two years later he became totally blind. White realized the need and importance of special training when still a boy. He went to the School for the Blind, at Talladega, Alabama. His chief study was music, and at the end of the tenth session he returned to his home not only an accomplished musician but with that self-confidence and ambition to succeed which is so necessary for competent work, and for which the ability market is ever open. To-day, he is not only pianist and manager for an orchestra made up of violin, drum, and saxophone but is also manager of the White and Wallace Garage, at Inglenook, just a few miles out from Birmingham, Alabama.

In spite of his blindness, Mr. White says he "can put on a tire or repair an automobile as easy as falling off a log."

"I have been an automobile mechanic for five years,"

he said; "for the past three years in this one place. I did not study this business before entering the garage but just gradually picked it up, and while I cannot drive an automobile on the open road because of my blindness, there is very little about a car that I do not understand and cannot do."

While there are many other men working in the garage with Mr. White, they do not in any way assist him, as one would imagine. He has a place for all his tools, parts, and equipments, and it is no trouble for him to find what he wants.

"The men in the garage," said Mr. White, "never move anything after I put it down. Fixing automobiles comes just as natural to me as playing the piano. Music is my delight and vocation. My

orchestra has been organized only about three months, and we have as many nights devoted to practice as to engagements. The other men in the group are not blind like myself, and for some reason our orchestra has never been given a name. We play for numerous events, but dances take the lead on the list of our engagements."

In 1914, during the baseball season, Mr. White was business manager for a ball club. While taking no active part in the game, he is very fond of the sport. When he wants recreation he takes a swim or a walk, and occasionally sings.

W. C. White, though totally blind, repairs automobiles, leads an orchestra, writes his own business letters on a typewriter, and manages a baseball club. His blindness was caused by an accident in childhood, but he has never been despondent over this handicap. His ambition to be self-dependent has carried him over every obstacle, and he says he has found happiness in music, and his versatile career

Another link in the chain of Mr. White's versatile occupations was added when he learned to operate the typewriter. He writes his own business letters, having learned to use the machine without the aid of an instructor.

It is interesting to note in connection with this story of what Mr. White has succeeded in doing for himself, that social workers say the improvement in the condition of the blind throughout the United States in recent decades is due to the great courage blind people display in overcoming obstacles. According to census reports there are about eight blind persons in every ten thousand of population.

Great credit is given them for the eagerness with which large numbers of them have seized the opportunities offered

them, or made opportunities for themselves.

Mr. White agrees with what is generally supposed to be true—that blind people are more likely to be cheerful and happy than deaf people. The reason for this seems to be that deafness cuts you off from social intercourse with the world at large more than blindness does.

He is far from exhibiting any conceit over what he has accomplished in spite of obstacles. He believes that any other man who realizes that he can achieve happiness only by keeping his mind and hands employed could accomplish as much.

One thing he wished especially to emphasize for the benefit of any blind person, and that was this: "When a blind man has trained himself to do one difficult thing well, he should not rest on his laurels. He should pick out another goal, a still higher ambition, and try to achieve that. This will keep him from running any chance of being self-centered or moody, as sometimes happens when a man settles down to a merely comfortable routine. In this way, too, he may hope to keep out of the mediocre class."

Mr. White will never be placed in the mediocre class. He is the epitome of the man whose ambitions have soared far above hardship. Overcoming discour-

agements that would have made many a man stagger he has persistently "smiled" in the face of every obstacle. Of a bright, sunny disposition, he radiates optimism.

"There is no cause for despondency when one loses his eyesight," he says. "I have convinced myself that blind men can live happily. It is a great satisfaction to be depending upon one's self for clothes and sustenance. There are always other compensations to be found, too. I find mine in music, for it seems that the loss of sight has made me especially sensitive to this art. To do one's duty each day—that's the big thing! Many of us crave to do great things; but my garage work and the orchestra are the things that principally keep me busy," he declared with a smile.

## He Found Out What Armadillos Are Good For

**W**HEN Charles Apelt left his native land he was running away from a trade that he disliked. From childhood he had been a basket maker. He said, "I will go to America, where I can own many acres and be a farmer. Baskets will never enter my life again."

If, though, on the eve of his departure he had sought the services of a seer, the wise one might have forecast his future partly in these words: "I see a small quaint animal. It inhabits only the regions you seek and the countries to the south. It will cross your path. Do not ignore it, for it will bring you wealth. Also, a peculiar-looking basket is associated with this odd creature, and is destined to influence your life."

But no one read his future. So with a single purpose—to be a farmer—he came to America, went to southwest Texas and became the owner of a farm in a charming valley where a bonny stream raced unceasingly between the mountains. Several years passed while Charles Apelt tilled the soil, and with his family lived happily amid their pleasant surroundings, near the little town of Comfort.

Then one day the quaint little animal literally crossed Mr. Apelt's path. Early one morning he was following a trail along the base of a mountain and the queer-looking creature raced out down the hillside. Mr. Apelt grabbed a stone and gave chase, landing a body blow with the stone, but without effect, because the body was covered with armor, only the head and feet being exposed to attack. A second attempt with a stone struck the head, and the animal was killed. Mr. Apelt took a look at the first armadillo he had seen. However, at that time he did not know its name and had never even heard of it.

It had been the custom of most of the settlers in that region, in the early days, to do some trapping; and it was a matter of routine to skin everything killed and stretch the hide to dry and make ready for market. When Mr. Apelt returned home with his strange victim, he took off the hide or, rather, the coat of mail formed by the connected bony plates. He tried to flatten it to nail it up to dry; but this kind of hide would not flatten. He gave up the task for the time being, and in the afternoon returned to tackle the job again. In the meantime the sun's rays had been playing upon the armadillo's coat, and it had curled up into a half-oval shape; the tail, a bony structure, had

formed a half circle over the open end of the shell. Mr. Apelt looked at the object with interest. There was something about it reminiscent of his boyhood days, and gradually there appeared in his mind's eye a picture of an artistic, silk-lined

basket formed out of this shell from the body of the odd little animal.

There was born that day a new industry. He inquired as to the history of the armadillo, and found it had migrated to Texas from the South American countries.

A few expeditions into the mountains showed him that armadillos were not numerous; but as time passed he caught a few and formed their shells into baskets, which he disposed of through the curio stores in the Southwestern cities and along the border.

Mr. Apelt's original idea was that the animal would multiply rapidly throughout the hills, and time justified this opinion. He found the armadillo population growing by leaps and bounds, so he kept men working to supply the

raw material for the peculiar factory he had set up. The men go out at night, because usually the armadillo is abroad only after dark.

To-day Mr. Apelt keeps about fifty men and as many dogs—just any sort of a dog—busy in the mountains in the "producing end" of the business. The dog is muzzled so that his teeth will not scar the armadillo's coat of mail. When the dog encounters one, a catch-as-catch-can battle takes place, during which the hunter gets in a blow with a stick on the head of the little animal.

Strangely enough the demand for armadillo baskets has extended in a limited way to all parts of the world since Mr. Apelt began making them. It seems that almost anyone who sees this peculiar product is at once interested in it; then, upon learning something of its history and hearing about the animal that furnished the "raw material" that person is disposed to have one, either for his own use or to exhibit to his friends. At any rate whenever Mr. Apelt sends a basket to a new purchaser he is almost certain to receive several additional orders from the same neighborhood. Mr. Apelt has received orders from New Zealand, Australia, from nearly every country in Europe, and from many out-of-the-way places of the world.

It has not been hard to create a market for this unusual product and, with the exception of the war years, he has had an extensive, almost world-wide, trade. The marketing end of the business is now taking up so much of his time that factory details are left to subordinates.

In the industrial world he stands alone. He has created a prosperous business out of one of the most peculiar ventures any man ever made into the manufacturing field.

Down in Texas they say, "God made the armadillo, but Charles Apelt found out what the armadillo was good for." He converts the hide of these queer armor-plated creatures into baskets. The top picture shows an armadillo in his natural make-up, while the center picture shows how art transforms the creature's shell into something useful. The third picture shows Mr. Apelt and one of his armadillo-hunting dogs

## *The rich purée of tiny, sweetest peas*

Smooth, wholesome, inviting pea soup! What a delightful and refreshing dish it is! It's a soup that everybody likes both for its delicious flavor and its generous, satisfying nourishment. The very name "pea soup" is a promise to your appetite. Do not disappoint it. Campbell's delights the taste on edge for pea soup that has the real flavor and richness. The puree is richer still for the fine butter which is blended in. The delicate seasoning gives just the right appetizing touch. Once taste it, and you will serve Campbell's every time you have pea soup!

### **Cream of Pea**

If you wish a Cream of Pea that will be your pride, just follow the simple directions on the label for making it with Campbell's.

**21 kinds      12 cents a can**

# Dot Joins the Ladyslipper Club

(Continued from page 58)

deal about averages and such things, said:

"Of course though, as Herford says, 'You can't fool the law of averages. If you think one thing and the law of averages shows another, you're wrong.' Now, I think as much as either of you that Rosemary Merton is a nice girl and a good bridge player, but I ask you—does it fit with any law of averages for the same person to win a prize *five times in succession*?"

Mrs. Curtis admitted that Rosemary was a nice girl, but it did look queer. Dulcie and I didn't say much, but the rest must have talked it over, because at the next meeting Mrs. Curtis said they thought it had been a mistake to reorganize the club so near spring and they guessed we'd better drop it. So we gave back our pins to Mrs. Curtis, said what a nice club it had been and so on. I had a queer suspicion that this was not a real disbanding for anybody but Rosemary. Sure enough, on the way out Mrs. Oats whispered to me to come to her house at the regular time next Friday.

**P**oor Rosemary! Her social life was over, nipped in the bud, so to speak. And all because she was a good bridge player. As I used to try to explain to Father when I was still in school, it doesn't do a girl any good to be smart.

I told Will about the sad affair at supper that night, and instead of being sympathetic he laughed.

"Gosh!" he said. "So they put the skids under Rosie!"

"There's nothing very funny about being dropped by the only smart crowd in Montrose, Will," I said.

Will, however, kept right on laughing.

"Gosh!" he repeated. "And they call it the Ladyslipper club!" He helped himself to some more potatoes *au gratin*. "Wonder which lady they'll slip next," he observed speculatively.

That idea, put, of course, in a less crude form, was, as a matter of fact, in my own mind, too. It had entered at the first time that the club disbanded. I realized right then and there that whenever that club disorganized it boded no good for somebody. I specially hated to have Rosie go; she and Dulcie were the only ones in the club that I felt free and easy with. When I was with the rest I had to remember to refer to Will's father's flivver as a "motor," and everything like that. I felt something the way they say you do on a high mountain where the air is a little too rarefied to breathe easily.

Socially, I was certainly on the mountain peak. Here I was, at a mere nineteen, married, a member of the Ladyslipper Club. But I was uneasy. I was beginning to realize that life in the Ladyslipper Club was uncertain. While you were in it, you were on the pinnacle of social life, but you never knew what morning you might wake up and find that you weren't in it. I would think of Mrs. Carstock and Mrs. Laidlaw and poor Rosemary, who was merely too smart for her own good, and certain proverbs that I had heard all my life would come back to me like a banshee wailing around a house before a death,

proverbs like "The higher you climb, the farther you fall," "The higher, the fewer," and others of a like apprehensive tone.

I did everything I could to keep a good firm grip on the pinnacle, so to speak. It was fearfully hard. There was the matter of clothes, for instance. Everybody wore such beautiful dresses to the meetings, and never wore the same dress right along, as would have seemed only natural to me. I did the best I could. I worked for days and days on a dress, embroidering it in raffia. Mother helped me with the fitting and I thought it looked lovely. Then I wore it to the Ladyslipper and had my heart almost broken with disappointment. Mrs. Curtis said:

"My, Mrs. Horton, what a pretty dress! You certainly are clever with your needle!"

So the dress that I thought looked so lovely must really have looked as though I made it myself! I was so blue that night that Will said to cheer up, and we'd take in a movie.

"No," I said firmly. "I don't want to spend any money. I've got to save every penny I can toward entertaining the club. If my clothes do look homemade, I don't want my party to."

"I'll be glad when you get that blame party off your chest," said Will. "I hate to see all our social life for three months going into one hen party."

I felt very guilty, for I knew, though I didn't mention it to Will, that as soon as this party was over I should have to start saving up for the next. Why, Mrs. Oats's prize must have cost five dollars! And after the next I'd have to save for the next, and then the next and the next. It was unfair to Will for him to have to give up all his future social life for a club that he couldn't go to.

**T**hen something happened which relieved my mind greatly: The Ladyslipper Club decided to meet Friday evenings instead of afternoons, and have the husbands, too. It wouldn't cost any more to have an evening party for twenty-four, I thought, than a luncheon for twelve. And then I wouldn't feel so selfish, because Will would be getting his share of the fun, too.

To my great disappointment, however, it didn't work out that way at all. Will didn't get his share of fun. He insisted, in fact, that he didn't get any fun at all. For Will, you see, doesn't like bridge. Father says it's because he doesn't play bridge, which is a nasty way to put it, though I have to admit that Will is better at Five Hundred or Wild Canfield.

That first night, when he was playing with Mrs. Oats, he raised her spade bid three times, and then, when he laid down, proved to have no outside suits at all. She was nice, but some way Will got the impression that she considered it a grave error on his part, and it preyed on his mind. He talked about it all the way home.

"Never mind, Will," I said comfortingly. "I'll borrow Mrs. Curtis's 'Aid to Auction Bridge,' and you can study it so

you'll never make any more mistakes like that."

"I will not study any dog-gone book," said Will. "If I've got to work as hard as that to enjoy myself—why, I might as well be boning up on real estate law, or something that might get me somewhere. If I've got to ruin one evening a week enjoying myself, I'm not going to ruin the other six studying up to get ready for it."

It seemed to me that there was a shade of irritation in Will's voice, so I dropped the subject. It added another uneasiness, however, to the Ladyslipper Club for me. Now I had to worry about Will's playing. He couldn't get it out of his head that a bridge party was a place to have a good time. Whenever I would be playing at one table and hear Will at another, bidding or doubling or something, I would be so apprehensive that I could hardly play my own hand. I would feel miserably certain that he was doing something ill-advised.

**T**hen came that hideous meeting at Mrs. Reed's. Father had given me a birthday present of a trip up to Kathie's, and I had just got back Friday evening, in time for the party. I was taking off my hat and coat up in Mrs. Reed's room just as Mrs. Oats and Mrs. Crowley were going out. Mrs. Oats said to me:

"Well, you must win the prize to-night, as this is the last meeting of the club."

"The last meeting?" I said, bewildered.

"Yes, we're disorganizing," she said.

And as they went out the door I saw her wink at Mrs. Crowley.

I went down-stairs simply sick with fear. It might, of course, be a real disorganizing, but anybody who had seen what I had might well be skeptical. Had my time come at last? I had been away for a week—I had no idea of what had gone on in my absence. What had I done—what *had* I done? I had been so careful. Maybe it was my clothes. In spite of all my care, maybe they looked too homemade for the Ladyslipper Club. Maybe it was because we didn't have a car—still, neither did Dulcie. What had I done—what *had* I done?

It was a miserable evening; I couldn't remember what was trump. All through refreshments I sat eating meringue whip with one hand and worrying with the other. It occurred to me to wonder if all the society women in the world do the same thing, eat meringue whip with smiling faces and fearful hearts, wondering with each rich mouthful if the skids are under them.

Everybody was so blithe but me. At the next table sat Dulcie, gayly flirting with Will and Mr. Curtis. I didn't mind her flirting with Will—when you've known a girl like Dulcie all your life, you get to know that her flirting doesn't mean anything—but her light-heartedness was a dagger in my heart.

All the next day I hoped and prayed that somebody would drop in and tell me to come to Mrs. Cushman's next week as usual, but nobody did. Of course I couldn't call up and ask anybody else. I was so nervous and miserable by night

that Will said I was losing the old disposition, and to have a heart and not gloom around the house so. The next morning, when it seemed to me that I couldn't face another day, Mrs. Cushman called up.

"We're meeting at my house next Friday night," she said.

My heart leaped like a rubber ball.

"I thought the club was disorganized," I said, relief simply singing within me.

Mrs. Cushman laughed. "It was," she said; "but we're reorganizing."

"Who," I asked curiously, "is not to be with us in the reorganization?"

"Dulcie Lane."

"Dulcie!" I gasped.

Mrs. Cushman giggled, and as though this was explanation enough for any reasoning human, asked:

"Didn't you see her *flirting with Mr. Curtis*?"

Before she hung up she said casually, "Oh, by the way, come at half-past six. I'm having the club for dinner first."

**MY FEELING** of joy and relief burst like a pricked bubble. For there was only one more person to entertain before me, and I knew but too well what would happen. She would have the club for dinner, too, and there would be nothing for me to do but likewise.

Twenty-four people for dinner!

Surely stronger hearts than mine have quailed at such a doom. With prices what they still are, the mere food necessary for human sustenance for twenty-four people is nothing to be treated lightly by one who keeps house on a budget, and is also conscientious. If it were just twenty-four of our old crowd, where they are all old friends, and think nothing of lending you napkins, or helping clear off between courses, the expense would be something.

But a dinner for the Ladyslipper Club and their husbands! They all have maids and bouillon cups, and stacks of silver that matches, and everything of that kind. I should have to have a fancy dinner, beginning with fruit cups and ending with salted almonds; but that wasn't all. I'd have to hire old Katie to do the cooking, and somebody else to wait on the table. There would have to be cigars for the men and candy on the bridge tables afterward, and prizes and— Suddenly I felt sick and scared.

What if something should go wrong with the dinner, in spite of nerve-racking precautions! It wouldn't seem just a funny joke the way it does with your old crowd. This didn't seem like giving a party at all. I felt more the way I used to when I knew I had to have a back tooth pulled.

The worst of it all was that I felt Will was not sympathetic. Most ordeals ahead, I would have felt that he was standing right beside me and would do anything, from freezing the ice cream to wearing his dress suit. But this was different. He didn't seem to have any idea of what a serious matter entertaining the Ladyslipper Club was.

"It's bad enough," he said, "to have to put every penny we might have had any fun with into one dog-gone party, without having you act about as cheerful as though you were getting ready for a wake."

I said no more, but it hurt my feelings terribly to feel that Will was going back on me just when I needed him worst. It

gave me a strange feeling of being deserted, all alone in the world. Even if I lived through entertaining this time, there would be the next time and the next and the next, looming ahead all my life. At the rate things had gone so far, by even the next time, entertaining might have come to mean giving a ball for five hundred people. It was just like a snowball rolling down-hill, getting bigger and bigger till it was big enough to crush you. I saw all my life ahead spent getting ready to entertain the Ladyslipper, and recovering from having entertained it, sprinkled along the way with the smaller worries of getting the proper clothes to wear, and watching my step, to strike just a happy medium between playing too well and not playing well enough. And sometime, try as I might, and advance in business as Will might, sometime perhaps the time would come when I could no longer keep the pace. Then, all in one puff, a lifetime of struggle and worry would go all for naught.

I suddenly realized that I was downright unhappy. The real cause was deeper than worry. I got to thinking of Will never having any fun at all, having to sink all his pleasures into the Ladyslipper Club, which was really no pleasure at all to him or, in fact, to me, either. After a little while, he might get all out of the habit of standing by me in things, he might get to feeling hurt and abused and—you often hear of such things—perhaps in his hunger for a little fun, even running with low companions. I suddenly realized what a terrible toll being in society takes of its victims.

**MRS. HUTCHIN'S** dinner was a sad affair to me. It was a wonderful dinner—to my horror, she had *two* maids waiting on the table—but I didn't enjoy it at all. I was unhappy to start with, and, some way, with neither Dulcie nor Rosemary there, I felt queer and lonesome. I got to thinking about the parties our old crowd had, when the boys would form a "bucket brigade" to the kitchen and pass out the dishes between courses, and how we nearly had hysterics at Dulcie's when her freezer sprung a leak and the ice cream was full of salt. Salty ice cream when one was entertaining the Ladyslipper Club would be cause for suicide.

I kept getting homesicker and homesicker for our old crowd, where everybody's known everybody for years and doesn't think anything special of Dulcie's flirting or Rosemary's playing a good game of bridge. Your old crowd knows your faults all right, but, somehow, they've got used to them. As Will once said, he believed that if he took up murdering on the side the bunch would gossip their heads off about it, but wind up by helping him dispose of the bodies, and saying, "Oh, well, it's just Will Horton's way. He always was rough."

During the last hand of bridge that night, Will made an awful mess of his, but I scarcely realized it. I was trying to get up my nerve to say casually, "Well, you must all come to our house next week at half past six." It sounds easy enough to say, but it was like jumping off for a dive, easy, but so hideously final.

All the money I had saved and scrimped for weeks wouldn't be near enough—I dreaded to go in debt, but we would have

to. Will would get more and more dissatisfied—and in time he might even get to not liking me so well! Oh, it was awful! And there was no way out. It was my turn. I had gone to the other eleven parties. If it bankrupted us and even eventually wrecked our marriage, there was no way out. I should have to entertain the Ladyslipper Club. The feeling of the utter, despairing inevitability of it finally nerved me with courage. I cleared my throat.

"You all must—" I began. But nobody paid any attention to me. Mrs. Curtis was talking.

"It seems to me," she was saying, "that it is getting too warm now to keep on with the club any longer—what do you all think about disbanding?"

**THOSE** old familiar words! I could hardly believe my ears. I know now how a man about to be electrocuted feels when he gets a reprieve. As though in a daze, I heard it go on, the old, oft-repeated conversation, everybody saying what a nice club it had been, and good-by, and so on. I even, as if in a dream, found myself saying good-by, too, and handing Mrs. Curtis my pin. I tried to act casual and indifferent, but I am afraid the frantic hope which flamed within me must have shown on my face.

And then! On my way up-stairs, I heard Mrs. Curtis, who thought I had gone on into the bedroom to get my hat, tell Mrs. Oats to come to her house next Friday night. It was true, the flaming hope was a certainty—it wasn't a reprieve, it was a pardon!

There could be no doubt. If it had been anybody else who was being left out, I would have been told, because it was my turn to entertain next. It was probably Will's wretched playing that had done it. I didn't know—I didn't care. When you are handed a million dollars, you don't worry about where it comes from. Our financial future, our happy married life, which had been teetering on the very brink, were saved! I was out of the Ladyslipper Club.

Will put his arm around me, walking home in the moonlight and said not to care. He thought I was feeling bad.

"I'm not feeling bad," I said; "I'm figuring. I believe that money we've saved for the Ladyslipper Club will just about pay for the Songola."

"Great gosh!" said Will. "Do you suppose it will? I didn't expect to get money enough for that in years."

"We never would have," I said, "except by the sheer desperation I've been in. Yes, I know there's enough. We'll get it and have the old crowd in next Friday night, and dance."

"And play Wild Canfield," said Will ecstatically. "And wear my old patent leather slippers, and have just ginger ale and cake—"

"Will," I said, "we might play bridge—" And when he looked at me fearfully, I winked. He pulled me under a tree out of the moonlight and kissed me.

Suddenly, I don't know why, I remembered Mrs. Laidlaw, the day I saw her on the street with her baby, just after she had been dropped from the Ladyslipper Club. But this picture of her didn't seem tragic and forlorn to me now. I'll bet she was drawing the first long breath she'd drawn in months.

## DO YOU KNOW WHY THE GEAR-SHIFT IS DIFFERENT?

The design of Dodge Brothers gear-shift takes into consideration the natural inclinations of the driver.

To start, you throw the lever forward. To reverse, you pull the lever backward. And when the car is running in high gear—which is about ninety per cent of the time—the lever is in a forward position, out of the way, where it does not interfere with passengers, robes, or luggage.

Moreover, the transmission, developed and patented by Dodge Brothers, is so designed that the countershaft—used in intermediate speeds and in reverse—is disconnected when the car is in high. There are no gears in mesh. Power is transmitted directly from clutch to rear axle.

This exclusive feature prevents the loss of power through friction, reduces gear-box noises and eliminates a vast amount of wear.

That is why the gear-shift of Dodge Brothers Motor Car is *different*.

# Three Wonderful Dogs

(Continued from page 55)

heard no sound whatever, and make for the next field. And I have heard my father say that in no instance could he recall where birds were found in a field old Frank had passed up. He knew! He knew! He knew!

He was never part of the dog life of the town, from which he held himself proudly aloof. Aloof is not the word, either. Gentle and kindly toward people, he was fierce toward all dogs, except those smaller than he. Any small dog could rush out at him, yapping at his heels, and he would trot on past without even a single hair of resentment rising on his back. But with dogs his size or bigger, he would fight any time for anything. He was the only bird dog I ever knew who would rather have a fight than not.

What fierce eyes he had! What a mighty warrior he was! He whipped a big brindle bulldog that was the terror of the town. I saw that epic fight. The bulldog rushed, Frank side-stepped, then quick as lightning he cut his flanks into ribbons. Sometimes he was on his enemy's back, ripping his hard neck, leaping lightly off, and awaiting the next rush. The owner of the bulldog dragged him, raging and bleeding, away. Frank didn't have a scratch!

He was best hunted by himself, for he was jealous of other dogs and would pick fights with them during the lunch hour. Most bird dogs are fairly generous toward one another. I put it down as his weakness that Frank was lacking in such magnanimity. He needn't have been jealous; the honors of the hunt belonged to him always. I must say this to his credit, though: In the field he was fair. Bird dogs back-stand one another—that is, if one finds birds, the others come up behind and point him. A jealous dog will sometimes push ahead of the dog that has found the birds, to create the impression that he did it. To my knowledge Frank was never guilty of this. He was fierce and quarrelsome, but he was ethical.

**A** BIRD dog usually reaches his zenith at about six years of age, from which time his pace slackens. He sometimes makes up for his diminishing vigor by "bird sense" as it is called—which is nothing more nor less than knowledge, gained through much experience, of where birds are most apt to be at certain hours of the day and under certain weather conditions.

At eight years of age, at ten years of age old Frank was still going strong. Not until he was twelve, as nearly as we could compute—not knowing his exact origin—did his pace slacken in the least. Not until he was fourteen did his powers desert him.

Then the streets of our town saw him no more; he lived the rest of his days with Mr. Allen in the country. He still followed us on our hunts in that section of the county, but we had to help him over fences and across ditches. We never made him stay at home—it would have broken his heart. No man who had known him in his prime but was willing to slacken the pace of his hunt for him, to

get down from his horse and help the old fellow across some barrier.

To see him lying under a tree in Mr. Allen's yard you would never have thought him old. His coat, unusually fine-spun and curling like a spaniel's, kept to the end its satiny gloss; there was a poise and dignity to his noble head, and his eyes never grew dim. It was only when he rose, eager to greet you—for his affections increased with his years—that you saw the Llewellyn was stricken with years.

Toward the end he took to baying the moon all night long, and no one raised a window to rebuke him, for he had won his right to this weird indulgence. I have often wondered what mysterious longing or unrest he poured forth to that distant and burned-out planet that shone down on the woods and fields he had ranged so often.

**A**T LAST came the morning when Mr. Allen drove to town, and hurried around to the garden where Father and I were working. His stout, ruddy face was grave, and we wondered what calamity could have happened. Straight to Father he came and the two hunters looked into each other's eyes. After a moment Mr. Allen spoke:

"Derieux—Frank's dead!"

Bryan was an Irish setter. He was a tall, long, rangy fellow with a silken bronze-red coat, very handsome and stylish; the swiftest dog I ever saw, and an athlete every inch. He knew nothing of town life; the plantation was his home.

I don't know what else to call Bryan but a fanatic on the subject of hunting birds. All hunting dogs love the sport; it was Bryan's passion. The sight of a gun or hunting coat, the click of shells in a pocket set him crazy. He would leap up into your face, barking in a rage of eagerness. He would rush round and round the house. He would refuse to eat. We were compelled to practice deception on the mornings set for hunts. We would not put on hunting togs until after breakfast, and by being careful to show no signs of our intentions he would take time to eat his breakfast and digest it!

Once in the field, so great was his speed that I have seen other dogs jump up above the straw to watch him, under the impression he was on a sight race with a rabbit. This phenomenal pace, which he could maintain all day, coupled with the longest nose I ever saw, swept all the honors of the hunt before him. There might be several other dogs along, but Bryan found the coveys.

Coveys consist of from ten to twenty quail, and on being flushed they scatter into woods or canebrakes. To point these single birds without flushing them takes caution and pains. Bryan was not cautious; he took no pains. Having found one covey, his mind went straight to another. He positively refused to retrieve. He had a single-track mind, and that mind ran to birds in the mass—to coveys. Here, in my experience, Bryan was without a peer.

In contrast to Frank—I blush to say it

—Bryan was a coward. He not only would not pick a quarrel, but he would employ every means compatible with dignity, and some not compatible with dignity, to avoid one. He would bluff his way through if he could, and he knew how to maintain a fierce bluff. I have seen him at sight of another dog paw up sand like a bull, while his hair rose on his back and he emitted the fiercest growls. But let that dog approach with a belligerent expression, and Bryan would get on the other side of my legs. Many times have I been humiliated by that weakness in this magnificent animal.

I have never been able to figure out why one dog is courageous and another not. Bryan was never whipped by man or dog when he was young. On the other hand, Buck, the dog I shall tell about next, before he was full grown was so chewed up by two bulldogs that we despaired of his life. Yet Buck never showed a yellow streak—just as soon as he got well he went looking for those bulldogs. Courage in dogs, as in men, seems to be an innate quality, which is present or not present according to some law I am not familiar with.

Also, unlike Frank, Bryan was not ethical. So great was his jealousy of other hunting dogs that he could not be depended upon to back-stand them. He would push ahead of the dog that had found the birds. I know these were great weaknesses, no one regretted them more than I; but as a true historian I must set them down, remembering all the while what a brilliant dog he was in the field—what a genius!

**A**S HE grew older he developed another prima donna trait—a strong sense of personal dignity, easily offended. You had to handle him carefully or, however much he loved the hunt, he would go home! Once my brother and I were hunting some three miles from home when he got his feelings hurt. We had shot down several birds, merely wounding them, so that they ran off into the thick patches of grass and there hid. We had no other dog with us, so we called Bryan to find the birds for us—something which with his sense of smell he could have done in a minute or two. He refused to come; my brother went to him, caught him by the collar and compelled him to.

But he refused to look for them, and my brother, thinking that a good whiff of them would make him forget his grievance poked his nose into a plum thicket where we knew a bird was hiding. Bryan sat down on his haunches, a sullen expression on his face, and refused to budge. We begged, we pleaded with him, to no effect. He would not even look at us. Finally we decided to let the matter pass, and went on our way, calling him. He sat still where he was. We went out of sight over the hill, still calling him, but he would not follow. At last we shot four times in quick succession to create the impression we had flushed birds. Bryan did not come. It was a glorious morning; with the dew from melted frost sparkling on

## "They can't fool me" *said the man from lower 8*

A Palmolive enthusiast met a doubter in a Pullman washroom.

"I made a great discovery," said the enthusiast. "I sent for a free tube of Palmolive Shaving Cream, and it is amazing. It does exactly what they claim."

"I'd do the same," said the other. "But I have a shaving soap I like and they can't fool me."

### *We told you so*

That's what we have already said. Every man is using a shaving soap he likes, and he can't be fooled.

In spite of that, mark this:

Millions of men have changed to Palmolive after making this ten-shave test.

Tens of thousands have taken the pains to write their voluntary thanks.

And this new-type shaving cream, scarce three years old, now holds the pedestal place.

### *The five reasons*

That's all because we did this:

We made a shaving cream which multiplies itself in lather 250 times.

That acts in one minute, without hot towels, without finger rubbing.

That does not dry, but keeps its creamy fullness for ten minutes on the face.

That supports the hairs for cutting, because the bubbles are so strong. With weak bubbles, hairs fall down.

That leaves the skin soft and smooth—due to those supreme cosmetics, palm and olive oils.

### *Do this kindness*

We are world-famed soap chemists. We've made several great creations. One of them—Palmolive—is the leading toilet soap of the world.

We made up and tested 130 formulas to attain for you the utmost in a shaving cream.

Please do us the kindness to test it. You owe it to us and yourself. Cut out the coupon.

THE PALMOLIVE COMPANY  
Dept. B-402 Milwaukee, U. S. A.

**Multiplies  
itself**

In lather 250 times.  
Softens the beard in  
one minute.

Maintains its creamy  
fullness for 10 min-  
utes on the face.

Strong bubbles sup-  
port the hair for  
cutting.

Fine after-effects,  
due to palm and  
olive oils.

Every ScotTissue Towel contains millions of soft Thirsty Fibres, which absorb four times their weight in water. They make ScotTissue the quickest-drying, most satisfactory towels made.

## Thirsty Fibre is found only in ScotTissue Towels

An exclusive advantage no other towels can have.

Millions of thirsty tentacles of fibre are interlaced in every ScotTissue Towel. When you grasp a ScotTissue Towel with moist hands, these fibres leap to their task drinking every drop of moisture making your skin instantly, thoroughly, safely dry.

Just dry your hands once on a ScotTissue Towel. Notice the whiteness, freshness, quick absorbency—the comfort it creates. You'll say it is different—superior to any others you have ever used.

It is so easy to have clean hands with ScotTissue Towels. Buy a carton of 150 towels (40c in U. S., 50c in Canada and even less by the case of 3750 towels). Your stationer, druggist or department store can supply you. Or, we will send, prepaid, the towels or \$5 outfit, upon receipt of price. Try the Handy Pack of 25 towels for 10c.

the broomstraw we had counted on a big hunt. And now the hunt was off, for in quail shooting man is practically helpless without a dog. There was nothing for us to do but go home.

Half a mile before we got there Bryan passed us in the road. He did not look at us, did not wag his tail. When we got to the house he was lying on the porch, and as we came up the steps he still lay there, without a glance at us.

In his domestic relations about the house he had a fine trait, common to big dogs, but more developed in him than in most. There were a number of children, white and black, around the yard, and they could crawl all over him, pulling his ears and tail, ramming their fists in his mouth, yanking him around and pommeling his ribs. Toward them he showed no impatience whatever. He would get up and walk away when things got too bad. Of course they presumed on it, but he didn't seem to mind. This is one of his fine traits that I like to dwell on, in view of the less admirable ones which, as a biographer, I have noted.

Bryan was a genius. Old Frank was more methodical, more dogged, but without so great a spark of divine fire. No prospect of a hunt could daunt Frank's healthy appetite for breakfast. You had to pick Bryan's food. He was finicky; no hunger could induce him to eat a pone of cornbread, unless you broke it up and put gravy on it, whereas old Frank would swallow it in two gulps, and then go off and drink a generous supply of water, to wash it down. Frank was the sturdier soul of the two; Bryan more the dreamer. I can see him now, sweeping through an extensive level straw field, swift and strong, head high like a swimmer, the sun glistening on his silken red coat, his mind on one thing and one thing alone—that covey of birds somewhere ahead.

BUCK was a pointer, black as a crow's wing—one of the few black pointers I ever saw—and named by my youngest brother, who had just finished reading Jack London's "The Call of the Wild." He was sent me, half trained, by my father at a time when ill health compelled me to live for two years in the country.

I had seen him a time or two when I was at home. I hadn't thought very highly of his looks; there was an irresponsible wild something in his eye, and his color was against him. He had climbed a ladder once, jumped from the chicken coop to the cow shed and thence into the alley, and left for a week or more for parts unknown. The reason he wasn't allowed his freedom, as most bird dogs are, was that he would get into trouble—chasing neighbor's chickens and cats and overturning garbage cans. One neighbor who had hunted with him said he was a fool. I never thought that. The dome of his head above his ears was notable. But I had thought him a wild, harum-scarum fellow, analogous to the young chap who is expelled from college for playing poker and painting the president's cow blue.

On the trip in the express car he broke his chain and plunged out of the door. He was recaptured with difficulty by the express company and delivered to me at the destination. I met him, brought him home and fed him. That night he left, and turned up four days later. A neigh-

## Jewett Special Six Sedan

*Sparkling Style—Rare Driving Ease!*

**P**ICTURE it at your own door—the dash and vim and fascination of it! Here is the embodiment of all that critics conceive as style: sweeping lines, spirited appearance, faultless appointments.

Open the door. Enter. Cozy luxury welcomes driver and passengers always. Sides and seats are upholstered in the finest grey broadcloth. Deep, costly cushions rest buoyantly on nested coiled springs. Etched dome light, taffeta shades, silvered fittings, complete ventilation, a trim heater that bids defiance to the bitterest weather, are ever dependable servants of your comfort. In any season, anywhere, you find the longest day's drive unfatiguing. The farthest tour is a relished recreation.

No closed car for five is roomier—none better outfitted. Full nickeled drum-type head and side lamps. Nickeled motometer. Full nickeled radiator. Carried forward at left are cord tire, tube, rim and waterproof cover. At the rear is a stout and spacious trunk, with lock and rack. Aluminum body-rails combine protection and adornment.

Double-bar spring bumpers front and rear are full nickeled. Adjustable windshield visor. Cowl ventilator. Automatic windshield wiper; rear-view mirror; combination tail-light and automatic stop-light. Smart disc wheels, as shown, are furnished at slight added cost.

Certainly no car confers such rare ease of handling and driving! Powered for the most masculine service, its pronounced appeal is to women. Gowns are kept ever clean and dainty; storm, wind and rain forever banished. For the theater trip, social call, country club jaunt, the long journey—this Special Six Sedan is a companion pre-eminently well groomed.

No resistance meets foot or hand in Jewett driving. Gears shift fast as hand can move. You cannot “clash” or jerk the car. Accelerate from 5 to 25 miles in 7 seconds. Women, however inexpert, discover that here is indeed a driving ease delightful to the frailest hand.

Ask the Jewett dealer to show you this Special Six Sedan. Drive it; prove for yourself its unique comfort, power, charm!

## —a Wonderful New Hoover

**Adjusts from above!** The turn of a thumb nut adjusts it for rugs of varying thickness.

**Belt life doubled!** Brush revolves with so little friction that belts last twice as long.

**Attachments connect easily!** New "Converter" permits instant connection of air attachments.

*Lighter, handsomer, better—the finest electric cleaner for the home ever devised by the industry's oldest and largest maker*

All that has been learned in building those more than a million Hoovers now rendering superlative satisfaction the world over, is embodied in this wonderful new light Hoover.

The result is an electric cleaner such as the world has not seen until now.

It utilizes, of course, those three vitals of thorough cleaning—beating, sweeping and suction—but in a manner which widens the range of cleaning efficiency and gives a greater power to increase the life and beauty of floor coverings of all kinds.

Despite its great superiority, this new Model 541 is obtainable at the same moderate price as its celebrated predecessor, the Hoover Special.

Do not, therefore, buy an electric cleaner until you have had an opportunity to judge this latest Hoover.

*Have an immediate home demonstration—no obligation. Phone any Branch Office or write us for names of Authorized Dealers. 17c to 23c a day soon pays for a Hoover.*

THE HOOVER COMPANY, NORTH CANTON, OHIO  
The oldest and largest makers of electric cleaners  
The Hoover is also made in Canada, at Hamilton, Ontario

# The HOOVER

*It BEATS... as it Sweeps as it Cleans*

bor told me he saw him in the next county, a long way from home, running rabbits with a disreputable collection of hounds and curs. I tied him up after that.

I have said he was only half trained, and more than once I despaired of finishing the job. He seemed an absolute incorrigible, as some animals, as well as some people, are. In the first place, he hunted so fast and so far away from me that he was almost useless. Indeed, he hunted absolutely for his own amusement, and didn't care a rap whether I went along or not. My commands, importunate, then angry, were as the idle chaff that the winds blow away. He didn't have even the decency of old Frank, who at least pretended not to hear.

Another thing: A bird dog, when he approaches birds which he has located by scent, comes to a point. The hunter then advances, the dog remaining steady in his statuesque attitude until the hunter is at his side, or directly behind him. Then at a word of command, "Hie away," the dog flushes the birds and the hunter shoots them while they are flying.

Now, Buck would point the birds with as much style as you ever saw. Then, before I got within range and without awaiting the order, rush into them, and I wouldn't get a shot. He wouldn't do this every time, but about half the time.

**MY MORALS** began to suffer. The ordinary parlor variety of English could not meet the emergency. I knew it wasn't nervousness that made him flush birds, for his nerves were made of steel. It was that thing I had seen in his eyes. I began to doubt whether he was a pure-bred hunting dog. Father said he had the papers, that his family tree was all that could be desired. But I wondered whether something hadn't happened the genealogists didn't record.

To the patience of my wife, who hunted with me sometimes, more, far more than to my own, Buck's salvation was due. We had left the house one afternoon on one of those fine golden days that come like a benediction during Southern winters. "Buck's got the devil in him to-day," I told her when we left. "Something is going to happen."

He flushed the first covey. I let that pass. He flushed the next one. I let that pass. Then I shot down a single bird that fell across a creek and told him to go "fetch." He went after the bird, brought it to the edge of the creek, looked at me, then calmly laid the bird in the water, and with pricked ears, as though it were a comical sight, watched it go floating off down-stream.

You are to remember the state of mind I was already in. I leaned my gun against a tree and plunged across the creek. There I cut a switch and approached him. He sat on his haunches, ears thrown back, eyes a bit green. I got hold of him and cut him with the switch. He broke loose, and before I knew what had happened I was bitten through my leggins and almost to the bone.

I have said I left my gun across the creek leaning against a tree. I started for it, but Buck evidently saw murder in my eyes—for it would have been murder—and when I wheeled round he was gone. A hundred times I have been thankful that I left the gun behind.

## "Companions of Spring—"

It's the season for pleasure, for color, for the good things of life. People who know the best in sweets will often have a friendly argument as to which is the most attractive package in Whitman's famous Quality Group. But you will never hear any difference of opinion about the goodness of the sweets. In all of these packages it is the same Whitman's—famous since 1842.

**The Sampler**—best known of all candy packages—quaint, original, unique in its make-up, the favorite from ten leading packages of Whitman's.

**Salmagundi**—latest member of the group—luscious chocolates in an art metal box prized as a keepsake as well as for its charming contents.

**Pleasure Island**—romance in chocolate—pirate's sea-chest freighted with treasure from the Spanish Main.

**Fussy Package**—for fastidious folks—nuts and nut combinations enriched with Whitman's far-famed chocolate.

**Super Extra Chocolates**—the Standard package of sweets which first made Whitman's reputation.

**Library Package**—book shaped—odd—luxurious—an eloquent volume of sweet thought and good taste.

Seek the Quality Store in your neighborhood which has been selected as Agent for Whitman's Quality Group—usually a drug store.

## A Bouquet From Japan

*What Mr. Hayashida learned about Ford economy as he drove from Moji to Kagoshima*

A RECENT letter from Japan closes: "This is the first time that we experienced a true value of Ford car."

The letter is signed by Mr. Kumaichi Hayashida, proprietor of the Hayashida Jidosha Shokwai Tammon-kwan-dori, Kagoshima, Japan.

The local translation says also, "We used Gargoyle Mobiloil 'E' in our trial trip of Ford car on the 2nd May, between Moji and Kagoshima, and we found the lubrication satisfactorily giving much more power to the engine than we imagined and its swift run gave us a keen pleasure. We arrived at Yatsushiro after a long run since we rushed through Kumamoto on that day and reached Kagoshima early next morning."

The trip covered about 250 miles. Mr. Hayashida had made the same trip many times before—with other oils. He found that with Gargoyle Mobiloil "E," his oil consumption was reduced 50%.

Japan, Siam, England, Africa, Australia—all know Gargoyle Mobiloil "E" and the surprising economy it gives in Ford engines.

Here is an oil which meets with scientific exactness every lubricating requirement of your Ford engine. That is why it is so cheap to use in spite of the fact that there are other oils which sell for less per gallon. A 5-gallon can of Gargoyle Mobiloil "E" is the most useful utility you can put in your garage.

IN BUYING Gargoyle Mobiloil from your dealer, be careful to purchase in original package. Look for the red Gargoyle on the container.

The Vacuum Oil Company's Chart specifies the grade of Gargoyle Mobiloil for every make and model of car. Gargoyle Mobiloil "E" is the correct grade for Ford. If you desire another make of car, send for our booklet, "Correct Lubrication."

**VACUUM OIL COMPANY**

My wife and I sat down and she dressed the wound. While we were at it we heard a noise behind us. Crawling contritely on his belly came Buck. He did not come to me but to my wife, and with her between us, looked around at me, ears dropped, eyes begging everlasting pardon. My wife put her arms around his neck.

"Speak to him," she pleaded.

And that was the turning point in old Buck's life. Never again was I called upon to raise my hand against him. The transformation was complete and lasting. He lost none of his fire; he was not cowed; he kept his independence in the field and out of it until the last.

I am not going into his virtues as a bird dog, though they were many. He never, except accidentally, flushed another covey. He did not have the speed of Bryan; but from that day his change of heart was complete and he was absolutely reliable. He was as good in single birds as in coveys; he was a perfect retriever. He dropped no more birds in swift running creeks. He would bring them to me when I was on horseback, rear up on the saddle and hand them to me.

SHORTLY after the conversion he developed a trait that is most unusual, and admirable from a practical hunter's viewpoint. He just worked it out in his own head.

Dogs range far ahead, covering from five to ten times as much ground as the hunter; and it frequently happens that, having found a covey of birds in woods or high straw, and pointed, they become lost for hours from the hunter who is looking for them.

One day I had lost Buck and was looking for him, calling him. Suddenly he appeared from out of the woods, ran to me, and showed by signs that he wanted me to follow. Straight he led me through a patch of woods into another field. There he came to a dead point. He had located these birds, backed off from them and come to me.

And this was his practice from that time on. He got so that when I was writing at the house, he would run up on the porch, scratch at the door and, opening it, I would find him there with glowing, eager eyes. He would run down the steps, looking back. I would get my gun and he would lead me to the birds. Thus I could sit at home and hunt at the same time!

Over and over he did this and the temptation to leave my work and follow him was too great for me to stand. In regular hunts this trick of his saved hours of time. Mr. Wright, my hunting companion, and I could ride along the road and never get down from our horses until Buck came to us with the announcement that he had found quail. It was an invaluable trait, and so far ahead of what the average dog can do that it would, I am told, have ruled him out of field trials. Such is the price one has to pay for going ahead of his race!

It is strange that this wild, headstrong Buck should have been toward other hunting dogs the most magnanimous dog I ever knew. He was absolutely free from jealousy, in the field and out of it. He hunted very sturdily and independently, but seemed glad when another dog located birds. I hunted him a time or two with a considerable party and was proud of his courtesy and generosity.

A mighty engine.  
Enduring and  
exceptional in  
its goodness. Re-  
leasing its amaz-  
ing power quickly  
and smoothly for  
the pick-up. Set-  
tling down to the  
long pull with de-  
termined, tireless  
strength. Fresh-  
ness and volume  
of power undimin-  
ished after months  
of hard driving.

In every one of its manufacturing processes, the good Maxwell receives precisely the same high-principled treatment which is accorded a car produced to sell at three times its price. It is built under the close and continuous direction of a group of men who have been associated with some of the largest and finest achievements of the industry.

The good Maxwell engine incorporates high-priced quality and features throughout—Three extra large crankshaft bearings; full pressure lubrication to main and connecting-rod bearings, through channels bored in the crankshaft; all rotating and reciprocating parts, even to the fly-wheel, minutely balanced; pistons light-

weight alloy, of the split skirt type originated by Maxwell. A transmission fit for duty in a truck. A rear axle as fine in construction, and as modern in design, as an axle can be built today—Gears chrome nickel steel, spiral cut; straddle pinion bearings; extra large ball bearings for wheels; heavy gauge pressed steel, tubular housing.

*Locks & Hardware*

*"Lift up the latch  
—walk in!"*

**H**OSPITALITY radiates from the Colonial doorway when each detail is gracefully and genuinely in keeping. Latches and door handles are manufactured by Sargent & Company to harmonize with all Colonial doorways, whether Dutch or New England in style. These handles may be used on one or both sides of the door, connecting with the Sargent Cylinder Lock that provides complete security. Their cordial gleam of welcome comes from the finest solid brass or bronze. They are beautifully designed—as lasting and as satisfying as the home.

For every door and window in every room in your house there is the proper Sargent Hardware. And remember that it offers you the utmost in security and lifelong service.

Send for the Sargent Book of Designs and select with your architect just the hardware needed for your home.

**SARGENT & COMPANY, Hardware Manufacturers**  
45 Water Street, New Haven, Conn.

**COLONIAL  
KNOCKERS**

These knockers are the finishing touch in decorative hardware for the Colonial door. They come in several designs—each quaint and beautiful and each made of solid, time-resisting brass. Put both Sargent latch and knocker on your Colonial doorway.

**SARGENT  
DOOR CLOSERS**

close all doors silently and surely and keep them shut. A small size, most reasonably priced, is convenient for the door within the home that must be closed.

He was a one-man dog; that is, he would follow no other hunter but me. But to visiting hunters he was always courteous. Some dogs will bring dead birds only to their master, no matter who killed them. Buck would bring the bird to the man who killed it, if he knew. From the unpopular dog who in his youth had chased chickens and cats and overturned garbage cans, he came to be a favorite with everybody who knew him. There was something big about Buck. Maybe his wildness, as in the case of some men and women, was a sign of generosity.

A more fearless dog never lived. I could give half a dozen instances of Buck's willingness to fight and of his prowess. I had as soon doubt Frank's courage as Buck's. In fact, I don't know but that there was a steadier, colder quality about Buck's bravery. I never saw him tremble in a quarrel. Most dogs were instinctively afraid of him. He had a remarkable eye, very dark and steely, and when he was enraged few dogs could meet it. I have seen it proved over and over again, when dogs rushed out at him from farmhouses. He would stop in the road and stand very steady, head and tail high. They would come up to him, look into his eyes and turn away.

"They can't stand old Buck's eye," Mr. Wright used to say.

**P**ETTING and soft words embarrassed him, made him tuck his tail as if in shame, and turn off. But he loved for me to grab him with a strong grip by the loose skin of his neck, at which he would start away with mock ferocity and grab my wrist, his eyes glowing with pretended anger. Once or twice, my wife said, when nobody else was around, he came to her and put his head on her lap. But so rare were these occasions that she would tell me of them—when he wasn't listening! I think it would have humiliated him had he known she told.

He was very watchful of her, and more than once, when on account of the ruggedness of the country, I left her far behind, he refused to hunt further until she rose from the log on which she was sitting and waved him on with her handkerchief. Also, when I had to leave the cabin, as I did occasionally for a trip of a day or two, he stayed very close about the house, challenging everybody who came near, inspecting them closely if they were strangers, and keeping himself between her and them.

But you will think that after his conversion Buck, unlike others, had no canine or human frailties, or that he was my favorite—as perhaps he was. Some of his former wildness clung to him. The pup is father to the dog. Most hunting dogs have a high sense of honor about their master's food and property. I have come in late from a hunt with Bryan and taken my supper up-stairs, Bryan following, then, putting the supper on the hearth to keep it warm, gone out to wash my hands, leaving him in there when he had not yet been fed and when he was ravenously hungry. I knew he would not even put his nose close to my food, though his chops dripped with hungry saliva. I have known other bird dogs equally trustworthy in this particular. In fact, it is the rule with the well-bred, well-trained ones. Poor old Buck—there was one dish

Burroughs Adding Machine Company,  
Detroit, Michigan.

Gentlemen:

Since we installed our Burroughs, we are handling our affairs more with one less person than with the old method, making a saving of \$800 a year.

Our customers' statements are now posted daily showing the name of each item and the price charged, and these statements are in the mail the same day we close our books. Our figures are always readily accurate.

We keep a perpetual inventory of the different lines of goods we handle and are able to take off a balance sheet and financial statement, also statement of operations covering sales, gross profits, constant expenses and net profits by departments within a few minutes' time.

We postponed buying this machine for three or four years, which we regret very much as we feel that it would have paid for itself several times over simply by giving us a better knowledge and control over our business.

We would not now be so late to our old method.

Yours truly,  
KILLEEN-BUICK COMPANY  
*Charles E. Killeen*  
Pres.

## BETTER FIGURES *for* BIGGER PROFITS

# Burroughs

### ADDING • BOOKKEEPING • BILLING • CALCULATING MACHINES

Other car and accessory dealers and garages are as enthusiastic about the Burroughs Simplified Accounting Plan as the Killeen-Buick Co.

Here are typical examples of hundreds of letters.

"We take off a profit and loss statement monthly. With the information given us, we

always know exactly where we stand every day."—Calavada Auto Company, Inc. (Ford Cars and Fordson Tractors) Reno, Nevada.

"The most important feature of all is the simplicity of the system. I believe that any clerk with ordinary intelligence can successfully operate it."—Eisele Motor Company (Dodge Cars) La Salle, Ill.

**Burroughs Adding Machine Co.,**  
6048 Second Blvd., Detroit, Mich.

Please send complete information about the Burroughs Simplified Accounting Plan for garages.

# Are you to blame for the big repair bills?

**Most automobile repair bills are due to careless lubrication.**

**If your car is not Alemite-equipped, have this system installed at once. The cost is low in comparison with the savings it effects.**

**If your car is already equipped with Alemite, the system is helpless unless you use it regularly.**

## ALEMITE

*High pressure lubricating system*

Get in the habit of having your car Alemite-lubricated every 500 miles. That is the way to make your car last longer, keep repair bills down and eliminate squeaks and rattles.

### *Alemite for the Springs, too*

The Alemite Lubricating Spring Cover encases each spring in a flexible armor of lead-coated, non-rusting steel.

Filled with lubricant by means of the Alemite Compressor this cover retains the lubricant, keeps out water, dirt and grit and adds much to the life and easy riding qualities of the car.

*Write for complete information*

Alemite Products Company of Canada, Ltd.,  
Belleville, Ontario

which he would incontinently steal, and that dish was salmon. Let my wife fix up a salmon salad, put it on the table and leave the room—when she got back the plate would be clean and Buck would be lying before the fire, unashamed, licking his chops.

Not only that, but he took advantage of me one day. Down the hill from our house was a clear running stream with a rock on the shore. Here, when we didn't have a servant, I used to skin and clean the birds I had killed, wrap them in a cloth previously provided for the occasion, and bring them home. Now, in dressing them I would put the hearts and livers on the rock beside me, where Buck also sat, and at intervals tell him to "hie away," which meant he might eat them.

At dusk one afternoon, engrossed in my task, I put two birds already cleaned on the rock, and Buck suddenly looked at me. I forgot I had put birds and not hearts and livers there and told him to go ahead. The roar of the stream kept me from hearing the crunching of bones, and when I looked up Buck had eaten both the birds. He showed no shame. The look in his eyes was bold and challenging as it used to be. He had simply taken advantage of a technicality!

I don't mean that he was a thief, he wouldn't steal anything but salmon; and I never had him take advantage of me again—though I never gave him another chance.

**H**E LOVED to run with low company, with the hounds and mongrels that roamed the woods. I guess he was quite a hero among them. One of the things strictly forbidden a bird dog is to run rabbits. Bird hunting is a gentleman's sport—rabbit hunting is not. And to run rabbits demoralizes a bird dog, just as it demoralizes him to tree 'coons and 'possums. These creatures are left to hounds—a bird dog is a specialist.

Buck wouldn't chase a rabbit when he was hunting birds. Just one longing glance at that bobbing white tail, and he would go on about his business. But bird season over, and a period of idleness come—the devil finds plenty for an idle bird dog to do—Buck would join forces with the mongrels and, forming a pack, scour the woods. Sometimes he would be gone for days, and would come back from the dissipation as lean as a rail and with the old wild look in his eyes.

Across the road from our house was an extensive forest. One morning—it was Sunday, too—I heard far in these woods the sounds of a chase, and going around to Buck's kennel found it empty. Consequently, I entered the woods, located the chase, and hid in a thicket. Presently a red fox darted across an opening before me. Followed an interval before the pack appeared. I think every dog for miles around was running in that pack, and Buck was in the lead!

I called him and he came to me, panting and embarrassed, but good-natured. On the way home he turned now and then to listen with pricked-up ears to those disreputable friends of his. My sympathies were all with him, but to allow him to run with such company meant his moral degradation. A little more of such company as he was running with, and salmon would not be the only thing he would take.

The name of Sir Christopher Wren—builder of St. Paul's Cathedral in London—is associated with all that is worthiest in English architecture. While the ashes of the great London fire were still alive, Wren set to work to rebuild the city. Speaking of his monumental achievement, St. Paul's, he said, "It is the work of the builder to establish a nation, draw commerce and make people love their country."

## Building to an Ideal

**A**S the stone is shaped to man's enduring use by the master builder, so, in the Firestone Cord, has material been fashioned to contribute to that vital need in human progress—transportation.

And just as Wren, the great architect, toiled over his plans, rejecting even royal opinion if it did not meet his own high standard, so has Firestone maintained quality in the face of all obstacles.

The Firestone ideal of Most Miles per Dollar preceded the actual building of the tire and this vision of what a good tire should be reached

its highest fulfillment in the Firestone Cord.

Its acceptance by so great a number of car-owners has come because the *name* it bears is synonymous with quality. But in the last analysis, *results* are the determining factor in any success and the performance of this tire has already made it a dominating influence in the automotive field.

To Firestone builders a tire is much more than a product of rubber and cord—it is an essential in modern social and commercial life, a factor in present-day progress because it facilitates swift, economical transportation.

*Most Miles per Dollar*

# Firestone

## Where the Presidents bought their hats

THESE two brown Windsor chairs in the hat store of Charles Knox saw "distinguished service" for fifty years. It was here President Lincoln sat, and General Grant.

And in the fifty years that followed, every American President, and many other leaders in our nation's life, made use of these chairs when they bought their Knox Hats.

But not one of the Presidents who have worn Knox Hats received better style or more courteous service than you will receive in any shop where Knox Hats are sold today, from San Francisco to New York.

*In leading stores throughout the country wherever the Knox Coat of Arms is displayed, you are assured of style, quality and courteous attention.*

NEW YORK  
Fifth Ave. at 40th St.

SAN FRANCISCO  
51 Grant Avenue

The intangible something that gives the Knox Fifth Avenue Soft Hat its character is its combination of unmatched style and perfect workmanship. \$7.

On the most famous golf courses of America you see Knox Caps on the heads of men who are as precise about correct dress as they are about correct form. \$2.50 to \$5.00.

# KNOX HATS

FOR MEN  
AND WOMEN

With middle age, though, came sobriety and dignity. He lay around the yard when we were not hunting, or dozed before our fire at night, or watched us as we moved about the room, a fine look in his deep, agate-brown eyes. I have surprised this look when he was watching us and did not know we were watching him, and have been thrilled and startled by the benignity and generosity of it. The wildness had given place to a steady, unobtrusive, unlimited devotion to the two of us. And more than once I thought of that afternoon when, could I have got my hands on my gun, that look would never have been.

We took him with us when we moved to the city, and there he was stricken in his prime, of black tongue, a disease that in the last ten years has killed off many of the fine bird dogs of the South. The best veterinarians I could find attended him, but finally there came the afternoon when the doctor said there wasn't a chance for him; that he was suffering very much; that a hypodermic would end his life without struggle and without pain. I nodded, left the doctor, and came into the house—a hundred fields of glistening straw in my mind, a hundred wooden coves with autumn leaves sifting down, a hundred log fires with Buck dozing in front.

My wife was sewing in the hall, and when I told her she laid her work aside and ran quickly up-stairs. I heard the hum of the doctor's car as he took his departure. Maybe because of that afternoon when I reached for my gun, old Buck, of all dogs I have known, has the surest place in my heart. Not that altogether, either. He was the noblest Roman of them all, the most generous, the most magnanimous.

## The Ten Most Important Books in the World

(Continued from page 11)

Museum of Alexandria; all the great Hellenic achievements in physical science and surgery in the third and second centuries before Christ sprang directly from his initiative. The Arabs got their scientific impulse from him through the Greek books preserved by the Nestorian Christians in Persia, and by the literature left in Persia by the refugees from the schools of Athens when this last stronghold of pre-Christian thought was broken up by Judaism. And of all Aristotle's writings upon natural science we may perhaps take his "Physics" or his "History of Animals" as the best expression of his insistence upon the gathering and criticism of real knowledge, which was his supreme gift to the world. Of the two I would put the "History of Animals" first, and make that the sixth of our ten most important books. This again is a star which stands for a cluster, and it makes the sixth book upon our list. I do not see how we can omit any of these six, but we are left with only four vacant places for all the books of the last thousand years. (Admittedly this is an absurd inquiry.)

Now between the middle of the thir-

# Have you the courage to start over?

By William C. Roberts

I ADMIT very frankly that I didn't—not until it was almost too late. It is not easy to "start over" after you have been working in one position for a number of years—small as that position and its salary may be.

I used to wish, sometimes, that I had been more fortunate in my choice of a business when I first started to work, or that I had studied a little when I was younger and had fewer responsibilities.

I knew that I had just as much natural ability as many of the men who were getting ahead of me. And yet, somehow or other, Opportunity seemed always to pass me by.

Sometimes I blamed it on myself—sometimes I thought that other men had more influence or pull with the firm than I had—sometimes I overestimated the part that Luck plays in a man's success.

Then one day I met Jim Bartlett!

Now, Jim Bartlett was my best friend. He was a successful business man and he talked straight from the shoulder. There was no mincing words when he started analyzing my capabilities and telling me what I ought to do.

"Bill," he said earnestly, "the trouble with you is that you have fallen into a rut,

You work hard enough, but you haven't any definite goal.

"It may sound brutal for me to say this, but there's only one reason why you aren't getting more money, and that is because you don't deserve it. You've never made any effort to improve yourself after working hours. You've never trained yourself to handle larger responsibility."

"But what can I do?" I asked helplessly. "I have a wife and child. I'm too old to take chances."

"Too old?" fairly shouted Jim. "Too old? Why, if anything, you're too young!"

"At 35, Henry Ford was working in the mechanical department of the Edison Electrical Light & Power Co., for \$150 a month. At 38, John H. Patterson, who founded the National Cash Register Company, was the proprietor of a small and none too successful country store. At 25, George Eastman, president of the Eastman Kodak Company, was earning \$1400 a year as a bookkeeper in a savings bank. At 22, Edison was a roaming telegraph operator—out of a job—too poor, when he arrived in New York, to buy his own breakfast.

"Success wasn't handed to these men on a silver platter, Bill. They worked for it and worked hard—not only during the day, but at night, when the average worker was

lazing around the house or shooting pool. And you've got to do the same thing if you ever want to get anywhere."

FIVE years have passed since I had that conversation with Jim Bartlett—five important, eventful years.

I remember going home that night to a frugal supper and telling my wife of my conversation with Jim. I remember putting my head in my hands and thinking harder than I had thought in years.

Then my wife entered the room silently, and coming up behind me, placed one hand on my shoulder.

"Have you made your decision?" she asked.

It was a simple little question, but there was something in her tone and in the tender, trusting way her hand lay upon my shoulder that sent a thrill clear through me. There could be only one answer to an appeal like that.

"Yes, Mary, I have made my decision," I said—"a decision that is going to change our lives. The past is gone—dead—forgotten. But To-day is here and To-morrow is yet to come. I'm going to show Jim Bartlett and the world that I've got the stuff in me to succeed—and succeed big."

It was a brave speech for me, but somehow I knew that I was making a prediction that was sure to come true. So it came about that that night, before I went to bed, I cut out the familiar little coupon I had seen so often and mailed it to the International Correspondence Schools.

I tell you frankly that I had no idea that the course would be so interesting—so easy—so fascinating—so profitable.

Six months after I started studying with the I. C. S., I received my first promotion and an increase in salary—inside of a year I was assistant manager of my department. A year later I was made manager and I have held that position for more than three years.

JIM BARTLETT claims most of the credit for getting me out of the rut and I am glad to give it to him. He *did* start me thinking in the right direction.

But Mary and I both know that just "thinking" wouldn't have helped me very much if I hadn't sent in that coupon when I did and started studying in my spare time.

Take the advice of a man who has been through it all and send in this coupon today. It is a little thing to do—it will take only a moment of your time—but it may be the means of changing your whole life.

# WALTHAM

THE SCIENTIFICALLY BUILT WATCH

teenth and the end of the fifteenth century there was a mighty reawakening of the human mind, and I have at least four books competing in my mind to express this renaissance. I have already committed myself to the very debatable assertion that Roger Bacon was one of the Six Greatest Men in History. His greatness lay in his ideas and writing, and so it may seem incumbent upon me to give something he wrote as the seventh book on my list. Yet I hesitate to do so and finally I decide that I will not do so.

His writings were manuscripts; to this day they are manuscripts; England is too indifferent or too illiterate to translate and issue a good edition of the thoughts of one of her two greatest sons. He had such a vision of what was needed in the world for education and fruitful knowledge as no other man has had, but he wrote passionately and badly. He was, very largely, ineffective. I cannot assert that the creative urgency of his spirit was ever properly embodied in a book. And on the other hand, there was another thirteenth-century book that did release enormous new forces in the world, albeit it lacked altogether the reach and depth of Roger Bacon. This other book, which shall be put seventh in this list, was the "Travels of Marco Polo," which first opened the great world of farther Asia to the European imagination. From the literary point of view this book is of little account, but it sent Vasco da Gama to India and Columbus to America, and it turned the flat little world of ancient history into our round modern world. In Seville I have seen the copy of the Travels that Columbus possessed, with annotations in the margin that Columbus himself had made.

**O**NE able critic of my choice of the Six Greatest Men quoted two names as possible alternatives to my Roger Bacon. One was that universal genius Leonardo da Vinci. But while Roger Bacon shines like a star in the night of the thirteenth century, Leonardo was living in the brightness of the fifteenth. No doubt his "Note Books" show a wonderful curiosity and penetration, but I cannot put him on a level with his wrathful, lonely, and altogether wonderful predecessor. And for quite parallel reasons with those that exclude Roger Bacon's manuscripts from the list of the most important books, must we exclude the "Note Books" of Leonardo. They are private meditations, and they are still but incompletely given to the world.

But the other name that was set up against my choice of Roger Bacon gives me a book. This was Copernicus. He lived in the beginnings of printing. The first copies of his great achievement, "The Revolutions of the Heavens," were brought to him as he lay paralyzed upon his deathbed. It struck at the dearest vanity of mankind. It showed that the earth was not the center of the universe, but a mere planet among the planets that go about the sun. That realization marks an epoch in the growth of the human mind. I must count that book as No. 8.

Eight books; two more vacant places remain, and we are not yet in the beginning of the sixteenth century! I can see a dozen worthy candidates for consideration. I am much divided between "The New Atlantis," which formulated the conception of a House of Science, incessantly

COURTESY OF DR. J. C. S.  
—and then he bought a Philco  
What experiences—embarrassing or dangerous—have you had through the failure of ordinary batteries? We would be glad to hear from you.

### 3-Point Superiority

1. The Famous Diamond-Grid—the diagonally braced frame of a Philco plate. Built like a bridge. Can't buckle—can't warp—can't short-circuit. Double latticed to lock active material (power-producing chemical) on the plates. Longer life. Higher efficiency.

2. The Philco Slotted Rubber Retainer—a slotted sheet of hard rubber. Retains the solids on the plates but gives free passage to the current and electrolyte. Prevents plate disintegration. Prolongs battery life 41 per cent.

3. The Quarter-Sawn Hard-Wood Separator—made only from giant trees 1000 years old; quarter-sawn to produce alternating hard and soft grain. Hard grain for perfect insulation of plates. Soft grain for perfect circulation of acid and current—quick delivery of power. Another big reason why Philco is the battery for your car.

#### LOOK FOR THIS SIGN

of Philco Service. Over 5500 stations—all over the United States. There is one near you. Write for address, if necessary.

**BATTERY**

With the PHILCO Slotted Retainer

RADIO DEALERS—Philco Dynamic Radio Storage Batteries are shipped to you charged but absolutely DRY. No acid sloppage. No charging equipment. No batteries going bad in stock. Wire or write for details.

## When the cry comes— “Hurry, Doctor, Hurry!”

No time, then, for hand-cranking an engine! It's the emergencies—the dangers and humiliations of battery failure—that make motorists realize the absolute need for dependable, unfaltering battery power. That's why thousands upon thousands are replacing their ordinary batteries with long-life, high-powered Philcos.

Tremendous in capacity—staunch and rugged in construction—the Philco Battery is built for long-lasting, trouble-free service. A touch of the starter, a whirl of the motor, and you're off—hot, fat sparks racing to your plugs—brilliant headlights flooding the road.

The Philco Slotted-Retainer Battery—with its famous Diamond-Grid Plates and other time-tested factors of safety—is guaranteed for two years, but long outlasts its guarantee. Yet it now costs you no more—in many cases less—than just an ordinary battery.

Put a Philco in your car NOW. Safety demands the strongest, toughest, most powerful battery you can get. The nearest Philco Service Station has the right-size Philco for your particular car.

Philadelphia Storage Battery Company, Philadelphia

The famous Philco Slotted-Retainer Battery is standard for electric passenger cars and trucks, motor locomotives, and other battery work where long-lasting, low-cost current is demanded. If later you want batteries for, write Philco.

**DEPENDABLE AS TIME ITSELF**

inquiring and criticizing and publishing, that should continually extend the boundaries of human knowledge, and Newton's "Principia," which brought the whole material universe within the domain of natural law. Rather reluctantly I must see Newton squeezed out of our list. The book that replaced unorganized by organized scientific research, and did so much to insure the unending continuity of scientific inquiries must, I think, take precedence even of Newton's glorious analysis. And yet I cannot call "The New Atlantis" a very great, nor a very well-imagined or well-written book. It is indeed the hardest task in the world to make Utopias gay reading, though Swift could make the negative Utopias of Gulliver bitterly entertaining, and the "Republic" moves freshly to its end.

More's "Utopia" itself is a drearily dull book, and few there are who struggle through it. It has not of course the impenetrable tediousness of Harrison's "Oceana," but only the make-believe of the literary people can find brilliance or excitement in the Utopia of either More or Bacon. But "The New Atlantis" is at least short, and it contains the essential ideas of the modern scientific process, the organized collection, publication, and criticism of fact. Quite possibly it was the sole invention of Lord Verulam, but it is much more probable that his greatness was rather to understand and give publicity to the ideas of his friend Gilbert of Colchester, the experimental philosopher. But of the supreme importance of the book itself as the seed of the Royal Society and most European Academies there can be little dispute. Like the rod of Moses, it strikes the rock of human capacity, and thereafter the waters of knowledge flow freely and steadily.

**C**ERTAIN other books, though they are books of great moment, must also, I fear, be excluded from our ten. There is, for example, Adam Smith's "Wealth of Nations." That is still most living and readable, and it marked the beginning of a rational and unprejudiced treatment of the economic life of the world. But I do not know how far it was an original and creative book. Adam Smith had French precursors and inspirations. I know practically nothing of that seventeenth and eighteenth century literature of social, political, and economic science in France. I do not know what I ought to know of it, but clearly it was a very important literature indeed, and as I do not know it I cannot judge how far Adam Smith was really the great original he seems to me to be. But anyhow, for a reason immediately to be stated, there is no place for him or his sources.

Another eighteenth-century name that holds me in doubt is that of Immanuel Kant. I am held in doubt for much the same reasons as those that hold me back from any confident judgment about Adam Smith. But here it is not a question of his origins but his influence. I do not know my way about in the literature that is involved. I do not know where to place him, because I do not know the threads of suggestion and influence that link his work with the main lines of thought in the nineteenth century. He seems to me to have been one of the greatest originals among men, to have abolished limitations

# Mother and Child doing well

**Every year—**

These glad tidings are sent out by more than two million proud fathers in the United States. They are sent from the bedsides of the two million or more happy mothers who have had competent care.

**Motherhood is Natural—**

and where the mother's health has been safe-guarded before the coming of her baby and where she has had proper care at its birth, the happy report follows: "Mother and child doing well."

But what of the thousands of unfortunate mothers—who have no pre-natal care and who, when their hour comes, are in careless or incompetent hands.

**20,000 Such Mothers Die Needlessly—** die needlessly every year in the United States. "Put just one of these mothers in a vast hall. Let her die publicly, where thousands can see her, and observe the outcry. Imagination fails!" So writes a great editor.

## Two-Fifths of the Deaths from Childbirth

are the result of ignorance or criminal carelessness. The medical name for the direct cause is Septicemia. Septicemia is infection, caused by germs on attendant's hands, on instruments, on linen, or on some other article used in caring for the patient. Soap and water alone cannot produce the cleanliness necessary. Hands must be made antiseptically clean. Instruments must be sterilized (boiled). A little everyday knowledge and scrupulous care in each case—Septicemia is prevented—and these mother-lives saved.

5000 mothers die yearly from bodily neglect before their babies are born. The mother's body is working for two. This puts extra strain on the kidneys and other organs. Precautionary examinations by a physician show whether the kidneys are in good working condition, and care reduces danger from convulsions to a minimum.

Multiply that one dying mother by 20,000 and you get a picture that not only fires the mind beyond the realms of imagination, but one that stuns by its brutality—for most of these deaths are needless deaths. *They can be prevented.*

**10,000 Men Killed—**

When this news was flashed from the front during the Great War, our entire nation was hushed to tears and bowed its head in grief. Yet twice that many mothers die every year from childbirth here at home!

Millions are working for World Peace—working to save the loss of life in war. Then why permit the unnecessary sacrifice of mother-lives

—the choice lives of our Nation?

**Mothers in every part of the country need help—**

What shall the answer be? Husbands, physicians, hospitals, communities must ensure absolute cleanliness and provide skilled care.

More women in this country between the ages of 15 and 44 die from the effects of childbirth than from any other cause, except tuberculosis.

From its very beginning in 1909, the Metropolitan Life Insurance Company's nursing service considered the care of policy holders, before and after childbirth, as one of its chief obligations.

From January 1, 1922 to December 31, 1922, Metropolitan nurses made over 700,000 visits to policy holders in maternity cases, not

only giving pre-natal care but after-care to mother and child and teaching the mother how to care for the baby when the nurse's visits were no longer necessary.

The death rate among Metropolitan policy holders from child bearing has been reduced, while the death rate among women lacking the visiting nurse service has actually increased.

Results obtained by the Metropolitan, together with the fact that wherever public and private agencies are working, the maternal

death rate is being reduced is an indication of the possibilities when every mother shall have pre-natal care and proper attendance during and after confinement.

The company is ready to send a simple but scientifically prepared booklet entitled: "Information for Expectant Mothers". Your request by letter addressed to Metropolitan Life Insurance Company, New York, will bring this booklet without charge or obligation.

## The Securing of Watch Chain Value

TO give you real value, a watch chain must be more than beautiful, for beauty is sometimes temporary. It must serve you faithfully through the years—continually worn, much handled, yet never losing its beauty or playing false to its duty of securing the watch.

Wear a Simmons Chain to secure the maximum of watch chain value! It is made by a special process of drawing gold, green gold or Platinumgold over a less expensive base metal. Thus it becomes the more durable and beautiful and surprisingly reasonable in price—\$4 to \$15.

There are many styles of Simmons Chains to meet your preferences and requirements at work, dress and play. Each is made with finished craftsmanship. See them at your jeweler's.

and opened out new worlds. It seems to me that ideas about the validity of human beliefs, and about such things as space and time differ in the pre-Kant era from those in the post-Kant era as a brick wall differs from a glass partition. You can see through them now, even if you cannot for effective thinking get through them. His "Examination of Pure Reason" (which people for some unfathomable reason either mistranslate as the "Critique of Pure Reason," or leave only half translated as the "Kritik of Pure Reason" comes close to our Ten. Yet it was not the whole of Kant, hardly more than the "Natural History" is the whole of Aristotle. It is the star that stands for the cluster.

Kant's mind, I think, wasn't in the eighteenth century at all, it was mooning ahead somewhere about the twenty-fourth. He was not a very expressive man, and again and again it is only when his work has been laboriously rediscovered that the explorers find from some dropped phrase or fragmentary essay that, instead of having pushed into the virgin wilderness, old Kant has been there before them. He anticipated certain discussions of the effect of the tides upon the length of the world's day, by a hundred years. We work a way through war and bloodshed, slowly, so slowly! to the realization that there is no peace, no future for mankind except through the political unity of mankind in a world republic. Kant said it. Never a commanding idea has this world of to-day brought to me that he has not anticipated. The fundamental importance of universal history as a basis of international ideas has come to me with the effect of a great discovery. He knew that universal history must be the basis of the political ideas of a happier world.

RECENTLY, and under the sway of Sanderson of Oundle, I have been more and more confirmed in my belief that the world can only be reconstructed (and that it can be reconstructed) by remaking it in the schools. Here is our best field of work, our surest, freshest hope. Yet a century and a half ago Kant had said that, he had said quite plainly that we must educate not for the present world but for the world that is to be. I begin to doubt at times whether I shall ever come to see any truth that Kant did not see. If when I die I receive the greatest surprise of my life and find myself immortal, I know that the first person I shall see in that stupendous new world will be this little Scotch Prussian, walking by, perfectly at home, with an air of having said so all along. Yet—and here is the real question of his importance—how much did he help us to discover and realize? Or is it that, as we come up to things, we just find that almost unhelpfully—so dry was he and so obscure—he has been there?

Another book that I am constrained to put aside by the limitation of my question to ten books only, is Marx on "Capital," in spite of its enormous influence during the last quarter of a century. I do not say it is a good book, but I insist it has been a very important one. Indeed, I should call it a bad book—evil rather than bad. It has given the socialist and labor movements of our modern civilization a narrow, bitter self-righteousness. Marx has played to insurgent labor the same rôle that Herbert Spencer with his individualistic

## A Million Miles from Dull Care

**S**OMEWHERE far beyond the place where men and motors race through canyons of the town—somewhere on the top of the world—there is a peak which dull care has never climbed.

You can go there light-hearted in a Jordan Playboy—for it's always happy in the hills.

A car for a man's man—that's certain.

Or for the girl who loves to take the open road with top down, in the summer time.

Lighter than any on the road, for its wheelbase, rare in beauty and supremely balanced, as a fine car must be—distinctive as only a car of personality can be—the Playboy is an apt companion for all Americans who dare never to grow old.

Strangely we have always underestimated the Playboy demand.

We have never built enough.

But we never will—you may be assured.

There's too much real fun in building a few less than the people want.

It's friendly, human—you know—to want to have something the other fellow can't get.

Frankly, the Playboy is built for those admirable people of good taste, who know how to distinguish high quality from extravagance—those rare individuals to whom experience affords the possession of the pride of economy, which is just another name for common sense.

# JORDAN

JORDAN MOTOR CAR COMPANY, Inc., Cleveland, Ohio

## Refreshment without risk

**W**HEN you feel worn out and nerves are a-jangle from the daily grind—that is nature's danger signal. Good food, a *wholesome* hot drink and rest are the only safe ways to restore vigor and freshness.

A good hot drink, such as Postum, that contains no treacherous stimulant, is one of the surest, safest helps in relieving fatigue.

The genial warmth of this famous cereal beverage, its delicious flavor and "body" give immediate satisfaction. Tired nerves are soothed—not stirred up at the expense of vital energy.

Postum *tastes* like coffee but it does not contain a particle of coffee. Coffee is likely to let you down; but Postum comforts and satisfies without any disagreeable after-effects.

Postum is the world's household drink that every member of the family—young and old—can enjoy.

Your grocer sells Postum in two forms: Instant Postum (in tins) prepared instantly in the cup by the addition of boiling water. Postum Cereal (in packages) for those who prefer to make the drink while the meal is being prepared; made by boiling fully 20 minutes.

# Postum

FOR HEALTH

*"There's a Reason"*

doctrines, played to the selfish financier and industrial entrepreneur; both justified the characteristic class impulses of the people they flattered, and both discouraged that generosity which alone can save the world. They are the twin evil spirits of our age. But vast as has been the disastrousness of Marx, I still cannot count his book among my ten. There is a far stronger claim for Darwin's "Origin of Species." Of that book we may say it completed the disillusionment of mankind. It is the end of twenty-five centuries of adolescence, the coming of age of mankind. With that book man ceased to live, self-centered and limited, in a childishly conceived world made for him and culminating in him, and entered upon a full realization of the greatness, terrible-ness, danger, and beauty, the limitless possibilities and endless adventure of life.

**T**HAT completes my choice of ten. The reader will remark that I have glanced at Homer and the Rig Veda only to dismiss them, and that Shakespeare and Goethe, Euripides and Virgil and so forth are not even named. But I was not asked for the most beautiful or the most perfect or the most moving books; I was asked for the most important. I was thinking not of delights but powers. And just as I declined to think of Shakespeare, that most lovable, humorous, melodious, and understanding man, as one of the Six Greatest Men, so do I refuse to consider his plays or any one of his plays as of supreme importance in human affairs. Had there never been a Shakespeare the world would have been very much what it is to-day; some of us would have lacked a dear friend and the forcing-houses of "refinement" would have had one tedious cant the less.

And if a young man or a young woman were to ask me if I thought the reading of these Ten Most Important Books advisable, I should make a very guarded reply. I should say, "Read all you can of the original Gospel as it is preserved for us in the existing Gospels, read the 'Republic,' for it is not too long and still quite a contemporary book, and if you are a Jew or want to understand the Jews—and I do not see how you can understand the world if you do not understand them—read Isaiah. But the 'Koran' you will not want to read, because it is practically unreadable; look into it and see what it is like. Read about Confucius rather than explore the text of his sayings. The 'Travels of Marco Polo' makes interesting but not absorbing reading nowadays, and it is by no means 'generally necessary for salvation.' It has done its work. And Aristotle and 'The New Atlantis,' the 'Revolution of the Heavens' and the 'Origin of Species' are all now so digested and absorbed and incorporated in the body of modern thought and science that there is really no particular urgency for the ordinary educated man to study these originals at all. It is well to read them; it is well to get as close as possible to these great originating books, but it is not vitally important to do so. The Ten Most Important Books does not mean necessarily the ten most important books to read. But this is opening a fresh question, the question what a decent citizen of to-day should read, and that I hope to be able to discuss in next month's AMERICAN MAGAZINE."

## WHAT SURPRISED THE CHEF

### *Real Cream in Cream Soups*

"You don't mean to tell me," exclaimed a noted chef, who was visiting the "Home of the 57," "You don't mean to tell me that you put *real cream* in your cream soups!"

His specialty was cream soups. His exclamation of surprise came when he saw the great cans of real cream, fresh from the dairy, waiting to be made into Heinz Cream Soups.

"Of course!" was the reply. "What else?"

"But I never use cream in my cream soups—or even milk. It isn't necessary. Nobody notices the difference."

He was told, however, that real cream was necessary for Heinz Cream Soups.

*Doesn't the label say  
"Cream"?*

When a Heinz Soup is called "Cream Soup" it is because it is *made with real cream*.

When Heinz Beans are called "Oven Baked" it is because they are *really baked in dry heat ovens*.

"Pure" means *pure*, and there are 57 Varieties of HEINZ pure food products.

H. J. HEINZ COMPANY

## Doctors know the value of ARCOLA warmth

DR. T. W. POSEY, Bowling Green, Ky., who warms both his home and garage with ARCOLA, says: "We never have less than 70° temperature throughout the house; three of our neighbors have installed ARCOLA after seeing how splendidly ours worked."

Dr. Sidney A. Dunham of the Parkside Sanitarium, Buffalo, N.Y., writes: "My ARCOLA is proving very satisfactory and economical. It requires less attention and produces more heat than any other system I

have ever seen. I consider it excellent for the health of patients. It has been in use here four years without repair."

Your doctor, too, will tell you that hot-water warmth is the healthiest and best for your home. Your Heating Contractor will tell you that he can have ARCOLA installed, and furnishing hot-water warmth to every room in your home, in less than a week.

See him today. And send for the finely illustrated book which explains how ARCOLA pays for itself in the fuel it saves.

## The Most Wonderful Dog I Have Ever Known

### FIRST PRIZE

#### Brought Help to a Trapped Sheep

**A**KINSMAN of mine, Mr. Roland Sperry of New York State, bought a shepherd dog with the intention of training him to handle a small herd of sheep. Because of a belt of white hair around his neck, the dog was named Ring.

Ring grew up about the place but had never received any lessons in sheep herding. He had, however, been taught to drive the cattle and the horses back and forth from the pasture.

One day the master of the farm was some distance from the house working in a field when Ring came running to him. The dog acted curiously. He tried, obviously, to make the man take notice of him, and paid no attention to Mr. Sperry's efforts to be playful. Finally, the man became uneasy, thinking perhaps something had happened to his invalid wife. He hurried home, Ring running in front. At the house all was well, except that the dog continued to leap up, whine, and try to lure his master on. A tuft of sheep's wool showed in Ring's teeth, and upon discovering this Mr. Sperry was astounded, fearing that his fine dog had become a sheep killer.

But he decided to follow the dog and see. Into the woods he was led and, picking his way across the trunks of newly-cut trees, the man, as directed by the dog, came upon a sheep caught fast in between two fallen trees and wedged there by an accidental adjustment of the boughs. Ring had tried to extricate that sheep; he had gnawed bark off the trees, scratched around in the ground, and finally had taken hold of the sheep and pulled backward, thus getting the wool in his mouth.

All this being useless, Ring decided to go for his master, for he had learned that a man can do many wonderful things which dogs cannot do. L. B. S.

### SECOND PRIZE

#### Found His Way Home, From New York to Texas

**B**OSCO is a collie. He is still a young dog, but nevertheless a wise one.

We had been wondering what we should do with him when we went off for our summer vacation, for it so happened that, according to the plans we were making, we could not take him with us. A friend of ours who was very fond of Bosco suggested that he take him on an automobile trip to New York. Our home is in Texas, and this friend was to make the long trip by motor. He said the dog would be good company. That settled it, and so on the first Friday in March Bosco and this friend departed.

## What is the secret of good-natured children?

**T**O BUILD child health and happiness, natural foods are the most helpful—especially cereals. Of all cereals, oatmeal is best. But it makes a difference which kind of rolled oats is used.

*The superiority of H-O is due to an exclusive process of Steam-Cooking and Pan-Toasting the oats in the old-fashioned way.*

Thorough Steam-Cooking in closed kettles at 250 degrees, dextrinizes the starch and makes the oats digestible. Pan-Toasting over live coal fires at 650 degrees, produces that delicious H-O flavor.

H-O oats are plump, curly and brown—exclusive characteristics made possible only by the Steam-Cooking and Pan-Toasting process.

Oatmeal made from H-O (Hornby's Oats) has distinctive color, flavor and texture, unlike any other oats.

For free trial package, write the H-O Cereal Company, Inc., Buffalo, N. Y., Department "C."

## The Ties You Like to Wear

JUST the fact that they are Cheney Cravats is more than enough to make you *like* these new Spring ties on sight—for you know what "Cheney" means in ties.

They offer you patterns and colorings that are unusually smart—cut and style that are up-to-the-minute—and an easy-tying material that is wrinkleproof, wear-proof and holds its shape well.

Especially sturdy are Cheney Tubulars, famous for their long life of good looks. Your favorite haberdasher has them.

shades.*

# CHENEY CRAVATS

It took the tourists full three weeks to reach New York. Bosco was given a comfortable kennel at the house where my friend was stopping. Everything reasonable was done for him, but he was not content. Homesickness seized him—love of the wide spaces of Texas, the smells of the prairies and the warmth of the Southern sun lured him. He was housed better than ever before, but it wasn't *home* to him. He became restless and finally ran away. Efforts to find him proved futile, and our friend notified us of our loss.

One day in August, a little more than four months later, my baby brother was playing in our front yard. He felt a dog's nose nudge him, and turning he stood amazed! "Bosco!" he shouted at the top of his voice, "Bosco!" and running as fast as his little legs would carry him he called to Mother that Bosco had come home.

And so he had! His beautiful coat was matted with burrs and mud; his feet were sore, the nails being worn off; his tongue was dangling and his graceful body was lean and lank. No wonder, for he had traversed the miles from New York to Texas, and in some way unknown to us humans he found the way south and west and home.

P. K.

### THIRD PRIZE

#### Saved His Master From Enraged Bull

OUR family dog came to us a stray puppy on our old Minnesota farm. As chief chore boy it fell to my lot to be his sole trainer and companion. For me he would travel clear across the farm to bring the cattle, and would unerringly separate the steers and young stock from the milk cows, bringing only the latter at milking time.

Once I had sent him nearly a mile away for the cattle, then feeding in the corn stalks. I was amazed to see him hesitate after the herd was started home, and then cross the road into a neighbor's pasture and start that herd also. He seemed to be trying to cut out some animal from the herd, and pretty soon he succeeded.

When the cattle came up I scanned the bunch to discover the stray member, but to my astonishment found that the wanderer was our own bull, that had jumped into the neighbor's pasture. Old Fido had noticed his absence and had located him mixed in with some forty-odd cattle.

Another time I was milking in the sheds, and Fido came to the door making sounds of great excitement. I knew something was wrong. I heard a thud and a sound as if the breath had been driven from someone's body. With a bound I reached the door, and was frozen with horror to see my father prostrate on the ground and the bull—he had no horns, happily—maneuvering so as to throw his weight upon the almost helpless man. With a little remaining strength Father wiggled now this way now that to escape the impact of the bull's head.

For a second I stood motionless, but Fido flashed out into the yard, made a leap and grabbed the infuriated animal's tail close up to his body. This unexpected attack surprised the bull and gave Father a chance to crawl into the shed. E. H. P.

# \$50000-in Prizes For Users of Valspar

Nearly everybody knows about Valspar and millions are using it. This wonderful waterproof varnish has proved its worth and quality under circumstances and conditions that are nothing short of amazing.

Thousands of unsolicited letters have reached us from people wishing to relate unusual Valspar experiences. These letters furnish overwhelming testimony of Valspar's marvelous durability and its astonishing resistance to water, heat, acids, alkalis.

And we are convinced that thousands of other Valspar users have had experiences just as interesting. We want to know of these incidents. Accordingly we are offering several thousand dollars in cash prizes for letters telling of experiences with Valspar.

## For Instance

That you may understand exactly what we have in mind, we give the following actual experiences as examples:

1. C. K. Perry of Marshfield, Oregon, wrote about a Valsparred dining room table which as the result of a fire last July, was drenched with water mixed with lime and charcoal. The under part of the table (which was not Valsparred) turned white as snow—the Valsparred top, when washed, was found to be in perfect condition.
2. Mr. J. H. Audibert, of Fort Kent, Me., varnished four axe-handles, each with a different Varnish-Stain including Valspar Varnish-Stain. He writes: "The cheapest stain looked all right and dried quicker, but after putting all the handles in a pail of ashes mixed with boiling water, I found the Valspar was the only one that stood the test."
3. One stormy day last November, Mrs. J. B. Kirk of Hackensack, N. J., had to leave her car out in the driving rain and sleet. (Fortunately, her husband had put two coats of Valspar Enamel on it the Spring before.) "After the storm," she writes, "it looked like an iceberg and I thought the finish would be ruined. But the ice and water didn't hurt it at all and today the car looks as fine as when the enamel was first put on. Our garage man marvels at it, because his own car, which he refinished with another make of varnish, looks so shabby and dull."

**Valspar Colored Varnish-Stains.** All of these can be freely washed with hot water and soap; they never turn white; they resist the action of acids, alkalis and oils. They are very durable; they don't chip, crack or peel. They dry in any weather—dust-free in two hours and hard in twenty-four.

## About the Uses of Valspar

Clear Valspar is, of course, used for finishing floors, all kinds of indoor and outdoor woodwork, furniture, boats, refrigerators, linoleum, and for the many other uses of varnish.

Valspar Varnish-Stains possess the same qualities as clear Valspar, but you stain and varnish with one stroke of the brush. They come in six permanent colors. Absolutely waterproof and very durable, they are unequalled for finishing floors, front doors, porch furniture, and all other woodwork that requires staining.

Valspar Enamels answer the need for a really waterproof enamel. They are made from the finest pigments carefully ground in clear Valspar, thus combining Valspar durability with exceptional beauty of color. Valspar Enamels are absolutely unsurpassed as an automobile finish and for wood, metal and all other surfaces where enamel is used. They come in 12 standard colors.

## What Can You Tell Us?

If you know an instance where any (or all) of these three forms of Valspar has proved its durability and waterproofness under unusually severe conditions of wear, or under some extraordinary circumstance, we ask you to write us about it. And if you have photographs which add interest to your story we will be glad to receive them.

It makes no difference which form of Valspar has been used—it makes no difference what kind of a Valsparred surface it is. Just tell us the facts.

## Requirements and Prizes

There are no restrictions, no intricate qualifications. Write your letter in ink and use *only one side of the paper*. These are the only requirements—with the understanding, that the incident told about actually occurred prior to the first announcement of this contest. And that we shall be allowed to use for publicity purposes as we see fit any letters submitted.

\$2000 will be awarded to the contestant who sends the letter that the judges agree is the most interesting of all. 5 prizes of \$100 to those whose letters stand next in interest—ten \$50 prizes, one hundred \$10 prizes, and two hundred \$5 prizes will also be distributed—more than three hundred (300) prizes in all.

The judges of the contest will be Mr. Lawrence F. Abbott, President of The Outlook; Miss

Every Live Dealer in the United States Sells Valspar

## SPECIAL DEALER WINDOW DISPLAY CONTEST

In addition to the contest described above, which is open to everyone, including all dealers, there will be a special contest for dealers only.

**\$1500 IN PRIZES** for photographs of the best Window Displays of any or all of the following—Valspar, Valspar Varnish-Stain and Valspar Enamel. Only those dealers who have Valspar in stock or have ordered same at the time of the first announcement of this contest are eligible.

Prizes will be awarded as follows: First prize \$250; 5 prizes of \$100 each; 5, \$50 prizes; 10, \$10 prizes, and 80, \$5 prizes—101 prizes in all. All letters and photos must be received by April 30th, 1923.

## List of Prizes

### Prizes for Valspar Experiences

1st prize \$500.00  
5 prizes of \$100.00 each  
10 prizes of \$50.00 each  
100 prizes of \$10.00 each  
800 prizes of \$5.00 each  
316 prizes in all—Total value of prizes \$3,500.00

### Prizes for Valspar Dealers

1st prize \$250.00  
5 prizes of \$100.00 each  
5 prizes of \$50.00 each  
10 prizes of \$10.00 each  
80 prizes of \$5.00 each  
101 prizes in all—Total value of prizes \$1,500.00

Contest Closes April 30th

**VALENTINE'S VALSPAR**  
The Varnish That Won't Turn White

Martha E. Dodson, Associate Editor of 'The Ladies' Home Journal'; Miss Gertrude B. Lane, Editor of the Woman's Home Companion.

We suggest that letters do not run more than 250 words in length, but length or literary style will have no bearing on the award of prizes.

All letters must be received by April 30th.

Address your communications to Valentine & Company, Prize Contest Department, 52 East 31st St., New York City, N. Y.

## Write Your Experience Now

Let us hear what you know about Valspar. Don't consider your experience as too trifling or commonplace, write us about it. Not everybody can relate a startling occurrence, and it's more than likely many of the prizes will be won by simple, matter-of-fact stories.

Don't let this chance slip by. A few minutes spent in writing your letter gives you a splendid chance to win a substantial prize. Send us your story. Send it today.

Prize Contest Department

## Captain Jackson Gives In

(Continued from page 49)

and slipping and swimming. I had our boat unhitched. He took her and going back, beached just as the doctor appeared. When they got to the kitchen there was poor old Cap'n in agony.

"White of egg," ordered the doctor.

"Had five," said I.

"Oil?" and I nodded.

"Mustard water?"

"Ready, but he won't take it."

"Can't, can't," whispered the Cap'n.

The doctor just took his beard and yanked his mouth open, and down it went. Well, it wasn't long before he threw off the poison. Seemed as if he'd turn inside out. Then the doctor fixed him up and ordered him to bed. While we were undressing him, Doctor Emery said, "Ezra, Jane Wiggin saved your life, to-day. Don't you ever forget it."

Stella was about crazy when she got home. She stayed with him all the time.

A week later I see Anna Blaine in the village, and she told me True was coming home the next Sunday for the first time in weeks. "He says he's going to see the Cap'n about Stella," she said.

The doctor was making his last visit the next day. When I was bringing him across, I said to him, "Doctor Emery, would you mind mentioning again to-day how 'twas me that saved his life?"

So when he was leaving, he said, "You can thank Jane for your life, Cap'n. We'd 'a' had a new keeper if it hadn't been for her."

Cap'n and I exchanged a glance, but we said not a word.

THE next Sunday, who should come rowing across the cut but True. No one saw him but me, till he knocked at the kitchen door. Stella opened and her face was a picture when she see who it was. He walked right in and kissed her before she could say Jack Robinson. Then he remarks, offhand like, "I'd like a few words with Cap'n Jackson."

Cap'n had heard his voice and was standing in the sitting-room door looking like a thunder cloud. True said, "Cap'n Jackson, I'll come right to the point: I'm here to ask your consent to marry Stella, three weeks from next Sunday. I've got a good position, and I love her and she loves me. I want to take her West."

At that word "West," Cap'n most exploded. He went out the door and walked round and round the island.

True says, "If he won't give in, you're going to come anyway, Stella. I've made all the arrangements—got the license, and our tickets too."

Stella was wavering between anger and admiration when the Cap'n came in. He spoke to Stella in the gentlest voice I ever hear him use.

"Stella," he said. "Stella, I've been hard and stubborn sometimes; but I loved your ma and I love you. Circumstances," he says, with a look at me, "all seems to point to my giving you to True Blaine. God help him if he don't make you happy. Don't ask me to stand up with you—I won't do it. But I give my con-

## What about the men?

AN intelligent young woman in Cleveland sat down to her typewriter during noon hour the other day, and wrote us the following:

"Gentlemen: Please hand this letter to the man who attends to your advertising.

"I have been a lot interested in reading what he has to say about Halitosis (unpleasant breath) because it all hits so close to where I live eight hours every day.

"It's the man I work for who is the offender, and I am simply hoping and hoping every day that he will see one of your advertisements and that it will do him some good! You see I don't dare mention it to him.

"I'd clip out one of your advertisements and hand it to him if I didn't need my present job as badly as I do.

"If you have any suggestion, I'd be glad to have it.

Yours truly, G. S."

\*\*\*

So there you are, Miss G. S. If

this advertisement helps you out, we'll all be happy.

The insidious thing about halitosis (the medical term for unpleasant breath) is that you, yourself, rarely know when you have it. And even your closest friends won't tell you.

Sometimes, of course, halitosis comes from some deep-seated organic disorder that requires professional advice. But usually—and fortunately—halitosis is only a local condition that yields to the regular use of Listerine as a mouth-wash and gargle.

This halts food fermentation in the mouth and leaves the breath "sweet, fresh and clean." So the systematic use of Listerine this way puts you on the safe and polite side. You know your breath is right. Fastidious people everywhere are making it a regular part of their daily toilet routine.

Your druggist will supply you with Listerine. He sells lots of it. It has dozens of different uses as a safe antiseptic and has been trusted as such for half a century. Read the interesting booklet that comes with every bottle.—Lambert Pharmaceutical Co., Saint Louis, U. S. A.

A.F.B.A. HOUSE No. 628  
at Park Ridge, Illinois

This is one of the ninety-six  
attractive designs shown in  
"Face Brick Bungalow and  
Small House Plans"

## Basic Values in Home-Building

FACE Brick combines that strength, durability and beauty which meet the requirements of both good taste and the thrifty purse. Other materials have their merits and make their appeal, but looking at the home-building problem on all sides, no other material approaches Face Brick in the structural and artistic values it offers—permanence, comfort, safety from fire, economy, and beauty. Every home-builder will find it worth while to investigate Face Brick before he builds. The facts are given in "The Story of Brick." For your copy, address, American Face Brick Association, 1736 Peoples Life Building, Chicago, Illinois.

### Send for these booklets:

"The Story of Brick" is an attractive booklet with beautiful illustrations of modern homes, and discusses such matters as Comparative Costs, Basic Requirements in Building, The Extravagance of Cheapness, Financing the Building of a Home, and kindred subjects. A copy will be sent free to any prospective home-builder.

"Face Brick Bungalow and Small House Plans" embrace 96 designs of Face Brick bungalows and small houses. These houses are unusual and distinctive in design, economical to build, and convenient in floor plan. "Face Brick Bungalow and Small House Plans" are issued in four booklets, showing 3 to 4-room houses, 5-room houses, 6-room houses, and 7 to 8-room houses. The entire set for one dollar; any one of the books,

twenty-five cents. We can supply complete working drawings, specifications and masonry quantity estimates at nominal prices.

"The Home of Beauty" contains fifty designs of Face Brick houses, mostly two stories, representing a wide variety of architectural styles and interior arrangements. These houses were selected from 350 designs submitted in a nation-wide Architectural Competition. Sent for 50 cents. We also distribute complete working drawings, specifications and quantity estimates for these houses at nominal cost.

"Orienting the House" is an illustrated booklet, with a sun dial chart and explanation for placing the house with reference to light and shade. Interesting to any prospective builder. Sent for 10 cents.

sent—though I might just as well of died then as now," he adds, with a black scowl at me, as if 'twas all my doing.

Stella and True was so overcome they didn't hear half he said. They both thought True had scared the old man into it. I never told 'em 'twas just the will of the Lord working through Jane Wiggin, as He has many's the time. Even Cap'n took great credit for his kindness, and give them five hundred dollars for a wedding present.

Mrs. Wiggin drifted off into oblivion with her memories, and was roused only by my question, "What's become of the Cap'n?"

"Him? Laws, if he didn't marry Ella Adams that very next fall—or rather she married him, I'll tell you about it sometime."

## What Have You Got in Your Medicine Closet?

(Continued from page 29)

special conditions, make the family safe by pasting on the outside of bottle or box a piece of sandpaper. Sandpaper can be detected in the dark and will warn anyone to drop that bottle. And the fools who will go into a cabinet in the dark and take a dose out of an unseen bottle are to be found in the best of families.

If I were to add to my list of home remedies it would be the name of a drug not yet generally known, because it is comparatively new, but one which deserves a place. It is a tissue extract called thromboplastin and is used to stop minor hemorrhages. It takes thromboplastin just one minute to stop a bad nose bleed, and when this drug is better known it will undoubtedly be valued as a home remedy.

SOME people "just can't take" certain drugs. If you can't, there are forms of disguise that make the taking of almost any drug agreeable. If you have a revulsion at the notion of some drug that you know is going to do you good, have it put up in some form that you like. The old-timers sneer at this pleasing of a patient; they prefer the days when we held the children's noses until they gasped for breath and so swallowed the castor oil.

But any modern physician knows that flavor and appearance are factors in the successful administration of drugs. If the flavor is agreeable to the patient, it puts the patient into a more favorable condition for the action of the drug and actually aids absorption. Tasteless castor oil, castor oil put into capsules, tablets with coverings of chocolate, licorice, peppermint, or sugar, are just as effective as the distasteful raw drug, and to most people much pleasanter to take. If your children fight about taking remedies, have those remedies put up in agreeable form.

Practically all human beings take drugs. Even the people who deny taking "medicine" have their pet aids to health. Hardly a man or woman but takes some drug internally at least once a week, and the folks who fly for relief for every little ache take drugs every day and often many times.

The crate on the left is one of several crates designed by a Weyerhaeuser Crating Engineer for a Detroit Automobile concern. It replaced the crate shown on the right.

The advantages of the new crate are: saving in lumber, reduction in size and weight, lessened labor cost, greater strength.

Another instance of what Weyerhaeuser Crating Engineers are doing for shippers every day.

## How Scientific Crating Cuts Down Freight Bills

**S**HIPPERS today find no joy in the subject of freight rates. So the ability of Weyerhaeuser Crating Engineers to cut tons from freight bills has brought their services into national prominence.

The story of the crate pictured above is characteristic of what scientific crating is accomplishing.

**T**HE new crate, designed to carry an automobile fender, weighs 36 pounds less than the crate it replaced—a reduction in weight of 54.5%. This saving is chiefly the result of using a lighter weight wood. Yet through proper design the new crate is stronger.

The concern for which this and several other crates were designed, estimates a reduction in its freight and express shipping weights of 2,000,000 pounds per year, representing a saving of from \$10,000 to \$15,000.

The new crate requires 3.3 feet less lumber—a saving of 17.9%.

It is two inches less in length and height—an economy in storage and car loading.

The foreman of the shipping room says his men can make two of the new crates in the time required to make one of the old design.

Shippers who have adopted scientific crating report other advantages in addition to factory savings. Good packing insures safe delivery of

merchandise. It eliminates damage claims and speeds up collections. It decreases sales resistance and so gives the salesman a new selling tool. Safe packing builds good will.

Many large concerns are utilizing the service and the facilities which this organization makes available to the industrials of the country.

**T**HE services of Weyerhaeuser Crating Engineers are offered to executives of business concerns—by appointment on request.

There is no charge for this service. This organization feels that the position of lumber as the standard material for shipping containers imposes the obligation to deliver 100% value with every foot of lumber we sell.

For crating purposes, this organization supplies from its fifteen distributing points, ten different kinds of crating lumber, of uniform quality and in quantities ample for any shipper's needs.

A booklet, "Better Crating," which outlines the principles of crate construction and explains the personal service of Weyerhaeuser Engineers, will be sent on request to any manufacturer who uses crating lumber.

Weyerhaeuser Forest Products are distributed through the established trade channels by the Weyerhaeuser Sales Company, Spokane, Washington, with branch offices at 208 South La Salle Street, Chicago; 220 Broadway, New York; Lexington Building, Baltimore; and 4th and Robert Streets, St. Paul; and with representatives throughout the country.

**WEYERHAEUSER FOREST PRODUCTS**  
**SAINT PAUL • MINNESOTA**

*Producers for industry of pattern and flask lumber, factory grades for remanufacturing, lumber for boxing and crating, structural timbers for industrial building. And each of these items in the species and type of wood best suited for the purpose.*

## Men's Teeth

Should also glisten.

Shall women take all the care?

A large percentage of the women you meet have white teeth nowadays. Men like the charm. They like the smiles that pretty teeth engender.

But don't you know that women also like such evidence of care?

Careful people the world over use a new teeth-cleaning method. It means whiter, safer, cleaner teeth. You owe yourself a test.

### Film is the cause

The cause of dingy teeth is film—that viscous film you feel. It clings to teeth, enters crevices and stays.

Food, tobacco, etc., discolor film. Then it forms cloudy coats. Tartar is based on film. Teeth which people don't like to show are made unsightly by that film.

### Troubles follow

Film also causes most tooth troubles. It holds food substance which ferments and forms acids. It holds the acids in contact with the teeth to cause decay.

Germs breed by millions in it. And they cause many serious troubles, local and internal.

### Now we combat it

Now people who are well-advised constantly combat that film. Dental science has found two ways. One acts to curdle film, one to remove it.

Able authorities proved those methods effective. Then dentists everywhere began to urge their use.

A new-type tooth paste was created, based on modern research. The name is Pepsodent. Those two great film combatants were embodied in it. Now it has come into world-wide use, largely by dental advice.

### Fights acid, too

Dental research found two other things essential. And they were both embodied in this new-day dentifrice.

Pepsodent multiplies the alkalinity of the saliva. That is there to neutralize mouth acids, the cause of tooth decay.

It multiplies the starch digestant in the saliva. That is there to digest starch deposits on teeth which may otherwise ferment and form acids.

Thus Pepsodent, with every use, gives to Nature's tooth-protecting agents manifold effect. And these results are bringing to millions a new dental era.

### It's easy to know

You can easily prove that these effects do come, and know what they mean to you.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how teeth whiten as the film-coats disappear.

What you see and feel will very soon convince you. Make this test in justice to yourself. Cut out the coupon now.

### 10-Day Tube Free

The New-Day Dentifrice

A scientific film combatant, which whitens, cleans and protects the teeth without the use of harmful grit. Now advised by leading dentists the world over.

a day. Women are probably the biggest drug users, not because they have more illnesses than men but because they are apt to worry more about an illness, and so seek relief.

Country folks specialize on patent medicines rather than on pure drugs, and if there was ever a perfect illustration of the power of advertising it is seen here. The mail of country dwellers is full of patent-medicine circulars, and the country people read them, and buy. If sent to city dwellers they usually glance at them and throw them away, time being limited and the drug store handier.

One precaution which few people observe is not to mix drugs freely in the human stomach. A man runs to a medicine cabinet for relief from a headache and takes a dose of some kind of pill, and it fails to work to his satisfaction. A half-hour later he takes a second pill but of a different kind. And an hour later he takes a third dose of a third variety. The stomach takes from one hour to three to empty, so that this man probably has pills one, two, and three all in his stomach at the same time. What the results are going to be no man can tell without analyzing each.

**QUEER** things happen in our internal regions when we get to mixing things. Cathartics which are saline in character will prevent the absorption of some other drugs, which will then be of no use to the patient at all. Certain drugs taken too closely will react to form poison. Other drugs will counteract each other and form inert substances that pass through the body with no effect whatever. Or two drugs taken closely may counteract each other in physiological results. The patient absorbs them both, but as they counteract each other he is just where he was before taking any drug at all.

Some vegetable drugs contain considerable tannic acid. If another drug packed in a gelatin capsule is taken soon after any of these, in all probability the gelatin will fail to dissolve and the capsule will lie in the stomach and do nothing. Drugs containing iron salts, followed by tannic acid, either in a drug or in a cup of tea that has boiled or has been brewed too long, result in a formation of ink in our insides. It probably won't do us much harm, but it certainly will do us no good.

If you feel you have to have a second dose of a home remedy, take a second of the same kind, and don't mix it too freely with your food, or other chemical combinations may result. This often explains why at some times drugs relieve and at others they do not. At the "other times" they have found something in the stomach which counteracted their effect.

Read the directions on the drugs you buy. One would think it unnecessary to issue such a warning as this, but if people take pills in the dark, without being certain of what they are taking, just as surely will they trustingly take a drug without finding out the dosage. If there are no directions on the drug you buy, ask your druggist to put them on. He knows the average dosage and can advise you. Then take the drug exactly as you are told to take it. If it is to be taken with water, do not take it dry. The water is not intended to wash the drug down; it is often necessary to the action of the drug. Usually it assists in the passage of the drug through

# GET THIS NEW AND BETTER TIRE

*Important improvements make the new Goodyear Cord Tire with the beveled All-Weather Tread especially desirable*

Here, in brief form, are the reasons why the new Goodyear Cord Tire with the beveled All-Weather Tread is the greatest tire Goodyear has ever made:

The new type tread on this tire is made from an improved rubber compound, extraordinarily dense, tough and long-wearing.

This tread is semi-flat instead of round, giving broader road contact and affording increased resistance to wear.

The powerful, clean-cut blocks are reinforced at the base by heavy rubber ribs, knitting the whole tread design into a firmer unit and resulting in a smoother-running tire.

The blocks which line the tread on either side are beveled at the outer edge, relieving the carcass from vibration as wear proceeds, and resulting in a more even

distribution of the load over the carcass, and a better seating of the tire in ruts with consequent less strain in the shoulders of the tire.

This new tire has a heavier and tougher sidewall, assuring utmost resistance to curb and rut wear.

It has a stronger bead designed to fit more snugly to the rim.

The more uniform pressure secured in the double molded process by which it is made insures a better union between the plies of the carcass and between the carcass and the tread.

In design, materials and workmanship, the tire is representative of the highest Goodyear standards.

If you are genuinely interested in tire economy you will want this smoother-running, longer-wearing, improved Goodyear Cord Tire.

You can get this new tire now from your Goodyear Service Station Dealer.

**and produce**  
**human music**

the stomach, so that it reaches the intestines sooner, and in the intestines most drugs are absorbed and become of some use to you. Some drugs may have disastrous effects if lodged in the stomach in solid form. Epsom salts, or sodium phosphate, another popular purgative, depend for their effect upon the amount of water taken with them.

If you are administering drugs to your children, remember that the dosages printed on drugs are for adults. People very frequently give children the drugs which have been purchased for themselves. There is danger in this, as the action of some drugs in children differs widely from the action in adults. Opiates, formerly often present in cough medicines, are totally unsafe for children, and aspirin, which I placed on the list of family remedies, should have the dosage reduced two thirds, if given to children at all. Any drug administered to a child needs special directions, and any druggist can mark the line beyond which it is unsafe to go.

**K**NOW these things before you take or administer any drug. Most people of to-day realize that the manner of using a drug is about as important as the kind of drug to use. Intelligence in the use of drugs has increased greatly in recent years, partly because physicians are franker with their patients and partly because of the educational campaign in the interest of health that is being carried on everywhere by the medical profession, boards of health, the United States Government, and the public-school system. The biggest improvement in drugs by which we have all benefited is their purification and the substitution of milder for more dangerous remedies.

"Shot-gun" cathartics, that took a lot out of the human system in more ways than one, are now replaced by mineral oil and Epsom salts; opiates such as paregoric, which used to be taken generally by children, and by a good many grown people, have practically disappeared. There is a new understanding of antiseptics which has resulted in the more general use of the kinds that kill only bacteria and not our tissue cells. Old-time antiseptics often killed our natural means of defense along with the bacteria causing the ill. The chloramine T. solution mentioned for the home cabinet is one of these newer antiseptics, the value of which was proved in the treatment of the wounds of soldiers during the World War. Chloramine T. will do the work that carbolic acid and bichloride of mercury formerly did, and it is not a rank poison.

Impure drugs may not produce the full effect counted upon, because inert material replaces a part of the drug. You cannot determine a dosage unless you can count upon purity. Impurities in drugs may cause decomposition, making them actually poisonous. Some preparations of sodium phosphate in an impure state contain arsenic, and accidental deaths from this cause were occasional some years ago. And often impurities mean common dirt, which we do not want in our systems through drugs any more than in food, in which we would not tolerate it. A generation ago pure drugs were very rare, but to-day drugs sold generally are much better than a generation ago, and high-class drugs are usually pure.

"Save the surface and  
you save all" — *Paint & Varnish*

**"I'm glad we did it.**

It should have been painted  
three years ago. Let's never  
neglect it again."

**H**OW glossy and clean it looks in its new  
paint! How fresh and immaculate!

Better yet, the paint has actually given  
the house a new lease of life. You talked  
of having it painted, three years ago. A  
house can depreciate sadly in three years.  
Now that it is painted, a big load of  
worry is off your mind.

After all, it costs more not to paint than  
to paint. Rust and rot go on till you check  
them. Paint and varnish **NOW**, or you'll  
pay far more, later, for repairs and re-  
placements. *Don't put it off—put it on.*

For expert advice on the painting of your  
property, call on your local painter. Or  
talk with your local paint dealer. Save the  
surface and you save all.

## You Can't Kill These Fifteen Immortal Jokes

(Continued from page 25)

never mentioned in humorous connection, is a puzzle indeed. But nevertheless a fact. As innate in the Human Intelligence as love of mother is the jest of a mother-in-law. Nor can we feel sorry for the victim of this joke, for it is only too probable that she brought it on herself. One of the earliest known stories puts it this way:

As Mr. Caveman was gnawing at a bone in his cave one morning, Mrs. Caveman rushed in, exclaiming, "Quick! Get your club! Oh, quick!"

"What's the matter?" growled Mr. Caveman.

"A saber-toothed tiger is chasing Mother!" gasped his wife.

Mr. Caveman uttered an expression of annoyance.

"And what the deuce do I care," he said, "what happens to a saber-toothed tiger?"

The Japanese are noted for their almost idolatrous respect and affection for their ancestors, yet even they have a proverb, "Be civil to your mother-in-law and she will come to your house three times a day!"

This is really the same jest as that which tells of a wife who stipulated her mother should pay them two visits a year. To this her husband agreed, but to his dismay the visits were each six months long.

"What is the penalty for bigamy in this state?" a lawyer was asked.

"Two mothers-in-law," he replied.

2. **Whiskers:** Why are whiskers funny? Again we are confronted with an unanswerable question. Human hair is not funny, unless missing or false. A bald head gives rise to mild jests and a wig is humorous.

But whiskers are an accepted joke. Hierocles, an ancient of the Fifth Century, was the first known to make a definite collection of jokes.

Among them is the story of the man who went to the barber to have his beard trimmed. "How do you want it cut, sir?" asked the barber. "In silence," was the reply. The gist of this has been the backbone of hundreds of stories since; and the hero of the occasion has been said to be, and doubtless was, one well-known man after another, the latest on record being Sir Herbert Asquith—as attested by his wife.

But, unlike some other jokes, whiskers are funny in and of themselves. Whether they be the long, flowing plumes of Lord Dundreary, the formal landscape whiskers of the New England Poets, the chin whiskers of our own Uncle Sam, or the neck whiskers of Horace Greeley and Peter Cooper, they are one and all provocative of involuntary smiles.

Then there is the bushy type, called "Man climbing out of a fern dish," and the dressy varieties of Van Dyke, goatee, and imperial.

With whiskers, as with many things, it is a case of the more the merrier; and the more voluminous the whisker, the funnier it is on the face of it.

Without whiskers where would be the

## One Hundred Ways You Can Brighten Up Your Home—

THERE are many ways to make your home more artistic, cheery and inviting. Our book on Home Beautifying gives a hundred practical suggestions for refinishing and keeping your furniture, woodwork, floors and linoleum in perfect condition. Use Coupon below.

## JOHNSON'S Paste - Liquid - Powdered POLISHING WAX

EVERY room needs the brightening touch of Johnson's Polishing Wax. It will rejuvenate your furniture, woodwork, floors and linoleum and give your home that fine air of immaculate cleanliness. Johnson's Wax imparts a velvety, artistic lustre of great beauty and durability.

YOUR Linoleum will last longer and look better if you polish it occasionally with Johnson's Prepared Wax. Johnson's Wax prevents cracking and blistering—brings out the pattern and color—protects linoleum from wear and makes cleaning easy. Leading linoleum manufacturers recommend it.

### Paste-Liquid-Powdered. A Form for Every Use

Johnson's Wax is conveniently put up in three forms—Paste, Liquid and Powdered. Use *Paste* Wax for polishing floors of all kinds—wood, tile, marble, composition, linoleum, etc.

Use Johnson's *Liquid* Wax for polishing your furniture, piano, woodwork, linoleum, leather goods and automobile.

Johnson's *Powdered* Wax makes perfect dancing floors.

**Insist on Johnson's Polishing Wax—For Sale at all Good Stores.** Our Book Tells 100 Ways to Brighten Up Your Home. Use Coupon Below.

*A friend*  
**Unguentine**  
UN-DWEN-TEEN  
*—quick!*  
*in need*

## If you know Unguentine this message is for you

**T**HIS is the first public message about Unguentine. It is addressed to you who *know* this "friend in need". Doesn't its name shine out like that of an old standby?

Remember the burn that ceased to hurt and rapidly healed when you used Unguentine

—or the nasty cut it caused quickly to be forgotten

—or the bruise that lost its soreness so surprisingly

—or the irritated skin that calmed down and was restored to health and smoothness?

Perhaps it was your physician who first used Unguentine in your home. With thousands of physicians today, Unguentine is the "first thought in burns", and is widely used for surgical dressings. Perhaps it was your druggist who called your attention to it, for nearly every druggist the country over *always* keeps Unguentine. Perhaps it was a friend.

Thirty-one years ago, Unguentine quietly began its alleviating and healing work. Since then it has proved a tried and true "friend in need", to veritably millions of people.

Your friendly recommendations have spread its use. For its purposes it is unsurpassed.

To keep a tube on hand is wisdom.

Get it at your druggist's—he knows what Unguentine will do.

*To relieve and to heal*

**NORWICH**

charm of Sargent's "Frieze of the Prophets"? Or the Smith Brothers on the cough-drop boxes? Or Michael Angelo's Moses? Or the Mormon Elders?

An influential citizen was walking down Main Street, his long whiskers prominently displayed.

"Please, sir," said a small miss of his acquaintance, "what do you do with your whiskers at night? Do you sleep with them inside the covers or outside the covers?"

"Bless my soul, I don't know!" replied the startled man. "I never thought about it!"

A week later the little girl met him again, and to her surprise his chin was clean shaven.

"Why, Grandpa," said she, "where are your whiskers?"

"You little nuisance!" he cried. "You kicked up a fine bobbery with your question! I had never thought what I did with my beard at night. But when I came to think about it, I put it under the covers, and it felt queer; then I put it outside the covers, and it felt queer; then I twitched it back and forth till it near drove me crazy! And then I got up and cut the blamed thing off!"

3. **The Lame Excuse:** The two best-known manifestations of this Immortal Jest are the man who telephones his wife he is detained at the office and the office boy who wants the afternoon off to attend his grandmother's funeral.

"I say, Mummy," asked little Tommy, "do make-believe stories always begin with 'Once upon a time'?"

"No, dear, not always. Sometimes they begin, 'My dear love, I have been detained at the office again to-night.'"

Little Gladys awoke about two A. M. "Muvver," she begged, "please tell me a fairy tale?"

"It's too late, dearie; Daddy will soon come in, and he'll tell us both one."

An exceedingly lame explanation was that of the man who was surprised by a call from his wife at his office.

"Why, Jim, you told me that your stenographer was a scrawny, homely old maid!"

"Yes, yes—but, you see—she was ill to-day, and sent her granddaughter in her place!"

4. **The Bride's Housekeeping:** From the time Adam's rib was shaped and set up on end and began to keep house for him, there have been jests about the little bride and her inexperience.

Said a young husband, cautiously, "It seems to me dearest, that there is something wrong about this chicken à la King."

And the bride, with a smile of superiority, returned, "That shows all you know about it! The cookery book says it's perfectly delicious!"

The devoted bridegroom returned home at dinner time to find his beloved one in tears.

"What's the matter, honey-pie?" he asked.

"Oh, I'm worn out! You said you liked broiled rabbit—and I thought I'd have one for you—and I've worked at it all the afternoon—and I haven't got it half picked yet!"

5. **The Fat Man:** To make a joke about the fat man is painting the lily. Everybody laughs at him, even though he

## Will you accept these 4 Volumes of Kipling *FREE!*

*An experiment in human nature*

**T**he most gripping stories of the age have come from Kipling's pen. He has you out of the commonplace. He carries you with an absorbing realism into the Realm of Romance, into a world that teems with life in its strangest and most unexpected places. And now four volumes of his works are offered you free.

They include such masterpieces as "The Phantom Rickshaw," "The Man Who Was," "The Vampire," "The Murine of the Mavericks," "My Own True Ghost Story," and others.

There is nothing to pay for these four volumes of Kipling, now or later. This offer is, frankly, an experiment. The only condition is that you accept them NOW—for the offer is made in return for your cooperation in taking advantage promptly, instead of waiting, of an opportunity that has come to be known as

### "The most amazing book bargain ever offered"

Several hundreds of thousands of people have already taken advantage of this opportunity, without the special inducement of these four free volumes of Kipling. But who would not consider a set of thirty great masterpieces of literature, at the price of \$2.98 for all thirty, a decidedly worth-while value?

Yet this is the almost incredible book bargain that is achieved in the Little Leather Library set of thirty beautifully-bound books.

Here are the best works of such immortal authors as Shakespeare, Stevenson, Emerson, Poe, Coleridge, Burns, Omar Khayyam, Marlowe, Lincoln, Washington, Oscar Wilde, Gilbert, Longfellow, Drummond, Conan Doyle, Edward Everett Hale, Thoreau, Tennyson, Browning, and others. Each one of these great books is complete; they are NOT extracts. The binding is NOT paper or cardboard, but a rich, limp cloth, tinted in antique green and bronze, and embossed. It is not leather, but looks like leather, and will wear five times as long. The paper is of fine quality; the type large and clear. Each volume (3 1/4 inches by 4 inches) fits conveniently into a pocket or purse, making them ideal companions for travel or spare-time reading.

### How it can be done

It is not too late to see, without purchasing any other thirty book set, how it is done, at the surprising price of but \$1.00 for all. The secret is that these books are printed on a special process, a million at a time, and one edition more before another immediately if we want to build up before the hands of skilled workmen who make these volumes. For a moment, therefore, these books are sold at a special price, and this is the chance.

We want to know, however, that many people intend to have these four free volumes, and in order to keep our skilled men busy, we are making this experiment in human nature, to see if we can induce people not to procrastinate. It is worth our while, in other words, to offer something valuable for your prompt cooperation. That is why we now offer, for a limited time, these four volumes of Kipling free. They are in exactly the same size and binding as the set of thirty books.

### Send No Money

Neither description, nor illustration, can do justice to the beauty and character of these books. We should prefer to have you see them—so we ask you to let us send you a set for examination, together with the four free volumes of Kipling. You need not send any money now. Simply mail the coupon. When the books arrive pay the postman only \$2.98 plus postage; then examine the set, decide in your mind what these volumes are worth. If you have the slightest doubt of your bargain, return them at any time within 30 days and your money will be refunded immediately.

LITTLE LEATHER LIBRARY CORP.  
Dept. 364 354 Fourth Avenue New York City

LITTLE LEATHER LIBRARY CORPORATION  
Dept. 364, 354 Fourth Avenue, New York City

Please send me on approval the 30 volumes of the De Luxe edition of the Little Leather Library (and the four volumes of Kipling free). I will pay the postman \$2.98 plus the postage upon delivery. It is understood, however, that this is not to be considered a purchase. If the books do not in every way come up to expectations, I reserve the right to return them any time within thirty days, and you agree to return my money. It is understood that \$2.98 plus the postage is positively the only payment to be made on this set.

Note: We have had made a special set of hand Hammered Copper Book Ends to fit this set. Regular \$2.00 value, our price only 40c. If desired place X in this square ☐

## Some telephones you may never have heard of

**I**N the clouds or in the depths of the earth, men will always need to talk together—and there are telephones which enable them to do it.

Not the familiar instrument on your desk or wall. Special needs have demanded special types. To help develop these, a skill gained in 46 years of making telephones has been called into play.

Western Electric is the oldest and largest manufacturer of telephones in the world.

*Western Electric*  
Since 1869 Makers of Electrical Equipment

**IT HELPED WIN THE WAR.** Telephones like this played an important part in reporting enemy movements along the Western front. For peace or war, the opportunity of airplane telephones to render real service helps to make our job of producing them an interesting one.

**"TUMPS OUT OF ORDER."** An emergency call from a mile below ground. The mine telephone has warned in time to prevent many a disaster. Western Electric people like to think of this help when they are making the *hourdroids*.

**STALLED A HUNDRED MILES FROM NOWHERE.** Conductor happens in on the street with a portable telephone to call for help. Used by trainmen, porters, too, to report accidents, here is another Western Electric product which is *unusually*.

**LINE SPEAKING TWO FEET AWAY.** Every syllable heard and distinct. The Public Address System makes it possible for speakers to talk to tens of thousands. The remarkable product of the telephone genius and the magnanimous skill carries a message to *the masses*.

does nothing humorous. Or, rather, everything he does is humorous. If he makes love, if he rides a horse, if he eats his dinner—his simplest, most normal actions are funny. Dickens's fat boy or the fat woman of the circus is funny only because they are fat—for no other reason.

But of course jokes about fat people are inevitable.

A story, true or not, is told of one of our ex-Presidents. Desiring to stop a through express train for his sole convenience, he wired the conductor, "Will you stop at a way station for a large party?"

The answer was affirmative and the train stopped. The single passenger climbed aboard.

"Where's the large party?" growled the conductor.

"I'm it," smiled the passenger.

Of course, this Immortal Jest also includes the gentler sex.

A dear old lady, by reason of her stoutness, found it more convenient to back off a street car.

Seeing her, the conductor thought she was getting on, and courteously assisted her inside the car.

At the next block she arose again, and began to back down the step. A would-be passenger coming up at the moment, politely gave her a helpful push, and she found herself again inside.

At the third attempt, she announced plaintively:

"Please don't push me in—I'm four blocks up and three blocks over now! And it's dinner time!"

**6. Old Maids:** Perhaps no jest more forcibly exemplifies the discomfiture of its victim than the spinster joke. In the olden days, before the present emancipation of the sex, women were far more sensitive on this subject; but all ages have jollied the woman who does not get married.

A hackneyed formula is the eagerness of the spinsters to accept a supposed proposal.

Said the man: "Elizabeth, would you like to have a puppy?"

"Oh, James," said she, "how delightfully humble you are! Yes, dearest, I accept."

Another, a tongue-tied young man, sat for hours without speaking a word, when spending the evening with a lady.

Finally she said with a languishing sigh, "Yes, John, I will." And he found himself engaged to her!

"I wonder how many men will be made miserable when I get married," said a languishing old maid.

"I'll tell you," was the unkind retort, "if you'll tell me how many you expect to marry."

**7. Seasickness:** Probably the earliest of our race didn't make seasick jokes, because, like the "Ruler of the Queen's Navee" they never went to sea. But as soon as the first hollowed-out log was successfully launched on a bounding billow, the seasick jokes began. For no one with the divine spark of humor in his soul could refrain from laughing at the plight of the victim of *mal de mer*!

The Cretans claimed their locality one of the seasickest on the map, just as in these later years the English Channel and the trip to Bermuda share the honors. And few can deny that if the discomfiture of others is the root of all laughter,

# Old English Wax

## Free to you!

You will receive a can of Old English Wax free if you buy an *Old English Waxer-Polisher* now. Does two things—it waxes, then polishes the floor. It's a great improvement over any weighted brush, which does not apply the wax, but merely polishes. Lasts a lifetime. Just mail the coupon below.

**"You put  
the wax in here"**

**The way to have beautiful floors  
is open to everyone**

More and more people are learning of the simple, inexpensive treatment that makes floors beautiful.

Here is the way: Finish your floors with Old English Wax. As you wax and polish them, the floors will take on a mellow lustre—a hard, lasting finish that cannot be scratched or show heel-marks.

After the first waxing, an occasional "touching up" of the spots walked on most frequently is all that is necessary.

## The new, easy way

Many people still use a soft cloth to apply wax and polish the floor, and it will always be a good way. But with the Old English Waxer-Polisher, the work of waxing floors on hands and knees is made unnecessary.

Just as easily as you push a carpet-sweeper, so can you use the Old English Waxer-Polisher. It waxes and then polishes the floor. The only device of its kind. It's quicker, easier, and uses less wax.

## Costs less than other finishes

Old English has a high percentage of hard, high-grade, imported wax, so it goes farther, lasts longer, and therefore costs less than most other finishes.

THE A. S. BOYLE CO., 1622 Dana Avenue, Cincinnati, Ohio  
Canadian Factory: Toronto

Manufacturers of wax finishes exclusively for over 25 years

## For linoleum floors

Use Old English Linoleum Wax, liquid, a special wax that polishes, preserves, and beautifies linoleum. Recommended by leading linoleum manufacturers.

## For dancing

Merely sprinkle Old English Powdered Wax lightly over the floor. The dancers' feet will put on the polish.

## Send for this free book

Filled with information about the treatment of floors, woodwork, furniture, linoleum, etc. Shows how easily and economically you can have permanently beautiful floors. Every housewife should have this expert advice, which is based on over 25 years' experience. Mail the coupon now.

Paint, hardware, drug, housefurnishing, and department stores sell Old English products.

THE A. S. BOYLE COMPANY,  
1622 Dana Avenue, Cincinnati, Ohio.

☐ Send me your free book, "Beautiful Floors, Woodwork, and Furniture—Their Finish and Care."  
☐ Send me, all charges paid, an *Old English Waxer-Polisher* with a can of Wax Free at the special time-limited price, \$1.50 (Denver and West, \$4.00; Canada, \$4.50; Winnipeg and West, \$5.00), which I enclose.

## You Can Be The One in Five That Does Not Pay

### Watch your teeth— and care for them

Do you know that four persons out of every five past forty, according to irrefutable dental statistics, and many thousands younger, are afflicted with Pyorrhea?

Has Nature warned you, with tender, bleeding gums, of Pyorrhea's presence or coming?

Can you afford to take chances, to wait, when your teeth and health are menaced and the odds are so overwhelmingly against you?

Go to your dentist for advice. Have him inspect your gums and teeth regularly. Undoubtedly, he will tell you to brush your teeth, twice daily, with Forhan's For the Gums.

Pyorrhea is the foe of teeth and health alike. When it strikes, the gums recede, the teeth loosen or must be extracted, and infection often spreads throughout the system.

Forhan's For the Gums, in turn, is Pyorrhea's foe. When used in time and used consistently, it will prevent Pyorrhea or check its progress, and in addition, keep the teeth white, the gums firm and the mouth healthy.

It is the formula of R. J. Forhan, D. D. S. It is used and recommended by the foremost dentists. Buy a tube today. It is pleasant to the taste. At all druggists, 35c and 60c.

# Forhan's

## FOR THE GUMS

*More than a tooth paste—it checks Pyorrhea*

Formula of R. J. Forhan, D. D. S.  
Forhan Company, New York  
Forhan's, Limited, Montreal

seasickness is sublimely qualified to rank as the theme of one of the Immortal Jests.

One of the best is the story of the seasick pair on the deck of a liner. She lay back in her steamer chair, with an expression of utter indifference to all things mundane and an appearance of being in the last throes of desperate nausea. The man crouched beside her, his head in her lap, and clutching at her hands in his agony.

"Can I do anything for you, madam?" asked a solicitous steward.

"No—just let me alone—"

"But your husband there—perhaps I can do something for him?"

"He isn't my husband—I don't know who he is— Oh, let me alone!"

Another tells of a wife who, on leaving her sick husband to go to the dining-room, said, "George, shall I tell the steward to bring you some dinner?"

"No," he groaned; "but I wish you'd ask him to take it on deck and throw it over the rail for me."

An appropriate steamer gift to a friend is a neatly framed motto to hang in his stateroom. The legend to be: "You cannot eat your cake and have it too!"

8. **Boarding-Houses:** This is a prolific subject for jests, for landlady and boarders are continually trying to bring about one another's discomfort. As there is continual strife between them concerning the price paid and the accommodations received, naturally they are moved to sarcasm.

"How did you find your steak, sir?" asked the landlady of the new boarder.

"By the merest chance, ma'am! I just happened to move a little piece of potato, and there was the steak under it!"

A canvass of the boarding-houses all over the country shows the following surprising statement: If you could seat all the boarders in the United States at one table they would reach.

A story of an affable boarder is of the man who had just been assigned to his tiny hall bedroom.

"And, now," the landlady said, "as to your bath hour. We have only one bathroom, and we have to make a schedule. Mr. Jones's time is seven-thirty. Mrs. Smith's time is eight. I have my bath very early, and I see two others have eight-thirty and nine. H'm, . . . I don't see just when I can arrange for you—"

"Now, don't worry, ma'am. I'm most accommodating, I assure you. Your time is nine!"

9. **The Gold Brick:** Human nature dearly loves to get something for nothing, and it is the discomfort of those who, over-eager to do this, are cheated, that makes the foundation of the Gold Brick joke.

Actual gold bricks may not have been used until the later centuries, but the principle is as old as the grasping soul of sordid man.

The picture that comes first to our mind is the old, white-whiskered countryman with his carpet-bag, arriving in the city. The innocent and unsuspecting old codger falls victim to the wiles of the sharpers.

Variations on this theme are numberless, and later stories turn the tables so that the supposed greenhorn is really cleverer than the would-be swindler.

A man in peasant dress was walking the streets of Paris with a bewildered air. A

## Chart of Recommendations

(Abbreviated Edition)

THE correct grades of Gargoyle Mobiloil for engine lubrication of both passenger and commercial cars are specified in the Chart below.

A means Gargoyle Mobiloil "A"  
 B means Gargoyle Mobiloil "B"  
 BB means Gargoyle Mobiloil "BB"  
 E means Gargoyle Mobiloil "E"  
 Arctic means Gargoyle Mobiloil Arctic

Where different grades are recommended for summer and winter use, the winter recommendation should be followed during the entire period when freezing temperatures may be experienced.

This Chart of Recommendations is compiled by the Vacuum Oil Company's Board of Automotive Engineers, and represents our professional advice on correct automobile lubrication.

## Sets a New Mark in Closed Car Value

### *All-Year Utility at Open Car Cost*

The Coach will cost you less even than the open model of any car to which you compare Hudson in quality, performance and reliability.

Yet see how fully it meets your closed car requirements. With the long, carefree service that only a superlative chassis can give, it provides all essential closed car utility and comfort.

#### *The Coach Met Instant Success*

It took buyers by storm. More than 30,000 Coaches are now in service. With the Coach you get the famous Super-Six chassis, of which more than 140,000 are in service. Official tests mark it one of the truly great automobiles.

And with its new and improved Super-Six motor you get the best Hudson ever built. It has a smoothness unknown to earlier models. Its reliability and endurance excels even those Hudsons which have registered upwards of 100,000 miles of service.

#### *You Will Like It*

Respecting its good looks and substantial quality you need no other assurance than Hudson's reputation as the world's largest builder of fine cars. The Coach has a sturdy simplicity. It is delightfully comfortable. It is built to stand the hardest kind of service.

Come ride in the Coach. See if it does not fully meet your closed car needs at a saving of \$800 to \$1200.

Speedster - \$1425      7-Pass. Phaeton - \$1475      Coach - \$1525      Sedan - \$2095

*Freight From Detroit and Tax Extra*

# Hudson Coach \$1525

passer-by saw him and asked him what he was looking for.

The peasant showed a package, addressed to a certain man, and a note on it declared that it contained ten thousand francs. He asked the other to read the address for him, as he was illiterate.

"Why," said the other, "how fortunate that I saw you! This letter is for me. I will take it."

"Good," said the peasant; "but you must give me the hundred francs I was promised to deliver it."

The other willingly gave him the amount he asked for and the peasant went his way.

On breaking the seal the new owner of the packet found only sheets of blank paper inside.

Any kind of confidence game comes under the head of Gold Bricks.

10. **Feminine Garrulity:** Although epitomized in the character of Mrs. Caudle, the eternal chatter of the eternal feminine has always proved a fruitful source of jest. Nor is the chatterer greatly discomfited by the opprobrium heaped upon her. But, nevertheless, it is productive of witty stories.

There is the story of the man who hadn't spoken to his wife for five years. "Why not?" he was asked. "I was too polite to interrupt her," he replied.

A countryman took his wife to see a doctor. Greatly interested, he saw for the first time the process of taking a patient's temperature. After the session was over, he sneaked back and whispered, "I say, Doc, how much will you take for that thing you put in her mouth?"

Another doctor met a couple in his consulting-room. "Which one of you wants to consult me?" he inquired.

"I, sir," said the man.

The doctor turned to the woman. "Put out your tongue," he said.

"It's him as is the sick one," she demurred.

"Put out your tongue, madam," he repeated and, overawed, she obeyed.

"Now, keep it out," he ordered, and proceeded to examine into the man's case.

11. **Marriage:** From the records we gather that earliest man didn't observe the ceremony of marriage, at least not as we do now. But the jest is the marriage relation, and whether Caveman or twentieth-century Benedict, the connubial state has always been, and will ever be, the subject of fun and raillery.

The Joke *par excellence* is the historic Punch's: Advice to a young man about to marry—"Don't." The wit of this lies in its brevity as well as its cynical philosophy.

A maid who left a good mistress to get married made an unfortunate match. She returned later to visit the lady, and she was in a distressing state. One eye was swollen shut, her lip and cheeks were cut, and three teeth had been knocked out. She lisped, and her right arm was in a sling.

"My goodness, Norah," cried the lady, "so your husband beats you!"

"Yis, mum."

"That's dreadful! Can't you leave him?"

"No, mum."

"Oh, well, then you must make the best of it. It might have been worse."

RADIOLA RC takes but half an hour to install. If you don't know the address of your nearest RCA dealer, write us and we will tell you. We shall be glad to send you our free illustrated booklet that tells all about every Radiola.

This symbol of quality is your protection

Tonight, thousands of homes will be "listening in" with a RADIOLA RC. Half way 'cross from coast to coast, it picks up joy, gaiety, and education from the world's own theatre.

There will be music, solos, lectures, political orations, organ recitals. From Newark, Kansas City, Schenectady, Detroit, Chicago, Springfield, Atlanta, Los Angeles. From stations near you—and from far.

The nearby broadcasting stations can always be counted upon—but the romance is in getting the far-away messages. RADIOLA RC is famed for its long distance performance. It is a simple compact receiver. You turn a knob and tune in. With a loud speaker, you can flood the whole room with voice and music from many parts of the country.

"There's a Radiola for every purse"

\$25 to \$350, according to type, range and purpose for which the receiving set is intended.

**Radio Corporation of America**

Sales Dept., Suite 2090  
233 Broadway  
New York

District Sales Offices  
10 So. La Salle St. 433 California St.  
Chicago, Ill. San Francisco, Cal.

Carelon C. Jones, of Glenn Summit, Pa., writes about his Radiola RC: "You will be pleased to know that I have listened to programs broadcasted from the following stations: Pittsburgh, Newark, Buffalo, Schenectady, Detroit, Indianapolis, Cleveland, Chicago, Springfield, St. Louis, Kansas City, Denver, and Atlanta, in addition to many other stations."

## Bring Spring Inside the House Now!

**F**RESHEN up your home. Increase its attractiveness. Add to its value. Bring Spring inside your home *now* with Acme Quality Paints and Varnishes.

The floors, the walls, the woodwork, the furniture! What a joy to bring new beauty to all the old familiar things—to restore all their original attractiveness! No need to wait longer to paint and varnish and renew inside the house.

You can do it now with Acme Quality Paints and Varnishes. There is one for every surface, inside and outside the house.

There are thousands of Acme Quality dealers. They can give you helpful suggestions—tell you just what finish is best for each surface you want to renew and protect.

If you do not know the Acme Quality dealer in your town, write to us. We will be glad to send you his name and our literature.

**ACME WHITE LEAD & COLOR WORKS**

Fort Worth	Dallas	Topeka	Salt Lake City	Portland	San Francisco	Los Angeles

**Paints—Enamels—Stains—Varnishes—for every surface**

"Oh laws, yes, mum. Why, I might not have got married at all!"

"Is your wife entertaining this season?" asked one senator of another, in Washington.

"Not very," was the frank reply.

12. **John Barleycorn:** Under various names, in various countries, in dry or wet times, the subject of intoxication has always been a legitimate butt for a joke. The earliest records refer to man's intemperance, and there is no doubt intemperance existed long before records did.

A good old standby is the story of the ship's mate who was addicted to his grog. The captain sought to shame him by writing in the log, "The mate was drunk to-day," each time the misdeed occurred. The entries were almost diurnal; but the mate got back at his superior by writing one fine evening, "The captain was sober to-day!"

A witness being asked whether the defendant was ever drunk, replied: "Well, I won't go on record as saying I have seen him drunk. But I will say that I have seen him sitting in the floor, making grabs in the air, and saying he'd be hanged if he didn't catch that bed next time it came 'round!"

A recent personal read thus:

A gentleman with a bottle of Vermont would like to meet a lady with a couple of bottles of gin. Object, cocktails.

The Southern Colonel entered the hotel dining-room and said, grandly, "Bring me a Kentucky breakfast."

"What is that, sir?" asked the astonished waiter.

"A big steak, a quart of Bourbon whisky, and a bulldog."

"Y-yes, sir. B-but what do you want of the bulldog, sir?"

"To eat the steak!" snapped the Colonel.

13. **Thrift:** Admirable quality though it be, yet the exaggeration of thriftiness causes great glee to the observers thereof. Without doubt the Scotch are noted for their economy, even parsimony, and this causes the best thrift stories to be tacked onto that long-suffering race.

One of the very earliest jokes in London "Punch," since quoted wherever the tongue of man wags, is of the Scotchman who visited London for the first time, and afterward told of its fearsome extravagance. "I hadna been there but a few hours," he said, "when bang, went sixpence!"

"Yes," said the generous-minded man, "if I had a herd of cows, I'd give one to the minister and one to the doctor, and one to each of my neighbors. And if I had flocks of chickens I'd give several to each of my friends, also. And if I had ducks I'd share with my fellow farmers—"

"What about pigs?" asked a listener.

"Huh!" was the irate retort. "Why, I've got pigs!"

A Scotchman and his bride-to-be looked appraisingly at the array of wedding gifts already received.

"A fine haul," she opined.

"Aye," he agreed, "But so many o' them from freens nae marrit yet!"

14. **Children's Sayings and Doings:** If Adam and Eve were really our first parents, then the sayings of little Cain and Abel were the first to be laughed at.

## *Kodak as you go*

All roads lead to pictures—the quiet lane just as surely as the busy highway.

With your Kodak tucked beside you, you have only to pick and choose—and press the button.

## Satisfaction's Lowest Price

**I**T IS our conviction that the New Overland provides comfortable, reliable, trouble-free *creditable* motoring at the lowest cost for which such motoring can be had.

The Triplex Springs (Patented) absorb shock and side-sway, ease the passengers and prolong the life of the car. The powerful Overland motor returns twenty-five miles and more to the gallon of gasoline. Timken and New Departure bearings are liberally

used in front and rear axles. The geared steering mechanism protects your arms against road strains.

And the good looks of the New Overland commend it everywhere. The hood is higher. The lines are longer. The seats are lower. The finish is finer—the result of nineteen hand operations.

You will find satisfaction in the New Overland. Drive it and realize the difference.

## A Man Who Draws a Crowd Because He Knows Human Nature

(Continued from page 65)

the day, for instance, you may motor by a billboard without giving it a thought, because there are so many other things for you to look at. But if that billboard is illuminated at night, you can't miss it! It fairly leaps at you out of the darkness.

"I knew this, so I determined to make people notice my church at night. At first I thought of putting up an illuminated cross. But there was nothing novel about that. Plenty of churches had illuminated crosses. Then I thought of a 'flashing' cross, one where the lights flash on, first at one side, then at the other. But other churches had flashing crosses. I needed something which people would not only see but talk about.

"Finally I thought of a revolving cross. I never had heard of one; but I called in an electrician, told him what I wanted, and within a few weeks there was a revolving cross on the tower of my church. That was one of the few absolutely original ideas I have used; for I freely admit that I get ideas anywhere and everywhere I can find them.

"That cross was an advertisement. And it was an advertisement of the right kind, because it did more than merely attract attention. It told *what* it was advertising! The cross is the one thing which has never been used except in connection with high and holy things. It means nobility of service. It means sacrifice and salvation. And as it turned and turned, sending its beams in every direction, that cross of my church seemed to say: 'Come to me! You—and you—and you!'

"From the night the revolving cross was dedicated, the church was filled every Sunday. And the collection that was taken up the night of the dedication paid the entire expense of making and putting up the cross.

"PEOPLE repeat glibly the saying: 'Advertising pays.' But if it is to pay *permanently*, you must not promise, in your advertising, something that you can't deliver! For instance, in the newspaper ads of my present church I constantly appeal to a certain trait of human nature. There is a lot of truth in the saying that 'Nothing succeeds like success.' People want to go to the successful store, the successful play; they like to read the best sellers among books; and they like to go to the popular church.

"It is a natural instinct with everyone. We all think it is pretty safe to conclude that if a whole lot of other folks like a thing we will like it too.

"It was because I recognized this fact that I advertised St. Mark's as 'The Big Church with the Big Crowds.' You will almost always find in my ads some suggestion that the church draws a lot of people. I use sentences like these:

"We promise no seats after seven o'clock.

"All seats free as long as they last.

"Last Sunday we had to put in 600 extra chairs!

"Our best seats are gone by seven o'clock.

"But, mind you, I wouldn't use that suggestion if the facts did not justify it! Our evening services *are* crowded. People do come early, especially in winter, in order to get good seats. We often *have* to put in 600 extra chairs. And we do turn away people. With these facts to back me up, I use a crowd to help *draw* a crowd. Because I know that people like to go where the crowd goes.

"One woman said to me: 'St. Mark's is not only the Big Church with the Big Crowd; but it is a church with a Big Heart.'

"That gave me another idea. Everybody likes a big heart. It means friendliness and warmth and cheer. Could I guarantee that people would find these at St. Mark's? I knew I could; so I began to advertise 'The Big Church with the Big Heart and the Big Crowds.'

"HERE'S another thing: People like to be comfortable. In San Jose, one hot day, someone said to me, 'Why, this church is as cool as a cave.' Immediately I said to myself: 'There's an idea! I'll see that the church is *kept* cool this hot weather, and I'll use that fact to draw people.' Here is a copy of an advertisement I put in the local paper that week:

### THE "COOL AS A CAVE" CHURCH WELCOMES YOU SUNDAY

#### FEATURE PROGRAM

##### A

Illustrated Preliminary Sermon  
(Ten Minutes)  
"YOSEMITE—GOD'S DREAM  
COME TRUE"

##### B

Sermon in the Morning  
"THE COOLING RIVERS OF THE  
BIBLE"

##### C

Sermon in the Evening  
"THE SNOW-CAPPED MOUNTAINS  
OF THE BOOK"

##### D

THE ARGALL QUARTET  
Dressed in white ducks, will sing

Big, bright, cheerful, hopeful services  
that you will enjoy

"You see, everything in that advertisement was based on a study of human psychology. Just let me analyze it for you. 'Cool as a Cave.' Wouldn't that sound good to you in hot weather? I'll bet it would! And the church 'welcomes you.' Of course everybody likes to be welcome; but there is still another suggestion in that phrase. It doesn't tell people it's their *duty* to come. Tell a human being that he ought to do something 'as a duty,' and he instinctively rebels. So I didn't tell people they *ought*

# See the Children Safely to School

*for Economical Transportation*

Why worry about the safety of your little ones on the highways or crossing city streets on the way to school?

The low price and small upkeep of a Chevrolet is cheap insurance against such risks.

Then, too, driving the children to and from school gives mother or big sister pleasing relief from household duties, and shopping can be done at the same time.

Chevrolet 5-passenger Sedan is the ideal all-year family car, combining the comforts and atmosphere of home with high grade body construction, mechanical reliability, ease of handling and low purchase and operating costs. Every home garage should house a Chevrolet regardless of whether or not another car is owned.

*"Buy one Royal Cord—  
try it on the right hind  
wheel"*

## To the new users of Royal Cords — probably a million in 1923

**M**OST rules are all the better for being broken once in a while.

There's an advertising rule, for instance—never to ask anyone to buy a thing and try it.

When the makers ask you to try a Royal Cord on your right hind wheel they may be breaking the rule, but you will benefit thereby.

The makers of Royal Cords, for their part, can't see why making friends should ever go out of fashion.

The more quality a tire has—and the more leadership—the greater its obligation to be

simple and direct. Royal Cords earned their position of high regard by simple things.

You can easily see that people's confidence in Royal Cords could never have been won by quoting a lot of *big mileages*, talking *big discounts*, or going through all those other kinds of gestures with the idea of registering *big*.

The makers of Royal Cords devote themselves to guarding quality and have no desire to dazzle customers.

Their ideas seem to be right, because U.S. Royal Cords are the measure of all tire values today.

## United States Tires are Good Tires

to come. Neither did I *beg* them to come as if the church were a poor thing, sort of forlorn and lonesome. No! I tried to give the impression—which was *justified by the fact*—that the church was getting along fine! That it was full of life and health and happiness; full of the spirit that says, 'Hello, there! How are you? Certainly am glad to see you! Come and join us. We're having a fine time.' You like a greeting like that, don't you? Well, that's the suggestion I tried to put into this advertisement.

"THE preliminary sermon, *with pictures*, about the Yosemite, was given because of the instinctive desire people have in warm weather to get out into the great outdoors. They *naturally* have this desire; and it never pays to buck against natural instincts. Use them, instead! Capitalize them as an asset in appealing to people. I used God's beautiful outdoors to turn their thoughts to God Himself.

"Then there were the two chief sermons of the day. Wouldn't the mere sound of those subjects be refreshing in hot weather? I wouldn't think of preaching, in July, about the fiery furnace! I wouldn't advertise my church, in August, as 'Warm as Toast!' I do advertise it that way in the winter. Why not—if it is warm? What is the sense of knowing what people feel and think, and then not making use of this knowledge as an aid to a great work?

"'Dressed in white ducks.' Again I tried to convey the impression of something clean and cool and refreshing to the eyes. I want to *get the people coming*—because I want them to hear the message I have for them. All of us have *some* message we want to get across to *somebody*. We must 'get them coming' to us, by using our knowledge of what appeals to them.

"In that advertisement, you notice I say: 'Feature Program.' My newspaper experience taught me the importance of *featuring* things. Suppose I should put the following notice in the paper:

"St. Mark's Church, East Jefferson and Garland; morning service at 11, evening service at 7:30; William L. Stidger, Pastor.

"Is there anything in that announcement that would *appeal* to anybody? It is a dull notice. It makes you feel that the service will be dull. I don't think a church has any *right* to have a dull service. And I think it is my duty to make people realize that the service *won't* be dull. The best way to do this is to provide good features—and to *feature* them. As a matter of fact, every church has things on its program which it could feature.

"If there is a quartet, give it a name—and feature that name. If there is congregational singing, say so—and say it in big capitals! One of the 'features' at St. Mark's is the 'Big Sing' in the evening. Other churches have it. People love to sing, even the people who don't know one note from another. Often as many as three thousand persons take part in our Big Sing.

"But there's another thing about human nature that I constantly try to satisfy. People like variety. You can get tired even of a good thing. So I try to devise new ideas for our singing service. One of these is Echo Singing, not an original

idea with me but one which we have adapted in a new way.

"A soprano singer is hidden in some remote corner of the church auditorium; perhaps in the back of the balcony. Somewhere else, perhaps down-stairs, is the contralto. In another place the tenor is concealed; and in still another the bass. Our leader announces a hymn; such as 'Pass me not, O Gentle Saviour.' And he tells the audience that he has arranged for the singing of the verses, but wants them to join in the chorus.

"The organ plays the introduction. Then suddenly, as if some spirit were hovering over the listening crowd, the soprano sings the first verse:

"Pass me not, O gentle Saviour,  
Hear my humble cry.  
While on others Thou art calling,  
Do not pass me by.

"Then, as the notes die away, the audience takes up the chorus. And how they do sing it! There is none of the carelessness of ordinary chorus singing. That voice, stealing with penetrating sweetness to their ears, has reached their hearts; has spoken to their minds and souls. The verses are sung in turn by the four hidden singers, and the effect is almost magical.

"I believe in giving things a *name*, so that folks will get to calling it by that 'feature' name. We call our big sing 'The Billy Sunday Sing.' In a church that was in a college town I called it 'The College Sing.' One preacher called theirs 'The Sing Song at Seven.' Another was 'The Big Sing with the Whistling Chorus.'

"By the way, some people were shocked when I asked those who could whistle, to whistle an accompaniment to our hymns. But again, why not? Whistling is fine; it is beautiful; it is sometimes as plaintively lovely as a bird's song in the dusk of evening; sometimes as cheering to the heart as the smile of a friend. We love to whistle—if we can. We love to hear someone else whistle. It is like mercy; 'It blesseth him that gives and him that takes.' Then why not have pleasure in it in the one place, above all others, where we should find pleasure?

"I SAID that people want variety. I *know* they do and I am always trying to satisfy this instinct. If I were selling soap, I wouldn't go on repeating the same advertisement over and over again, year in and year out. Well then, I am, you might say, selling church services and church service. One of the ways in which I try to sell my 'goods' is by means of our church bulletin, which is distributed every Sunday. We don't have a fixed form for this bulletin. I want people to *read* it! So it is printed sometimes on white paper, sometimes on tinted. One Sunday it may be eight by fourteen inches in size; another time it is six by ten inches; or four by eight inches. Sometimes it has two leaves, sometimes three or four. It always has a picture on the outside—but the picture is different every Sunday. I use display type, poems, inserts, 'boxes,' even comic drawings!

"Why, if we always handed the audience the same old leaflet, with perhaps the same old 'cut' of the church on it, I should *know* they wouldn't read it—un-

## Jim Henry's Column

Thanks, old man,  
for turning me the  
shaving cream.  
That you the good  
shave I want best.

## Beard Softening

Let's get down to first principles. You want the shaving cream which will put your beard in the right condition for painless removal. You shave 365 days in a year and any preparation making this daily operation more pleasant is going to receive your earnest consideration.

No cream can deceive your razor. Your beard comes off smoothly and gently or it tugs and yields protestingly and painfully.

Over two million men have decided finally and enthusiastically that Mennen Shaving Cream is the master of any beard that ever stood up to a keen-edged razor.

Let's say I induced these men to buy Mennen's, but they weren't reading my column when they gave Mennen's its initial test. In the bath room a shaving cream must stand on its own lather, so to speak. Advertising claims never yet have softened a beard.

I honestly don't believe any man ever gave Mennen's a fair trial without crediting to it a power to soften a beard more completely than will any other soap.

Mennen's has other virtues which are mighty attractive and desirable. It does not have to be rubbed in with fingers. It works equally well with hot or cold water—soft or hard. The lather does not dry on the face. It never drizzles but whips up almost instantly into a firm, creamy, moist mass of beard softening lather.

Mennen's keeps the face healthy and the complexion clear and glowing. That is largely due to wonderful Boro-glycerine, a soothing, healing emollient which softens and relaxes skin tissues and supplies a refreshing, mildly antiseptic protection.

But after all, the chief object in using Mennen's is to get great shaves—and I guarantee that you'll get them.

Go to any drug store and get a giant size tube. Try ten shaves. If you are not satisfied, return the tube to me and I will refund purchase price.

less the sermon and the service was so dull that they turned to the leaflet to help them kill time! No; if you want people to sit up and take notice give them something that will attract their notice. Variety helps to do this. I put variety into our services, our bulletins, our newspaper advertising.

"But I invariably use it to advance the one great purpose of the church. No business man should use, in his advertising or in any of his methods, an appeal that isn't a constructive help to his business. Get people's interest; but get it in a way that will help to sell your idea.

"For instance, my 'business' is to turn people's thoughts to God. And one of the most important means of doing this is through prayer. But after a half-hour of rousing songs, mingled perhaps with laughter and fun—which is good for them!—they are not in the quiet and worshipful mood which is the best one for prayer.

"I KNEW this and realized that I must prepare them, must change their mood. So I used an idea I got from the Panama Exposition at San Francisco. The architect of the Palace of Fine Arts had known that he had the very same problem. He knew that the crowds would come to his Palace from utterly different ones—the Palaces of Machinery, of Agriculture, even from the bally-hoo shows! They would not be in the right mood to 'get the message' of art and beauty. So he built a lovely colonnade leading up to the Fine Arts Palace that the people's minds and souls might be calmed and uplifted and made ready for the coming experience.

"To accomplish the same purpose, we use various methods. When we come to the end of the Big Sing, we have what we call the Prayer Hymn. Many hymns are, in themselves, real prayers, 'Abide With Me,' and 'Rock of Ages,' and 'Nearer, My God, To Thee,' and 'Jesus, Lover of My Soul,' and countless others. Whoever is to make the prayer announces the hymn, then tells its story: who wrote the words and the music; when and how it came to be written, perhaps some story of how it brought comfort and help to a human being.

"Then, their mood already changed, the congregation begins the hymn. But we have the last verse sung by a quartet, or by a soloist; for I want the people themselves to be quiet—absolutely at rest, for the prayer. I may have the organist play the music alone, using the vox humana stop, after the singing ends. 'Be still—and know that I am God.' Gradually we have brought the people to the mood where they can do this.

"You cannot but admit that this is wise and right. But you may think it is a 'showman's trick' to advertise it. I do not think so. I believe in telling people what we have to give them, because I want them to come and get it! So I often 'feature' our Hymn Story in our advertising.

"Another thing I know about human beings is this: They can be reached more powerfully through their emotions than in any other way. If you talked learnedly for a year on the abstract theory of altruism you would not accomplish half as much as if you told one simple and sincere human story that brought the tears of pity and of sympathy to your hearers' eyes.

"Let me tell you an incident out of my own experience. When I came to Detroit to take charge of St. Mark's Church I knew that I had a hard task ahead of me. The church was new; the building was a very large one—and it had a debt in proportion to its size! The interest alone amounted to something like one thousand dollars a month! The membership was not made up of rich people. Quite the contrary. The church was often described as 'a white elephant'—and this white elephant was now on my hands.

"The evening of my arrival I went to the hotel. I had come without my family and no one had met me at the train. I was a stranger in the city; and I confess that, as I sat in the hotel lobby, I came as near being utterly discouraged as I ever had been in my life.

"As I sat there wondering what I should preach about the next day—for this was Saturday—I picked up a newspaper someone had discarded; and as I glanced through it I came across a small item about an accident. A little girl, named Marjorie Allen, had been injured in saving her baby sister from a street car. The address of her parents was given in the paper.

"'Well,' I said to myself, 'I won't sit here worrying about my own affairs any longer. This item says the child was selling papers. Evidently her people are poor. Maybe they haven't many friends. At any rate, I'll go to see them and maybe I can do something to help.'

"I hunted them up; and it just happened that I was the only minister who had come to see them. The father had been earning so little that Marjorie had sold papers to help bring in money. The mother was ill; and therefore Marjorie had taken her baby sister with her to relieve her mother of the care. She had run across the street to sell a paper; the little sister had tried to follow her; and just then a street car dashed around the corner. Marjorie turned back, pushed the child out of danger—but the car ran over her. She was taken to the hospital, where it was found necessary to amputate both legs.

"**B**RAVE, unselfish Marjorie Allen! Do you wonder that I forgot my own small worries in the face of a tragedy like that? The surgeons thought she would live. But what could she make of life, faced, as she was, with poverty and a terrible handicap? Her parents told me how bright she was. And no one needed to tell me that she had courage! All night I thought about that child and her future. The only solution, so far as I could see, would be to educate her mind, to compensate for her crippled body.

"I had been wondering what sermon I should preach. Could there be a better sermon than the one preached by this child herself? When I stood up in my pulpit that Sunday morning I told my audience about Marjorie Allen. That was my first sermon at St. Mark's. There were only three hundred persons present in the great auditorium, where now we often have three thousand. I asked them to help me to educate this child that she might be able to live a useful and happy life in spite of her handicap. After the service, when the people came to the front of the church to shake hands with me,

**A** WOMAN'S pleasure in motoring depends so largely on how much or little tire trouble she has on the road, that the General Cord has a distinctly feminine following wholly independent of its success in the world of man-driven cars. Confidence in a tire adds new enjoyment to every trip.

they placed their contributions for Marjorie on a table beside me. And those three hundred men, women, and children—none of them rich—left over three hundred dollars on that table.

"The newspapers, by the way, took up the story. People all over the city contributed to the fund, which quickly reached ten thousand dollars. I turned it over to a committee to be handled. I suppose, if I had deliberately planned to advertise myself in Detroit, I couldn't have chosen a better method. But I had no such idea in mind; I wanted simply to help Marjorie Allen—and to help my own people! And there is no surer way of reaching people and of inspiring them to action than by touching their emotions.

"I try to do this in many ways. For instance, I know that the emotions can be reached through the eyes. So I have used such 'features' as the Illuminated Cross and Illuminated Windows. A great beautiful white cross is set up in the church above the altar and is wired for electricity. Often at prayer time the church is darkened; then slowly the lights of the cross are turned on, until it shines as a glory and an inspiration, turning all thoughts to God.

"I use it in connection with beautiful music, too; with an exquisite song, or a violin played softly, or a muted cornet, or the organ with the thrilling vox humana stop. At Christmas, a star was substituted for the cross above the altar, while the cross was placed high up in the church. I could hear the people catch their breath, for the sheer beauty of it all. And then, as the notes of 'Silent Night! Holy Night!' stole through the church I could sense the wave of feeling that stirred the thousands of hearts down there in the dim darkness.

"Our eyes! Our ears! Why, they are the doors to the soul! Why not send through those doors the strongest appeals we can contrive, to turn the emotions to the ideas we want to get across?

"WHILE I was in San José, all the churches were closed during the epidemic of the flu. I realized that this was necessary, because of public health. But I also knew that people needed the church then more than ever. As I looked at it, standing dark and silent, an idea came to me. We had eight beautiful Tiffany windows, each one telling in glorious colors some great story from the Bible. I arranged to have those windows lighted from within, so that they would shine in the darkness like pictures painted in light. And I advertised it. The result was that fully five thousand persons gathered in the street on Sunday evening. It was a strange crowd. Most of them wore flu masks. Hushed and thrilled, they stood there while those windows preached a shining message.

"The effect was so wonderful that I used the same idea in another way later on. I had an electrician arrange to light the windows from the outside. Then, at some special point in the service, I would have the church darkened within and have one of the windows illuminated from without. The light was skillfully handled, so that it was strongest on the central figure; for instance, on the face of Christ. Thus I used, in novel and powerful ways, the windows which much of the time had been dead and lifeless.

"I use human emotions. You *must* use them, if you are to get hold of people's minds and hearts. For instance, I know that everyone loves a fight. Oh yes, they do! Not necessarily a fist fight; but we all thrill to any story of struggle. We all are stirred by a tale of victory against odds.

"One of the ways in which I appeal to this natural instinct is by issuing an open challenge to the theatre. Now, I realize that theatres may be used as powerful moral agents. Some of my best friends are actors. I often go behind the scenes at a theatre; partly because I want to know all kinds of people—since I must reach all kinds—and partly because I want to learn *how* to reach them. And I can learn something there.

"But the theatre is also my competitor. And when it comes to a struggle between us for an audience I am going to fight to get it! I put into my ads such lines as: 'The Church Challenges the Theatre.' I say this:

"We dare any theatre in Detroit to put on a Sunday-night program that will be more interesting to the people of our community than we put on in this church."

"Well, that appeals to the 'sporting blood' of people. They want to see whether we can make good on that 'dare.' We think we do—otherwise I wouldn't be such a fool as to issue the challenge. A feather-weight has no business trying to lick a heavy-weight. But if you believe you can do what you say, then get into the fight for all you are worth—and invite the crowd to the ring-side. Because they *enjoy* a fight.

"I SAID that people like to be comfortable. Never forget that human beings have bodies as well as minds and souls. Christ *felt* the multitude before he *preached* to them. That was good psychology. We use it in arranging our regular mid-week prayer-meeting service. We call it 'Food, Faith, and Fun Night,' a name which recognizes three primitive human instincts.

"At six o'clock comes the supper. It isn't free, but the charge is very moderate. There are round tables, so that families can sit together. We have served as many as five hundred at a time. An hour is given to this feature of the evening, an hour of good cheer and good fellowship. Then comes the 'faith' part, the prayer services. There are several of these in different rooms, for the crowd is so large that it has to be divided into Adult, Intermediate, Junior, and Primary. The service consists of testimony, song, prayer, and a spiritual message from some one speaker.

"This fills the hour from seven to eight; then comes the 'Fun' part. I believe in the right and the duty of everyone to be happy! I believe in the moral effect of good, wholesome, physical recreation. We have a fine bowling alley in the basement of the church. We have a place for basketball. We have other game-rooms. And after we have fed our bodies and fed our souls, we all go down-stairs again and play! God knows—and I say it with all reverence—God knows that human beings crave present happiness of the heart even more than a far-off salvation of the soul. I believe in giving them the happiness as a preliminary to making them ready to strive for the salvation.

## Avoid Loose Thinking

Clear vision comes from clear thinking and clear thinking can come only from accurate knowledge and dependable information. Vague and inaccurate information is worse than none at all. Clear thinking based upon dependable facts marks the successful man—the man of decision and action.

Nelson's Loose-Leaf Encyclopaedia is a Complete Reference Library, accurate, concise, authoritative. It covers the whole field of knowledge from the dawn of civilization to the present day.

Fifteen minutes a day with Nelson's will enable you to think clearly, to decide promptly, to be a leader among men.

## NELSON'S Perpetual Loose-Leaf ENCYCLOPAEDIA & Research Bureau for Special Information

Nelson's is always new—kept constantly up to date by the issue every six months of 250 or more new pages—old, out-of-date facts and figures being eliminated and new ones supplied to take their place. By means of the patented loose-leaf binding device, it is, like history itself, continually in the making.

Nelson's is fully and beautifully illustrated—over 7,000 illustrations, colored plates, photographs, reproductions of famous paintings, and line drawings.

Nelson's contains more than 500 maps, including new (1923) maps of Europe, Africa, Arabia, Jugoslavia, Germany, France, Belgium, etc., etc.

### Nelson's Free Research Bureau

FOR SCIENTIFIC REPORTS AND SPECIAL INFORMATION AND CORRESPONDENCE. Every purchaser of Nelson's is entitled to free membership in this Bureau. If at any time you are in doubt on any subject, old or new, write to this Bureau with the positive assurance that you will promptly receive the latest obtainable and most dependable information.

### Free Educational Reading Courses

Nelson's Reading and Study Courses in UNITED STATES HISTORY, BUSINESS ECONOMICS, NATURE STUDY, AGRICULTURE AND HOME ECONOMICS are declared by educational authorities to be equal to a college course and training in each of these departments.

"Another way I use in gaining people's interest is by preaching what I call Story Sermons. It may be true that 'all the world loves a lover.' I think it is. But I *know* it is true that all the world loves a story! I take a book which tells a great human story, and I preach my sermon on that story. People like to get down to concrete cases. That, by the way, is exactly what THE AMERICAN MAGAZINE does. It does not theorize about life. It tells true stories of actual human beings.

"THAT'S what people want. Life! Real, throbbing human life! I try to satisfy this desire by using the great stories in the latest books and plays and poetry. Incidentally it satisfies a minor interest. People like to be able to talk about the successful plays and books, but often they are too busy to see and to read them. When they have had one of these sermons they can go away and discuss the book, or the play, with their friends.

"But I want to repeat emphatically that I never use any appeal *solely* to get a crowd! That would be a waste of effort, even if it was nothing worse. Because it is a waste of effort to do anything that

does not help to 'sell' whatever *idea* you are trying to put over. I use my knowledge of human nature to interest as many people as possible. But everything I do, every advertisement I place, every device I use to catch the eye and the ear, is carefully planned to lead up to my one real purpose—which is to bring people to God. I am often asked if our methods do accomplish this or if they merely draw a crowd to the services, and achieve nothing more. My answer is that we have taken in new members at the rate of fifty a month; which is an extraordinary record. We have a membership now of over two thousand and it is steadily and rapidly growing. Moreover, our congregations have jumped from an average of about two hundred to—often—three thousand or more. The loose collections are ten-fold greater than they were. We spend several hundred dollars a month in advertising. And careful, truthful advertising, which appeals to natural human instincts and which leads up to your one big purpose, does pay. Ours pays not only in money, not only in getting a crowd into the church, but in getting them into the kingdom of God."

## Paying an Old Debt

(Continued from page 15)

carted that artillery about me. But it bothered me. I was priding myself on what a good servant I was, and it didn't seem right and respectable to be toting that automatic about. But a vow's a vow.

A year passed and I didn't do nothing about lifting them rocks. And then the chance came:

Oliver come down sick. He'd been ailing for some time, but he wouldn't give up. But at last he got it bad. And the first thing he did when the doctor had come and told him he'd have to stay in bed was to give me the combination of that safe. It came more like a shock than a pleasant surprise.

That was Thursday, and on Saturday I knew that the stage would be set for a get-away. You see, there was a picnic down at the old Hall near the station. A big crowd was coming to it and they would be going home on the two-o'clock train. I'd be in New York by three-thirty.

Came that Saturday night. It was twelve o'clock when I slipped downstairs. The house was cold and cheerless. I had felt the cold before, but never exactly knew the meaning of cheerless.

There was light in Oliver's room as I passed it at the head of the stairs which lead down from the servants' quarters. I paused and listened at his door and I could hear his breathing.

I felt his head and it was hot—awful hot—but his hands were as cold as ice. But I was mighty careful not to wake him, for Oliver was dead set on having me about him a lot and would 'a' spoiled all my plans. He didn't wake, and I left the room and went down the front stairs.

The first thing what I did was to unlock and unchain the front door. Mr. J. knew the value of those stones and always locked up. And I was as careful about them as he was. Many a night I laid awake thinking I heard noises down-

stairs. It wasn't all nerves, either, for only about two weeks before I had seen a fellow trying to force the dining-room window. But he seen my light and beat it. Of course it wasn't my game to wise the family up and have the stones shoved away in some bank vault.

Well, I went into the library where the safe was and sat down. It wouldn't do to get down to the station too early, and I didn't want to lift the rocks till I was ready to beat it. So I sat and watched the clock creep toward the half hour. Then it went around to one—and then one-thirty—and I was ready.

I KNELT down in front of the safe. I was just about to give the dial a twist when I hear a sound right behind me. I swung about mighty quick. The gun dropped from my sleeve into my hand.

Gosh! I just hid that gun quick enough. A breeze went up and down my back. Eddie stood there in the doorway.

"I was just making sure I locked the safe," I says, and my voice seemed distant and far away. She took my explanation all right. Her eyes were big and full of tears.

"It's Oliver," she says, running to me and throwing her arms about my neck. "He's calling for you, and when you weren't in your room I ran down here where the light was."

It was in a sort of daze that I took the trembling child in my arms and mounted the stairs.

The house was in confusion now, and Mr. J. come down the stairs in his dressing gown.

"Going to call the doctor," he says, passing me on the steps.

I give the child over to Nora, the nurse, and hurried over to Oliver's room, where I seen Mrs. Jones standing and wringing her hands.

# Nine Years with Studebaker

—two years with Willard  
Wood-Insulated Batteries  
—seven years with Willard  
Threaded Rubber Batteries

## The Thing that Makes it Different

This battery has inside of it no wood whatever. The plates are insulated from each other by sheets of hard rubber pierced with 196,000 little threads. The rubber supplies durability. The threads give a uniform passage for the electrical energy. This results in a greater amount and force of current, kept up continuously through the battery's life.

It is not surprising that Studebaker saw, seven years ago, in the invention of Threaded Rubber Insulation, a new and better kind of automobile battery.

But before either Willard or Studebaker was willing to announce the new battery they tested it for two years in a large number of cars under all conditions of service.

Finally the evidence was too positive to be doubted and the Studebaker Corporation adopted Threaded Rubber Insulation as their standard of original equipment.

Other car-builders, too, were convinced by the

result of this thorough testing of a new battery principle and today 134 of them are using Willards with Threaded Rubber Insulation.

The results are seen in the elimination of complaints to car builders, in the reduction of repairs and recharging done by battery service stations, in longer average life of automobile batteries, in the higher voltage, or "punch" that starts two million engines.

It costs only a little more to get the additional value of Threaded Rubber Batteries, and steadily increasing thousands of motorists are buying them for replacement.

# Willard STORAGE BATTERIES

**Oldsmobile**A PRODUCT OF  
GENERAL MOTORS

*The Brougham \$1375  
at factory*

## Buy a Complete Closed Car

*The new Oldsmobile Brougham at \$1375 has no equal  
in value and completeness*

*The front seats tilt forward  
giving unusual entrance  
space for passengers or bulky  
luggage.*

*The instruments on the wal-  
nut finish instrument board  
are separately removable  
for service.*

*The tools, carried in the lug-  
gage compartment, are  
accessible without disturbing  
the passengers.*

*The seat room and leg room  
are ample for five grown-up  
people.*

When we say that the 5-passenger Oldsmobile Brougham is the most complete closed car of its type and price, we hope you will challenge our statement. We want you to check the Brougham, point by point, with cars of this type and get the facts at first hand.

Keeping the low price of the Brougham in mind, try to find the equal of these remarkable features:

**All Steel Covered Body.** No panels of composition materials to warp and deteriorate rapidly. The Brougham is paneled in steel from floor to roof. You are entitled to standard closed body construction.

**Front Seats are Pullman Type Chairs.** The front seats are used the most—we have made them fully as comfortable as the wide rear seat, with soft upholstery, deep springs and high non-folding backs.

**Luggage Should be under Cover.** The locked luggage compartment under the deck at the rear is just right for two traveling bags.

**Headlights that Spell Safety.** The headlights are brilliant and powerful, yet legal in every state. The anti-glare corrugations in the reflectors make lenses and visors obsolete. A distinctive Oldsmobile feature.

**Match this Equipment.** Heater, door locks, cowl ventilator, sun visor, windshield wiper, high grade upholstery, satin silvered hardware, cowl lamps, nicked radiator, one-piece crown fenders, transmission lock, dome light, window lifters and shades, walnut steering wheel and walnut finished instrument board.

**Chassis Endorsed by General Motors.** Built by Oldsmobile and approved by General Motors—a double assurance of high quality—the Brougham Four chassis is famous for its economy and endurance records. Its wheelbase of 115" is in contrast to the 110" wheelbase average of all competitive fours.

Measured by the only impartial yardstick—comparison—the Brougham is the supreme price-value opportunity in complete closed cars.

# OLD SMOBILE

"Buck up, old boy," I says, foolish-like, never having the handling of anything like this before.

He kinda laid easy for a while and then he took hold of my hand. He was speaking, and after a bit I get that he wanted me to close the door. So I give Mrs. J. the high sign and shut the door on her. I heard her gasp and sorta lean up against the wall. Flop-like!

"I'm going out, Thomas," he tells me. "It had to come, but I'm glad it didn't come a year ago. The Burton Joneses would fail terrible with no one to take care of them, and Mrs. Burton Jones needs a lot of taking care of. But I can go easy now, Thomas. You'll take my place."

His face wasn't red no more. It was pale, a sorta pasty white. I don't think he had no pain.

"I'll take care of them," I said.

Here was him a-going over the long road and only thinkin' of the family.

"Yes, I can trust you, Thomas," he went on. "Now, don't forget her temper. You'll have to speak to her about that often. Then, there's the matter of cards. You must tell her about that each time before she goes calling. One card for herself, Thomas, and one of her husband's for each member of the family that she's visiting. That's her worst habit, and I've kept her straight on it for years. Remember . . . one . . . one for each member . . . only one, Thomas . . . for each . . . just one—"

And then Oliver passed out.

**N**EARLY everybody was gathered out in the hall of the servants' quarters when I laid Oliver back on the bed and come out. And he had placed a trust in me. I could a-laughed—but I didn't.

"It's all over," I told them, and Mrs. J. burst out cryin' and went right into the room and knelt before all the servants.

Then I thought of Mr. Jones and wondered what was keeping him. He oughta be there with all them females. So I slips down the stairs. I just go right into the library where the 'phone is, and know at once what's keepin' Mr. J. He's sitting there in a chair, and his mouth full of cotton and his arms and legs is bound to the chair. His eyes are bulging out of his head, but that's his own doing.

But that's all I see and then—

"Hands up—and put 'em up high."

And I put 'em up, and put 'em up high. I didn't see the speaker, but right away I knew what is doing. The lads of the window has returned for them rocks and finding the door open walked in. The room was quiet-looking. Mr. J. didn't put up no fight, which was best for him. But then I ain't of a peace-loving nature—and I was thinking hard.

"Frisk him, Ed," says the voice again; and a little wop walks in front of me and feels all over my clothes. But he never touched my arms, and there in my sleeve was that little twenty-five automatic.

Now, you see, I wasn't in such a bad hole as things looked. It takes the best dick on the force just one second to draw a gun and shoot. If he did that with me he would be just a half-second too late. But then these lads didn't have to draw, and from what I hear there is two of them—so, after all, I had food for thought. Considerable thought.

"It's old Butts himself—or young

Butts," the lad behind me with the cannon says. "We'll get the combination of that safe out of him."

I was looking straight at Mr. J., and I see him shake his head. He had some guts.

"Give me the combination of that safe." The leader spoke again, and his voice was cool and calm and I see that he wasn't no ordinary crook.

Then I swung around and looked straight into the face of the lad with the gun.

**I**T WAS Spike Dawson, the squealer. He gasps. The sudden recognition unnerved him. Just for the fraction of a second it did. But that was enough. My right arm went forward—two shots rang out. I had shot coming down and I had shot to hit right between those sneaking eyes. It was my life or his and—I wanted his. I knew that at last I was a killer. But if ever a rat needed killing that rat was Spike Dawson. It ain't what you'd call good ethics maybe—but it's fact.

And then there's another report, a sharp stab in my shoulder, and as Spike falls at my feet I remember that little wop and realize that I've been hit. But I turn quick—take another bullet in the left arm and drop the wop. Then things go black—awful black—and then nothing—just nothing.

It's two weeks later before I get a line on myself, and I'm in a nice white bed, my own bed, and there's a nurse there. Eddie gives me this dope, for she comes in often to tell me stories.

"You used to tell them to me," she says, "Now, I'll tell you some. About fairies. I don't like burglars any more."

Then Mrs. Burton Jones ambles in. I'm going to call her by her full title from now on. Oliver would have it so.

"You are our butler now," she tells me with a smile. "You must hurry and get well, and then we are going to send you away to the mountains for a nice long rest. Nurse says I mustn't stay long and disturb you, and besides I'm calling on the Hazzards this afternoon."

"The Richard Hazzards?" I asked.

"Yes—the Richard Hazzards," she nods.

"There are four of them," I says after a bit. "Don't forget to leave four cards for your husband and—and only one for yourself."

"Goodness gracious!" She looks startled. "I had forgotten all about that card-case, and—" Then she breaks off and turns sudden upon Eddie. "You naughty, naughty child," she almost yells. "You've been in my room again and been playing with my card-case."

"A lady never loses her temper," I says quiet-like.

Mrs. Burton Jones stopped dead in the middle of a sentence and then says calmly:

"Thank you, Thomas."

**T**HAT'S all long ago now. But it just had to be. You see, an honest country life was laid out for me. Mrs. Burton Jones would 'a' been absolutely helpless without me; Eddie didn't like burglars any more, and then there was Oliver's trust. But I don't know, somehow I put the whole thing down to Eddie's pipe and my poetic nature.

So I just up and bought myself a couple of books called "The Habits of Good Society." If you are going to do a thing at all you might just as well do it right.

Does your  
tooth-brush  
"show pink"?

**A**LL TOO OFTEN men and women hold back from giving their teeth the good brushing needed because their gums are soft or irritated.

A "pink tooth-brush" is a sign of tooth trouble to come—a warning to restore your gums to a healthy condition.

In this, Ipana Tooth Paste can help you. For it cleans the teeth thoroughly and exercises a gentle healing effect upon soft and bleeding gums.

Ipana contains Ziratol, long used by the profession in the treatment of soft, spongy or bleeding gums.

And flavor! Ipana is smooth, snappy and delightful.

## Nothing Could Keep This Boy Down

(Continued from page 16)

in the season of 1920-1921, when one third of the apples in New York State were rotting under the trees, apples shipped by one of these associations were selling at three times the New York prices. And to-day eggs sent East by the Pacific Egg Producers, whom Sapiro brought together, command a better price in New York than the native eggs sold by individual poultrymen—despite the fact that the Pacific product is eighteen days old when sold over the grocery counter.

Last year Sapiro went down into the Mississippi delta and organized a big group of cotton growers. This year the same growers have been getting from six to eight cents a pound—or from \$30 to \$40 a bale—more for their cotton than the unorganized producers in the same section of the country. In 1921 the burley-tobacco raisers of the South were getting from 8 to 11 cents a pound for their crops. Then Sapiro organized them. In 1922 they received an average of 23 cents a pound, which means that an added profit of some \$15,000,000 was distributed among the 68,000 members of the association.

A FEW months ago Otto H. Kahn, head of one of the most powerful international banking firms in the world, gave a dinner in New York for the purpose of creating a more intimate understanding between the financial and the agricultural leaders of the country. As spokesman of the great cooperative farming movement, Sapiro was asked to set forth the reasons why the California growers were running away with the Eastern markets—why more than three fourths of them rung up tidy profits last year, while the average Eastern farmer was barely holding his own or else going more deeply into the hole. Turning to Judge Gary, head of the billion-dollar United States Steel Corporation, who sat opposite him, Sapiro said:

"The California growers are making money because we have studied the methods of the Steel Corporation and applied them to the marketing of farm products. The industrial system of the country is based on group production and group marketing. Your company is an excellent example. Hitherto, among the workers of the world, only the farmer and the artist have labored alone and marketed their products as individuals. Now, a good farmer is not necessarily a good salesman—and even if he were a good salesman he has long been handicapped by circumstances beyond his control.

"Farmers used to dump their output wherever it was grown, as soon as it was grown, and thus they created a glutted local market from which speculators could buy at their own price. That's bad business. Your great company, Judge Gary, never dumps steel rails where they are produced and leaves them there to be taken away by the highest bidder. It studies the markets. It canvasses possible customers and ships products to them in the desired quantity.

"Now, the California farmers, by pooling their products and having a *central business organization of experts* to sell them, have adopted the same methods you use. We know our markets; we have a complete outlet for our perishables; we store our non-perishables, and we feed them out in such quantities as the buyer will absorb at a fair price. And because we are a sound business organization we can borrow money from the banks, so that the farmer who has once pooled his crops does not have to wait for full payment until they are sold. During the last twelve years financial institutions have lent us more than a billion dollars. In 1921 the War Finance Board advanced \$70,000,000 to cooperative organizations, and if there was a single loss, I haven't heard of it. . . . Yes, Judge Gary, we have become prosperous by taking a leaf from your own notebook."

Sapiro is the fastest and one of the most stimulating conversationalists to whom I have ever listened. He is a human cataract of enthusiasm. Even if you hadn't the slightest interest in cooperative marketing you would become a loyal rooter out of sheer deference to a man who can believe *anything* as hard as he does.

It was with some difficulty that I led the slender, brown-eyed enthusiast from his favorite topic over to the one in which I was immediately interested—himself. My reward, however, was more than commensurate. As I listened to his swift, simple recital of a boyhood of infinite pathos—particularly of the six starved and tortured years in an orphan asylum—I was constantly wondering how all that which was vivid in him could have survived the ordeal. This is a problem that I will pass on to you: for I shall tell you his story just as he told it to me. It needs no editing.

"VERY well—these are the facts," he said, leaning back in his chair and for a moment resting his thin, nervous fingers on his knee. "I was born in San Francisco thirty-eight years ago. There were nine in the family. I was fifth. My father was a teamster and we were pathetically poor. When I tell you that I was born in my aunt's kitchen, because we didn't even have a roof over our heads at the time, perhaps you can guess *how* poor.

"When I was very young, we moved across the bay to Oakland. There our fortunes were worse, if possible. If my father had worked regularly and saved his money, he could have provided for the simple needs of his big family. But he didn't work regularly, and he brought home very little of what he earned. He was afflicted with certain unfortunate personal weaknesses that it hurts me to think about or talk about, so if you don't mind—

"When I was six and my brother Philip was eight we had to start in selling newspapers and matches on the streets of Oakland. Otherwise we would have gone hungry. I rather liked selling newspapers,

## Oakland's share in automobile progress

WHEN McKinley was nominated for President there were only four gasoline automobiles in the whole United States. Today there are more than ten million. Two factors have helped to work this miracle—the *spirit of youth* and the *spirit of cooperation*.

Being young, the industry knew no limiting traditions, and almost every car has contributed something to the development of all the rest.

Oakland pioneered in the development of a light six-cylinder car to sell for less than \$1000.

The horizon of the industry was broadened by that achievement. Families, to whom the ownership of a six-cylinder car had been only a hope, found their hopes realized; and men began to think of the automobile as the servant of *all* the people.

\* \* \*

The Oakland of 1923 is one more

monument to the spirit of cooperation.

Back of the Oakland organization is General Motors, adding to Oakland's resources the economies of large purchasing power, quantity production, and the interchange of men and ideas.

This is the philosophy on which General Motors is built—that every member of a family is better able to serve because of its association with the others. General Motors is stronger because of Oakland's ideal to build "the finest light six"; and Oakland is strengthened by the experience, the skill, and the spirit of the other seventy parts.

OF THE ten million passenger cars in the United States, one in seven is a General Motors product.

OAKLAND is one of the five permanent passenger car divisions of General Motors, each of which makes its own contribution to economical transportation.

## Could you use \$250?

Here is your chance. At some time or other you have undoubtedly used Sherwin-Williams paints, varnishes, stains or enamels. Whenever you used them, you found that it *paid*. You got beauty, harmony, economy, preservation, increased value of the object painted.

Tell us the story of your experience in such a way that it will convince others of the advisability of using Sherwin-Williams products and win one of these splendid prizes. They will be given for the *most helpful* letters.

To be helpful, a letter must tell *facts*. These facts must be substantiated by photographs or by names and addresses of people who know the facts. No letter will be considered that refers to Sherwin-Williams products bought or used after January 22, 1923. If, prior to that time, you have never used Sherwin-Williams products you are disqualified. The contest closes May 15th.

Take your time, gather your evidence as carefully as if you were preparing a case for court. Remember, each letter will be judged on its advertising merit and provability. It is understood that all letters, photographs, etc. may be used in advertising, become the property of the Sherwin-Williams Company and will not be returned. Results will be published as soon as possible after the closing date.

it was clean and interesting work. But peddling matches was awfully hard. In those days matches were made in large, square wooden blocks, solid at the base, and with several hundred to the block. We bought five blocks for a nickel and sold three for a nickel. They were so heavy that a load big enough to net a profit of fifty cents would weigh twenty-five to thirty pounds. It was about all I could stagger under—for I was puny and undersized even for a six-year-old.

"They were wretched matches—about one in five would light when you wanted them to, and it's a wonder anyone bought them at all. We carried them in flour sacks. I had to be careful in swinging them up to my back or the jar would make them catch fire. This happened once; and two or three times they broke into a blaze on my back, through friction or spontaneous combustion. Almost getting burned up didn't bother me half as much as losing the matches, which represented money that we needed so badly at home. That almost broke my heart.

"**PHILIP** and I would get up at half past five in the morning and sell papers on the street until school time. Then, after school, we would rush away to get our loads of matches and start tramping from house to house. Often we would walk out as far as East Oakland and back to the down-town section—a distance of six or eight miles—before our goods were sold.

"Coming home at night so tired that I ached all over, I would sometimes stay outside the house for hours if I saw that my father was home. You can't imagine the fear we had of him. But I thank God for my wonderful mother. I have seen her go through things that I did not think any human being could go through, and remain brave and sweet and optimistic. Not only did she have to feed and clothe and protect us, but she had to keep us 'in nerve' as well—for we were simply frightened to death. Every once in a while she would break down and cry over us, because we had to work all the time we weren't in school, and couldn't go out and play the way other children did. But she gave us more strength and love than all the rest of the world put together.

"Two of our tragic little band had died meantime, and that threw an extra burden on Phil and me. We worked every minute we could spare from school—Mother just wouldn't let us give that up—and an elder sister helped with the housework.

"Presently we established so good a paper trade that we were able to give up selling matches. I learned to read quickly, and even as a little tad I used to stand on my corner and call the headlines off to passers-by. This seemed to tickle them to death and they would go out of their way to patronize me. We got to be good fighters, too. We had to be. Competition for desirable corners was keen, and we often had to lick the bigger boys to hold ours. But between us we averaged six or seven dollars a week—which seemed like a fortune.

"Then, when I was nine years old, my father was killed. A fast Southern Pacific express train hit the truck he was driving. I remember that one of the neighbors came to school and took Phil and me to the hospital. But we got there too late to see him alive.

"I wasn't old enough to appreciate the solemnity of death, and all I could feel was that a great fear had been lifted. In the brief period between the fatality and the funeral I was happy. There was no school and no work; neighbors were dropping in; we were the center of attraction. An uncle gave us new suits to replace our threadbare ones, and it seemed the most wonderful thing that had ever happened to me. Then, in accordance with the Orthodox Jewish custom, they started to cut a slit in our coats—which is the modern adaptation of the ancient practice of rending garments. Phil and both I ran away, and when they caught us they had a terrible time persuading us to submit to this mutilation of our new clothes.

"The funeral gave us our first carriage ride—another wonderful event. And after it was over custom required that we stay at home for a mourning period of seven days. The neighbors brought us food, and we had the blessed privilege of eating all we wanted.

"When Father was brought home dead there was less than twenty cents in the house—and seven children, the youngest a babe in arms. Now the burden of supporting the family fell even more heavily on Phil and me. At once we doubled our daily stock of papers and sold them to the last one. We had to, because we couldn't return them and get our money back if there were any left over. We would start in at six in the morning, and at eight-thirty Phil would go to school, because he was the elder and had a more immediate prospect of *needing* education. Passing my corner, he would turn over to me what papers he had left, and I would stick on the street until I had sold them all. Sometimes I wouldn't get to school until after eleven o'clock.

"**BEFORE** long my teacher got very indignant at my tardiness and wouldn't accept my excuses. So she reported me to the principal of the school, who was Edwin Markham, the poet. Mr. Markham called me into his office and extracted from me the whole story. Then the dear old man sent me back with a note to the effect that I could come late whenever I wanted to, and he would trust me not to arrive a minute later than was necessary. Moreover, he assigned a teacher to spend each noon hour helping me, so that I could make up the work I had missed in my classes.

"Phil and I managed to make about fifty dollars a month, and the whole family lived on this amount, supplemented by such money as Mother earned by hemming towels for the linen department of one of the large stores. She got a few cents a dozen for this work, and usually she would sew long after we children were sound asleep. I remember one morning, when we were particularly hard pressed, I got up earlier than usual to go after my papers and found her still sitting in her chair, with the first slant rays of the sunrise setting off the blue circles under her weary eyes. She had been working the livelong night!

"In the meantime the constant hard work was telling on Phil and me. I was much undersized and not any too well. In addition to selling papers I had to study hard to keep up in school. 'You boys are going to kill yourselves,' Mother would

STEPHENS TOURING SEDAN, 5 PASSENGERS, \$1595

## Range, speed, distinction united in Touring Sedan at \$1595

A masterly new enclosed car for town or trail, the remarkable power and balance of the Stephens Touring Sedan give it the range and speed of a fine touring car for spring and summer driving.

Quality and lasting beauty show in every line and detail of its dignified, hand-wrought body. Seats are agreeably broad and low, built up on deep, luxurious bases of small coil springs.

Upholstery is cut velour in a rich warm taupe; fittings in matt silver. Instrument board and window moldings are natural walnut. The body is in sunny Sorrento blue, with top of bright black duratex over standard steel panels.

Doors are wide. Entrance at either side is easy. The front seats fold down at right

angles to the floor. Both back and seat cushions are full-spring upholstered.

With instant throttle response, its Stephens-built motor combines brilliant performance, low upkeep cost and notable economy. Delco ignition, Timken axles, Gemmer steering gear, Fedders radiator, Mather springs, indicate the character and dollar value of its chassis.

Equipment is exceptional—trunk, power-driven tire pump, transmission lock, cowl ventilator, sun visor, dome and stop lights, and all usual accessories.

See the Touring Sedan at the nearest dealer's. Study its powerful lines, balanced design, oversize units, unmatched equipment. Take the wheel and give it your own performance tests.

WALL BOARD, GYPSUM WALL,

## Over two billion feet of Beaver Wall Board now in use

Seventeen years ago we introduced to the American public a new type of interior wall material—which combined economy with marked convenience.

Today it is sold in practically every city, town and hamlet in the United States and Canada. And fourteen foreign nations now buy it.

Constant improvement has been made in the quality of Beaver Wall Board, but even today the millions of feet of genuine Beaver Wall Board put up in the early years of our business are still rendering excellent service. Over two billion feet are now in use.

Microscopic view, magnified 200 times, showing long, tough, sinewy VIRGIN SPRUCE FIBRES, the most expensive and finest quality wood pulp material, of which genuine Beaver Wall Board is made.

This, in brief, is the story of Beaver Wall Board.

### Uses and Advantages

Beaver Wall Board comes in big, sturdy panels, 32, 36 or 48 inches wide, and in lengths of 6 to 16 feet.

Beaver Wall Board is easily handled. Merely nail it directly to the studding or over old plaster walls or ceilings.

Beaver Wall Board can be decorated immediately without costly sizing and is adaptable to a wide variety of beautiful wall treatments.

The cost of Beaver Wall Board is low. And the labor cost of applying is likewise very low.

For ceilings and walls in new construction; for remodeling or repairing attics and other idle space in home, factory or office; for covering old, unsightly plaster walls; for summer cottages, garages; in fact, for any purpose where a permanent heat, cold, moisture and sound-proof, fire-resisting inside wall or lining is needed, Beaver Wall Board is the ideal material from every standpoint.

THE BEAVER PRODUCTS COMPANY, Inc.

THOROLD, ONT., CANADA - LONDON, ENGLAND

### Six Important Features

Six important features explain why Beaver Wall Board is today preferred by those who are careful in the selection of wall board. Each is the result of our long experience in making wall board. And each has a vital part to play.

Genuine Beaver Wall Board is the only wall board made of VIRGIN SPRUCE FIBRE through and through.

Our experience has proved it is the best and strongest material for wall board use. These long, tough, sinewy, yet light, spruce fibres give to Beaver Wall Board its greatest toughness and durability.

Place a piece of Beaver Wall Board over a tumbler of water. Hold tight—they meet along and board and allow to stand as long as you like. The water will not penetrate the surface.

Genuine Beaver Wall Board is a NATURAL INSULATOR.

Due to the use of long, virgin spruce fibre it is filled with millions and millions of microscopic "voids" or dead air pockets. And building engineers will tell you that "dead air" is one of the best non-conductors of heat, cold and sound.

Genuine Beaver Wall Board is of 26-LAYER CONSTRUCTION.

Laminating several layers of wood together is widely practiced as a means of overcoming warping and buckling. Beaver Wall Board is made up of 26 LAYERS of Virgin Spruce Fibre pressed and laminated into perfect panels.

Genuine Beaver Wall Board is kiln dried and seasoned before leaving the factory.

Genuine Beaver Wall Board is rendered practically impervious to moisture or climatic changes by our exclusive, patented *Sealtite Formula*.

Genuine Beaver Wall Board is especially calendered and primed to produce our Art Mat Surface. *Either side may be used.*

The best lumber and building material dealers in all localities sell the *genuine* Beaver Wall Board, or can easily get it for you. Your carpenter can figure costs and apply it.

On request we will send you a sample of Genuine Beaver Wall Board and a booklet that tells all about its uses.

## AND VULCANITE ROOFING

### Vulcanite Roofing is a standard value the world over

America's building program for 1923 is probably the largest in her history. Many millions of dollars will be invested in asphalt roofing—shingles and roll-type.

Experienced builders are showing marked preference for VULCANITE Roofing. They know that VULCANITE is made of honest materials throughout; is fire-resisting; heavy, rigid, tough and strong; will lie flat in the heaviest wind; will retain its weather-proof qualities; will add beauty and attractiveness to any building.

"Hexagon" Slab Shingles give extra thickness over the entire roof and produce a beautiful deep tile effect.

Most experienced builders also know that one of the reasons for this long and satisfactory service is the famous Glendinning Saturation Process. This process dictates the use of only genuine Mexican asphalt and our own make of tough, long fibre, pure rag felt. Under its specifications, the felt is run *three times* through the hot asphalt saturating bath. Then huge steam heated rollers literally "drive in" the excess asphalt. Every tiny niche, crevice and pore is thoroughly and permanently impregnated.

VULCANITE Roofing includes three unusual types of shingles—all patented and all finished in beautiful red or green crushed slate:

"Hexagon" Slab Shingles produce a beautiful, durable, extra thick, fire-resisting roof. Exclusive patented design insures proper laying—also a tight seal, long wear, a deep tile effect and heavy shadow line. They are easy and fast to lay over roof boards or old roofing. Their artistic pattern enhances the beauty of any home.

"Doubletite" Slab Shingles produce a roof not unlike Italian tile. They lay fast and uniformly, and due to design, space auto-

matically. Patented "projection" underlies each slot, giving extra thickness here as well as elsewhere—insures *extra* wear and weather protection. For beauty, fire-resistance, weather protection and long life, "Doubletite" Shingles are an unusual value.

"Self-Spacing" Individual Shingles—popular everywhere because they are laid quickly, look good, last a long time, and are fire-resisting. An exclusive, patented "shoulder" insures *uniform spacing*, fast laying, and *seals* the roof above notch—prevents rain and snow from driving between shingles to roof boards. Gives practically a *triple thick* roof when laid four inches to the weather. An exclusive VULCANITE feature.

"Doubletite" Slab Shingles produce an artistic roof that enhances the beauty of any home.

VULCANITE Roofing also comes in roll and ordinary shingle types—for homes, commercial and industrial buildings—in jumbo and standard weights—and in smooth finishes, surfaced with mica, talc and sand; also red and green crushed slate finishes.

You can identify the genuine by the name VULCANITE on the label.

Ask your VULCANITE dealer for information—or write us. We will send free samples and booklet upon request.

#### Beaver Gypsum Wall

If you want plastered walls or ceilings, there is a more convenient way.

Beaver Gypsum Wall comes in large, wide panels which can be nailed direct to studding or joists. It is made of purest gypsum plaster, sandwiched between two layers of tough fibre board. Front side specially processed for decoration.

Beaver Gypsum Wall comes ready for immediate decorating. It is fire-resisting and moisture-proof. Can be sawed and nailed like lumber. Saves much labor, time and "muss." Sold by leading dealers in lumber and building supplies.

Upon request, we will send you a sample of Beaver Gypsum Wall with information on "how to use."

# MERCHANTS, send for this book

*and learn how PROJECTED SELLING will increase your farm trade*

Many older merchants can easily remember when cash registers were unknown, and yet what retail store today would try to conduct its business without a cash register or some similar method of recording purchases?

Conditions in the retail selling field are constantly changing. New methods are introduced—old ways are discarded. Always some merchant must try a new plan first. If it succeeds, others adopt it; if it fails, they avoid it.

Within recent years a new factor—Projected Selling—has made its appearance in the retail selling field. It is new only in its application to retail stores; it is as old as the Yankee tinware peddler of our grandfathers, the house-to-house canvasser, the nomadic merchants of the days of Rome and Carthage.

## What is Projected Selling?

Projected Selling—as used by retail stores—is simply an extending of the territory from which you draw trade, a projecting of your store into the rich farming regions surrounding your town or city. It is the "store on wheels" idea—taking your merchandise to the farmers by means of personal visit.

It seems to be here to stay. Retail merchants in many lines—automobiles, farm implements, clothing and shoes, groceries, hardware, jewelry—have adopted it, usually with success.

To Farm & Fireside, the National

## This book sent free

Merchants: Send for this book—learn how other merchants are using Projected Selling. If you are selling automobiles, farm implements, clothing, shoes, hardware, furniture, jewelry, groceries, drugs or other lines—you will find in this book something of very special interest to you.

Projected Selling does not necessarily require an elaborate investment in new equipment, an increase in sales expense. Every merchant can apply it to his business, even in a small way, and increase his sales materially.

Send for this book today. Just write us on your letterhead, "Send me 'Projected Selling,'" and we will gladly do it.

Farm Magazine, the subject has been one of interest. What is Projected Selling? Is it a permanent retail development? Will it help merchants to increase farm trade, to render a service to those who live on

farms which will result in more business for the merchant?

We have prepared an interesting booklet on Projected Selling, for free distribution to retail merchants, which undertakes to answer these questions.

It tells how a retail grocer has reduced his cost of doing business by means of Projected Selling. It tells how agents of the International Harvester Company are using it, many of them doubling and quadrupling their business. It tells how dealers in automobiles, hardware, clothing, shoes and other lines have increased business—and reduced costs.

## How this book will help you

It tells how Farm & Fireside—in its editorial pages constantly inspiring farm families to better farming and better living, in its advertising pages constantly showing and describing better merchandise—is an important factor in Projected Selling. It tells how Farm & Fireside will help you to increase your farm trade.

We will gladly mail a copy of this booklet, "Projected Selling," to every merchant in the land. Send for your copy today—learn the facts about Projected Selling so that you may decide whether it can profitably be applied to your business.

say, with tears in her eyes. And she worried more and more about us. Moreover, she was fearful that we would learn bad habits from mingling with the tough boys of the streets. In the end she took a step that almost broke her heart. She went to San Francisco and made arrangements with an orphan asylum to take four out of the seven children. So Phil and myself, one sister, and a brother who has since died went to the institution. Mother figured that she could support the other three youngsters by taking in more towels than ever.

"I WAS ten years old when I went to the orphanage, and I stayed there six years. Those years are seared into my very soul. I was no longer Aaron Sapiro; I was 'Number 58'—a puppet in a cold, unfeeling system that tended to squeeze the joy of living and the individuality out of any child. They fed us enough, such as the food was; but if someone could have come in to give us an occasional good-night kiss, or to speak a kind word now and then, it would have meant more to us than all the food in the world.

"Dressed in regulation uniforms that stamped us as charity children, we started off for school every morning with a slice of bread and an apple in a tin can on which our number was stamped. That was our lunch. The other children could tell as far as they could see us that we were orphan waifs, and they used to taunt us with the fact. After a while we developed the habit of eating our meager lunches after we had gone a few blocks and hiding the cans under a building until we came back at night. Before noon we were hungry, of course, and we went hungry the rest of the day. Even that subterfuge, however, didn't do much, if any, good.

"The food at the orphanage was always the same for every day in the week. We could tell on January first what we were going to have for every meal of every day in the year. We knew that for dinner on Sunday we would have veal, which was frequently bad; that on Thursday night we would have roast beef, which was usually pretty good; and that on Friday we would have fish, which, more often than not, was stale and unpalatable.

"The bowls and cups were so thick that one could drop them out of a window onto the cement walk and they wouldn't break. I know—because I tried it. The dining-room was dark, and the long board tables, around each of which twenty-five boys or girls would be crowded, were covered with red cotton tablecloths—the kind that can be used a long time without showing too noticeably the dirt and stains.

"But the great, thick cups had one saving grace: Every evening those of us whose actions during the day had not suited our custodians would be called into the office and whipped on the hands with rattan switches. As soon as one of us came out of the office, with his hands puffed and red and smarting, he made a bee line for the dining-room and soothed the sting by clasping tightly the cool cups. We had an unwritten law that no one should block the narrow passageway from the office to the dining-room between seven and eight o'clock. A kid didn't have to do much to get a whipping, and I

was one of those frequently singled out. I have seen as many as seven or eight fellows in the dining-room at a time, all blinking back the tears as we held the cups between our bruised hands.

"The orphanage had the most extraordinary system of bathing I ever heard of. The boys always took their weekly bath on the same night in a big tank that would hold about twenty at a time. A delegation of the biggest boys would enter the tank first and be scrubbed off with soap and a rough brush. Then part of the water would be let out, and the group of boys next in size would be herded in. I belonged to the last and smallest group, and we had to wash in the water that all the others had bathed in.

"We were never given a physical examination. Some of the fellows had running sores; many of them were tubercular; and nearly all had bad teeth. Nobody seemed to care. The whole system was a dull routine, without a touch of life or color.

"The fighting that Phil and I had done as newsboys stood us in good stead, for the bigger boys were always picking on the smaller ones. The first night I was there an oversized bully thrashed the life out of me because I wouldn't pull off his stockings. He left me all in a heap—but he had to take off his own socks! A few experiences like this gave me an idea that resulted in my first experiment at 'coöperative organization.'

"I got all the smaller boys together and outlined my plan. We took a solemn vow in the dark of the moon that the first time one of the bigger boys started to pick on one of us *we would all pitch into him together*. We drew up an agreement on paper, pricked our thumbs with pins, squeezed out the blood and signed our names with it—in accordance with the procedure followed in a pirate book I had been reading. We called ourselves 'Aaron's Gang' or 'The Budding Roses.' It was a darn fool name, and I can't remember whether I was responsible for it or not.

"The very next day one of the big fellows took an awful wallop at one of our band—an inoffensive little duck whom we called 'Snook.' A moment later thirteen infuriated 'Rosebuds' were swarming all over him. One grabbed each arm; two or three clung to his legs; and the rest of us proceeded to punch the living daylights out of him. After a few experiences like this we enjoyed a welcome immunity.

"EACH drab week had one rift of light for my sister, my two brothers, and myself. That was on Sunday—when my mother came out. Too poor even to pay car fare, she would walk the three long miles from the ferry to the asylum. Once in six months she would bring the baby, and on these occasions she would ride back and forth in a cable car.

"When I finished grammar school I was fortunate enough to get two hundred and fifty dollars and a silver medal from the orphanage as the reward for standing at the head of my class. The medal was mine, to have and to hold; but the trustees put the two hundred and fifty dollars into the bank to be kept for me until I was twenty-one. Then they let me go to high school, which was a privilege given very few of the boys in the orphanage. When I finished high school, at sixteen, I was

## Save Fuel Keep Warm End Draughts

You will be surprised at the small cost of equipping your home or business building with Chamberlin Metal Weather Strips.

And they add so much to comfort, cleanliness and good household economy. They save 25% to 40% of fuel costs. Keep dirt, dust, soot and smoke from sifting in. That ends one of the most tedious tasks of housework.

### Why Heat Your Building 36 Times Every Day?

Tests show the inrush of cold air at unprotected windows and doors fills the average building 36 times daily. Why fight this with fuel?

How much more simple to bar it out as thousands of good home managers do, with Chamberlin Metal Weather Strips.

At 12,000,000 windows and doors Chamberlin Metal Weather Strips permanently end fuel waste and discomforts resulting from draughts. They make homes dust-proof. Protect hangings, furnishings and decorations. End rattling doors and windows.

**Healthier homes result.** Children are safe from cold

air currents. No cold spots. You are not driven from the bright, cheerful window by chill draughts.

**Free** Chamberlin Strips are used on 85% of all weather stripped buildings, including homes, banks, schools, office buildings, churches, stores, hotels and apartments.

They are guaranteed to last as long as the building. Any need for service or attention, no matter how many years hence, is cheerfully done free, by Chamberlin experts. An estimate by our engineering department, on the cost of your equipment, is free. Just send the coupon.

still very much undersized—about five feet tall and less than one hundred pounds in weight. Our diet certainly hadn't proved very conducive to growth.

"About this time one of the trustees became interested in me and asked me if I wouldn't like to become a rabbi. Such an exalted position seemed an infinite distance above the orphanage, and I jumped at the suggestion. So a few months later I was sent to Cincinnati, when I entered Hebrew Union College. This was in 1900. I stayed there eight years."

SAPIRO walked to the window and drew the shade lower, to shut out the blinding rays of the late afternoon sun. For the first time since our talk began I heard the heavy rumble of the Broadway traffic below us. We were sitting in an office in the Equitable Building, Sapiro's headquarters when he is in New York.

"You stayed at the theological school eight years," I said, as he drew up his chair once more.

"Yes, eight years."

"Did you become a rabbi?"

"No. The course was nine years. I left before it was over."

"Why?"

"Because I came to believe strongly that any church must be an instrument of social service—to further human welfare—rather than an institution for the preaching of a fixed and changeless creed. I told them so. I told them that I felt I could not go on. So I left Hebrew Union."

"How did you support yourself while at the theological college?"

"The last half of this period I earned enough by tutoring students at the University of Cincinnati, where I also held the salaried position of student assistant in history."

"Teaching at the university!" I exclaimed. "Why, I thought you were only a high-school graduate!"

Sapiro smiled. "I was when I went there. But, you see, I attended the university in the forenoon, the theological school in the afternoon, did my tutoring in the evening, and studied whenever I got a chance—usually after midnight. I found that I could do very well with five hours of sleep."

"How did you happen to be placed on the University of Cincinnati's teaching staff as student assistant?"

"Oh, I don't know. Probably it was because I was lucky enough to have a good reputation as a student. Anyway, they gave me a Phi Beta Kappa key when I finished."

"When you left Cincinnati, what did you do?"

"I decided to study law. So I went back to San Francisco and entered the Hastings Law College, which is one of the subdivisions of the University of California. At the same time I was fortunate enough to land a job in the office of a prominent attorney. He took an interest in me and taught me many things. But I had to leave him after a year or so—although I still kept on in law school."

"Why did you give up the law office job?"

Sapiro plunged one hand in his pocket and his face grew very serious. "Well, you see," he explained, "those years in the orphanage had so seared me that the scars

remained, and I never could stop thinking of the other boys and girls out there. They were suffering what I had suffered. They sat in the same old dingy dining-room, at the long tables covered with those same atrocious red cloths, and ate the same kinds of unpalatable food from the same massive dishes. Sometimes I couldn't sleep from thinking of it. Finally, I sat down and wrote out fifty or sixty of my strongest grievances against the institution and delivered them to the president of the board of trustees. So tremendously shocked was he that he sent for me and offered me the position of assistant superintendent. I told him that I would take the job under two conditions: that I could continue my law studies and that I should have *real authority* to change the existing order of things. He agreed.

"I guess I turned that orphanage inside out. First, I tackled the dining-room, where I cut the long tables up into small, sociable ones, bought decent dishes, laid in a stock of white tablecloths and napkins, and hung up some white curtains at the window and some pictures on the wall. Then, with the help of one of the University of California professors and his wife, who was a dietetic expert, we worked out menus made up of palatable, nourishing foods—after having first fired the old cook!"

"Meantime, we had a physical examination of all the children, and found that on the average they were about four years sub-normal in physical development. Moreover, many of them were suffering from all kinds of ailments. We saw that these got proper medical attention."

"I kicked out all the old beds, whose iron slats left marks for weeks on a new boy's ribs, and I put in shower baths to replace those awful old tanks. Then I instituted a modern system of self-government in which the boys and girls not only tried their own offenders but made the regulations under which the institution was run. Then I stepped out, and a new superintendent, who believed in what I was trying to accomplish, picked up where I left off. I believe that orphanage is rated today as one of the best in the United States."

IN 1911 Sapiro was graduated from the Hastings Law College. Having led his class, he was selected to represent the law school in the commencement exercises of the University of California. In his address the former orphanage waif discussed the duties of a lawyer as a citizen. Governor Hiram Johnson and several other leaders of progressive legislation were in the audience. All of them were impressed both by what Sapiro had to say and the way he said it. This resulted in his appointment, a few months later, as secretary of the newly organized Industrial Accident Board, which was charged with the hearing and investigation of the complaints of injured workmen, under the newly enacted Workmen's Compensation Act.

Sapiro's two years in this office were significant. Finding the existing compensation law crude and ineffective, he assisted in writing a new law, which was passed by the legislature. Later, as the legal representative of the State of California, he defended the constitutionality of this act in the courts and won a complete victory.

# The Simple Secret of Success

**A**LL GREAT fundamental principles are, when revealed, simple and easily usable.  
The secret, if it is a secret, of success is no exception to the rule.

Two words tell it.

Two words comprise the whole story of what's required to win the high rewards in business—tell the qualities that make a man forge easily ahead of other men who in *native* ability appear to be his equal.

And those two words are—*intelligent service*.

All material rewards come in return for service—of one kind or another.

*Intelligent service* naturally commands the *high* rewards.

And the ability to render *truly* Intelligent Service is not born of chance or genius, but is the result of one thing and one thing alone—knowledge.

Barely two decades ago, business knowledge was available only through word of mouth imparting and long years spent in gaining day-to-day experience.

In this day and age, business education enables earnest men to quickly and thoroly equip themselves to render that type of Intelligent Service which commands substantial returns. This business education is now easily accessible thru *organized training*.

Service staffs comprising more than fifteen hundred people—highly specialized expert groups—every facility that millions in capital and over a decade of experience place at our command, are found at LaSalle. All are concentrated upon equipping the LaSalle student to render service—the kind of service that commands not only income but position and influence as well.

Thru the Problem Method as developed and used by LaSalle he learns to do by doing—by going thru the actual work of the position he is training to fill; thus he enters the bigger task, when it opens to him, with *confidence*, for he knows that he has nothing to face which he has not already met and mastered.

Seasoned, practical, experienced, he has thoroly equipped himself to render—*intelligent service*.

Any concern—any institution—is best judged by its product. And the product of LaSalle is *men*.

Without leaving home, without interfering with their daily tasks, thousands upon thousands of men in every part of the world have received thru LaSalle the specialized training necessary to direct their natural ability into productive channels.

Moreover—as an “unearned increment”—that training has quickened their faculties, broadened their viewpoint, given them an all-round growth in power and mentality.

What LaSalle has to offer the ambitious man—what its members have accomplished from standpoints of rapid promotion and increased earning power—these factors, considered in relation to your *personal* problem of advancement, will clearly point the way.

Are you satisfied—with either your present progress or your future prospects?

Are you in earnest when you say that you wish to realize to the full the added earning power that trained ability to render intelligent service brings?

Your answer to those questions will tell you automatically whether or not you are the kind of man LaSalle can help.

And the information we will forward on request enables you to intelligently exercise your judgment.

*J. H. Hopkins*  
President  
LaSalle Extension University

LASALLE EXTENSION UNIVERSITY

## LA SALLE EXTENSION UNIVERSITY

*The Largest Business Training Institution in the World*

# Old Hampshire Bond

Cheap paper  
for his customers?

Bryon E. Veatch, Chicago business man,  
says, "NO—its use is unprofitable."

Read what he has to say:

Gentlemen:

When I send a man out to sell, he is my representative, my mouthpiece; consequently I expect him to be correct in speech, manner, and dress. He must look and act the part.

When I send out a letter, it also becomes my representative, and by the same token I insist that it shall likewise show distinction.

Men have been known to invest a million dollars in a plant, to spend a quarter of a million in advertising its product, and then, when the buying inquiries came, to make reply on cheap Jim Crow paper. I consider such a course both illogical and unprofitable.

When my customer or my friend visits me, he is worthy of the best seat at my table and the best cigar in the box; so, also, he is entitled to the best stationery when I address him by correspondence.

Consistent with the above creed, I use Old Hampshire Bond.

Furthermore, I like that crisp, crinkly feel of Old Hampshire; it sort o' reminds one of the magic touch of banknotes or bonds. It possesses that intangible something which represents VALUE.

Yours respectfully,

(Signed) BYRON E. VEATCH,

5119 Dorchester Ave., Chicago, Ill.

Old Hampshire Bond is the choice of business men who want stationery that is in keeping with the high standards they set for themselves in business as well as in social life.

A generous sample of Old Hampshire Bond will be sent you if you will be good enough to write us on your business letter head.

**Hampshire Paper Company**  
South Hadley Falls, Mass.

Also Makers of Old Hampshire Stationery for  
Social Correspondence.

This law has since been copied by many other states.

In 1913 he resigned his office and went into private practice. Much of his time, however, was devoted to a study of cooperative marketing systems—a subject in which he had become deeply interested because of a conviction that most farmers were unjustly handicapped by existing marketing conditions. Of his appointment as counsel of the State Market Commission and his subsequent organization of cooperative associations I have already told.

EVERY associate or acquaintance of Sapiro with whom I have spoken has emphasized his extraordinary capacity for leadership—that faculty which enables him to inspire large groups of men and weld them into a fighting, homogeneous whole. So in our talk I asked him what qualities one human being has to possess to become a leader of others.

He thought my question over for at least a minute before he answered, slowly and earnestly:

"In watching the leaders of our organization, as well as of other business enterprises, I have come to the conclusion that the gift of leadership is not so much a matter of brains as of intensity. If you

are so completely saturated with anything that you think it and dream it and live it, to the exclusion of all distracting influences, nothing on earth can stop you from being a leader in that particular movement. But first you must have the vision. You must know exactly what you want to accomplish, and you must have satisfied yourself by a common-sense analysis that it is possible of accomplishment. Then, if you are really afire with it all, you are bound to be able to communicate your vision to others. A bonfire is rather pretty to look at, but it takes the concentrated oxyacetylene flame to cut steel.

"If I didn't have a burning and definite vision I couldn't accomplish anything. More than any other one thing in the world, I want to see every farmer in this country make money enough to live decently. I want to see his boy have shoes and stockings, and be able to get a good education without suffering what I have suffered. I want his home to be provided with a bathtub and all the ordinary comforts of life. I don't want his wife to have to work as hard as my mother had to work. In other words, I want him to get a fair deal; and until he gets it I shall keep on fighting just as hard and just as earnestly as I'm fighting to-day!"

## Stella Dallas

(Continued from page 63)

two, Stephen was still sitting in his big chair before his desk, looking far out over the roofs. Miss Mills was still sitting outside the door waiting to finish the dictation.

"I'm sorry to have called you at your office, Stephen," were Helen's first words when she saw him that night, standing ten feet away from him, just inside the threshold of the big room. "I suppose you were having a consultation or doing something important." She tried to make her voice sound light and careless, "But I wanted to get you right straight off—so that you wouldn't fall down an elevator shaft, or get killed in an explosion, or something,"—she laughed tremulously—"the way they do in novels, sometimes, before I had a chance to tell you that after all the years of waiting, that—that—after— Oh, Stephen!"

Stella arrived at the apartment on Commonwealth Avenue at eleven o'clock that night. She telephoned to Laurel from the Back Bay station that she would be out in half an hour, and when she puffed up the last flight of stairs (it grew hotter and hotter as she approached the roof) Laurel, in her thin sleeveless nightgown, with her hair pulled tightly back and braided, was in the hall to meet her.

"I've made some lemonade, Mother. It's on the ice. And there's some cold watermelon. Come in and get those horrid hot things off. I've pulled the bed out where it will get the breeze, if there is any, in the early morning. How is Mrs. McDavitt and the children?"

Ten minutes later, Stella, nightgowned, and hair pulled back and braided too, sat on the back porch under the clothes reel and drank lemonade and ate cold watermelon and gazed at Lollie, seated on top

of the coal box with her bare arms locked about her knees, not talking much, looking up at the lopsided moon that had been full three nights ago on Stag Island.

Funny place, thought Stella, for the lovely Miss Laurel Dallas, who would be staggering New York society one of these days, to be perched in mid-summer. Oh, if she could only tell the poor suffering little kiddie (for she was suffering, she had been pretty crazy about that Grosvenor boy, Stella guessed), if she could only tell her it was only for a short time now; that everything would come out all right in the end. But of course she couldn't.

"It's simply horrid for you here, honey."

LAUREL gave a start, as if she had been a thousand miles away.

"Oh no, it isn't," she assured Stella lightly. "Really, I like it. Oh, we'll have a good time. See if we don't. There's Revere, and Nantasket, and Norembege."

"Was it awful lonesome without me?"

"No more awful for me, than for you when I'm away, I guess."

"What did you do?"

"Oh, I sat out here."

"Gracious! Seventeen, summer, a moon, and alone, out here."

"About nine o'clock the bell rang. It was that Mr. Munn."

"Oh, Ed! Really?"

"He said he saw the light and he didn't know but that it was you who was here. When he discovered it was I, he said please to excuse him, and went away."

"That sounds real polite of Ed."

"No, it wasn't. He didn't have any right to ring the bell for you—a man like that. He knows we do not want him. Oh, I hate that man, Mother."

# Both Are Embarrassed—Yet Both Could Be At Ease

THEY started out happily enough at the beginning of the evening. He was sure he had found ideal companionship at last. She was sure that she was going to impress him with her charm, her cultured personality.

But everything seemed to go wrong when they entered the restaurant after the performance at the theatre. Instead of allowing her to follow the head waiter to their places, he proceeded—and when he realized his mistake he tried to make up for it by being extremely polite. But he made another humiliating blunder that made even the dignified waiter conceal a smile!

And now, at the table, both are embarrassed. He is wondering whether he is expected to order for both, or allow her to order for herself. She is wondering which fork is for the salad, which for the meat. Both are trying to create conversation, but somehow everything they say seems dull, uninteresting.

They will no doubt be uncomfortable and ill at ease throughout the evening, for it is only absolute knowledge of what is right and what is wrong that gives calm dignity and poise. And they do not know. She finds herself wondering vaguely what she will say to him when they leave each other at her door—whether she should invite him to call again or whether he should make the suggestion; whether she should invite him into the house or not; whether she should thank him or he should thank her for a pleasant evening. And similar questions, all very embarrassing, are bothering him.

The evening that could have been extremely happy, that could have been the beginning of a delightful friendship is spoiled. He will probably breathe a sigh of relief when he leaves, and she will probably cry herself to sleep.

## How Etiquette Gives Ease

Are you always at ease among strangers, are you always calm, dignified, well-poised no matter what happens, no matter where you chance to be? You can be—if you want to. And you *should* want to, for it will give you a new charm, a new power. You will be welcomed in every social circle, you will "mix" well at every gathering, you will develop a delightful personality.

By enabling you to know exactly what to do at the right time, what to say, write and wear under all circumstances, etiquette removes all element of doubt or uncertainty. You know what is right, and you do it. There is no hesitancy, no embarrassment, no humiliating blunders. People recognize in you a person of charm and polish, a person following correct forms and polite manners.

Every day in our contact with men and women little problems of conduct arise which the well-bred person knows how to solve. In the restaurant, at the hotel, on the train, at a dance—everywhere, every hour, little problems present themselves. Shall olives be taken with a fork or the fingers, what shall the porter be tipped, how shall the woman register at the hotel, how shall a gentleman ask for a dance—countless questions of good conduct that reveal good manners.

And now, at the table, both are embarrassed. How do you then become dignified and graceful, that of not knowing what to do at the right time—and not being sure of one's manners? It is no easy feat for people to misjudge us.

Shall she invite him into the house? Shall she ask him to call again? Shall she thank him for a pleasant evening? In rapid confusion these questions fly through her mind. How humiliating not to know exactly what to do and say at all times!

Do you know everything regarding dinner etiquette, dance etiquette, etiquette at the wedding, the tea, the theatre, the garden party? Do you know how to word an invitation, how to acknowledge a gift, how to write a letter to a titled person? Do you know what to wear to the opera, to the formal dinner, to the masquerade ball, to the luncheon?

## The Book of Etiquette Complete in Two Volumes

In the famous two-volume set of the Book of Etiquette the subject of correct form for every occasion is covered completely, authoritatively. It is recognized as the most thorough and reliable book on the subject available today. It is encyclopedic in scope, answering every problem of etiquette that may be puzzling you in a clear, definite interesting way. Nothing has been forgotten. Even the ancient origin of customs has been traced, and you are told exactly why rice is thrown after the bride, why black is the color of mourning, why a tea-cup is usually given to the engaged girl.

With the Book of Etiquette to refer to, you need never make embarrassing blunders. You can know exactly what to do, say, write and wear at all times. You will be able to astonish your friends with your knowledge of what is right under all circumstances.

A great deal of your happiness depends upon your ability to make people like you. Someone once said, "Good manners make good company," and this is very true. Etiquette will help you become a "good mixer"—will aid you in acquiring a charming personality that will attract people to you. Because you will rarely be embarrassed, people who associate with you will not feel embarrassed—your gentle poise and dignity will find in them an answering reflection and you should be admired and respected in matters where you are or in whose company you happen to be.

## Sent Free for 5 Days' Examination

The Book of Etiquette will mean a great deal to you. It has already opened the doors of social success to many, has shown hundreds of men and women the way to obtain the poise and charm their personalities lacked.

Let us send you the famous two-volume set of the Book of Etiquette free for 5 days' examination. Read a few of the chapters—you will enjoy particularly the chapter on "Games and Sports" and the chapter called "When the Bachelor Entertains." If you are not delighted with the books you may return them within the 5-day period without the least obligation. If you are delighted—as everyone is who examines the books—just send us \$3.50 in full payment and the books are yours.

Don't make the mistake of putting it off. Here is your opportunity to examine the Book of Etiquette without cost or obligation. Mail the coupon now. Nelson Doubleday, Inc., Dept. 584, Garden City, N. Y.

"I know you do. You've told me so enough times. Funny. You're your father right over again, Lollie."

"Did Father ever see Ed Munn?"

"Mercy, yes!"

"Did Father ever hate Ed Munn?"

"Like fury," laughed Stella, "and there was never any sense in it either—no more than with you—just a whim."

Laurel, still gazing at the moon and the few far dim stars that seemed to lay beyond, was silent. Was Ed Munn one of the pieces of the puzzle too?

HELEN and Stephen were quietly married one afternoon the following May. The same day Laurel received a note from Mrs. Morrison inviting her to spend a week-end with her, a fortnight later. The invitation did not come as a surprise to Laurel. Mrs. Morrison had told her last September that she hoped to have Laurel stay with her for a few days in the spring.

Helen was at the station to meet Laurel. There was no Miss Simpson with Laurel this time. She and Mrs. Morrison (she was still Mrs. Morrison to Laurel) were quite alone in the back of the limousine as it threaded its way out of the congestion of Forty-second Street and turned north on Fifth Avenue. Laurel sat forward on the edge of the seat beside Helen, cheeks flushed, chin raised, breathing in deep breaths of the intoxicating, Mrs. Morrison-charged air, not saying anything at all.

"Glad to be here?" finally Helen interrupted from her deep corner.

Laurel simply nodded, keeping her starry eyes steadfastly turned away. Her worshipful regard for Mrs. Morrison had not changed in quality in the last four years. The only difference was that she was able to adapt herself a little sooner now than formerly to the dazzling presence of her goddess.

"Your father is going to be with us for dinner to-night," briefly Helen announced before the car had left them at the door.

"Oh, I wondered when I'd see Father."

Helen and Stephen had decided to tell Laurel together. They waited until after dinner. Con and Dane were away at school, and little Rick, who had been cautioned not to mention the great news, had finally been torn away from Laurel's side (little Rick was devoted to Laurel), and had gone up-stairs. Helen and Stephen were alone with Laurel in Helen's lovely ivory-tinted room (yellow and fawn were the dominant notes to-night—jonquils and pussy-willows) seated, all three, before the fire, on the long Sheraton sofa, with Laurel in the middle.

Helen slipped an arm through Laurel's and, smiling across at Stephen, said, "Shall I tell Laurel a story now?"

The story that Helen told was the story of her own life. She told it exquisitely. "And-then, and-then, and-then," step by step, from the first time when she knew that she loved Stephen when only a little older than Laurel, down through all the years, when their paths diverged, met, diverged again. It sounded to Stephen like some beautiful epic poem. He had to close his eyes frequently to shut out tears. Then she reached the end, "and so here we are, Laurel—Stephen and I, together at last." Laurel whispered softly, "married?"

"Yes."

"I wondered when you would be," was Laurel's unsurprised reply.

"How long have you wondered that, Laurel?" eagerly Stephen inquired.

"Oh, ever since I saw you together in the big room at Green Hill, when I came down from up-stairs that first time; I felt then that you were meant to be married, only—"

"Yes, only?"

"Only you must have taken a wrong turn 'way back somewhere—you know how it is—a wrong turn, or a detour, makes all the journey different sometimes."

Stephen slipped his arm through Laurel's, too. "Are you glad?" he asked her.

"Oh, ever so glad!" promptly she assured him. "It's like a book, or a play, coming out the way you hoped it would; or a journey ending where it should, even though there was a wrong turn. What shall I call you, Mrs. Morrison?" she broke off. "I've wondered and wondered. Isn't it funny?" she laughed. "You aren't Mrs. Morrison any more!"

What a little girl she was after all, thought Stephen. How simply, how serenely she accepted that which had been so painfully won.

"Let's call each other by our first names," Helen lightly suggested.

"Oh, I wonder if I ever could! Your name is so—so special. Mrs. Morrison is like the word 'America' to me. It means things. I couldn't possibly call America anything else."

"You could call it home, couldn't you?" said Helen.

LATER, placing her hand over Laurel's, and Laurel turning hers palm upward, and interlacing her fingers with Helen's in impulsive response, Helen said, "There's more to my story, Laurel."

With infinite gentleness she explained to Laurel that she was a part of *this* home now—was a member of *this* family; they were hers and she was theirs. She must have been talking five minutes before Laurel caught the import of her words.

"You mean," suddenly she interrupted, "I'm to live here?"

"Yes, here, and at the place at Green Hills, wherever we are—as one of us, Laurel."

"I never thought of that." Laurel gazed wonderingly around the lovely room. This her home? This beautiful place? A family like other girls? A mother and father who lived together? Mrs. Morrison? "Yes, yes," she gasped, "but what about—what about—"

"What about your mother?" Helen asked for her. "You shall see your mother often, Laurel."

"You mean"—she still had a manner as if gasping for air, as if groping for light, for comprehension—"you mean Mother would still live in Boston?"

"That would seem wisest, wouldn't it?"

"Yes, yes, of course," Laurel nodded. "Yes, that would seem wisest." For a long quarter-minute she was silent, then, unlocking her fingers from Helen's, withdrawing her arm linked through her father's. "No," she said quietly. "It wouldn't do."

"You may visit your mother in Boston, Laurel."

Again for a moment Laurel was silent. "No. It wouldn't do," she repeated. The

little girl in her had disappeared. The spontaneity, the soft tender impulsiveness had faded, gone. "I'd like to be a member of your family, Father," she said, turning toward Stephen, "of yours, too, Mrs. Morrison," turning toward Helen. "Thank you ever and ever so much; but I'm sorry. I couldn't."

For twenty minutes, for half an hour, both Stephen and Helen labored with Laurel; but to no purpose, to no avail. "I'm sorry. I couldn't," was her unvaried reply.

Finally Stephen exclaimed, "But, Laurel, my dear child, this isn't a matter we are consulting you on. It is a matter that has already been arranged. We are simply telling you about it."

"That makes no difference. I'm sorry. I couldn't," she persisted.

"Why, of course you can, my dear. You don't understand. You are not old enough to make your own decisions yet, Laurel."

"Oh, yes, I am, Father."

"But you're not. Not on a matter of this sort. Your mother and I have decided this for you."

"Does Mother know of it?"

"Certainly, and approves. She is sending your trunks to-morrow."

TWO little bright spots appeared in the center of Laurel's cheeks.

"The trunks will have to be sent back then," she announced. "How silly to have tried to force me like that!"

"We didn't think it would be forcing. We believed it would be a plan that would make you very happy. It was your mother's idea, to say nothing about it beforehand, to avoid good-bys."

Laurel replied calmly, "I came down here for four days, and I am going home in four days, Father."

"This is home now," he told her.

"Oh, no, it isn't," she flashed back, "and it never will be home, either, as long as my mother is alive." Laurel stood up. "Of course you can lock me up if you want to," she went on, "but I sha'n't stay any other way. Please understand that."

The bright spots on her cheeks had not disappeared. There were unfamiliar lines and shadows, too, about her chin and jaw. Helen and Stephen stared at her. They had never felt the steel in Laurel before.

"But, Laurel—"

"Oh, don't let's argue about it, Father. It won't do the least bit of good."

"Why, this is absurd, impossible! I cannot allow—"

"Just a minute, Stephen," Helen interrupted. There were bright spots in the center of Stephen's cheeks, too. "Laurel dear," she said, reaching for Laurel's hand, drawing her down on the sofa again. "Listen. Let me explain. It is your mother's wish. It's all your mother's planning. This—all this—" with a wave of her hand she included the whole house and all it stood for in the way of happiness for Laurel, "is her gift to you." (The truth was best, Helen concluded.) "She came and saw me about it last summer. We talked it all over in detail together."

"When last summer?" Laurel exclaimed.

"Last July."

(Oh, then, it flashed across Laurel, her mother had heard! She hadn't been asleep that night in the train! She hadn't

## 500,000 Travelers in 1922 Used 5,000,000 A·B·A Cheques Worth Nearly \$100,000,000

been to Milhampton the next day to see Effie McDavitt. She had been to New York to give her Mrs. Morrison!)

"Well, I sha'n't take her gift," said Laurel. (Her mother! Her wonderful mother! And they had called her "That woman!" "That awful creature!" "That dame!")

"HOW foolish of you, Mother," four days later Laurel scolded Stella, as they stood side by side in front of the sink in the kitchen of the Boston apartment, and washed and dried the three-days collection of dishes Stella had allowed to accumulate. "How foolish to think you could work up any such scheme as that, on me. You'd think I didn't have any such thing as a will of my own."

"Oh, I know," sighed Stella. "I suppose we did it in the wrong way. I ought to have told you I guess."

"Telling me wouldn't have made any difference."

"But I don't see why. He's your own father, and you've always been crazy about him, and she—"

"I know, I know," Laurel interrupted. "Oh, look here, Mother," impatiently she broke off. "Listen to me. I'm never going to leave you as long as you live. Do get that through your head. Do try; and don't talk about it any more." Then, suddenly gentle, "Why, Mother," she caressed, "don't you remember you said to me once, way back, when I was a mite of a child, 'I'll never leave you, and you'll never leave me, will you, Lollie?' I've never forgotten that."

"Oh," groaned Stella, "what a fool I was to have talked that way to a little kid!"

"No," Laurel retorted. "Rather, what a fool you were to have worked and slaved for that little kid for seventeen years, and skimped and saved for her all that time, and given her everything under the sun you thought would make her happy—oh, that was an awfully foolish way to treat a child you hoped would run off and leave you, the first chance she got."

"What nonsense," Stella scorned, "why, I didn't even want you before you were born. I didn't like babies."

"Yes, so you've told me before," laughed Laurel, "and you don't want me now, do you? Poor thing! But you've got to have me, just like before I was born. You've got to have me. You see, we happen to belong to each other, Mother."

"But you belong to your father, too."

Laurel puckered up her brow, thoughtfully mopping the plate which she held half in the water, half out, round and round slowly with her dish cloth.

"Yes," she acknowledged. "I suppose I do belong to Father, too; but it's different. I'm fond of Father. I love to be with him. We always have wonderful times, but Father and I have never been through anything long and hard and disagreeable. We've always had just fun together. Somehow, having fun together doesn't make two people feel as if they belonged the way suffering together does. Besides, Father doesn't need me, the way you do."

"Pshaw! I don't need you! I get along all right alone."

"So did I last summer, those two days when you left me. I got along all right alone, too. Nobody to wash dishes with,

nobody to talk with, nor to eat with, nor to sleep with, nor to do anything with. No, Mother, you can't live like that. It isn't decent."

"Decent! What do you mean?"

"Why, look at the way the apartment looks, for one thing. Not only the kitchen, but all the other rooms, too. I never saw them in such a mess."

"Well, I didn't know you were coming. If you'd written—"

"Exactly. Without some human being to clean up for, and have a little pride for, this place would look the way Grandpa's used to before he died, in a little while. No, Mother. You can never live alone. Come, let's change the subject. What show shall we see to-night?"

Stella sat down at the kitchen table, her hands dropping limp into her lap. "But I've gone and given your father his divorce now," she lamented. "I didn't want a divorce! It will be all for nothing, if you won't go and live with him for a while."

"Mother, I've told you, and told you, I'm glad you've given Father the divorce. It was exactly the right thing to do. Father and Mrs. Morrison cared about each other before you and I ever saw either of them. You've fixed something right that was wrong."

"Yes," sneered Stella, "especially you. I've fixed you fine and right! Oh," she sighed, her eyes resting mournfully on Laurel's back as she stood before the sink, "it just almost kills me to see you doing work like that, Lollie."

LAUREL was wiping out the large tin dishpan now with her dish cloth, which she had just wrung out with several vigorous little twists. Afterward she hung up the dishpan on a hook underneath the sink, and spread out the dish cloth to dry on top of it. Then proceeded to clean the soapstone sink. She used a small rubber-edged shovel for the purpose, scooping up small bits of refuse with it and emptying it now and then into her free hand.

"I like making things bright and clean," she called out above the loud scraping noise she was making with her shovel, "but if you prefer," she went on cheerfully, "we'll have a servant. You've often said, since the divorce, we could afford several servants if we wanted them."

"Oh, but, Lollie, I don't know how to run a lot of servants. Besides, what's the use of servants when there's nobody to serve? I can't give you a coming-out party. I used to think I could, but I know now I can't. No; it's no use. It's not in me. I've done all I can for you." She lifted her upturned hands, lying idle in her lap, and then let them drop, dead and lifeless. "She was going to bring you out in New York society, Lollie," she droned on, "she said she was. You'd be going to dinners, and dances, and balls. You'd be having lovely clothes. You'd be having lovely friends—young ladies in limousines calling mornings for you to go shopping with them; young men in limousines calling evenings for you to go—"

"Mother! Please stop. You've told me all that before."

"I haven't told you one thing. I haven't said one word about one special thing. Laurel, listen; if you go to New York for a season you'll be almost sure to run across Richard Grosvenor! He knew Mrs. Morrison, and—"

"Oh, don't drag in Richard Grosvenor."

"And if you did—you can't tell. He was crazy about you—"

"Now, Mother."

"Well, he was."

"I'm all over Richard Grosvenor now, Mother."

"You're not. No such thing."

"But I am! I never even answered his letters last fall."

"His letters?"

"Yes. He wrote me—twice. Mrs. Morrison forwarded them. I never told you, because you were so silly about him."

Stella shoved her chair back from the table with a fierce jerk and stood up.

"I know why you didn't answer his letters. I know mighty well! Of course you couldn't answer his letters, with him in college right across the river, here, likely—no, sure—to look you up in this hole, and find out we didn't know any of his Back Bay friends, not a single one of the young ladies whose dances he's been ushering at! Oh, I've seen his name in the lists in the papers, too. I've got eyes, and I've just suffered for you, Lollie. Of course you couldn't write to him and have him come here, and find out how we live, and what sort of a freak I am—"

"Mother!"

"That's all right. I know—I'm no fool, Laurel. Oh, Lollie, please—please go to your father just for a little while—just for a year or so, just long enough—"

"No, Mother. I'm not going."

STELLA sank down in her chair. It was useless, futile to beat herself against this soft child's will, once she had set it up; experience had taught Stella that a big buzzing fly is as ineffectual in breaking through a plate-glass barrier.

"Well," gloomily, "what are you going to do with yourself then. You can't hang around a five-room apartment all your life, can you, reading two library books a week, and practicing on a piano two hours a day?" (Laurel had not taken any "Courses" this winter.) "What are you going to do to amuse yourself, I'd like to know."

"I've got a plan," nodded Laurel, smiling. "I must have something to do, of course. Busy people are always the happiest. I'm going to be very busy. I'm going to be a stenographer, Mother."

"A what?" gasped Stella.

"A stenographer. I've thought it all out."

"A stenographer! A stenographer!" Stella repeated, and a third time, "A stenographer!" If Laurel had said that she was going to be a German spy, Stella wouldn't have been more shocked.

"Yes, Mother dear, a stenographer. Don't you see it's the one thing I can do, and live along here with you, and keep up our nice times together evenings at the theatre and the movies? And have Sundays with you, and holidays and nights? I'm going to start right in, next week—this week—if I can, at the very best business college there is in this city, and work hard. It's going to be lots of fun!"

"Oh, no, Laurel!" Stella broke out. "Not that! Not that! Please, please." Her voice plead, her eyes beseeched, implored. "You wouldn't do that. Say you wouldn't. Not you. It would break my heart. Say you wouldn't, dearie, please,

## An Extra Measure of Service

**T**HE Middle Western country grocer familiar to our forefathers made a practice of weighing out grocery supplies on a big pair of counter scales. When the pans had balanced, he would throw in "a little extra," making one end of the scales touch bottom.

The Continental and Commercial Banks live up to this tradition in all their banking transactions. We are not satisfied to give merely an *even* measure of service. We believe in giving an *extra* measure of service.

please." She grasped hold of Laurel's hand. "Lollie, for my sake! It would kill me, Lollie!"

Laurel drew her hand away. "Oh, come, Mother. Don't be silly. Don't be a goose."

A stenographer! Laurel, her beautiful Laurel, shut up all day long in an office reeking with tobacco smoke! Laurel, the servant of a lot of men, taking dictation, taking orders! Laurel, wearing paper cuffs and elastic bands, and pencils in her hair! No! No! It mustn't be. It simply mustn't be. Why, even she herself wouldn't have been a stenographer!

Stella lay wide awake in the bed beside Laurel. It was nearly two o'clock. Laurel had slept like a baby—sweetly, steadily, all night long so far. Twice Stella had risen and turned on the light to see what time it was, had stopped a moment by the side of the bed, and gazed down upon Laurel.

"Like a lovely Sleeping Beauty, she is. Oh, my God, she can't be a stenographer!" It would be like planting an orchid between the cobble stones at the corner of Washington and Winter streets, to stick Laurel in front of a typewriter, inside of one of the big, grimy office buildings downtown. She'd get all dust and dirt, and trampled and spoiled in no time. She mustn't be sacrificed like that! Why, New York would go simply crazy about Lollie. It would exclaim over her, oh-and-ah over her, like the people at the Horticultural Shows over some new amazing flower.

"Oh, gracious, what can I do—what can I do, to save the child?"

She must do something, and quick—now. Laurel was all ready to show *now*. Next year, the year after—too late. She'd be touched, handled, brown on the edges. There'd be a story about her—a tale. "She was once a stenographer, you know." People would whisper, "Really! You don't say!" And eyebrows would be raised. That must not occur. Whatever it cost, by whatever means, *that must be avoided*.

**A**BOUT three o'clock in the morning, Stella crawled out of bed, and wrapping herself up in a blanket sat down on the window seat by the open window. She could always think clearer in a vertical position. "If it wasn't for me, Laurel would go. I'm the reason she's tossing aside her opportunity, dumping her happiness overboard, as if it were so much rubbish, and then scrapping herself—her lovely self, all ready to sail (yes, that's what she's like, too—a ship, beautifully made—beautifully fitted out). Oh, gracious, what can I do? She's ruining her life for *me*—for a big old water-logged hulk like *me*. Oh, why couldn't I have whiffed out last summer at that hotel when I was so sick? She'd have gone to New York then, just as a matter of course. 'As long as you're alive!' Those were her words. Oh, why couldn't I whiff out *now*? Say, why couldn't I feel a little dizzy and topple over out of the window, down there on the concrete—it's four stories—and clear the job up quick, right now, and no more talk?"

"No, I can't. I'm afraid. I haven't the nerve. I haven't the guts. It might only smash me up. Poison would be better, or gas, or a revolver. Poison—what

kind! Gas!—how long would it take? A revolver—where were they bought? How did you load them? Oh, it would be horrid—horrid! I wonder if I dare."

Stella got down from the window seat and went over to the bed. The early light of dawn was in the room now, like gray smoke. She stood looking down at Laurel, through the thick intangible haze, for a long time—for a minute, for two minutes, for three minutes perhaps.

"Ought I? Oh, gracious, ought I?" she whispered.

"It would hurt her, of course—poor kid—at first. Her face would get all white with horror and dismay. But she'd be rid of me—free, and, after a while, she'd forget. She's young, she'd get over it. Or would it also be a story—a tale, to whisper about behind Laurel's back. 'Her mother committed suicide.' . . . 'You don't mean it!' . . . 'And her father's father, too, so I've heard.' . . . 'Really?' . . . 'Runs in the blood on both sides.' . . . 'How shocking!'"

Years ago Stella had read in a magazine somewhere that suicidal tendencies were inherited. She recalled it now. Heavens! What if Laurel should grow up and read that, too. Good lord, it might make her afraid of herself, if it was on both sides! She must be saved that horror. A wave of relief swept over Stella.

"I must think of some other way." She went back to the window seat again. "Oh, how scared I was! What a sniveling coward I am!"

ALL the next day she submitted compromise after compromise to Laurel. She would keep a servant, if only Laurel would go to New York. She would keep two servants, a companion; two companions; return to an apartment hotel, if only, if only— But Laurel simply shrugged her shoulders. Again and again that day Stella was forced to face the unwelcome consideration of discovering some method of "whiffing out," that might not arouse suspicion. Slipping down in front of an automobile, making a mistake about sleeping powders. It might be done! But, oh, she didn't want to die that way! Not that she was much on religion, but she didn't want to take any such chances with immortality. There must be some other way.

It was sometime during the course of the second night, when she was wearied and exhausted almost to the breaking point, that the "some other way" flashed across Stella's mental field of vision. The first consciousness of it made her feel queer and hollow inside for a moment. It was like having a messenger suddenly run onto the scene with your pardon, just when you were settling yourself in the electric chair.

Tremblingly, anxiously she groped her way across the hall to her desk in the front room. If only she could find the address. It was on a card. She had never thrown the card away. It must be somewhere. Oh, what if Laurel, in one of her raids upon the cluttered desk, had torn it up, tossed it aside? What if it was ashes now? She had no other clue. If the card was lost, she was lost. "Help me to find it. Help me to find it." It was about the size of a calling card, a little larger, very grimy, because she had carried it about in her shopping bag for a long while. Here? This looked like it! Yes, this was it! No,

## A community's promise to pay

SO strong is the security of good Municipal and State Bonds that State laws approve them as suitable investments for Savings Banks.

Such bonds promise to pay you their face value after a definite term of years, and yield interest free from Federal income tax.

The National City Company has learned

through years of analytical study the factors which make certain Government, State, Municipal, Railway, Public Utility and Industrial Bonds more desirable than others.

The results of the Company's latest studies will be found in a list of recommended Bonds—a copy of which will be mailed on request.

*Boston, Mass.*

She'd go to bed now. She'd go to sleep. "Thanks, oh, thanks," she said on her knees three minutes later. "Do please help me bring this business out all right."

Stella as well as Laurel was sleeping soundly and sweetly at dawn on the second morning.

*(To be concluded)*

## Most Folks Prefer to "Go Straight"

*(Continued from page 21)*

sticking, as I do now. No young man does. If you put it up to any young man to-day, just what happened to me, sticking thirty-two years to get to the president's chair, he'd say:

"Thirty-two years! Not for me. Ought to do it in ten."

"When I applied, thirty-five years ago, for a position with this firm the officer who interviewed me said:

"Now, young man, go home and think this over. And if you don't want to stick with us, don't come. Stay away. If you come, make up your mind to stick."

"I was not any different from most boys, and I thought little enough about my future; but I did go home and think it all over. And I made up my mind to come and stick. That determination weakened. Time after time I was thoroughly disgruntled because things were moving too slowly to suit me. I wanted raises faster than anyone else seemed to want them for me; I wanted promotions oftener than the firm seemed to think I merited them; I wanted, as every boy does, some things changed all around.

"At one time these things pyramided until they rose mountain high, and I made up my mind to quit. But before I wrote my resignation I went for a pen and red ink—black ink wasn't fiery enough for what I intended to do—and I sat down to deliberately write my opinion of every officer and manager in the company. I did a good job of it too, and spared no adjectives. Then I hid the list and told my troubles to an old friend of mine, one of the department managers, winding up with, 'I'm through!'

"Now, see here, Dan," he remonstrated, 'you sit down again and make another list of men who are here now: how much they know of the business, how much they will know ten years from now, and then figure whether you can't beat them all out. Figure out just how things are shaping up here, and see if in the same time you can hope to do as well anywhere else.'

"I sat down again, black ink this time, and found he was right. I could look at things coolly, with all that venom out of my system. I stayed. But I took the red-ink list and put it carefully away—I have it yet. I'd established a habit. Thereafter, when things got too much for me I sat down and wrote out all the things I wanted to say and knew I couldn't. It was a perfectly good safety valve. I eased

up all over after the writing. I never showed my work but put it all carefully away, and as year after year passed I found myself getting a reputation for control of myself that I never really possessed.

"I recommend a red list for any young man—or older one—who has to learn to control himself in order to manage other men. As the years went on, my lists grew fewer and shorter, and then they stopped. One look at the little drawer which held them was enough.

"It pays most men to stick. But when to stick and when to go is a very difficult problem. Often I have advised young men to leave this company, despite my belief in sticking. The thing to do is to find out the kind of man you are. If you are a slow grower, a company like this, where growth is normally slow, where solid and substantial work and faithfulness and loyalty bring rewards in the long run, is worth sticking to. If you grow quickly, in the spectacular way some men do, and all your powers are ripe at thirty, get into some quick-changing, lively business that offers you a chance to realize on yourself early.

"**M**OST men grow slowly, which is fortunate, since they have time to learn the most important thing about a business—the perfection of its details. It is the fashion to-day to undervalue details. You hear a great deal of men of vision, men who can see far ahead and who delegate the details of their business to someone else. Delegating details works only when you have complete assurance that they are being looked after. For if they are not, your vision may extend far, but you will end in failure. Nothing was ever built from the top down.

"You've got to see over the details, but you have to see them at the same time. In this company the infinite care of details has perhaps a higher value than in most businesses. Even the curve of a line is an important matter in the printing of securities. Every line, every tint, every design must be absolutely right. But in any other business, or even in the affairs of a person, it is the accuracy of every little thing that makes for a solid, substantial total.

"This over-talked-of vision is in the main nothing but the result of analysis in the direction of self-preservation. Every man who is going to last and go forward must stop often and analyze what is happening to-day in the light of the possibilities of ten years to come.

"The man who works for a big firm only knows that he is keeping alive and growing by two things: promotion in responsibility and raise in salary. Fifty per cent of that promotion is going to come to him because he deserves it, and fifty per cent because he asserts that he deserves it.

"Knowing your own value and knowing when and how to assert yourself are two separate matters. Tact comes in their proper joining. A young man who thought he should be getting ahead faster than he was and who had spoken to me often about it once said to me:

"You remember the old farmer's tale, Mr. Woodhull, about the little pig that squealed the loudest getting the most swill?"

"Yes," I replied; "but I've seen a little pig get thrown right out of the trough by the farmer's boy because he squealed too much and too often."

## Why they stick

On the ground floor of the telephone building a man worked at the test board. It was night; flood had come upon the city; death and disaster threatened the inhabitants. Outside the telephone building people had long since sought refuge; the water mounted higher and higher; fire broke out in nearby buildings. But still the man at the test board stuck to his post; keeping up the lines of communication; forgetful of self; thinking only of the needs of the emergency.

On a higher floor of the same building a corps of telephone operators worked all through the night, knowing that buildings around them were being washed from their foundations, that fire drew near, that there might be no escape.

It was the spirit of service that kept them at their work—a spirit beyond thought of advancement or re-

ward—the spirit that animates men and women everywhere who know that others depend upon them. By the nature of telephone service this is the every-day spirit of the Bell System.

The world hears of it only in times of emergency and disaster, but it is present all the time behind the scenes. It has its most picturesque expression in those who serve at the switchboard, but it animates every man and woman in the service.

Some work in quiet laboratories or at desks; others out on the "highways of speech." Some grapple with problems of management or science; some with maintenance of lines and equipment; others with office details. But all know, better than any one else, how the safe and orderly life of the people depends on the System—and all know that the System depends on them.

### "Now, Let's Start on the Second \$5,000"

When John Watson and his wife made up their minds to quit the ranks of the always-broke and accumulate some property and a bank account, \$5,000 looked like a big fortune to them. But just the other evening they went over their account book and found they had reached their goal—\$5,000 to the good. "Now, let's start on the second \$5,000," said Mrs. Watson.

The secret of accumulating money lies in regular, persistent saving, aided by investment in safe securities such as Miller First Mortgage Bonds, which pay a good rate of interest. If you would like to know how easy, sure and satisfactory this method of accumulating a little fortune is, send for the story, "How Henry Wilkinson Became Rich." It will show you how fast money accumulates when well invested.

### Be Your Own MUSIC Teacher

Learn at Home by wonderful print-and-picture method that teaches in half usual time. Far superior to private teachers. Sample as A, B, C—a child can master it. Your lessons consist of real selections instead of tiresome exercises. When you finish one of these delightfully easy lessons you've added a new "piece" to your list. You read real notes too—no "numbers" or trick music. Method is so thorough that many of our 300,000 students are band and orchestra LEADERS.

#### Automatic Finger Control

Our own invention—the music marvel of all ages. Trains and guides your fingers so that they fall into proper place almost automatically.

#### FREE BOOK Shows You How

you may quickly become a great player or singer and explains all about this wonderful automatic finger control. WRITE NOW, however, before free books are exhausted. Mention your favorite instrument or whether you prefer vocal music. Please write your name and address plainly. Address

U. S. SCHOOL OF MUSIC, 443 Brunswick Bldg., New York

"Assertion must be exercised with the aid of a little gray matter."

"No old institution like this company can go forward without new blood. We have the third and fourth generation with us, and they establish the standards; but we have to have new blood all the time to keep us at the new pace. We don't want to get moldy, as did an old manufacturing house of which I know, a house almost as old as this, where the men in one highly technical department had worked right by each other for twenty years. Only death removed men in that department, and no one had died in that time. The owner of the business knew that there was something wrong with that department; no new machinery was ever called for, no new methods introduced. He tried to talk to the men, but they chaffed him. They all called him by his first name, a number of them remembered his boyhood. They grinned good-naturedly at his suggestions, and told him that they guessed the old ways suited best.

"But the old ways did not suit. The department was running on ideas that were too antiquated to make money. The owner knew that if he insisted upon changing them, the men would resent it fiercely. He picked out a young man whom he had watched, and who, he knew, had studied the conditions there, and handed over the department to him.

"THE young man had just the quality the owner could not use with his old friends. He was ruthless. If the men fought him, all right, that was his meat. He was going to have the new ideas tried out, fight or no fight. He pitched in, and in a week was thoroughly disliked. Then, after a time, the men began to see that this young chap had nothing against them; his interest was in the work. So was theirs: here was common ground. They yielded inch by inch. They began to give ideas a fair try without blocking them. Finally, seeing how well the new ways worked, they gave a grudging respect and even a small liking to the young fellow.

"Many a manager has failed after years of success, because he could not make himself ruthless with his old workers. This younger man had all the energy of youth, all its courage of conviction, all the argumentative freshness every man admires in every youth—except his own sons. So he was just the type of leader that the men under him needed.

#### R. de S. Horn Was the Author of "The Kidnapping of Prunes Alaska"

IN THE March number of this magazine appeared a short story called "The Kidnapping of Prunes Alaska," which was written by a talented young Californian, Lieutenant R. de S. Horn. Through an error this story appeared under the name of R. de S. Hart. We take this method of explaining the mistake and of expressing our regret that it happened.

Lieutenant Horn, who is only twenty-seven years old, was retired from the United States Navy in 1919 because of injuries. Just now he is on a long cruise in a sailing vessel. He expects to bring back material for a number of thrilling sea tales.

## He Thought He Needed a New Wife

(Continued from page 24)

"I mean, what woman's goin' to take care of you?" she repeated patiently. "Of course I understand you got some woman in your mind. Nothin' else would make you do this, Henry."

How well the creature knew him! And what an unnecessary turn she had given the screw by asking this question. For a moment he hesitated. Then, reflecting that the whole truth would clench the matter, he let her have it.

"I'm going to marry Florence Reynolds in a year or so," he said.

"That little whipper-snippet!" Mary Wilson's voice was outraged. "Henry Wilson, are you crazy?"

Now that the worst was over, the man began to feel himself again. It was in almost his usual tone of assurance that he answered her.

"It's time for you to realize, Mary," he grimly reminded her, "that I'm not looking for a housekeeper. Miss Reynolds is a fine girl. She is a college graduate, and she's well-born. Her father was governor of his state. She is working because he was an honest politician and died without leaving his daughter any money. But she knows the right people and she is as ambitious as the devil. She'll be just the wife I need. She'll make good in the new job."

**H**E STOPPED and cast a confused glance at Mary. In his sudden reassurance he had momentarily lost sight of the extraordinary nature of their talk. He had been discussing a new plan with Mary, from force of habit, as he had discussed hundreds of plans with her in the past. The incredible part of it was that Mary was now listening to him as calmly as if it were a plan in which she had no deep personal concern. She was serious but unexcited. She had even resumed her sewing.

"What shall you do?" he asked, to break a silence that was becoming embarrassing.

She stitched for a long moment without replying.

"Well, I hardly know yet," she said at last. "You see, Henry, you ain't given me much time to plan. But I s'pose I'll go back to the old place at Hanover. It was my mother's last present to me, and she left me plenty to keep it up—"

"Mary!" He had sprung to his feet. "You're not going to take that attitude!"

"I ain't going to take any attitude at all," said Mrs. Wilson steadily, going on with her sewing. "But I ain't goin' to take a penny, either, from a man that's cast me off. You may as well know that, Henry Wilson, first as last. I got plenty to live on, thanks to my own folks. I don't need nothin' from you, an' I wouldn't take it if I did."

"Half of what I've got is yours," groaned Henry.

"No, it ain't—and not one penny of it ever will be. That's flat. But you needn't worry about me," she added, almost serenely. "I guess I can live comfortable and happy among our old friends at Hanover."

## Make This **FREE TEST** If You Want Bigger Pay

There's a sure way to increase your earning power. And here is such an opportunity. Look into it—you may recognize it as your one chance to earn the biggest money of your life:

**A**RE you ready for a shock? Then, let me tell you that if you have average intelligence and can read and write, there is a quick and easy way for you to earn enough money to satisfy any average ambition. And after reading this offer, if you do not quickly make more money, you have no one to blame but yourself.

Don't take my word for it. By a simple free test—one you can make in the privacy of your home—you will know that every word I say is true—or otherwise. The test does not obligate you or cost you one penny. *But make it!* Then judge for yourself. It has proved to be *THE* opportunity for thousands. They have found the way to bigger pay—are now earning from five to twenty times as much as formerly.

### Field of Unlimited Opportunities

The thousands who have made this test before you—and who are now making the money you would like to make—are now salesmen. Ninety-five per cent once thought they were not "cut out for selling," that salesmen were "born" and not made. They found it was a fallacy that had kept them in the rut. They discovered that *anyone with proper training can sell*, and they are making from \$5,000 to \$10,000 a year, because they had the vision to recognize opportunity.

### Thousands Have Proved It!

For example: Charles Beery, of Winterset, Iowa, stepped from \$18 a week to a position making him \$1,000 the very first month. J. P. Overstreet, Denison, Texas, was on the Capitol Police Force at a salary of less than \$1,000 a year. Shortly after he earned \$1,800 in six weeks as a salesman. F. Wynn, Portland, Oregon, ex-service man, never thought he was cut

out for selling, but in one week he earned \$554. George W. Kearns, of Oklahoma City, was making \$60 a month on a ranch and then earned \$524 in two weeks as a salesman.

These men were formerly clerks, bookkeepers, factory workers, farm hands, mechanics, machinists, chauffeurs, firemen, motormen, conductors, etc. Their success proves that previous experience or training has nothing to do with success in the selling field. *And they started with this free test.*

Why don't you make this free test and prove to your own satisfaction that a bigger salary is easy to get. The test is contained in a free book, "Modern Salesmanship," which we will gladly send you without obligation. After reading the book through you will ask yourself the questions it brings up. The answers will show you whether you can get away from the humdrum, small-pay job for the lucrative and fascinating work of selling.

### Make This Free Test at Once

Don't turn this page until you have clipped the coupon, filled it out, and sent it on its way. It may mean the turning point in your life. Right now while the impulse to succeed is upon you.

National Salesmen's Training Association  
Dept. 23-D  
Chicago, Illinois

Please send me without obligation on my part your free book, "Modern Salesmanship," which will enable me to test my ability, at home, and full information about the N. S. T. A. # MACGREGOR

MACGREGOR Private Golf Course.  
—from an aerial photograph.

## Tributes to an Ideal

FROM the day the first MACGREGOR golf club was made, one unaltering ideal has guided our efforts. It is to give golfers everywhere clubs and balls which possess those playing qualities that can come only from the hands of craftsmen whose hearts are tuned to their work through their love and their understanding of the game.

The first MACGREGOR club makers came from the greens of Scotland—the home of golf. Later we built our own private golf course so that every worker might play golf regularly.

Consequently, MACGREGOR workmen not only know how to fashion each club with a master's skill but they also take an intimate, personal interest and pride in their work.

The praise of golfers and their loyal patronage which has made us the largest manufacturer of golf clubs in the world are FINE TRIBUTES TO OUR IDEAL.

Ask your Pro or Dealer to show you the line of MACGREGOR goods. Write us for our General Catalog and either or both of these booklets: 1. "Golf, the Game of Games" (an introduction to golf); 2. "Dressing Smart in a Golf Course" (helpful suggestions for laying out a new course).

Wilson almost groaned again. That Mary should return to Hanover was at once the most natural thing in the world and the last thing that he desired. Strangely enough, he had not foreseen that she would wish to do so. There seemed to be a number of elements in the situation that he had not foreseen. He himself was Hanover's finest tradition and favorite son. He had celebrated his prosperity by numerous benefactions to the town in which he was born. But what would Hanover think of its favorite son for discarding its favorite daughter after a quarter of a century—and marrying a whipper-snippet? Mary was as popular in Hanover as he was. It became increasingly clear to Henry Wilson that all the readjustment of the new relation would not be Mary's. He moved heavily to the door.

"I'm going out of town to-morrow, for a week," he muttered. "When I come back you can let me know what you want to do. Good night."

"Good night, Henry."

HENRY WILSON went dazedly upstairs. It had been an amazing scene, utterly unlike what he had expected. He had nerved himself for tragedy—for tears, reproaches, for "bad turns" and possible fainting spells. Nothing of the kind had happened. He was astounded. Also, he felt ill. This business of putting off an old wife for a new one was not as simple as its numerous precedents had made it appear. It had given him a headache—it and the indigestible dinner he had eaten down-town. He had eaten a lot of stuff that Mary would not have approved.

He went to the bedroom next to the conjugal chamber. In it he had spent most of his nights for the past year or two, but he had always gone in to Mary when he felt ill. To-night, of course, he could not go in to Mary. He heard her ascend the steps, enter her own room and softly close her door. He was absurdly tempted to call her—Mary always fixed him up in a hurry. And why shouldn't he call her? Clearly, they were to part friends. But to call her now would be humiliating. He wondered what kind of a nurse Miss Reynolds was, and suddenly realized that she was no kind of a nurse at all. Miss Reynolds, like Mary, was never ill.

He put in a night of severe mental and physical discomfort. It was dawn before he fell into a disturbed sleep, in which Miss Reynolds and Mary, oddly confused, seemed alternately turning away from him in some desperate crisis. He entered his dining-room at eight o'clock in the morning, heavy-spirited and heavy-eyed, and was immensely relieved to discover that Mary was not there. The waitress, Nora, served his breakfast.

"Mrs. Wilson isn't coming down this morning," she explained, as she poured his coffee. "She has a headache."

Her employer nodded. Never before had Mary failed to give him his breakfast when he was at home to receive it. She had a theory, frequently expressed, that a man's day depended on what sort of breakfast he got at home, and on the atmosphere in which he ate it. In late years Henry had begun to agree with her. He had been glad that his breakfast was always ready, that it was always good, and that his wife never brought up the subject

## *The* WATERWAY *to* HAPPINESS

**S**UNSET . . . and quiet water which breaks and gurgles across the bow. Each dip of the paddle whirls the reflections of a thousand colors. This is the magic hour.

Just drift. The shadows of the shore deepen. You float along—an idle stroke or two keeps you moving.

Or on the trips up winding streams. Each bend is a new adventure—a picture more beautiful than the last. And the rhythmic swing of the paddles carries you mile after mile . . . tirelessly. No effort. No work. Just pleasure!

For an "Old Town" is the easiest of canoes to paddle. It answers instantly the slightest pressure of the blade. Speed, too, is built into every "Old Town Canoe." And strength, and steadiness.

All "Old Towns" are patterned after real Indian models. To the grace of original Indian designs is added the improved construction of "Old Town's" master canoe builders. Get an "Old Town." It will last you for years. And these, the finest of canoes, are the lowest priced. \$54 up from dealer or factory.

*The new 1923 catalog shows all models in full colors. It is free. Write for one to-day.*

Save the surface and you save all

of domestic worries at the table, as he had heard that other women were apt to do. So far as comfort and punctuality went, he assumed that a rich man could always buy those things. Even if he couldn't, Wilson thought he had learned that there were things in life more important. He was determined to have those things. He repeated this to himself, several times and very firmly, while he ate his breakfast.

When he had finished Nora brought another message. His traveling bag was in the hall. Mary's headache had not kept her from packing it as usual. He knew that, as usual, it would be packed to perfection. Nothing he needed would be lacking—even to the silk socks and silk underwear he had only recently begun to buy, and concerning which Mary had made one or two characteristically caustic comments.

In the hall, he hesitated a moment. He felt hurried. He had a directors' meeting to attend before he went to his train. But perhaps he ought to say at least a word of farewell to Mary, and ask about her headache. For an instant he wavered, then brusquely put on his coat, seized his hat, and swung toward the front door. He heard the house door slam shut as he entered his automobile. There was an unpleasant finality in the sound.

**FATE** has its freakish tricks. The directors' meeting was an important one, and his fellow members on the board were among the men Henry Wilson most admired and respected. But one of them, Horace Andrews, was absent, and every other member of the board knew why. While they were still ostensibly waiting for him the chairman of the board voiced the thought in his associates' mind.

"Of course he won't come," he said. "He didn't even telephone. Probably he forgot all about it, after reading the morning newspapers."

For a moment no one spoke. Then Wilson said, "I didn't read the newspapers this morning. Anything new? Of course I've heard a lot of talk—"

"Oh, the newspapers have the whole scandal, at last," said the chairman, with distaste. "It's a nasty mess—pictures of his deserted wife and children, pictures of the actress he is going to marry, reminiscences of his early struggles—" He broke off. "Of course he'll resign from the board," he went on, after a pause which no one broke. "He'll want to, and we'll want him to. Bad for business, that kind of thing."

Though the meeting was an important one, Wilson's thoughts kept wandering from the discussion. He thought of Andrews, of Mrs. Andrews, of Mary—and he thought of them all again when, on reaching his office, he called for the morning newspapers and hastily read the flaring headlines of the Andrews scandal.

The personal application of it had begun to come home to him with the chairman's words. For some reason, he had not grasped the fact that his own experience would be similar to that of Andrews. There would be raised eyebrows among his friends. And if the press chose to make a sensation of his divorce, as it might easily do in view of his financial standing, he, Henry Wilson, would get a black eye in the business world. He found the reflection highly distasteful. Indeed it was

so distasteful that, when the door opened without a preliminary tap and Miss Reynolds entered with her notebook, he addressed her as curtly as he might have addressed an office boy.

"I haven't rung," he said abruptly. "When I want you, I'll ring."

Miss Reynolds hesitated a moment. Then coming a step nearer to his desk, she looked him squarely in the eyes.

"When you want me, Mr. Wilson," she said formally, "you will not ring. You will come yourself, and tell me you want me. And when you come you will be more courteous than you were last night or have been this morning. Please remember that."

She was gone and the door had snapped shut behind her before Wilson recovered from the surprise of her valedictory. He was glad she had had the spirit to do it. The episode freshened in his consciousness the difference between her birth and traditions and his own, but it also deepened his sense of loneliness and misery. Another reflection, born of it, brought no comfort. If Miss Reynolds really cared for him at all, would she have resented these trifles so much? Wouldn't she, instead, have made allowance for the strain she knew he must be undergoing? He had no idea whether she cared for him. That subject had never come up, nor, indeed, had the subject of any phase of the future of this strange pair been discussed by them. Wilson knew exactly what Miss Reynolds thought—that his wife was an ignorant, frumpy little woman indifferent alike to him and to her opportunities, a weight around his neck. She knew that a separation was contemplated and that, after a divorce was granted, she would be asked to succeed the unsuccessful first wife of Henry Wilson and to help him to mount to the social heights he wished to reach. But all this understanding had been reached in general conversation, with no apparent personal application. Miss Reynolds was far too well-born and well-bred to discuss her future marriage with a gentleman who still had a wife.

WILSON knew exactly what he ought to do. He ought to go to Miss Reynolds, ask her to come into his private office, and there honestly apologize to her. In one way he desired to do this. In another, it seemed impossible. It might lead to more than he wished to say. Also, he was in no mood for self-abasement, and he still had a lot of thinking to do, on the train. He impulsively picked up his desk telephone. He wanted to hear Mary's voice. To his relief, it answered his call.

"Hello," he said. "I'm glad you're up. How's the headache?"

Mary ignored the headache. She usually ignored any question based on pure convention.

"Yes, I'm up," she said. "I'm packin'."

"You're—what?"

"I'm packin'. Only my own things, of course. It's most done. I'm goin' to Hanover on the five-o'clock train."

"But—" Wilson found himself weakly stammering, "what—what's the rush?"

"Oh, I guess there ain't much use in postponin' what's got to be done." Mary's voice was matter-of-fact. "I don't see there's anything left to talk over."

"You wait," he said. "I'm coming home. I'll be there in half an hour."

# I Will Give You a Chance To Earn \$200 a Week

**R**IGHT now, today, I offer you an opportunity to be your own boss—to work just as many hours a day as you please—to start when you want to and quit when you want to—and earn \$200 a week.

## These Are Facts

Does that sound too good to be true? If it does, then let me tell you what J. R. Head did in a small town in Kansas. Head lives in a town of 631 people. He was sick, broke, out of a job. He accepted my offer. I gave him the same chance I am now offering you. At this new work he has made as high as \$69.50 for one day's work.

You can do every bit as well as he did. If that isn't enough, then let me tell you about E. A. Sweet, of Michigan. He was an electrical engineer and didn't know anything about selling. In his first month's spare time he earned \$243. Inside of six months he was making between \$600 and \$1,200 a month.

W. J. McCrary is another man I want to tell you about. His regular job paid him \$2 a day, but this wonderful new work has enabled him to make \$9,000 a year.

Yes, and right this very minute you are being offered the same proposition that has made these men so successful. Do you want it? Do you want to earn \$40 a day?

## A Clean, High-Grade Dignified Business

Have you ever heard of Comer All-Weather Coats? They are advertised in all the leading magazines. A good-looking, stylish coat that's good for summer or winter—that keeps out wind, rain or snow, a coat that everybody should have, made of fine materials for men, women and children, and sells for less than the price of an ordinary coat.

Now, Comer Coats are not sold in stores. All our orders come through our own representatives. Within the next few months we will pay representatives more than three hundred thousand dollars for sending us orders.

J. R. HEAD

And now I'm offering you the chance to become our representative in your territory and get your share of that three hundred thousand dollars. All you do is to take orders. We do the rest. We deliver. We collect and you get your money the same day you take the order.

You can see how simple it is. We furnish you with a complete outfit and tell you how to get the business in your territory. We help you to get started. If you only send us six average orders a day, which you can easily get, you will make \$200 a week.

## Maybe You Are Worth \$1,000 a Month

Well, here is your chance to find out, for this is the same proposition that enabled George Garon to make a clear profit of \$40 in his first day's work—the same proposition that gave R. W. Krieger \$20 net profit in a half hour. It is the same opportunity that gave A. B. Spencer \$625 cash for one month's spare time. If you mail the coupon at the bottom of this ad I will show you the easiest, quickest, simplest plan for making money that you ever heard of. If you are interested in a chance to earn \$200 a week and can devote all your time or only an hour or so a day to my proposition, write your name down below, cut out the coupon and mail it to me at once. You take no risk, and this may be the one outstanding opportunity of your life to earn more money than you ever thought possible.

## Find Out Now!

Remember, it doesn't cost you a penny. You don't agree to anything and you will have a chance to go right out and make big money. Do it. Don't wait. Get full details. Mail the coupon now.

## Want to get in business for yourself and without liabilities, as Mr. Zeh did?

For 14 years Mr. P. J. Zeh, Jr., now a Fuller Man at Long Beach, Calif., worked behind a counter.

Six years of this he ran his own store; watched for six years his profits dwindle away because of dead stock, depreciations, bad accounts, and a tremendous overhead. No wonder Mr. Zeh got discouraged. No wonder he longed to quit, and get into

something where there was not only real money to be made, but also a real future. One day a Fuller Man called at his house while he was at home. He watched this Fuller Man. The methods used in bringing Fuller Brushes to the

customer, the merchandise itself, all interested Mr. Zeh. "Here is selling of a kind that I can succeed in," thought Mr. Zeh. It took him but a few days to sell out his business, and become a Fuller Man. Once he had joined the Fuller organization he started off, as he says, "with a bang! My very first day's sales were \$35.25, and \$83.00 the next, while within a month my earnings were around \$400 a month, which was much more than I got out of my former \$10,000 stock of merchandise. And I had no capital invested; no stock, or book accounts, or rent to worry about. The first 8 weeks I earned \$80 to \$100 a week. And since then it has been easy to hold those earnings every week. In addition, I was promoted to assistant branch manager and recently again promoted to a full branch manager. I have never experienced one day of regrets since I became a Fuller Man."

### Learn salesmanship, while you earn!

Fuller trains and equips men to become successful salesmen, and then puts them to work. And Fuller can use, right now, a limited number of ambitious men to first make good selling Fuller Brushes, and be in readiness for promotion opportunities. Any man making now less than \$35 weekly can immediately better his earnings. Fuller Men make all the way from \$40 up to \$100 a week. Fuller sets no limit on what a Fuller Man can earn.

Write for booklet "Out of the Rat" telling how hundreds of men have found their success with Fuller. Don't wait for this book, but get in touch at once with any one of the 230 Fuller Branch Offices. For address of one nearest you, look in telephone books. Evening appointments made, if desired. Or, address:

Sales Promotion Department

The Fuller Brush Co., Hartford, Conn.

Fuller Brush Co., Ltd., Hamilton, Ont.

When he entered his home, within this time, Nora told him that Mrs. Wilson was in the library. When he entered, Wilson found his wife before the fire. She was dressed for her journey, even to her hat and gloves.

"I got all ready," she explained unnecessarily. "I don't want to miss my train."

Her husband stood by the door and tried to look at her. But though she was before him in the flesh, he could no longer see her. A feeling came that he would never see her again—a feeling so strong, so terrible, that it gripped him alike in the throat, the heart, and the pit of the stomach. Under its influence he stumbled toward her, and without knowing at all how it happened, found himself on his knees, his head in her lap. He heard the sound of sobbing—not hers, but, incredibly, his own.

"There, there," she was saying, "don't you take on so, Henry. I know it's hard for you, too. You'll feel different by and by."

"I feel different now."

Henry Wilson checked his sobs and lifted his head, but he did not rise from his knees. He had an odd conviction that this woman was his mother, not his wife. It was as a mother, too, that Mary continued to soothe him, with a mother's understanding and tolerance. Her voice crooned over him.

"It's hard for us both, just at first. It was bound to be. And I ain't denyin' I'm glad you feel it a little, too. But I want you should be happy, Henry—and you're a-goin' to be."

"You bet I'm going to be. We're both going to be."

HENRY WILSON drew a long breath and rose to his feet.

"Mary," he said simply, "I guess I've been out of my senses. I guess I've had a brain storm. I've been ranting round and making a big gesture that didn't mean anything. But I'm myself again, and you ain't one to hold rancor. I want you should forget this whole business. Forgive me and wipe off the slate. It's all over and done with. I've had my lesson—I've had a lot of lessons. Nothing like this will ever happen to us again."

His wife sat very still and looked at him. At last she understood. In some way, Henry's eyes had been opened. She had few words for the great moment, but what she had she uttered.

"Henry," she said, brokenly, "if you and me stay together, things are goin' to be your way. Climb up all you want to. I'm goin' to follow you as well as I can."

She had risen as she spoke. They stood facing each other, both immeasurably relieved, both deeply content, both suddenly self-conscious.

"You'll miss your train," said Mary Wilson at last, in a casual tone.

"I'm going to miss it." Her husband had his cue. "But we won't miss your train." He grinned at her, affectionately. "As long as you've made all your plans for Hanover, and we're both ready for a journey, I guess we'll go there together for a few days. It will be nice to see the old place and the old neighbors."

"Yes," said his wife, drawing a long breath. "It's spring, too," she added. "It will be pretty there. Henry, you've forgotten it, but we was married in Hanover jest twenty-five years ago to-day!"

# Things People Look For in Buying a Home

(Continued from page 27)

the seller to give him the part that was for the house!

It may be thought that our "hard-boiled" manufacturer's two years' search for a home was brought to a remarkably quick close. Such cases, however, are not unusual. I recall how one young couple, at eight o'clock on a rainy morning, drove up to one of our branch offices in their sedan. They had been renting a home in a neighboring town but had to leave it, and long had been looking for a substantial place to buy. In despair of finding a place to suit them, they had under consideration the leasing of a New York apartment. That very day, in fact, they had to decide about the apartment. Before making their decision, they wanted to take one last look for a house. What had we to show them in that town?

There was call for hurry, since the husband, who was employed in New York, would have to catch a train leaving in about an hour and a half. Hopping into their car, our salesman showed them three places. None would do; and the husband, who had been nervously consulting his watch, said it was train time.

"I have one more place to show you," said the salesman.

"Sorry," replied the husband, "but I can't take a chance on missing the train."

IF THE salesman had not insisted, the fortunes of that couple would have been greatly different. By guaranteeing to get the husband to the station in time the salesman induced the couple to look at the remaining place—and both were convinced on the spot that it was just about what they wanted. So, while the husband hurried on into New York, the wife remained behind to bind the bargain.

In all such cases, the decision to buy is not such a snap one as it may seem; for in his long search the buyer becomes well acquainted with localities and gains a good knowledge of values. Indeed, it is quite proper that you should take plenty of time in buying a home. But I have known people to be still searching for a house after ten or fifteen years. Yes, and giving the same old funny excuses for not buying.

When I was working for another firm, a man to whom I had shown house after house finally wrote me that it was impossible for him to get a home then as he just had bought a piano on the installment plan. Fully ten years later, when I organized my own firm, that man again bobbed up, but evidently did not recall me in my new setting. Would you believe that he wrote once more, after looking at many houses, that it was impossible for him to buy a house because he still was purchasing a piano on installments!

With real-estate "bugs" like this every broker is pestered. They literally feed on real-estate news and advertisements, and they will look at all the houses anyone is willing to show them; but they never buy!

Occasionally, among these "bugs" we

## One year married and all talked out

**H**ERE are two young married people. For a year they have been spending their evenings together—and now, as the second year of their married life begins, they are *all talked out*.

He sits in moody silence under the lamp. The click of her needles is the only sound that breaks the veil of depression in the room.

Is there anything that would brighten their evenings?

How can they get more things to talk about; how can they turn their silent, lonely hours into real human companionship?

The answer to this question—and to the question of thousands of married couples like them—is contained in a free book that you may have for the asking. It is called "Fifteen Minutes a Day," and in a viv-

id, stimulating way tells how every man and woman can gain the knowledge of life and literature, the culture, the broad viewpoint that will turn lonely evenings into fine comradeship.

Think of it. You know in advance what most people are going to say. No new ideas, nothing that stimulates you, or makes you think: "My, I'd like to see those people again." But a few people get more interesting every year; they have always a new subject, new interests. Instead of growing mentally fat for lack of exercise, they keep their minds fit

**Send for this free book

will look there. Men are mainly interested in the cellar, the heating plant, the roof, and distance to the station or place of business. With an increasing number of men, however, the all-important thing is the distance, not to the station or place of business but to the nearest golf links.

The ordinary attitude of the American husband, especially if he is a business man of the larger type, is to leave practically everything about the home to the wife. After telling the broker that it is all up to friend wife until the time comes to pass out the money, the husband usually makes some such sly remark as: "You know, I am home very little, anyway," or, "You know, I only do my sleeping at home." I believe I have heard such remarks several hundred times; but I dare say that in each case the husband thinks he is saying something original.

As the average woman is not inclined to look beyond or beneath adequate floor spaces and hardwood floors, paint and paper, and gleaming fixtures and tiles, men show too great a tendency to leave the selection of a home entirely to the wife. If more interest were taken in such things as well-laid-up foundations, solidly-built piers, properly braced beams, and substantial roofs, it might be awkward for those persons who now earn a living mainly through making repairs but the sum total of human satisfaction would be greatly increased. It is particularly important that the foundations be examined; for if the main object of the builder has been to save money the scamping usually begins right there.

I HAVE spoken of the difficulty of telling in advance what will appeal to a person in the way of a home. This is partly due to the fact that the reasons governing one's choice of a home are usually intimately personal. It also is due to the fact that it is common for people to withhold their confidence from a real estate man. Their feeling is likely to be that he is interested only in getting their money. They seldom are willing to tell him how much they can, or wish, to spend. In general, their attitude is likely to be the one often expressed in these words: "You've got to sell me a hundred dollars' worth of value for fifty dollars."

Doubtless there was a time in the real-estate business when it was a common thing to misrepresent conditions and grossly exaggerate values, on the principle of "let the buyer beware." But those times largely have passed. Much has been accomplished in the way of raising standards by the National Association of Real Estate Boards, local bodies of which are now likely to be found at all important centers. If a broker is a member of one of these local bodies, and thus is entitled to do business under the name of "realtor," it is a pretty good test of his reliability.

Whether or not he is a "realtor," there surely will be found in every community at least one broker of good reputation and proved integrity, and when such a broker is found it will pay the home-seeker to give that man his confidence. The right kind of a broker not only has valuable knowledge and experience but is willing to draw on it strictly in the home-seeker's interest. In fact, I could mention many cases where a broker has gone a long way to find what would best fit into the home-

seeker's needs, or obtain for him the utmost value for his money.

I am reminded of a big sale that was made in a very curious way: A salesman at one of our branches had a customer "all set" for the purchase of a ninety-thousand-dollar property. However, winter was approaching; there was a coal shortage due to the chronic labor troubles at the mines, and the customer would not buy unless he could be assured of getting the fifty tons needed to carry the house through the winter. The salesman visited all the available coal dealers, but their combined offers for immediate delivery amounted to only twenty tons; after that, so they said, the salesman's customer would have to take his chances in a general *pro rata* distribution. It did not satisfy the customer. He would buy no house unless he was *absolutely* sure of being able to heat it.

ON Main Street one day the salesman encountered a man who did odd jobs among the homes in that town. He was a very humble person, but the salesman paused for a friendly word with him, and finally this man said, "How are things going with you, Mr. Collins?"

"Very bad, Jim," was the reply. "All for the lack of thirty tons of coal, I am losing a ninety-thousand-dollar sale." And though the last thing in the salesman's mind was that Jim could be of any help to him, he explained his difficulty.

Now, that man Jim had done work for a Mr. Blank, who had rented a big house in town but had had to give it up suddenly to return to New York, and the house long had been standing vacant. "Mr. Collins," said Jim excitedly, "if Mr. Blank ain't got thirty tons of coal in that cellar, then I'm no Irishman; but it might be the devil's job to get it out."

It proved that there were more than thirty tons in the cellar; and as the owner of the coal was found willing to sell it for the price he paid for it and the price had since risen about three dollars a ton, it was entirely practical to employ men to get the coal out and transport it to that ninety-thousand-dollar house, the sale of which went through.

This shows, I think, that, as you never can tell who will prove a friend in need, you do well indeed to cultivate friendly relations with everyone in your community, high and low.

"TELLTALE Table Manners" are described next month in an illuminative article by Gelett Burgess. "The Cup Cuddler," "The Table Ostrich," "The All-Day Sucker," "The Two-Handed Corn Eater," and many other familiar table figures are the objects of Mr. Burgess's keen observations.

"MARY PICKFORD Describes Her Most Thrilling Experience" is the title of an article next month by Mary B. Mullett. In this interview the world's most popular woman screen star tells you not only about this experience but about many others in her hard struggle to win recognition. Altogether, it is a very human and vivid story about a very human and vivid person.

*An extraordinary  
5¢  
pencil*

We say "extraordinary" not only because the lead is so delightfully smooth and responsive, but because of the very shape of the pencil itself.

It is neither round nor hexagon, but a happy combination of the two. And a pencil's *shape* has much to do with ease and speed in writing—try a Ti-con-der-oga and see.

"You'll say, 'I have never had so fine a 5c pencil.'"

Price slightly higher west of Mississippi

## A Combination That Couldn't Be Beaten

(Continued from page 33)

course it was a God-given gift; but it was not kept clear, and sweet, and true, without an effort, without faithful adherence to a prescribed routine. She took a lesson a day, not some days, but six days a week. And Kenneth knew that she was equally faithful in discharging all of her duties, the manifold duties that fall to a girl whose time is supposed to be her own.

The result of Kenneth's cogitations was the solemn resolution to emulate Raymond Bassett. There was to be one exception, one person from whom he'd expect no return, either in entertainment or edification, and that person was Agnes Hall. Although she bored him infinitely, he would not desert Agnes. One evening a week meant so little to him and so much to her. But with everyone else he'd be firm.

And he'd not give up Alison. But he would stay away from her until he had achieved something notable.

About three weeks later, Kenneth, with more fervor than logic, explained to his mother why he could not take his sisters to a party. He had attended a lecture on salesmanship the night before. He won out in the argument, and in consequence spent a pleasant and profitable evening reading coal journals and a textbook on geology.

**U**NDER the new régime things moved right along for Kenneth until that day, possibly a month later, when Norman Wainwright asked him to make up a four-some for the "Scandals." It was an open night, and Kenneth accepted gladly.

But the evening at the theatre was entirely spoiled for Kenneth before the curtain went up. Two rows ahead and a trifle to the right sat Alison and that upstart, Bassett. For the first time in his life Kenneth Giles knew what it was to hate a fellow man.

Presently she looked around and, spying them, bowed sweetly. Then, in her enjoyment of the show and of Raymond Bassett's repartee, she apparently forgot all about the young persons back of her. She did not again look around.

The next day Kenneth Giles was summoned to the L. C. and O. offices. He responded promptly, wondering what was up. Upon his arrival he was introduced to Mr. Kent, a genial gentleman, and the new purchasing agent for the railroad. Mr. Kent explained that they were about to give out their yearly contract for coal, that several of the bids were in, and then he had heard of Mr. Giles and decided to give him and his firm a chance.

Kenneth was quite overcome; but he strove desperately not to show it. The L. C. and O. contract! The L. C. and O. contract! Over and over the phrase raced through his mind. It would be something to tell Alison! Something notable! Why, they could easily afford to marry if he got this! It was twice as much business as selling to the Morgan Metal Company, and that was a big contract. Getting himself in hand, Kenneth talked with Mr. Kent,

## See the Bran in every flake

In Pettijohn's each luscious flake hides 25% of bran. In eating these delicious morsels, one forgets the bran.

Pettijohn's is soft rolled wheat—a special wheat, the most flavorful wheat that grows. It supplies whole wheat, plus bran—two essentials in a diet. And they come in a luxury dish which everybody welcomes. It will delight you. Try it.

**Pettijohn's**  
Rolled Wheat—25% Bran

talked earnestly, enthusiastically, knowingly, for one solid hour. Then, dizzy with controlled excitement, he departed.

The prospect of getting this railroad business reduced everything else to minimum importance. Kenneth lived in a keyed-up state of expectancy, hope and fear struggling fiercely within him. Some mornings he arose surcharged with the spirit of conquest, confident that to-day would bring him success.

**T**HEN he received an invitation to Alison's concert. It was the first direct communication he had had from her since that fateful evening three months ago. There was something exquisitely stirring, something strangely exhilarating in the sight of the familiar writing of the address, even in the engraved words, and in the feel of the heavy paper. Alison's concert! He knew just what it meant to her. She had often discussed it with him. Next to her wedding, it would be the most important event in her life.

With the unusual quality of her voice, and her application, her sheer ability to work hard, she might easily have hoped for a brilliant career; but she didn't. "I should never be happy away from home," she often said. "I don't believe I could sing well for strangers. I need the inspiration of my friends."

Her non-professional attitude did not lessen her interest in her music. Her concert was the goal toward which she had worked for years. Of course Kenneth would attend it. He wouldn't miss it for anything in the world. If he had only done something that he could be proud of! That L. C. and O. contract blazed across his mind. He leaned back in his chair and speculated luxuriously as to what he'd do if he should get it. Into this pleasant musing the thought of Bassett intruded itself. With a sinking sensation that amounted to positive illness, Kenneth felt that Bassett had usurped his place in Alison's affections.

Nor was this merely the imagining of a jealous lover. Hadn't the girls seen her and Bassett having tea at the Claremont last week?

And hadn't Norman Wainwright seen them together, too, and spoken of it to Kenneth? "I don't want to butt in, old man, or anything like that," he had said; "but if I were in your place I wouldn't step down and out and give a dangerous bird like Bassett the whole field. A wife with Alison's social position is just what he needs; and he's shrewd enough not to lose a trick—"

"If Alison prefers—" interrupted Kenneth.

"Prefers!" shouted Norman. "You aren't giving her a chance to prefer! You just turned her over to him. It's high time you jumped in and broke it up."

Break it up. Ken wasn't at all sure that he could break it up. Alison had said very firmly that she admired Bassett. He brooded over this disconsolately. Then he thought of flowers. He could send her flowers for the concert. It must be admitted that his delight in selecting them was not entirely free from malice. Bassett was almost sure to send her orchids, and she disliked orchids. Ken would send her violets. She adored violets. He'd make it an old-fashioned, formal bouquet, one with pink rosebuds in the center, a deep

## THE SECRET OF DRAWING

**W**HILE tell you the secret of drawing, right here! It is learning of correct principles, observation, practice, and perseverance.

Ask any successful artist and he'll tell you the same.

No marvelous "secret" of drawing exists that will make you a success overnight. In any line of endeavor where the hand and the eye must be skilled, practice is essential. But there is a great difference between just "practicing" and intelligent practice that develops your talent on a sure foundation by the quickest possible method. The Federal Course does this in a truly fascinating manner, that makes your work a pleasure.

## Develop Your Talent at Home in Spare Time

No previous training or experience is needed for the Federal Course, which clearly explains each step, and gives you individual personal criticism on all your lessons. It has developed the greatest of teachers—the commercial artists earning good incomes—like Franklin of the Time they would otherwise have taken. Well-trained artists earn \$25, \$75, \$100, \$150 a week, and sometimes even more. It is thoroughly worth your while to train your ability, if you like to draw, for thousands of business firms pay millions of dollars annually for good advertising designs and drawings.

Leading designers, artists, illustrating companies and bureaus of successful Federal Students have enthusiastically endorsed Federal Training. Among Federal Artists, whose help you get exclusively in the Federal Course, are many of the best known artists and designers in America.

## Get this Free Book "YOUR FUTURE"

If you are 16 years old or more and if you are about learning to draw, send today for this free book. It is beautifully illustrated in colors, and tells every detail you need to know about the Federal Course. It shows work of Federal Students many of whom earn more than the course costs while studying.

The Federal Course is a practical, profitable, and gets them. Fill out and mail coupon NOW. Don't miss your chance.

row of violets, then a narrow band of tiny white flowers—no, forget-me-nots—another row of violets, and a paper frill.

If he should only learn his fate about that L. C. and O. contract before the concert! If he should only get it, so that he could tell Alison! So that he could ask her. . . .

But the day of the concert arrived without his having heard a word from Mr. Kent. In the forenoon he went around to the florist's and inspected the corsage bouquet before it was sent out. It pleased him immensely. At four-thirty in the afternoon he went to his barber's. An hour later, looking fresh as a daisy, he got back to the deserted office, and there on his desk was a note saying that Mr. Kent wished to see him. Without losing a minute, Kenneth made his way to the L. C. and O. offices, only to find them closed. For a second he was nonplused. He had not an idea where Mr. Kent lived. But he had one day seen him lunching at the University Club. He might live there, or at least he might dine there.

Luck was with Kenneth. He found Mr. Kent at the club and was warmly received. "Glad to see you, young man. Have dinner with me, and we'll talk things over."

AFTER telephoning his mother, Kenneth joined his host at a table for two in a secluded corner. The meal progressed leisurely. They talked and talked of everything except that contract. Under what Kenneth hoped was a calm exterior burned a veritable volcano of excitement. Why did Mr. Kent want to see him? Was he going to give him the contract? Or did he just want to let him down easy? In that case, would he have sent for him? Yes, he might have. He seemed like a considerate chap. If he'd only speed up a little. One simply couldn't be late at a musicale. Ken figured just how long it would take him to get home; how long to dress—Mrs. Giles would have his evening clothes laid out for him and the cuff-links and collar buttons in his shirt; she was that sort of mother—and how long to get to Alison's.

Then he debated as to whether he should come right out and ask Mr. Kent about the contract or wait. He mustered up his courage and said:

"Mr. Kent, I'm sorry—that is, I regret extremely that I have an engagement—that I'll have to leave you now."

"Well, well, young man, not so fast. Call up the young lady and tell her you'll be over to-morrow night. I want to talk business with you."

Kenneth flushed with mingled hope and despair. Confound it all! This was the only evening in three months that he wouldn't have been tickled to death to talk business with the purchasing agent of the L. C. and O.

"If it were as simple as that, Mr. Kent, I'd be delighted. But this is different. It's important. It's a concert."

"A concert important!" Mr. Kent laughed unpleasantly. "Are your social engagements more important than your business engagements, Mr. Giles?"

Kenneth was acutely miserable; but he replied evenly: "I've always considered a social engagement as binding as a business engagement, Mr. Kent; but I assure you that if this were merely a call

or the theatre, I'd 'phone and break it off. She'd understand."

"Oh, so it is a girl?"

"Not a girl; but *the* girl."

"I see. And does this girl mean more to you than our contract, Mr. Giles?" Mr. Kent's manner was offensively courteous. Kenneth ached to choke him.

"Yes, Mr. Kent. The contract without—without the girl would not mean so much to me; but the contract with her—"

"Well, then, young man, stay and talk it over." Again Mr. Kent was genial.

Kenneth, always sensitive to another's mood, regretted his irritation. "Oh, I would, if I could! But it's *her* concert. Why, she has worked years for it! I couldn't miss her concert! Can't I talk with you in the morning, Mr. Kent?"

"I'm to understand, then, that there are other contracts, but there'll never be another concert?" Again Mr. Kent's manner was disagreeably polite. "May I ask who this young lady is?"

"Certainly. Miss Trenchard. Miss Alison Trenchard," Kenneth told him proudly.

Mr. Kent got to his feet. "I'll not detain you any longer, Mr. Giles. You might be late to the concert. Good night."

KENNETH was not late for the concert. Alison was lovely in jade green and silver, and—Ken could scarcely believe his eyes—she was wearing his flowers. *His* flowers! He wondered how Bassett felt about this. He wondered where Bassett was sitting. He felt annoyed because he couldn't see him.

After what seemed to Ken an interminable length of time, the recital was over. Admiring friends crowded about Alison. Kenneth gazed about the room. Where was Bassett? Could it be possible that he hadn't come? Ken's spirits soared with the thought. Well, he certainly wasn't here, or he'd be standing by Alison now. There was nothing shrinking, nothing self-effacing about Raymond Bassett. A servant approached Kenneth with a slip of paper. "Mr. Giles, you are to call this number. The gentleman said for you to call as soon as the concert was over." Kenneth hastened to the telephone.

"Well, Kennie, who left you a fortune?" Alison asked playfully after the guests had departed. Her question was but natural. Kenneth Giles simply radiated joy.

"Mr. Kent did. He told me to come around in the morning. To tell you that the contract was ours. He liked my attitude— But you don't know what I'm talking about!" Ken laughed happily; then plunged in and told Alison all about the contract. "It's the biggest deal I ever put over, Allie! In fact, it's as big a deal as any of our men, even the old birds, have ever put over. A railroad uses a tremendous amount of coal, you know. And it's new business! Absolutely new business! First time in ten years that our firm has sold the L. C. and O!"

"I'm so glad, Kennie," she answered simply. "I'm so glad you did it."

"It's the system! Bassett's system!" Kenneth went on enthusiastically. "Bassett, himself, never followed it more faithfully than I have. And it pays!"

"Do you really think that it always pays?" Alison asked. Then, without

## Will Your Mirror Tell a Happy Story Tonight?

As you tidy up a bit before dad comes home, will your mirror tell a happy story—set with two sparkling eyes and wreathed in a cheery smile?

If not, then you should look to the methods you employ in your kitchen. Old-time, laborious ways make women tired and old and lifeless.

A Sellers Kitchen Cabinet will put your kitchen work on a systematic, time- and labor-saving basis. Just by reducing the hours in the kitchen and by making those hours happy instead of boresome, it works wonders.

Why put up with methods that are tiring you out? A Sellers with all its wonderful conveniences costs no more than any good cabinet. Most dealers will gladly arrange for you to have the beautiful white enamel or golden oak finish on terms to suit your income.

See your local dealer today. Have him demonstrate the Automatic Lowering Flour Bin; Automatic Base Shelf Extender; Automatic Extending Table Drawer Section; Porcelain Work Table; Ant-Proof Casters and many other features of this cabinet. If you do not know the local dealer, please write to us.

## Why Good Dancers Are Popular

Everyone admires and wants to dance with the person who knows the latest steps. There is no need of being a wall flower! Arthur Murray, America's foremost dancing teacher, has perfected a wonderful new method by which you can learn any of the newest steps in a few minutes and all of the dances in a short time.

Even if you don't know one step from another, you can quickly and easily master any dance without music and without partner, right in your own home. Your success is guaranteed. The Vanderbilts and scores of other socially prominent people have chosen Mr. Murray as their dancing instructor. More than 100,000 people have learned to become popular dancers through his easy learn-at-home method.

### New Easy Way

To show you how easily and quickly you can learn his new way, Arthur Murray has consented to send, for but a limited time, a special course of sixteen dancing lessons for only \$1.00. This extraordinary offer is made to prove you will enjoy learning the newest steps in the shortest of your own home—without making any outlay. You need not send any money now. When the postman brings you the 16 lesson course, just deposit \$1 with him, plus a few cents postage, in full payment. If within five days you are not delighted, return the lessons, and your money will be promptly refunded.

This unusual offer may not be made again. Write today for the sixteen lesson course. If you prefer, send the dollar now and we will pay the postage. The lessons will be sent promptly in plain cover. Learn at home and surprise your friends. Get now and be a good dancer soon. Arthur Murray, Studios 678, 601 Madison Ave., New York City.

## Write Ads for Big Pay

Ad-Writing is one of the highest paid professions in the world. Hundreds of ad-writers earn \$100, \$200, \$300 a week. Many of our most successful ad-writers never dreamed they could write ads until they tried. One of our star ad-writers was once a \$25-a-week bookkeeper. Another, a printer. Another, a shipping clerk. No special "gift" required. It's mainly a matter of training. Get the specialized training and opportunities open to you everywhere.

## Wanted More Ad-Writers

Ad-writers in demand everywhere. You can learn the business at home in your spare time. Page-Davis experts will teach you every phase of the work—laying-out ads, writing headlines, describing products, selecting type, choosing illustrations, etc. Page-Davis training has a reputation. It gives you a big advantage in landing the high-salaried jobs.

## FREE 6 Try-Out Lessons in Ad-Writing

No cost, no obligation to you whatever. Simply send us your name and address and get these 6 Try-Out Lessons by return mail FREE. Try your skill at writing headlines, suggesting illustrations, laying out ads, etc. See how good an ad man you would make. Compare your work with that of men who are earning \$100 to \$200 a week. Write today for these 6 free lessons and full particulars of our famous course in ad-writing. Mail post card or letter.

PAGE-DAVIS SCHOOL  
Dept. P-28 CHICAGO, ILL.

waiting for a reply, she turned and walked from the room. In a few minutes she came back with a note and a wealth, literally a wealth, of orchids. The note she handed to Kenneth with the injunction: "Read that."

Kenneth read the short missive. It merely congratulated Alison and regretted that Mr. Bassett would not be able to hear her sing. This happened to be one of the evenings that he did not go out. For a second Kenneth stared at the letter, doubting his senses. Then he threw back his head and laughed. After a bit Alison joined him. "This is one of the evenings that he doesn't go out! Oh, Allie, that's the best one I ever heard!"

"I presume he decided that my concert wouldn't repay him, either in entertainment or education, for the time expended," she said, with a touch of bitterness in her tone.

"Well, he'll be entertained when he reads of our engagement in to-morrow's paper," Kenneth stated boldly.

"Our engagement! To-morrow's paper! Why, Kennie!"

SOMEWHAT later, when Kenneth had convinced Alison that to-morrow really was the right and proper time to announce their engagement, an engagement that hadn't existed an hour earlier, and they were back on the subject of Bassett's system, Kenneth remarked, "Well, of course, such unparalleled selfishness as his obviously won't do socially; but it surely does pay in business. Now, if I'd been all tired out when that L. C. and O. purchasing agent sent for me, I couldn't have landed the contract. But I was feeling fine, and I surely put up one beautiful spiel."

"Kenneth, do you know who this purchasing agent is, and how he happened to send for you?"

"Yes, he's Mr. Kent, from Chicago, and he said he'd heard quite a bit about me. I must be getting a reputation as a bright young salesman."

Alison smiled. "Kennie dear, I know you are; but it wasn't because of your reputation as a salesman that Mr. Kent sent for you in the first place. Agnes Hall told me all about it."

"Agnes Hall!"

"Yes. Mr. Kent is her uncle, and it was from Agnes that he heard of you."

Kenneth Giles made a queer noise in his throat; then tried to speak. But Alison put her finger on his lips. "Listen to me, young man; while of course it was entirely because Agnes wanted him to that Mr. Kent sent for you, if you hadn't been able to deliver the goods you wouldn't have made the sale. All that he promised Agnes was that he'd give you a chance to bid."

"Gee, that was a lot! You see, because of something that happened long ago, there has been an unfriendly feeling between the L. C. and O. and our firm."

"Yes, I know. But Mr. Kent was much impressed with you, Ken. Said that you were the best informed coal salesman he ever met. That you thought straight and talked straight. Bassett's system is all right. It's not the use of it, but his abuse of it, that's objectionable. I've thought it all out. You just go on being your own dear, natural self, and use Bassett's system, too. Coupled with your spontaneous kindness, I rather think it's a combination that can't be beaten."

## Lost People

(Continued from page 39)

If he should happen to see this account of his disappearance, I want him to know that there is no charge against him. All we want to do is to give him this message from his anxious wife: "Come home! Your little boy and girl are asking every day, 'Where is Daddy?' I know that it was a mistake for me to let you go away instead of facing your creditors squarely. We need you. Come home!"

In almost every case, a person who disappears leaves a trail which can be followed successfully if the case is promptly reported.

Suppose a man intends to drop out of sight and go West. When he goes to luncheon with a friend, perhaps a week before he disappears, he is very apt to say that he had always wanted to take a look at the Grand Canyon, and some day means to have it. In making purchases before leaving town, a girl or woman is likely to tell the clerk where she is going, or to ask advice about the kind of materials best suited for wear in certain parts of the country. Persons who disappear from small towns and come to New York usually have dropped some hint to a relative or friend.

If one person more than another is certain to leave a plain revelation of his intentions, it is the fellow who thinks he is smart enough to "disappear" and cover up his trail. Some time ago, I was informed by the friends of a certain John Smith, the manager of a jewelry store, that Smith had gone to Oregon and there had disappeared. They said that he had told them he was depressed and moody, and that if they heard nothing from him it would be because some ill fate had overtaken him.

**T**HERE was something suspicious about the case. The first thing I did was to have a search made of the room Smith had occupied at a boarding-house. On a table near the telephone we found a candy box with writing on it—a name, Herman Brown, and a telephone number. These were in Smith's handwriting, and it was obvious that he had used the box as a memorandum pad.

The telephone number we recognized as that of a morning newspaper, and we found that Herman Brown was a member of the reportorial staff. When we asked Brown if he knew a man named John Smith, he said, "No," and added, quick as a flash, "But wait a minute. That is the name of a man about whom I wrote a little story last week. Someone called up the night city editor to tell him about the disappearance of a New Yorker out in Oregon. The night city editor gave this man my name, and asked him to talk with me. When I went to the telephone he told me the story of John Smith's disappearance in Oregon."

Thus it was perfectly obvious that John Smith had telephoned to the newspaper the story of his own disappearance. Consequently, we dropped the search. Some time later it developed that he was wanted for absconding with funds. Detectives located him in New York. He had never left the city.

### Happiness

By EDGAR A. GUEST

The lights are lit, the night has come,  
The burdens of the day laid down;  
The children's voices gayly hum,  
Above the noises of the town;  
And this is what my home is for,  
A home I pray, that God will bless,  
To shelter until life is o'er,  
Our hours of peace and happiness.

Written Especially for  
John Lucas & Co., Inc.

The next stanza in this Edgar A. Guest Series will appear in the May issue of The American Magazine.

### "My Castle of Happiness"

The great spur which drives man forward is his search for happiness. In its quest, nations have been born, liberty assured, deeds of valor performed, and many an unselfish service rendered.

Every one who loves the home and all it stands for, will appreciate the simple beauty of Edgar A. Guest's poem "My Castle of Happiness," which he has written especially for us.

This poem consists of twelve stanzas, the first of which appears above. It deals in a genuinely human way with the various aspects of happiness in the home.

#### Write for the Book of Happiness

Tells what colors are conducive to comfort, restfulness, harmony, etc. Simplifies color selections for various rooms as never before! "The Book of Happiness" was written by Prof. A. J. Snow, Ph. D., of Northwestern University, a recognized authority on psychology. This book is free. We shall be glad to send you a copy at your request. Write Department 24.

## Health and Happiness

Realize the vital importance of minerals in the foods you supply your children if you would have them grow into strong, robust manhood and womanhood. Foods robbed of their life-sustaining elements do not function when taken into the body.

Kellogg's whole-wheat KRUMBLES contain every atom of whole wheat—including the necessary body-building, blood-making food iron, food lime, phosphorus and potassium. Protect your loved ones against sickness by serving Kellogg's KRUMBLES at least once each day—food that you know will fortify them!

KRUMBLES are delicious and have the full, wonderful flavor of whole wheat for the first time in food history! They're all ready to serve and tempting to the most fastidious appetite. All grocers.

*Kellogg's*

WHOLE WHEAT—ready to eat!

# KRUMBLES

*The only whole-wheat food with a delicious flavor!*

### Reading that stirs youthful ambition

In St. Nicholas Magazine are just the stories and articles that you have often wished your children would read. You have sensed the fact that their reading should be more helpful, less jazy.

President Taft and President Roosevelt felt this way when they subscribed to St. Nicholas for their children. President Hibben, of Princeton University, and Professor Phelps, of Yale, were delighted readers of St. Nicholas. So were Mary Roberts Rinehart and James Montgomery Flagg, the artist. Thousands of successful men and women praise St. Nicholas for its entertaining, helpful guidance in the days of their youth.

In 1923, St. Nicholas will publish vivid, fascinating stories from the most popular writers for boys and girls. "A Continental Dollar," by Dr. and Mrs. Knipe; "The Last Parakeet," by George Inness Hartley; "Nid and Nod," by the author of "The Turner Twins"—these, with the usual prize contests, will make every page interesting, helpful.

One year's subscription is only \$4—about half what you pay for your morning paper. Send check or money-order to St. Nicholas Subscription Department, V-2, 353 Fourth Ave., New York.

**ST NICHOLAS**  
*for Boys and Girls*

### How to meet a domestic emergency

Perhaps you are preparing a simple lunch—and an unexpected guest arrives! You can make the meal quite festive if you serve hot STEERO bouillon. This will take only a moment. Drop a STEERO bouillon cube into a cup, add boiling water, and you are all ready.

**STEERO**  
BOUILLON CUBES

Hot STEERO bouillon is an appetizing drink at any and all times. STEERO bouillon cubes add greatly to the flavoring of many other dishes. Send 10 cents for samples, and often-free-page cook book.

"A Cube Makes a Cup"

Many young people who run away from small towns head straight for New York, because they think a big city offers them greater opportunities for employment than they can find anywhere else. Frequently, girls with a little knowledge look for positions as "secretaries," or as clerks in department stores. It is not often, however, that they are able to secure employment in department stores, because these institutions make a practice of inquiring very closely into the antecedents of their employees. About the best a runaway girl can hope for is to find work in a box factory, or in some one of the city's thirty-eight hundred cloak and suit establishments. Usually, when we locate these young people, we find that the bubble of their hopes has been pricked, and they are very glad to go home to partake of the fatted calf.

More persons—both adults and juveniles—are reported to us as missing from Pennsylvania than from any other state in the Union. Missing persons from this state usually leave home because they find the mining regions depressing. More women are reported missing from Allentown, Pennsylvania, than from any other community anywhere near its size. This seems to be due to the fact that the population of the city includes an unusually large proportion of women, who break their home ties to come to New York because they cannot find satisfactory employment there.

MORE boys disappear in the middle of the summer than at any other season of the year, because weather conditions are then so favorable that they can get along for quite a while on a small sum of money. Youngsters from small towns when starting out on independent adventure away from home usually go to the nearest large city, but not infrequently find their way to New York. Boys who live in big cities are most likely to start out in search of adventures in the Southwest.

Last summer, three New York boys of about the same age—fourteen—who lived in the same neighborhood, disappeared simultaneously. The parents could suggest no possible clue as to their sons' whereabouts. They did know, however, that each boy had a hundred dollars in war savings stamps and that the stamps had disappeared too.

As usual, we found that the boys of the neighborhood knew more about the aspirations of the runaways than the parents did. We learned that the three runaways had spent much time together reading Wild West stories, and that they had expressed the ambition to become "cow-boys."

At a sporting goods store, we learned that they had bought a complete assortment of camp equipment. They had told a salesman that they were going to the Southwest. Inquiry at the Pennsylvania Station revealed that the boys had bought tickets for St. Louis. At St. Louis, we learned they had bought tickets for San Antonio. When they arrived at San Antonio they were received with open arms by the police force of that city.

They were glad of their welcome, too, for they had already decided that the Southwest was not a paradise for campers, and their money was almost gone. Those youngsters, on their return to New York,

## Its new metal container!

*Beautiful hair and white bathrooms  
welcome PACKER'S in this new form*

You can now give your hair the immediate and lasting benefits you know you can get from Packer's—with greater comfort and speed. The new metal box makes Packer's the handiest kind of a shampoo and bath soap imaginable. Here is your chance to have your own individual cake, to put away when not in use.

Every time you wish to use your Packer's it's just where you want it and the way you want it—in its own particular box, kept fresh, dust proof and germ proof. It's your *own* cake of soap, for no

other hands but yours, if you so wish it. And the rest of the family can all have their individual cakes of Packer's.

How your young "Scouts" will enjoy it! It is a real "kit" package! And don't forget Dad's locker at the club and his traveling bag! Sister, too—when she makes those long, delightful summer visits! How glad she'll be to carry her own cake of Packer's with her, with no extra wrapping!

There is no extra charge for the new metal box.

were brought to my office at Police Headquarters, where they were reunited with their families. While waiting for the appearance of his father one of the boys demonstrated that he had a one-finger knowledge of the typewriter. When I asked him what he was writing, he said "I'm writing down the history of my experience in the Southwest." This manuscript he left behind, and I found that he had written twenty times on the same sheet a very important truth, which I hope all boys will remember. It was this:

Boys, never try to run away, because the Bulls (meaning the detectives), will get you sure.

The inability of parents—sometimes of only one parent, but often of both—to understand child nature is one of the commonest reasons why boys and girls run away from home. Last summer a New York physician informed me that his boy, seventeen years old, had come home from boarding-school after "flunking" his examinations, and subsequently had disappeared. "His mother made quite a fuss," said the physician, "and I have no doubt he thought he had disgraced us forever. He went away with fifteen dollars in cash, and my touring car."

**M**UCH distressed, the father told me frankly about other things that might have led the boy to run away. "I have the finest wife," he said, "into whom God ever breathed the breath of life; but I must say she is the worst mother imaginable for a boy who has any spirit. He is our only child, and she wants to keep him under her wing all the time. She insists on knowing everything about his companions and what they do. She has been allowing him seventy-five cents a week spending money, and requires him to keep account of every cent of it. I've been slipping him five dollars a week to do with as he likes; but don't you tell my wife that, or she'll say I'm to blame for his having money enough to run away with."

On hearing this last statement, I told the father he had no cause to worry, because I felt sure the boy, on running out of money, would get in touch with him. The father seemed immensely relieved, and said, "If I'd only known he was going to 'blow away,' I'd have given him money for a good trip. His mother needs a scare."

A few days later, the boy, who had got as far as Maine, telephoned to his father's office. He was then at a garage without money and was in need of gas to get home.

"See here," said his father, "I'm going to arrange with your garage man there to give you gas and also some money; but don't you dare to come home! You haven't had half a good time yet! Stay another week, anyhow!"

This was all arranged without the knowledge of the boy's mother. When he returned a week later, none the worse for wear, his mother was delighted. She even took her husband's advice and did not scold her son. The boy was amazed.

The father asked me to talk with his wife and tell her what I knew about boys. She told me that, while she didn't think men knew "all there was to be known about boys," she was going to take my advice, nevertheless, and relax her rigid supervision over her son. Not long ago

the father informed me his son had returned to school, was doing well in his classes, and was eager to enter college in the fall.

Old people who are unable to give their names or proper addresses are frequently discovered by a policeman while they are wandering aimlessly in the streets or shrinking in doorways. Sometimes they are found late at night after they have been wandering for hours. They are always taken to a hospital by the police. Not infrequently I have in my office a record of their discovery before their alarmed relatives know they are lost.

Probably you have read quite a number of stories based on a form of mental derangement known as aphasia. Aphasia is not one of the frequent causes of disappearances, but it does account for some. We have a case of this kind once or twice a year.

A few months ago, a well-dressed, clean-shaven man of thirty-three came to police headquarters and, without asking questions of anybody, went up-stairs to the chaplain's office. When the chaplain asked him what he wanted, he seemed surprised and said:

"I was sent for."

Nothing else could be got out of him. He could not give his name nor tell where he came from. He made no objection to my searching him, and I found from the papers in his pocket that he lived in Chicago. His honorable discharge as a lieutenant who had seen service over-seas was among his papers.

**W**HILE we were trying to locate the man's relatives in Chicago, he was kept in a hospital. On the third day his memory began to come back. He said something to a hospital attendant which showed that he thought he was in St. Louis. On the fourth day, his memory was perfectly clear, and he remembered everything about himself, except what had happened since the attack of aphasia.

This man had been ill in France. Since his return home, his memory had become blank on several different occasions. While in St. Louis on a business trip he had felt that another attack was coming on and, as he had no friends in the city, he had started for the St. Louis police headquarters to ask that he should be kept from wandering while in an irresponsible condition.

That was the last thing he could remember. Then he had begun his random travels. On reaching New York, he had a vague, subconscious recurrence of the same idea he had had consciously in St. Louis, and consequently, I assume, had inquired his way to Headquarters.

When anyone is reported missing, the first thing we do is to go to the Department's information bureau to determine whether the missing person has met with an accident or been arrested.

If we find that the person has not been arrested or met with injury, our next step is to interview the person's relatives and friends.

There are certain things anyone should do to aid the police in their search whenever the disappearance of a friend or relative is reported. One should, if possible, furnish a photograph of the missing person, and give an accurate description, including such details as height, weight,

## The Powder Base Perfection

Fashion decrees that woman may wear  
A touch of powder to make her fair,  
To soften her color and add to the charms  
Of her face, her neck, her hands and arms.

But powder to give real beauty and grace  
Must be smoothly applied on a proper base;  
To prevent detection the base supreme  
Is our Hinds Honey and Almond Cream.

Hinds Cre-mis Face Powder next you choose  
Delicate, fragrant and charming to use,  
And you have the requisites, perfect quite  
For a lovely effect by day or night.

True aids to beauty, each user finds  
The products that bear the name of Hinds.

So many patrons of our Hinds Honey and Almond Cream are now using it as a base for face powder, and with such gratifying results that we are urging you to give it a trial. 'Twill cost you only a few cents for a trial bottle and the process is extremely simple.

Just moisten the skin with the cream and allow it to nearly dry, then dust on the powder. It will adhere wonderfully and remain in perfect condition longer than with any other base we know of. The cream and powder will prevent the skin from becoming rough or chapped.

**HINDS Cre-mis FACE POWDER**, impalpably fine and soft. Its delicate tints blend to produce the coveted effect, and with its subtle and distinctive fragrance, enhance the charm of every woman who uses it—white, flesh, pink, brunette. Large box 60 cents. Trial box, 15 cents. Sample, 2 cents.

All druggists and department stores sell Hinds Honey and Almond Cream. We will mail you a small sample for 2 cents or a trial bottle for 6 cents. A Try-out Box of 5 samples, assorted, 10 cents. Booklet *Free*.

**FINE  
HOSIERY**

**SOMEWHAT** heavier than our sheer summer silks, Shawknit socks afford a protection, together with good looks and extra wear, that is welcomed by many men for all year wear. Now is a splendid time to buy. Made in six colors.  
SHAW STOCKING CO., Lowell, Mass.

**Comfortable under heavy clothing—because they are tailored**

A reason to remember about Dunham jackets is that they may be worn beneath heavy outdoor clothes without robbing your arms and shoulders of free-swinging comfort.

This is because they are tailored like custom-made coats and do not depend upon their elasticities for their fitting qualities. Their tailoring makes them notable for style, fit and comfort. All wool and the best of it.

Two, navy, brown, black and Colorado green—a beautiful new shade. Plain, pleated or flared jackets. At best men's shops. If you don't find them, write us.

THE DUNHAM MILLS, INC.  
Hartford, Conn.

**DUNHAM**  
Knit Jacket

color of hair and eyes, condition of the teeth, the kind and location of any tattoo marks, the nature of any deformities, and a full description of clothing and jewelry worn. Any information that can be supplied as to the missing person's habits, temperament, recreations, or ambitions is of value.

If you live in a small town and have occasion to report the loss of a relative you should notify the police of your own locality. If there is any evidence to indicate that the missing person may have gone to New York, your local police will notify us of that fact.

The Missing Persons Bureau does not take responsibility for locating missing persons, unless it appears that the person may have vanished owing to some cause outside of his own volition. We feel that our responsibility is especially strong when a person has disappeared because of some mental derangement, an accident, or, as happens very rarely, because of "foul play." Our search for missing juveniles—boys and girls under twenty-one—is always carried on until they are found, if that is possible. Especially as concerns girls, we feel that when they are detached from home they are likely to come to harm.

**WHENEVER** a girl is missing, the first thing that enters the minds of most parents is the fear that she may have been kidnapped. The fact is, however, that kidnapping is a negligible cause of disappearance except in the case of very young children. In New York, we have had but two cases of kidnapped children in the past four years.

Very often children who have been taken to crowded resorts near New York get separated from their mothers, but these children can scarcely be classed as "missing persons." They belong in the class of the "temporarily mislaid." What usually happens is this: The Police Department receives a frantic message from a mother that her child has been lost or stolen, and she gives us a description of the child. A few minutes later one of the officers at a station house near the resort informs us by telephone that he has on hand a child who fits that description. Sometimes, at the beach stations, we have on hand more lost children than we have mothers to fit them.

During the hot summer months it is nothing unusual for us to have as many as twenty lost children from eighteen months to three or four years old in the police sub-stations on the East Side. I have no doubt that some of these children are intentionally lost for a convenient but temporary period. When an East Side mother wants to go to the beach and finds herself incommoded by one of her younger children, she sometimes adopts the plan of "losing" it on a street corner, or of sending one of the older children out to "lose it." Some member of the family waits to see that the child is "found" by a policeman, who promptly takes it to a station house. There the child remains until the mother returns from the beach to make anxious inquiries about her young one. I know of no way to prevent mothers from losing their children where the police can find them; but some day it may be necessary to conduct an educational campaign toward this end, for our nursery accommodations are strictly limited. Google

## Extraordinary Experiences of a World Traveler

(Continued from page 43)

into the front trenches at Château-Thierry. While I was there a charge was ordered over the top, and I followed. I was gassed then; and in a company of which fifteen thousand went over the top only thirty-six hundred were not wounded or killed.

Such experiences, of course, are not a part of ordinary travel. Indeed, unless conditions are unusual, the dangers from man and the larger animals are scarcely serious at all. Insects are much worse. They are disagreeable pests, and often carry disease. The tsetse fly in Africa is one of the most deadly insects I have encountered. Several years ago when I was there it was killing natives literally by the thousands.

The tsetse fly feeds on the decaying flesh of dead alligators, and absorbs the poison that it transmits when it stings a human being. The poison in time destroys the red blood corpuscles. A victim cannot retain nourishment. What he eats does him no good. He gradually weakens, and in the last stages of the sickness falls into a coma. This disease is known as the sleeping sickness.

It was found at the time I speak of that the tsetse fly, which looks a good deal like our common house fly, needed shade in order to live. The British were cutting down a great deal of brush around the shores of Victoria Nyanza and other lakes. By doing that and moving the natives back from the shore, they saved many lives.

In the jungle, I usually wear a veil of mosquito netting for protection against insects, and heavy puttees to ward off the bite of snakes or reptiles.

**P**ERHAPS the most dangerous country I ever visited, from the point of view of actual risk, was the interior of Madagascar. Very few white men have traveled there, and I cannot recommend it for a pleasure jaunt. The swamps and heavy vegetation breed malarial fevers more deadly than most animals or insects.

However, of all the dangers to life and limb in traveling, one surpasses all others, in my judgment: it is bad drinking water.

More impurities can enter the body through poor water than in almost any other way. Merely a change in water may upset the system and destroy the pleasure of a journey. But if the water is really bad, it causes sickness, and also decays the teeth, so that all sorts of ill effects may follow.

When I am traveling I always provide myself with some kind of mineral water; or, if I am in a far place where it is not practicable to carry water, I boil a supply every evening and set it to cool overnight. The impurities are killed, and in the morning the water is fit to drink.

So much for dangers. What is it that people like most to see in the pictures I bring back from far lands?

They enjoy magnificent scenery, of course. You would expect that. They

John Lloyd Wright, Inc., 718 N. Wells St., Chicago

admire broad stretches of country, if it is foreign, great rivers, picturesque spots, and they look with awe at lofty mountains.

But the thing that really touches them, the scene that strikes to their hearts and brings applause, is some bit of living nature. People like life. Such things come close to them. A baby kitten or a puppy may amuse and affect them more powerfully than a view of the tallest peak in the Himalayas.

A couple of years ago, in Palestine, then famine-stricken, I took many pictures of starving children, and the relief efforts of Americans. One little baby climbed to a table where the jam pots were, and smeared the jam all over his hands and face. Every audience where I showed that picture seemed affected by it more than by anything else.

I have one picture of a monkey picking fleas off a dog. That seems to get home to a great many people—curiously, would you say?

People by and large do not care much to see pictures of their own country, even those parts of it that are unfamiliar to them. The United States has scenery that for magnificence and variety can hardly be equaled anywhere. If an untraveled person asked me where to go for both interest and pleasure, I think I should suggest first that he visit our own great national playgrounds: the Yosemite, the Grand Canyon, the Yellowstone, Glacier National Park, and so on. Yet when I show these places in pictures, I cannot get audiences!

SEVERAL years ago I left Gallup, New Mexico, and rode for three hundred miles or so cross country to the Rainbow Natural Bridge, in northern Arizona. I passed through magnificent country, a desert island of picturesque mesas and high mountains, with hundreds of Indians still living in primitive fashion. I took some of the finest pictures I have ever taken anywhere, and tried to show them; but people would not come to see them!

They do not come to see pictures of the Grand Canyon, the greatest gorge on earth; but they do attend when pictures of the Canadian Rockies are shown. I can exhibit pictures of Switzerland year after year to packed audiences; but I cannot show our own Rockies.

People, in short, like most to see how strangers in remote lands live, eat, worship, play, or sleep. Sometimes it is forbidden to take the photographs that will be most interesting. Once I remember being on the Duke of Marlborough's estate in England. The Duke was away, and I went about photographing everything that took my fancy. At length, however, one of the caretakers saw what I was about and came after me.

"You can't do that, you know," he said.

He showed me off the estate. But in the meantime I had the pictures I wanted!

In mosques in Constantinople I have had hooded and robed priests come running to me, shouting that I could not take photographs—after I had taken them! Sometimes, in native homes in Africa, China, and Japan, I have been told in no uncertain terms to get out, when my object was perceived.

I admit that it seems a bit prying and

# Corns

## Lift Right Off

Drop a little "Freezone" on a touchy corn or callus for a few nights. Instantly it stops aching, then shortly you lift it right off. Doesn't hurt a bit.

You can lift off every hard corn, soft corn, corn between the toes, and the "hard-skin" calluses on bottom of feet. Just get a bottle of "Freezone" at any drug store, anywhere.

Agents or dealers wanted in all parts of the country. Every auto owner should have one. They pay for themselves in a few nights of use, saving expensive hotel bills.

inhospitable, perhaps, to force your way into a private grass hut and begin to take pictures of a family, practically naked, at breakfast. But it makes an excellent picture. And I have found beyond a shadow of doubt that the best plan is to take the pictures first, and ask permission afterward.

Animals are often as shy about having their pictures taken as people are. To get them in their natural state, you have to proceed with the greatest caution. They take alarm at the slightest unusual noise, or at the scent of a human being.

This last year, in Africa, we got some extraordinary pictures in an elaborate blind at a water hole. It had been a popular water hole. But for days after we built our blind, hardly an animal came down to drink. Even when the wind was favorable, and we made not the slightest noise, the beasts were suspicious of the queer new piles of earth and brush, cleverly as we tried to make them "natural."

This blind consisted of two locations for the cameras, one on each side of the water hole. If the animals faced the wrong way for one camera, we got them with the other.

The locations were connected by a tunnel, and we could run quickly from one to the other if necessary. Each location was large enough for a couple of men to stand upright comfortably.

WE HAD to wait days before the animals regained confidence and started coming back. And after that we had to wait many more days in silence, to get enough interesting "poses." One of my assistants invented a shutter that does not click. The timidity of most animals makes its use positively necessary.

Climate! That is an inevitable question of travelers and prospective travelers. "Do you roast?" they ask. "Do you freeze? Do you drown in rain?"

I will say this much about climate: I have never found a country with a climate to which there were no drawbacks. However, there are places that approach perfection in this respect. I think that of all spots in the world, the one which, the year round, has the most delightful climate, is Hawaii.

Lying as it does in the middle of the Pacific Ocean, in the tropical belt, Hawaii during nine months of the year is in the path of the trade winds. They temper the heat and leave you never too cold or too warm. You can bathe at Waikiki Beach from one year's end to the other, and the average temperature of the water is seventy. The islands are mountainous and in some portions at the higher altitudes the air is positively bracing, and very healthful.

Altogether, Hawaii is a delightful place to visit. It has the largest active volcano in the world. Kilauea's crater is nine miles in circumference and a thousand feet deep; and it is the only volcano in the world where you stand on the rim with comparative ease and look down at the boiling mass of fiery lava, which sometimes rises or falls as much as a thousand feet in a few days. A government volcanologist is stationed there, and he issues warnings whenever the lava is rising to the point of danger. Motor roads completely encircle the two larger islands of Hawaii, and intersect the smaller ones.

## "We pay him \$100 a week"

AND he's worth every cent of it. Came here several years ago asking for a job. He got just that—a small job at a small salary.

"Then I forgot about him—hardly knew he was on the payroll until one day I got a letter from the International Correspondence Schools telling me that he had enrolled for a course of home study. It was remarkable the way he went ahead.

"We pay him \$100 a week now and he's going to be earning even a larger salary some day. I wish we had more men like him."

HOW do you stand when your employer checks up his men for promotion? Does he think of you? Is there any reason why you should be selected? Ask yourself these questions fairly. You must face them if you expect advancement and more money.

One hour after supper each night spent with the I. C. S. in your own home will prepare you for the position you want in the work you like best.

Yes, it will! Put it up to us to prove it. Without cost or obligation, just mark and mail this coupon.

### INTERNATIONAL CORRESPONDENCE SCHOOLS Box 7471-C, Scranton, Penna.

Without cost or obligation on my part, please send me a copy of your 46-page booklet "Who Wins and Why?" and tell me how I can qualify for the position or in the subject before which I have marked an X:

New method makes parents more happy and so produces remarkable results for thousands of parents. Known by leading educators. Copies all over. Free Book, "New Methods in Child Training" describes new system. Write for your copy now. Parents Association, Dept. 94, Pleasant Hill, Ohio.

December, January, and February, roughly, constitute the rainy season, when the northeast trade winds do not blow. The rains during that season come with great regularity. For about an hour and a half in the late afternoon the storm breaks in a terrific torrent. But everybody knows when the rain is coming and nobody goes out.

In the summer, on the other hand, Hawaii occasionally has what are known as "sun storms," when for five or ten minutes in blinding sunshine a delightful cool rain falls. The clouds gather in the mountains and are blown out by a land wind. In a few minutes the shower is over.

Climate is one thing. Customs of the people are another.

In various parts of the world you run across remnants of curious practices and you can learn this lesson: Not all wisdom abides in the twentieth century. Not only do you see other modes of living than your own in your own time, but you also perceive that in times past things were known that we have forgotten.

Once, in the interior of South America, I was present when there was taken from a cave the artificially shrunken figure of a human corpse. The Indians of that country once practiced this art. They could shrink a corpse until it was like a doll in comparison with the living body. We don't know how to do that. It seems repulsive to us. I believe the art is no longer practiced, and I think the knowledge of how it was done has been lost.

**WE PRIDE** ourselves, with justice, on our progress in most of the mechanical and scientific pursuits. Yet hundreds of years ago there were many other practices in common use—some of them valuable—which we, in spite of our knowledge, do not understand.

We do not know, for example, how to mummify. The ancient Egyptians did. Out of their tombs have been taken the bodies of human beings preserved for tens of centuries in the original human likeness. On the walls of Pompeii's excavated buildings have been found paintings preserved through the centuries. They were executed by processes unknown to us, and scientific men have not discovered the secret of their composition.

This generation is top dog now. But it has been preceded by hundreds of generations of thinking, intelligent beings, stirred by the same primary feelings as ourselves. Travel reminds you of that.

And now, what of the great trips—really great—that you can take to-day? I am often asked that.

The answer is, of course, that it depends on what you want to see. You cannot sum up a land or a people in a word. But we do go to different countries for different things: to Japan, perhaps, for a view of quaint home life; to China to see how human beings live in swarms; to India for a sight of wonderful Mogul architecture; to Europe for art and history; to the Himalayas for the most imposing scenery in the world; to South America for tropical life, or to see the most beautiful city in the world (Rio Janeiro), or the southernmost city (Punta Arenas); to Siberia or Alaska or Greenland, to see life where the earth is frozen and difficult; to the South Sea Islands to see life where the earth is provident and languorous.

## Walls of Beauty and Permanence

# "How I Raised My Child—and Why"

(Continued from page 45)

darlings play sweetly with each other.

Well, I sent out the invitations, see, of course not mentioning it was a birthday on account I didn't want the ladies should feel obliged to bring any presents, but I was nevertheless all ready to check up on the ones that didn't. Well, anyways, they brought the presents all right, because their kids would all have a birthday that year, and they wasn't taking no chances. And the afternoon was spent in destroying these presents, the parlor carpet, and the temper of 1/2 doz. mothers. Because when these little boys and girls was taken separate and held firm, they was much like them deceitful magazine-cover ones. But the minute we pooled them, the lid was off and they would rather stick a finger in each other's eye, or spit in their glass of milk than not. Taken as a whole, that party looked like a Dublin Street after a political argument, with a flock of mothers screaming "Don't do that" at the little dears with all the repetition and unity of a chorus in rehearsal.

Another reason why I claim a child may be born in 1923 but they start their mental life in 3921 B. C. or earlier and work up to date, is the fact that all go through the Age of Tyrants. You may of read in history where in early times tyranting was a regular business and men with a punch used to get away with it, whipping not alone their wife, but the hired help, and the help and wives didn't leave on account of it, neither. Also, in those days, why if an installment collector come with an overdue slip, why these tyrants would merely slam the drawbridge in their face, or maybe invite them in and then stick a red-hot poker to their nose and get the collector to pay them instead. And so forth.

BUT these old tyrants was mere dumb klucks alongside of a three-year-old kid which you have promised to tell it a story or let yourself in for a shopping trip or a rainy afternoon in the nursery, for the said child ain't got no mercy or sense of justice, and they will ride you to death if you make one false step. You got to get the upper hand and get it quick, or you may as well resign from all whist clubs and other social so-called activities.

But in spite of the average child's strong prejudice against being brought up right, a good deal could be accomplished only for friends and relations, including its father. However, I personally myself believe the father is practically a necessity in bringing up a boy, because he will insist that the child should do all the things he isn't so good at his own self. But some other relatives, such as unmarried aunts which heaven knows it's no mystery, their being so, for instance, who will say right before Junior, why Nina you shouldn't give that child so much on his plate at once, no wonder he won't eat, it's disgusting. And the next meal, of course Junior will say to me no wonder I won't eat when you give me so much on my plate, it's disgusting, well, such relatives as this, I could perfectly well go without them.

## The Spirit of Easter

TO have her home filled with flowers, whose joyous colors and sweet fragrance breathe the spirit of Easter, is the desire of every woman's heart. Send gifts of flowers this Easter Sunday, that a nation may unite in rejoicing for an earth reborn.

Flowers may be delivered within a few hours to any address in the United States and Canada by means of the Florist Telegraph Delivery Service. Ask your local florist to tell you how it is done

Easter Sunday, April 1

"Say it with Flowers"

## Deaf Can Hear Says Science

New Invention Aids Thousands

Here's good news for all who suffer from deafness. The Dictograph Products Corporation announces the perfection of a remarkable device which has enabled thousands of deaf persons to hear as well as ever. The makers of this wonderful device say it is too much to expect you to believe this so they are going to give you a chance to try it at home. They offer to send it by prepaid parcel post on a ten-day free trial. They do not send it C. O. D.—they require no deposit—there is no obligation. They send it entirely at their own expense and risk. They are making this extraordinary offer well knowing that the magic of this little instrument will so amaze and delight the user that the chances of its being returned are very slight. Thousands have already accepted this offer and report most gratifying results. There's no longer any need that you should endure the mental and physical strain which comes from a constant effort to hear. Now you can mingle with your friends without that feeling of sensitiveness from which all deaf persons suffer. Now you can take your place in the social and business world to which your talents entitle you and from which your affliction has, in a measure, excluded you. Just send your name and address to The Dictograph Products Corporation, 1333 Candler Building, New York, for descriptive literature and request blank.—Adv.

But as for George, that's my husband well, I must admit that he's got a certain value to the child, in spite of the fact I sometimes gives me a pain in the neck (account he attributes every good thing Junior has got to his family, example, an influence. And it's enough to try the patience of a alligator the way that man when Junior has done something smart will say do you know what that boy mine did? But leave Junior put on something rough, and George will come hollering I just wish you would come her Nina, and see what that brat of yours has done now. But anyways, in spite of that, George is awful good to the child and I have often known him to bring home constructo blocks, or a little telephone, or some mechanical toy of the modern kinds, see, where the child is supposed to get a liberal education out of putting it together. And believe you me Junior has certainly got all of that from these toys, because while George is spending a happy hour or two in the nursery putting the toy together why Junior will stand around and watch him and all listen to him, and I always tell George think it is a crime to lick Junior for swearing when the child only repeats what I hears.

**B**UT speaking of toys, when a person comes right down to brass tacks, why have noticed brass tacks or empty spoons or some old soup can that they have found for their own self, will make a bigger hit with a kid than some ten-dollar toy which you have chose it for them after carefully considering its effect on the sense of the beautiful, their powers of destruction, and their general future. As come to think it over I don't know do blame a kid for preferring a old tobacco box to the finest boughten toy going. To begin with, the tobacco box will be all his own, on account it's a safe bet none of the grown folks will crave to play with it. And to go on with, he can ruin it when the mood strikes him and nobody will make any remarks to the effect aren't you ashamed to spoil the beautiful doggie Auntie Annie brought you, you bad, boy? Honest to goodness, if any adult were to hear that kind of a line 1/4 as often as the average kid does, said remarks being alternated only by stop it, put that down do it at once, and etc., why the adult would presently grab up the nearest hatchet and pull a Carrie Nation on the kid would be even more destructive than Mr. Volstead's was! And yet if you leave a kid loose like some of these up-to-the-minute textbooks tell you to, you would soon have the fire department, police force, and local undertaker all in the rescue.

And speaking of the kind of thing a kid does if he is let, or even when your back is turned for all of half-a-minute, I wonder have you ever noticed how if some other family's kid pours ice water down the minister's neck it's a funny trick, but your own kid does the same identical thing it's no trick at all—it's a problem. And you and your particular George will sit out on the porch after he has cried himself to sleep—I don't mean the minister I mean your Junior—well anyways you and George will sit out there talking over in a low tone and saying well he certainly is a problem, what shall we do with

him, dear, I'm sure I've tried everything. Punishment doesn't seem to do any good, he forgets it so quick. And George will say well sometimes I think there's no use licking him any more, he promises to be good and then first thing you know he is at it again, I'm sure I don't know where he gets the ideas he does. And you sigh and say neither do I, but in your hearts the two of you actually think he was rather smart to do like he did, only of course he must be broken of it and it's not right to admit to each other what a thorough going A-1 little marvel he is!

Of course I will admit this hidden sentiment about a person's child wears kinda thin at times and places as for inst. when you have made some innocent but inaccurate remark to the effect, for a sample, that it was raining cats and dogs yesterday, and the child at once catches you up on it, and will follow you around for the next hour with a line about where are the cats? Were the dogs in the rain? Do they come from Heaven? Who put them there? Why does it rain cats and dogs? Is it because God doesn't want them up there any more? Were they bad cats and dogs? What bad thing did they do? Will they be punished? How? Where did they go after they fell? Did somebody pick them up? Who? Where did the one that picked them up take them to? Did they bite?

Every once in a while I will try a endurance contest with Junior, and decide to answer every question to the bitter end, but I never win. I am as a general rule reduced to Hush up for a reply long before he has got his second wind. Then on the other hand I realize that this ability to ask questions which is so well-developed in him, means he has got one of those bright minds like the President, and there is no telling how far the boy will go.

**W**ELL, the long and short of it is that kids have a lot of bad points which it is up to a parent to overcome them. When you come home from a trip the first remark they will pass is more likely to be what did you bring me than I hope I see you well, or anything to that effect. They love dirt, they pull off stories which under the name of sensitive imagination is just as big lies; they tell on you before company, and when your family comes to visit they will yell and run away like you was in the habit of hitting them all the time. I guess many of them are the same. I know mine is, and I can tell the world the Smith kids next door are like that and then some. And the reason for the Smith kids being that way is that they have not been brought up right. As for my Junior, well of course he is a very unusual child, highly temperamental and sensitive, so general rules don't apply to him like they do to other people's youngsters.

And that is why I have had to make up this set of original ideas about raising children, of which I was telling you. And now you have read this far, I am going to admit that I have got only four.

Well, the first rule is this: Give the child the very best physical start you possibly can. Keep it clean and well-fed. This is the one place where the books will be necessary. Because being a mother don't give you any real knowledge on either subject. Most people feed and dress their children wrong, and this is inex-

## Not Like Any Summer that you've ever spent

**H**ERE is real difference, real change, real relaxation, new interest, new fun, new healthfulness, for the coming summer.

All in Southern California—a place that you, perhaps, have thought to be too warm for that season of the year. And yet summer is preferred by Californians to the winter months. Note the U. S. Weather Bureau's figures—a forty-four-year record—(average mean temperatures taken in a great central city in this section):

44 Junes, 66 degrees.  
44 Julys, 70 degrees.  
44 Augusts, 71 degrees.  
44 Septembers, 69 degrees.

And summer is the rainless season. Mark that this makes each day available *all day* for all you want to do, and there are a thousand things in this strange land to do and see.

And all within a radius of two hundred miles from a great central city, with 4,000 miles of world-famous motor roads reaching out from it in all directions.

A desert like Sahara, turquoise lakes on mountain tops, stupendous views over rich valleys, rocky scenic grandeurs, the center of the moving picture industry, which came here because of the same variety that makes this country so interesting to travelers—great sea shore resorts, famous golf courses, old Spanish Missions, brilliant hotel dining rooms and dances, or quiet mountain retreats where one may merely rest, or go trout fishing—this is the unique section of your country that you should see.

*Southern California is the New Gateway to Hawaii.*

It absorbs you, revitalizes, renews your interest and spirit, and rebuilds torn nerves in a remarkably short time. A great playground, it has the playground atmosphere in which troubles vanish over night.

Truly a summer here is unlike any that you've ever spent; for in varied possibilities in sports, sight-seeing, or in methods and kinds of *pure rest* that you can take, there is no other land within your United States that is similar in any way.

*Change* is the *essence* of a good vacation. Completely new environment is magic medicine. Golf is *more fun*, likewise tennis, swimming, and all other pastimes take on zest in the midst of such change.

Do the things here that you can do in other places and *enjoy* them more. And do a thousand things, if you have time, that you can't do anywhere *but* here. That is Southern California, and it's at its best in summer.

Plan the trip now. The railroad journey through the Great West is teeming with historic interest. You have the finest limited trains, the most comfortable travel in the world.

Any railroad ticket agent will gladly furnish further information. Or mail coupon below and get our "Southern California Book."

Let next summer be a *different* one—the best you've ever had.

LAIRD EXTENSION INSTITUTE  
100 Laird Building Minneapolis, Minn.

cusable while the book stores remain open. Proper nourishment, proper clothing, intelligently applied, constitute the prime foundation of child-life.

The second rule is, Restrain the child's activities only enough to keep it from getting killed or destroying valuable property.

No. 3 is, Never give a child a cheap answer. Its questions are of vital importance to it. So tell it the truth in so far as it is capable of digesting it. Answer as accurately as you can, whatever it asks about, and if you don't know how glass is made, tell the child so, and then find out for him. Never, as you value your soul, put a child's question aside with a lie or with pseudo-humorous misinformation. To do so is criminal, for you are putting an awful crimp in the child's education and it will have to waste hours of precious mental effort overcoming your thoughtless lie.

No. 4 is, Give the kid a good spanking whenever it is bad. But first make sure that it is the child, and not you yourself who needs the licking.

AND that is about all the rules I have got about bringing up a kid, and so I have only got to tell the last half of the title, which is why I have brought him up. Well, the answer to that is, because I have a hunch that he may do some of the things which I have fell down on, later, when I have fell down for the last time. Because having this kid, that I helped make, actually speaking and thinking and moving about, is one of the chief miracles which prove the existence of God to me, because you can bet your sweet life no human ever made anything so wonderful without divine help. And I did it because I wanted to be a real woman, and a woman with no child is an old maid even if she has a living husband and four divorce certificates. Then again I did it because I wanted someone to love without having to put on the brakes every now and then the way a person has to with a husband, on account otherwise he might get too sure of you. And also because I like to think I contributed at least one American citizen to a country which needs more Anglo-Saxon ones, and if he don't make good, why I will lick the pants off of him. And then again I raised him because I like to make things—real things, and the more difficult they are, and the harder to produce, why the better I enjoy making them, even if I do crab a lot about how overworked I am, and etc.

And also, I needed somebody to educate me and bring me up right, and believe me, there is no one can do it like your own kid will. If you have not already proved this, get yourself a copy of my special parent's outfit, consisting of two pairs of ear muffs, two sets of shock absorbers, an encyclopedia and a good strong common desk ruler, and take a chance! It pays!

H. G. WELLS, one of the greatest of all living writers, has prepared for next month an informative and entertaining article on the subject: "What Everyone Should Read." Few men have read so many books in so many different fields of thought as has Mr. Wells. He gives you the benefit of what he has learned from this reading.

*So effective at easing pain,  
Sloan's has become "The World's Liniment"*

## To-day Sloan's is used in **1** out of every **3** American homes

**W**HAT is responsible for this remarkable growth—the widespread use of Sloan's not only in this country but throughout the world?

It has been due to one outstanding fact—the amazing effectiveness of the liniment itself.

No one who has ever tried Sloan's for a tired, aching back, a strained shoulder or ankle, a bruised or sore muscle anywhere, is ever again without it.

### **How Sloan's brings relief**

Most muscular or nerve pain is due to congestion. Congestion is the condition that results when blood collects in a tissue and does not circulate freely.

Sloan's Liniment counteracts congestion. It draws the blood away from the tight inflamed area and restores normal circulation.

### **Its effect is almost immediate**

At first a warm, tingling glow—a drawing, healing

sensation. Then suddenly you notice that the pain itself is gone!

That is the thing which will surprise you most, perhaps, if you have never used Sloan's before—the quickness with which it brings relief.

### **Keep Sloan's always handy**

If you occasionally stand on your feet all day and have a tired, aching back at night—if damp weather is apt to mean stiff or sore muscles—if you have a young athlete in the family who comes in with sprained elbows or bruised knees—you will particularly want to keep Sloan's Liniment constantly at hand. There is nothing that is "just as good".

Sloan's will not stain the skin. It should be applied thoroughly. No need of rubbing—it penetrates.

Don't wait for the time when you are badly in need of Sloan's. Get a bottle today. Thirty-five cents at all drug stores.

# Sloan's Liniment

*Wherever congestion causes pain—use Sloan's*

Public health officers recognize the medicinal and of Formamint in combating infection.

## Especially in crowds your throat needs this protection

WHEN disease is epidemic, we are warned against crowds. But we cannot escape from our usual business and social contacts. So physicians strongly urge throat hygiene as the best practical means of preventing infection.

The germs of disease will reach our throats no matter how carefully we guard against them. But we can reduce to impotence the action of these throat germs through the use of *Formamint*, the germ-killing throat tablet.

Physicians, everywhere, are endorsing this method of throat

protection. The throat is the gateway to the entire system, and in it germs breed and develop with incredible quickness to malignant vigor.

This is how *Formamint* acts: the tablet slowly dissolves in the throat, releasing a powerful, yet harmless germicide. This mixed with the saliva penetrates into every fold, nook, and cranny of the throat, checking germ growth, killing germ life with scientific certainty.

Use *Formamint* when your throat feels irritated. Use it as a protection—it's the safe way.

To acquaint you with *Formamint* we will send a trial tube on receipt of 4 cents in stamps to defray the cost of mailing. Address The Bauer Chemical Company, 114 West 18th Street, New York, N. Y.

## Is Your Office Cluttered Up With Frills and Titles?

(Continued from page 51)

will get to be automatons—doing without question, therefore without judgment or intelligence, what they are told. I have known a set of files to be kept assiduously and at considerable expense for years after there had ceased to be any possible use for them. The file clerk was simply going through the motions, doing what she was told, without any thought as to the reason or usefulness of it. That's a frill that costs money in any organization—a whole lot of it, if the truth in similar cases were told for all businesses.

Don't gather that I have a contempt for proper system. Full credit must be given to organization and machinery. "Order is heaven's first law." But there is a danger of pyramiding system until it finally leads to bureaucracy. This goes for the soft drink emporium that makes you buy checks before you know what your bill is going to be, as well as for the bank that obliges you to do a lot of unnecessary trotting around so as to make it entirely convenient for the folks on the inside.

A LOT of people lay a great deal of store by titles. Very often, in standardizing or putting a concern on an up-to-date basis, or introducing efficiency methods, or revamping the existing set-up on some other pretext, the question of titles receives long and serious consideration at the hands of the gentlemen performing the operation.

Once at a banquet the program contained a printed list of the speakers. One or two of them were entitled to the use of "Honorable" before their names. The printer, in order to have an even margin and make the program look nice, I suppose, had inserted "Honorable" before every speaker's name. One gentleman rose when his turn came, and said:

"My friends, I've been puzzled this evening to know why they gave me the title of 'Honorable' on this program. I couldn't think of any reason for it until I was called on a minute ago. Then I happened to remember that once I was a notary public!"

In none of the banks where I got my experience was there any great emphasis on titles for their own sake. The one where I started as a messenger had a president, vice president, cashier, and perhaps one or two more. We knew very well why the men in these positions had their titles. Take the president: he was head of the works, and on the job! The others followed his example.

The giving of titles can be carried to the point where they cause a lot of heart-burning in an organization, because of vanity and false pride. But a man of sense discounts every title he meets until he understands what's behind it. Solely because one is an assistant vice president does not make him, like Gunga Din, a "better man" than the cashier.

I knew a man who helped to organize a bank in a medium-sized town. He had a business of his own, so he was made vice

president, without being expected to devote any considerable part of his time to the institution. He was a hard-headed man, though, and he could serve the institution admirably on important cases.

Presently he learned that the official staff had been augmented by the appointment of two more vice presidents. He went around to see where *he* belonged. He discovered that in the estimation of the new officers his place amounted to something like second assistant honorary vice president. Yet in large part his money and influence had put the bank on the map!

"I always thought," he said rather grimly, "that a vice president was a chap who was supposed to act when the president was away!"

Not always—not when people think too much of the frills!

The giving of titles is occasionally carried to ridiculous extremes. A story has gone the rounds about a couple of men who met on the golf links of a country club near New York. They agreed to play together, and in the course of the introductions one asked the other what his business connection was.

"I," he replied, "am vice president of—"  
He named a prominent institution in the city, a well-known bank.

"Is that so?" exclaimed the other.  
"Well then, I am glad to know you. I'm a vice president there myself!"

I am saying a good bit about banks, because that is where my working experience has been. But a banker has a better chance than most to look into various kinds of business, and I know that the disposition to over-emphasize titles is not confined to banks.

**T**HERE was one case where the head of a prosperous business was getting along in years. It happened that nobody in his organization was big enough to fill his shoes when he stepped out. Naturally, the chief wanted such a man, and he decided to bring in some young fellow whom he could train as his successor.

The old man had spent a good many years working. He had never given much attention to the frills for their own sake. He heard of a young business man whom he thought might come up to the specifications for the position, and he made a proposal. It was a wonderful opportunity. But the younger man refused it.

His reason sounds foolish, and was foolish. He had been accustomed to having a title indicating in the minds of most people a considerable degree of responsibility and authority. He had grown to like it. In the new position at the start he was not to be given as lofty a title. The old man wanted to be certain first that his prospective successor was worthy, and he refused to confer a big title until it had been earned by service.

The disagreement on this non-essential point split up what should have been a mutually profitable arrangement. I have no doubt that there are plenty of men like this. They accept a good many dollars less in the salary envelope each month merely to possess a title or a private office or authority, or something else that gratifies their pride rather than their sense of achievement.

To put it in another light: I have known of men being ruined when they

Learn to play Auction Bridge from this book

Easy, but expert, lessons on bidding, doubling, scoring, finesse, leads, playing, etc., etc. Complete rules of all kinds of Auction—Pivot, Progressive, Three-hand, Two-hand, Duplicate. 78 pages. Everybody who plays or wants to play Auction should have this book, 10c postpaid. Send coupon below.

lot of unrelated facts. But usually knowledge for its own sake is a frill. The important thing is to know how to relate facts that belong together, and then to use them profitably.

That is wisdom. And wisdom commands a high price in business.

No man, in my judgment, is very wise who keeps on buying knowledge—storing up facts—without ever putting himself in a position where he can sell some of it. Not long ago I heard a successful bank official say to a man I know:

"You have been buying knowledge for a long time. When do you expect to dispose of some of it?"

In other words, he had given no evidence, in the opinion of the official, that would indicate an inclination to apply his knowledge to a useful purpose.

It always comes back to that: knowing something, and turning your knowledge to a useful purpose. Big salaries are not paid to the people who have merely learned a lot of facts. The test you can apply to yourself in your acquirement and disposition of knowledge, and in your progress in your work may be stated wholly in terms of increased usefulness. Are you getting to be more useful to your employer, to your employer's customers? Are you bringing home real results? Does your work show favorably somewhere in the profit and loss statement?

Or, are you a frill?

Unless increased usefulness is the result of your work you might as well stand on the street and pound a drum. You could probably attract as much attention to yourself that way as any other—if personal notice is what you want. But I say, out of an experience with a good many varieties of people and situations, that a reputation for having knowledge and being able to attract attention to yourself will take you no distance, unless it is coupled with constant usefulness. A title is as big or as little as the man behind it.

**AND** so with routine and standard forms and all the rest. In so far as they serve a useful purpose they ought to be kept. But they are tools, not the finished article. As soon as they become an end in themselves they hinder the doing of work and ought not to be tolerated.

I gladly admit, and claim, that organization charts and systems are fine in their place. I object to them only when they usurp the place of something else, and clutter up the channels of useful activity. And in any organization with which I may be connected, at least, I never want to see a plan take the place that ought to be filled by a man.

There are two subjects that cannot be completely charted and correlated in even the best of plans: they are Almighty God and human nature, and both cut quite a figure. It is my judgment that a lot of us get our trousers shiny sitting at our desks poring over statistics, department reports, and trying to appear terribly busy, who could spend our time to better advantage learning and cultivating the people in our organizations, and getting a more intimate insight into the viewpoint of those with whom we do business. As long as men and women have to be taken into the reckoning there isn't any possible way to add a lot of frills and make business automatic.

## From the Clouds these dainties fall

Puffed Wheat and Puffed Rice are created for you in this heroic way.

The grains are sealed in guns, then revolved for an hour in fearful heat. The bit of moisture in each food cell is thus changed to steam. When the guns are shot the steam explodes. Over 100 million explosions occur in every kernel.

Then from the steam clouds fall these bubble grains, puffed to airy morsels 8 times normal size.

Every food cell is blasted so every granule is fitted to digest.

### Not mere delights

This is not done to delight you, though it does.

Prof. Anderson invented this process to make whole grains wholly digestible. To make every element available as food.

Children need whole-grain diet. Essential food elements are generally lacking with children who don't get it.

Puffed Grains make that diet tempting, so children get enough. And every atom feeds.

Serve in every way you can. There are no better foods for children, and no whole-grain foods which they like so well.

## Puffed Wheat

8 times normal size

## Puffed Rice

## Tips on How to Write Letters

(Continued from page 50)

tell ourselves subconsciously. He should be too big to judge us because we neglected to dot our i's or cross our t's. Why condemn us because we failed to write a clean-cut, well-arranged, well-worded letter?

A little incident witnessed by the writer several weeks ago may help to explain. Having a luncheon engagement with my friend Bosworth, I was seated in his private office. Bosworth is vice president of an insurance company. Several years ago he took upon himself the duties of employment manager. I think he likes the job now. He is a great human being, and hence a keen judge of human nature. He hires many people in the course of a year. He reads thousands of letters applying for positions, and interviews the most likely candidates.

As I walked into his office Bosworth had just finished a brief conference with an applicant for a rather important position. He sent the man away without giving him the job. From what I saw of his visitor and what I heard him say, I felt sure he was both capable and keenly intelligent. He looked every inch of it.

"That chap looked competent from head to heel," I ventured to remark as we started out to lunch. "I am curious to know why you didn't hire him?"

"Well," responded Bosworth, "that's easily explained. You say he seemed to have all the qualifications. I believe he did have them. But the trouble was I found out about them too late. The position has been promised to someone else. You see, he came right to my office uninvited, after I had failed to answer his letter. That letter of his was what fooled me. It was so poorly written that I misjudged him. That young fellow has plenty of ability—every bit as much as, and perhaps even more than, the man to whom I have promised the place. The letter he wrote, however, was directly responsible for his failure to land the job."

BOSWORTH'S experience with the applicant was that of the average employer. Why? If ever a man or woman is guilty of what the lawyers call "contributory negligence" it is when he or she uses poor English, cheap writing paper, or bad penmanship in applying for a situation. It is a time when one needs every ounce of one's tact, intelligence, and care. For this letter is a vital document—to the writer. It stands between him and the position he seeks. Often it is the bridge over which he may pass to opportunity itself.

First appearance is important in this kind of letter. The writer, in his eagerness, little realizes that the recipient cannot read his writing as readily as he himself can. No busy executive has the time to decipher illegible handwriting. Hence, he very naturally classifies the writer as either slovenly, careless, or inconsiderate. It is a fairly good indication that the writer's personal habits or his working methods may be equally as poor.

No live individual nowadays is negli-

gent about appearances. Up-and-doing men and women have learned to their profit that it pays to look presentable at all times. They well know the value of first impressions.

You send a man a letter asking for a job. You expect that letter to sell your services. The letter, then, is your representative, your salesman. You cannot expect your salesman to succeed if you send him on this important mission with his coat all threadbare, his cuffs frayed, his shoes unshined, and his face unshaven. Of course you can't. You wouldn't think of it. You would send him looking fit. To look correct is to look convincing.

The typewritten letter is the thing. Typewrite it yourself or have somebody else do it. But see that it is accurately, neatly done. Don't be satisfied with blurred or indistinct letters, erasures, or type that is clogged with dirt. See that the typing is clean-cut and legible. It adds firmness to your letter, as well as readability.

**T**HE letter we write for a job nowadays is not like the letter we used to write. A new method of approach has come into use along with the big strides that have been made in selling methods. The letter of application to-day is truly a sales letter. It aims first of all at the reader's self-interest. Then, by the style of argument explained later on in this article, the letter builds up a value in his mind. Value-building is a matter of making him want the article.

So when you sit down to write that all-important message to a prospective employer, it is your purpose to compose a letter with salesmanship in it. Your aim should be to write something that will warm the reader's interest in you and your ability. Writing a letter of this kind is not unlike trying to make a man your friend. Nothing is so easy to overdo. If you try too hard, if you say too much, if you strive to appear too clever, or too capable, if you seem to over-estimate yourself, your effort is likely to fail.

You want to know where to draw the line between telling how well you can fill the job and saying things that sound boastful. It looks like a ticklish question but it really isn't. The letter that gets the job simply substitutes thoughtfulness for self-assertion. Instead of starting to talk of "me" it starts to talk of "you." First of all it shows an interest in the employer's wants instead of the applicant's.

The employer is thinking of what *he* wants. The quickest way to get him interested in you is to show that you're interested in him—that is, in his requirements. Knowing the employer's business, or understanding something of his requirements through having read his advertisement or made inquiry, you have an idea of his needs. Now, having that idea, your opening sentences will tactfully display a knowledge of the requirements of the position. You should also mention the desirable qualities that fit one to fill the vacancy. In so doing, you naturally say things that look at the matter from his side of it. And that's exactly what he likes.

He wants a man or woman to fill a certain vacancy. He knows the duties of the position and knows them well. He therefore has a mental picture of the equipment he would like to find in one who ap-

# Your glands are 20 times more active when you chew your food

## A new instrument gives startling proof of how the glands protect the teeth

**HIDDEN** in your mouth are six tiny glands. Until recently it had never been possible to watch these glands at work. But now a new instrument—the sialometer—has revealed some startling facts.

These glands are constantly at work—washing your mouth and throat with germ-free fluids. It is this constant bathing of your teeth and gums which protects the precious unreplaceable tooth enamel from the acids of decay.

### How your glands fight this unseen enemy

Few people realize that acids are forming in the mouth night and day. Minute food particles are constantly turning to acids. Brushing your teeth, while absolutely essential to mouth cleanliness, will not keep the acids from forming. Even if you brush your teeth after every meal enough food remains to feed thousands of acid-forming bacteria.

Only your mouth glands can fight these acids successfully—by flushing automatically the mouth and teeth every moment of the night and day. The fluids with which they bathe your teeth and gums are alkaline. They neutralize and wash away the acids as fast as they form.

But today our glands are not functioning normally. Nature intended us to stimulate or exercise these glands by chewing.

cially to meet this condition. By its mere presence in the mouth it causes the salivary glands to flow for a longer period of

*Less than two Eskimos out of 100 have any signs of dental caries. In civilized countries less than 3 out of 100 escape tooth decay. The rough, coarse, often frozen food of the Eskimo demands constant chewing. Thus their glands are kept active enough to protect their teeth.*

time. It does for us what long-continued chewing did for our primitive ancestors.

A prominent dentist says, "A flow of saliva must be stimulated to clean the mouth of starchy residue, and circulation must be stimulated in gum tissue by some agent in the dentifrice to take the place of the stimulative action of coarse food. Pebeco does this safely and well. Twenty years' use has proved that Pebeco will save the teeth and hold the ground that dentis-

*This instrument (the sialometer) is yielding interesting facts about the influence the salivary glands have in preventing tooth decay.*

try has gained in the fight against caries and gingival disease."

For cleansing and polishing the teeth no better dentifrice than Pebeco can be made. It contains no grit—or harsh abrasive to scratch the delicate enamel, or injure the edges of the gums.

Take home a tube of Pebeco tonight and note its exhilarating and refreshing taste.

It will keep the glands of your mouth active and your teeth sound and free from decay. 50c at all druggists. Manufactured only by Lehn & Fink, Inc.

### Make this test of your glands

If you will send us 10c we will send you material for testing whether your own salivary glands are active enough to protect you against these deadly acids.

We will include a junior size tube of Pebeco, free, and our booklet, "How the Glands Protect the Teeth." Lehn & Fink, Inc., Dept. D 5, 635 Greenwich Street, New York.

*Like the steam on the window the deadly acids begin to form on your teeth as fast as you brush them away. Only your glands can keep your teeth free from these destructive acids.*

As shown by the sialometer, chewing increases the flow of the glands 2,000% and keeps them functioning thus for a long time. The soft foods we eat today, however, give the glands neither exercise nor stimulation.

Pebeco is a dentifrice prepared espe-

## \*Can an infected tooth cause insanity?

According to one eminent medical authority infected teeth are sometimes the cause of insanity.

In one group of such afflicted persons recently examined infected teeth were present in every case. In many patients these infections had spread from the teeth to the tonsils and even down into the stomach. These patients were placed under the constant care of surgical dentists—all infected areas were cleaned out and their mouths put into a healthy condition.

As a result of this treatment cures of insanity startling to the medical profession were reported.

While further scientific evidence is needed to establish definitely the relation between insanity and tooth decay, certainly the harmful effects of an unhealthy infected mouth upon the whole

system are recognized by the entire medical profession. By actual tests mental sluggishness has often been found to result from bad teeth.

Certainly every man, woman and child is in danger who does not visit his dentist regularly. Let him remove the tartar from your teeth, examine them for signs of pyorrhea and repair every cavity. Have them x-rayed for infected roots if he suspects their presence.

Then do your part. Clean your tongue every morning with a brush, a tongue-scraper or a coarse wash cloth. Use a tooth paste that cleans and polishes your teeth without scratching the enamel. And use one that will mildly stimulate the flow of saliva. Saliva is Nature's means of keeping the teeth clean. It goes where your tooth brush cannot reach.

# Play a Conn For Pleasure and Profit

Take a tip from such  
popular artists as

TED LEWIS, the famous jazzical clown, who says many of the effects he gets are possible only with the Conn saxophone;

PAUL BIESE, renowned soloist and Columbia record maker, who with his orchestra members says Conns are the last word in perfection;

DON BESTOR, director of the popular Benson orchestra of Victor record fame, which is exclusively equipped with Conn instruments;

FRANK WESTPHAL, whose Rainbo Garden orchestra makes records for Columbia, and all members of which acclaim Conn supremacy.

CONN is the only maker of every instrument used in the band. Choose the instrument that suits your talent. To be sure it's best, insist upon Conn.

For fifty years Conns have been the standard of quality, endorsed by the leading bandmasters, soloists, symphony and opera conductors, including the great Sousa, because Conns are perfect in tone and tune; easy blowing; reliable in valve, slide or key action; perfectly balanced, handsomely finished.

More Conn saxophones are sold than any other make in the world—a tribute to quality. Send for complete information on exclusive features, including hydraulic expansion of taper branches, insuring easy blowing, perfect tone.

Conn violins are of highest quality, beautiful tone. Conn drums are endorsed by leading drummers.

**FREE TRIAL, EASY PAYMENTS.** Write today for details, mentioning instrument that interests you.

Dealers and agents throughout the country. Factory branches in all large cities.

the chalk; so he gave me a hammer, some tacks, and a lot of cards, told me to copy the directions on them and to nail them on the cars.

"It was a mean job, believe me! Every time I put my hands up to fasten a card, the rain poured inside my sleeves. The cards were almost as soft as blotting paper. I got so drenched that there wasn't a dry thread on me. Anyway, I was only a boy, and I liked to play as well as any boy does.

"But I did do the job," said Mr. Gorman seriously. "I sloshed around that yard pretty nearly all day. I guess I was as mad as the traditional wet hen, which I must have closely resembled in appearance; but I didn't, so to speak, fly the coop and run away. This seemed to please the agent, Mr. Moore; and the result was that he gave me a job in his office. It was supposed to be a promotion, but my salary wasn't 'promoted.' It was still only fifteen dollars a month.

"WITH one exception, I never in my whole business career have asked for an increase in salary. I didn't actually ask for it even that time, but I did sort of step on the accelerator.

"It was when I was in a Mr. Fayerweather's office, to which I had been transferred from that of Major Goodwin, a fine old ex-soldier, whom I regarded with something approaching awe. I had been getting forty-five dollars a month under Goodwin; and this was precisely what I continued to receive under Fayerweather.

"When Goodwin found this out, he said to me, 'Why, Jimmie, I let you go because I thought you would have more pay in that position. It looks as if we'd have to maneuver a little. Do you know anybody, outside the railroad business, who would offer you a job?'

"I told him I knew of one man who would. It was a Mr. McCloud, a man who used to come down to the yards to inspect grain shipments for members of the Board of Trade. It hadn't been my duty to help him, but I used to do it anyway, because I liked him."

Mr. Gorman paused; then he looked up with a quizzical smile.

"I feel it in my bones," he said, "that I'm going to preach a bit of a sermon after all. I'll tell you right now that it is going to be something about *liking* people and about making them like *you*. Just keep that in mind as I go on with this story. I believe you'll get the application before I come to the sermon itself.

"For instance, here were two men: Goodwin and McCloud. I had liked both of them. Because of that fact, I had tried to please them. I hadn't dreamed that Goodwin had any particular liking for me; but he must have had, for he tried now to do me a service. He, himself, wrote to McCloud; and McCloud promptly wrote to me, offering me a position at twelve dollars a week, which would amount to over fifty dollars a month. Goodwin told me to show this letter to Fayerweather and see if it wouldn't act as an accelerator in getting a raise where I was.

"I hated to do this, so I adopted indirect tactics. Every time I saw Mr. Fayerweather approaching me in the office I would pretend to be absorbed in reading the McCloud letter. Finally, he stopped and said, 'You seem very much interested

in your private correspondence, Jimmie.'

"I managed to look so guilty and embarrassed that he asked to see the letter. Of course, this was just what I wanted; so I handed it over. He read it—and we later settled that I was to stay on with him at a salary of fifty dollars a month.

"In a way, this scheme of kind old Major Goodwin was a bluff. But it wasn't dishonest, because McCloud's offer was made in good faith. He really meant it. And I was actually worth the extra five dollars I cost the railroad.

"Not long ago," laughed Mr. Gorman, "I was reminded of that old incident when I signed my name to an order increasing the salary of one of our own employees. He had 'stepped on the accelerator' in much the same way I did. When I saw him, a few days later, I told him I had been glad to sign the order.

"'But,' I said to him, 'you needn't think you invented that scheme for bringing the matter up. I worked the same one on my boss forty years ago!'

In the various talks I had with Mr. Gorman there was one thing with which I was constantly impressed. That was his astonishing memory. He did not seem to forget a single detail—names, initials, dates, figures, places. When I commented on this, he said:

"Well, I think I had a fairly good memory to start with; and I've tried to keep it on the job, because I have found it an invaluable asset. It is a great help in business; and it is even a greater help in human relations. For that matter, business and human relations are inseparable.

"But it is of practical value too; as I discovered in one job I had a long time ago. While acting as bill clerk I took up the study of shorthand. I didn't have any teacher. I just bought a book and tried to learn from that. But someone who saw me carrying the book around with me told my employer that 'Jimmie' was a stenographer. Whereupon, without inquiring into my attainments, the boss actually made me stenographer to two men in the office.

"I ACCEPTED the appointment without confiding to anyone that the freight-house cat knew almost as much about stenography as I did. I had learned most of the signs to be used, but I'd had almost no practice in writing them. I never had taken a line of dictation. I don't suppose I had written a dozen sentences in shorthand. But I wanted that position! So I took it.

"One of the men, Mr. Jackson, was very considerate and also was good at dictation. I got along all right with him. The other man didn't really know how to dictate. He used to write out in pencil what he wanted to say and then read to me what he had written. Of course, he could read it pretty fast; and in two shakes of a lamb's tail he was so far ahead of my notes that I was left at the post.

"But he never knew that he had me buffaloed! While I made meaningless marks in my notebook, I listened to him with all the concentration I could muster. The result was that I could remember pretty accurately what he had said. When he had finished the alleged dictating, he always got up and left his desk for a while, and I seized the opportunity to run through the penciled drafts he had used in

*Of the 1300 Corona stores in the U.S.A., perhaps the most famous is this one—located on 42nd St. near Broadway, New York City.*

## Let us answer your questions about the New Corona

### WHAT ARE THE NEW FEATURES?

- 1—Automatic Ribbon Reverse, springless and trouble-proof.
- 2—10-inch Carriage. Wider than in any other portable.
- 3—High Speed Carriage Return and Line Spacer.
- 4—Standard Portable Keyboard. The simplest of all keyboards and best adapted to touch-system operation.

### HOW DOES CORONA DIFFER FROM OTHER PORTABLE TYPEWRITERS?

The new Corona is really an office typewriter in portable form—complete in every necessary detail and yet so compact and light, you can carry it with you anywhere. It is simpler—more trouble-proof than any other

standard typewriter—and it is the only portable that has behind it 16 years of successful experience.

### HOW WELL WILL IT STAND UP?

No typewriter in the world has equaled Corona's record for enduring punishment. 30,000 Coronas saw active duty in the war. 500,000 are in use—more than all other makes of portables combined.

### WHAT IS THE PRICE? WHERE CAN I SEE IT?

See the new Corona at any one of our 1300 Corona showrooms—from Maine to California—or in your own home, at any time to suit your convenience. Just look up "Corona" in your phone book, or write us for new descriptive literature. \$50 still buys Corona, complete with carrying case. In Canada \$69.

CORONA TYPEWRITER COMPANY, Inc.  
102 Main St., Groton, N. Y.

# Do You Make these Mistakes in ENGLISH?

Does your English reveal your lack of education or does it prove that you are a person of culture and refinement? Are you handicapped in your speech and writing or does your command of English rise to meet every occasion and every situation? English is the one weapon you must use every day. Here is how you can improve it almost at once.

**M**ANY persons say, "Did you hear from him today?" They should say, "Have you heard from him today?" Some persons spell calendar "calender" or "calander." Still others say "between you and I," instead of "between you and me." It is astonishing how many persons use "who" for "whom," and mispronounce the simplest words. Few persons know whether to spell certain words with one or two "e's" or "i's" or "y's," or with "ie" or "ei," and when to use commas in order to make their meaning absolutely clear. And very few persons use any but the most common words—colorless, flat, ordinary. Their speech and their letters are lifeless, monotonous, humdrum. Every time they talk or write they show themselves lacking in the essential points of English.

SHERWIN CODY

Every time you talk, every time you write, you show what you are. When you use the wrong word, when you mispronounce a word, when you punctuate incorrectly, when you use flat, ordinary words, you handicap yourself enormously. An unusual command of English enables you to present your ideas clearly, forcefully, convincingly. If your English is incorrect it hurts you more than you will ever know, for people are too polite to tell you about your mistakes.

## Wonderful New Invention

For five years Mr. Cody worked almost day and night on the study of the problem, "How to make correct habits in speaking and writing stick in your mind." After countless experiments he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day. Now you can stop making the mistakes in English which have been hurting you. Mr. Cody's students have secured more improvement in five weeks than had previously been obtained by other pupils in two years!

## Learn by Habit—Not by Rules

Under old methods, rules are memorized, but correct habits are not formed. Finally the rules themselves are forgotten. The new Sherwin Cody method provides for the formation of correct habits by constantly calling attention only to the mistakes you make.

One of the wonderful things about Mr. Cody's course is the speed with which these habit-forming practice drills can be carried out. You can write the answers to fifty questions in 15 minutes and correct your work in 5 minutes more. The drudgery and work of copying have been ended by Mr. Cody. You concentrate always on your mistakes until it becomes "second nature" to speak and write correctly.

## Free—Book on English and 15-minute Test

A polished and effective command of English denotes education and culture. It wins friends, and makes a favorable impression upon those with whom you come in contact. In business, as well as in social life, correct English gives you added advantages and better opportunities while poor English handicaps you more than you will ever realize. And now, in only 15 minutes a day—in your own home—you can actually check up and see yourself improve by using the 100% self-correcting method.

If you are efficient in English it will give you greater confidence; if you are deficient you surely want to know it. For this reason Mr. Cody has prepared a simple 15-minute test which you can take in your own home. The correct answers are given so you can tell at once just where you stand. Write today for this test—it is free. We will also gladly mail you our new free book, "How to Speak and Write Masterly English." Merely mail the coupon or a postal card. Free yourself of the embarrassing errors in English that make you feel ill at ease. You can never achieve your greatest possibilities until you master English. Write today.

dictating. With this and the help of my memory, I got along until I became more expert.

"There was one other reason why I made such a mess of taking his dictation. He used to call me the very first thing after I reached the office. It was winter then and I had to ride five miles on the street car to get to work. You might not think it of me now," laughed Mr. Gorman, "but I was so modest and bashful then that I used to ride those five miles on the open front platform of the car because I was too diffident to ride inside with the other passengers. The consequence was that my hands were half frozen when I reached the office. Even if I had known how to take notes, I couldn't have done it with my stiff fingers.

"But by the time the other man, Jackson, wanted me, I was pretty well thawed out and, with one exception, I never failed to take satisfactorily any letter he dictated to me. That one time I did fail completely; and I never have forgotten about it.

"IT SEEMS that a Cleveland man, named Bayliss, had shipped a hearse to an undertaker in Streator, Illinois; and while it was on a flat car going down our line through the Fox River Valley, a terrible storm came up and blew the hearse off into the river. This was, as you might say, a deathblow to the funeral chariot. Even if it could have been delivered after that—which it couldn't be—no self-respecting corpse would have consented to ride in it.

"On receipt of the sad tidings, Bayliss sent in a claim for twenty-eight hundred dollars. It should have been handled by the Loss and Damage Department. But Jackson had a very remarkable command of language; and as this was an emergency that needed elaborate explanations, the matter was turned over to him. He dictated the letter to me, and it was a masterpiece! But I was as bad off as the hearse when he got through! He used a flood of technical phrases which I, never having heard the Loss and Damage lingo, didn't understand.

"Later in the day, I gave him transcripts of the other letters he had dictated, but I told him I had left the Bayliss letter to do that night, as it was such a long one. The fact was I hadn't been able to make head or tail of my notes. I took them home with me that night. In fact, for days I took them everywhere I went; and each day I gave Jackson some new excuse for not having written the letter.

"I never did write it! Not long after that, I took another position; and Jackson did not know, until I told him, years later, why I didn't transcribe that Bayliss letter.

"The fact is," said Mr. Gorman confidentially, "I never became an expert stenographer. But by using my wits and cultivating my memory, I managed—except that one time—to satisfy the men who thought I was a stenographer; and that was the important thing.

"I left the Burlington road when I was not quite seventeen and came to work for the Rock Island," said Mr. Gorman, taking an old leather-bound book from a drawer. "Here is the pay roll of that year 1881; and here is the first entry of my name, with the amount of my monthly pay."

He handed me the book and I read: "James E. Gorman, Aug. 16, \$66.66." Only three men on the list got more pay

than this seventeen-year-old boy received. His salary was \$800 a year.

"Up to that time," he went on, "I had been a willing worker and, on the whole, a pretty good boy. I never had drunk, for instance, although many railway employees did drink in those days. I remember one night—we used to work all kinds of hours—the boss came down to the Burlington office, where I then was, and found not a soul there except me.

"I knew, and he surmised, that the men were in Nick Hurd's saloon, a block or two away. And when he stamped out of the office to go after them I ran as hard as I could to Nick's place by another route, stuck my head in the side door and warned them of the approach of danger. When the boss got back to the office, it was a perfect hive of industry. I warned those men, not because I condoned their drinking; I didn't give that feature a thought. I just liked them, and wanted to save them from a calling down.

"I used to have some queer experiences," said Mr. Gorman, reminiscently. "Some of the men I worked with were old enough to be my father. I used to run errands for men who weren't getting nearly as much pay as I was. I had plenty of energy, I had youth and strength, and I liked these men. So I was always glad to do them a service if I could.

"I remember one nice old fellow—that is, he seemed old to me then—a Frenchman, who used to spend most of every night gambling. As a result he would come to the office in the morning without having had time to get his breakfast. There was a lunch counter next door; and, as the head of our office never seemed to mind my goings and comings, the Frenchman would slip up to me and whisper:

"Jimmie! Go down and order two pork chops and a cup of coffee for me, and tell them I'll be down in ten minutes."

"I'd slip out and give the order; and in that way he didn't have to be out of the office a minute longer than was necessary to bolt his breakfast. A few years later, when I happened to be wanting a job, that man wrote me a letter of recommendation which I never have forgotten.

"THERE was another man, in that same office, with whom I had a curious arrangement. He was a drinking man; the kind that simply has to have a drink at a certain time. If he didn't get it, he couldn't work. So when he gave me a signal, I would put on my hat and go down-stairs. In a few minutes he would come down, bareheaded, put on my hat, and go over to the saloon. I would wait until he came back and returned my hat to me. Then he would go up to the office. As he never took his own hat, he was not suspected of leaving the building; and, as I said before, the boss didn't seem to watch my movements with any particular vigilance.

"It begins to look as if that sermon—the only one I have any inclination to deliver—is about due now," said Mr. Gorman, with a humorous twinkle in his eye. "Talking about those old days makes me realize how important a factor this matter of liking people has been in my business career. I'm not sure that it hasn't been the most important of all. It has helped me to make friends; and a man cannot really estimate how much he owes to his friends.

## If the White House had been painted black

To the world at large the White House has always been a symbol of American thought and ideals, an expression of national character . . . . What then would have been the effect upon American life and international opinion had the White House been painted black?

**B**LACK is negative . . . . . the shroud of mystery, deception and intrigue. White reflects purity, cleanliness and spirituality.

White enamel puts in the home those rare qualities vital to its wholesomeness and charm. Besides creating an atmosphere of order and refinement, it raises the degree of colors used in combination with it and increases their warmth and beauty.

Luxeberry White Enamel is the most striking achievement in the modern history of enamel-making. We believe it is the purest white ever developed. It produces a mellow, hand-rubbed effect and endures indefinitely without discoloring, cracking or chipping.

**BERRY BROTHERS**  
Varnishes Enamels Stains  
Detroit, Mich.      Wallingford, Conn.

*Luxeberry Painter.*

"Luxeberry Enamel is made in white and six mellow tones. It is the product of the makers of Liquid Granite Floor Varnish and Luxeberry Wood Finish, the original hand-rub varnish."

Save the surface and you save all.

**T**HIS special Buxton Keytainer was designed originally to provide a place for your auto license right with your auto keys. If you had one, you had the other.

Then people discovered that this little pocket was the safest place to keep all small important papers; lodge cards, railway tickets, license cards, theatre tickets, etc.

A BUXTON Keytainer keeps your keys flat, orderly and easy to find. It protects pockets and hand bag linings. Keytainers come in sizes holding 8 to 16 keys; from the plain serviceable type without the pocket at 30c. to the beautiful models in richest leather and fine gold at \$11.

All have the patented, revolving, humped hook preventing loss of keys and making them turn easily.

You'll find just the style, size and price Keytainer that you want.

KEYTAINER**  
Reg. U.S. Pat. Office

"Liking people stimulates a person to give good service. And, because liking wins liking, it helps him to get good service from others.

"That is one great secret of success in business—the desire to give the best service you can, and the ability to get from other men the best service of which they are capable. And the soundest basis for it is *liking*, mutual liking. You never get so far up the ladder that you can afford to dispense with that help.

"As a boy, I made good with my employers because I gave them willing service. And I know exactly why I am in the position I hold to-day: I am here to be the *willing servant* of all comers. That door is always open. Nobody is ever told that I'm out, or am in a conference, when I'm not. In years gone by, I sometimes was told things like that when I called at a man's office. And, like every caller who has that experience, I wondered whether it was the truth or not. That's the reason for my open door.

"You hear men say that business is business, meaning that it is a mere matter of dollars and cents, of cold-blooded calculation and competition. But it is something very different from that. It is, more than anything else, a matter of human relations; of likes and dislikes; of coöperation and mutual loyalty."

**MR. GORMAN** hesitated a moment, then asked his secretary to bring him certain correspondence.

"When the Rock Island road celebrated its seventieth anniversary last autumn," he said, "we broadcasted a radio program which included short talks by some of the officials. A few days later, I received this."

Mr. Gorman handed me a sheet which read:

DEAR SIR: Giving us music and letting us listen in to your talks anent the road's seventieth birthday was indeed a novelty. It brought me, an outsider, very close to you; and what you and your associates said was taken by me as personal. I appreciate that.

I now feel as if I knew the Rock Island personally; and sometime soon, when a choice of roads is before me, I shall use the Rock Island just because I am personally acquainted with it.

Accept my congratulations personally and extend my best wishes to all of the members of the R. I. family. This must be sincere on my part, as I have no R. I. connections (never had a friend on the R. I. until last Tuesday), but I like all of them.

When I had finished reading this, Mr. Gorman handed me another sheet.

"I don't know that you will be interested," he said, "but here is my answer to that letter."

It ran as follows:

DEAR MR. —: Your very unusual and particularly pleasing letter of October 13th is before me. I will convey your message to the others, and I am thanking you for them as well as for myself.

In my turn, let me tell you something that I think will bring us, if possible, a little closer together. When I was a very small boy I lived on South Union Street, and I remember distinctly the advent of Palmer, Fuller & Com-

pany to the corner of Union and Twenty-Second Street. Mr. Palmer I never saw; Mr. Fuller is as plainly before my mind's eye at this moment as if I were looking at him, with his smooth-shaven chin, rather good-sized nose, and side-burn whiskers. Then there was Mr. Vine A. Watkins, who looked after the lumber yard as distinguished from the sash, door, and blind factory, and who came originally from Montgomery, Illinois, where I think he is taking his long rest. George Curtis was the engineer, and he took pride in having the largest whistle in that part of the city, if not in the whole town; and then Mr. M. T. Greene, before he branched out with his big yard at Thirty-Fifth Street Bridge, made his office at Palmer and Fuller's; and Bill Walker—related, I think, to Mr. Fuller—was the shipping clerk of P. F. & Co.; and George Vandenberg was the boss in the factory—a good man who later took charge of the Chicago Lumber Company's factory at Thirty-Fifth and Iron streets, went from there to Montana a good many years ago, and I never heard from him again.

Now, your present employers occupy all of that site and more, too; and I feel not altogether a stranger to them, since one of the young brothers and myself lived in the same building at the northwest corner of Michigan Avenue and Fiftieth Street. He was not in very good health, and the last time I saw him was when I was in Los Angeles. I know he passed on several years ago.

I am writing this because I thought it would appeal to a man whose letter indicates to me there is a great deal of sentiment in his make-up. Any time I can be of any sort of service to you, please do not hesitate to call upon me.

"How in the world could you remember all that?" I demanded. "It is amazing."

"Not in the least!" was the quick reply. "Those men and those incidents were of striking importance to a boy's mind and were indelibly impressed on my memory. What I want to know is whether you think the man to whom I wrote the letter would enjoy it, and would feel that I am not just a cog in a big business machine, but a very human sort of person to whom other men are also human beings, to be liked and remembered."

"Of course he would!" I declared with conviction.

"Well," said Mr. Gorman, "his own letter showed that he is a human sort of person. If he is that kind, and knows that I am the same kind, do you think he will have a friendly feeling toward the business I represent?"

"I think he will ship by the Rock Island whenever he can find a decent excuse to do so," I laughed.

"THAT'S all I wanted to know," said Mr. Gorman seriously. "Because it just helps to prove what I said before: that business relations and human relations are inseparable; that when we like a man, we want to serve him; that we like the people who like us; and that, therefore, to be willing to like people is a genuine factor in business success. I don't consider the moments spent in dictating that letter a waste of my time as a business man. For it is just as important to a business to have friends as it is to a human being. Perhaps more so! A man can continue to exist without friends; but a business cannot."

"FROM Stake Driver to Railroad President" is the heading given to the story of the eventful life of "Bill" Storey, president of the Santa Fe Railroad, which Neil M. Clark has written for next month. How Mr. Storey climbed from a \$20-a-month job to the leadership of one of the greatest transcontinental railway systems in the country is a story rich in inspiration and helpful philosophy.

# CURTIS WOODWORK

"Curtis" the name, and "1866" the year this firm started to make the best woodwork possible, are marked on each piece of genuine Curtis Woodwork. A guaranty of Curtis intent. You protect yourself by asking for Curtis trademarked woodwork. See the Curtis Catalog at your dealers, or write the Curtis Companies' Service Bureau, Clinton, Iowa.

## Be Sure to Get Good Woodwork

**Y**OU are going to live with your woodwork a long time. Therefore, choose it as you would a fine piano.

The doors, windows, molding and built-in features of a home are what give it a "homey" appearance. If poorly chosen, the finest furnishings cannot conceal the bleak look about the house, any more than a pretty dress can offset a girl's freckles.

An old house can be wonderfully brightened up by changing some of the doors, windows—and perhaps by adding a fireplace, or some other built-in feature.

### Curtis woodwork covers every architectural type

Curtis Woodwork is different from what you ordinarily see in that it is developed from classic models. Our consulting architects went to purest types of Colonial, English and other architecture for their inspirations. You are always sure of harmony and correctness.

But more than style and design the use to which each piece will be put is always considered. The door and sash illustrated on this page are exposed to all kinds of weather. So weather resisting California Soft Pine is chosen. There are many kinds of woods, each suited to a special purpose, each coming in different "grades." Even a single tree may cut up into different grades, which if carefully chosen or passed at the factory would affect appearance and wear of your woodwork. Curtis selection of lumber for different purposes, and Curtis inspection is kept to the highest standards.

### The right wood for the right purpose

It is this good judgment and honesty in picking out the right wood for the right purpose that makes Curtis Woodwork last a lifetime and always look well. Along with selection of right materials and correct designs, Curtis Woodwork brings you the good results of most careful workmanship. Every piece of Curtis Woodwork includes refinements—an improvement here, added strength there—which do not always show at first glance but which make people satisfied that dollar for dollar Curtis Woodwork gives more value than others.

You have never given door panels a thought. You think of door panels as wood in a door. But examine the panels of the door illustrated in this advertisement—they will give you a good example of chosen Curtis virtues. They are considerably thicker and stronger than an ordinary door—yet this thickness does not show. The whole entrance is constructed of soft, close-grained, weather-resisting wood. Glazing is done with clear, double-strength glass.

If it were made for you alone, it would be very expensive. But quantity production brings the price within the reach of everybody.

### Each piece is trademarked

In specifying Curtis Woodwork, you are always sure of harmonious

design and thorough workmanship. But it is necessary to look for the trademark—which is on every piece—if you want to be certain of getting woodwork made with Curtis intent.

One of the great advantages of Curtis Woodwork lies in the fact that you can study an exact picture of it before you buy. You can see how it will look in proportion to your rooms and furniture. This is much more satisfactory than striving to visualize woodwork from a blueprint before it is made up. Curtis dealers can show you pictures of a complete Curtis wood-worked house or the details of an individual door. Ask them to show you the Curtis catalog.

Combination Kitchen Dresser and Work Table C-760. Within easy reach is everything needed to prepare a meal. For further information write for free booklet on "Permanent Furniture."

Dining Alcove C-740. Few people will dispute how handy and cozy this little breakfast nook is. Write for our free booklet on "Permanent Furniture."

Interior door C-305. This inside door carries the delightful homeliness of the English house. It is a true reproduction of Elizabethan lines. Ask for our free booklet on "Interior Doors and Trim."

# Look Out for Your Glasses!

(Continued from page 54)

Left hand is always free to follow column of figures.

## No OTHER has these time-saving features.

During the past eight years business has been turning to a more efficient adding machine. It is simpler, smaller, lighter. In no other type will its improvements be found.

This adding machine is the Sundstrand. Such concerns as Standard Oil Company; Sears, Roebuck & Company; International Harvester Company and many other leaders use 15 to 100 each. They say its many features speed work and cut costs.

Convenient size and light weight are advanced Sundstrand ideas. You comfortably carry it to any desk or job.

10-key operation is a Sundstrand perfection. Gives speed with ease to beginner or expert.

One hand control is a Sundstrand creation. Left hand is free to follow column of figures or turn checks.

Automatic column selection is another Sundstrand feature. Units are automatically placed under units, tens under tens, etc., without the slightest waste of time.

There are also advanced correction and protection features—sturdy strength and dependability.

Adding machine users, who know the Sundstrand, will tell you that no other compares with it. No other sets so high a standard in adding and figuring efficiency. "The re-orders tell the story."

Our leaflet, "Testimony," is sent upon request. Address Dept. A.

Sales and service stations throughout the United States and Canada

Only 10 keys to operate—

all at fingers' tips

A few years ago the man who took the precaution of having extra glasses was the exception, but to-day the custom has become very common. Nearsighted people, who find themselves in the greatest difficulty when they have to go without their glasses, are the least likely to have an extra pair. The reason is that the nearsighted man wears his glasses all the time, and consequently does not break them as often as the man who wears his glasses occasionally, merely for distance vision. The man who wears his glasses part of the time and makes a habit of putting them on and taking them off breaks ten pairs of glasses to the nearsighted man's one.

The nearsighted man who has learned from experience the importance of having extra glasses usually feels safe if he has one pair in addition to those he is wearing. The farsighted man who takes the same precaution usually has two or three extra pairs. Elderly women often have five or six pairs of glasses which they keep in convenient places in their homes, some on the ground floor and some up-stairs.

WHEN going abroad or upon long vacation trips at home, many people make a point of having anywhere from three to six extra pairs of glasses with them. Several customers have told me that they adopted the custom of having extra glasses because of a run of bad luck. They had broken their glasses several times in the course of a month or two. Later, when they were fully prepared for emergencies, their luck changed and they went along for a year or two without an accident. But, once having felt the security that comes from having extra glasses, they never went without them.

Shortly before he left for Cuba in the Spanish-American War, Theodore Roosevelt had his optician make up for him ten pairs of glasses. The optician heard nothing more from him about the glasses until some months after the close of the war. Then, having sent his new prescription to the optician, the colonel came in one day to have the glasses fitted.

"Did I ever tell you how I got along with those ten pairs of glasses you made up for me before I went to Cuba?" he asked.

"No," said the optician. "I suppose you must have broken several pairs or all of them?"

"Not a pair!" chuckled the colonel. "Went through the whole war without breaking a lens. But two weeks after my return I dropped a pair on a rug in the library and one lens broke off at the screw hole. However, I don't see how I can blame that on the war, do you?" And again the colonel chuckled.

Some years ago, the president of a big Middle-Western industry, with offices in Chicago, St. Louis, and New York, asked us to have a special case made for the convenience of his secretary, one of whose duties it was to see that his employer was never without available eyeglasses. The case was made to hold fifteen pairs; but, besides these, the manufacturer always had an additional ten pairs made up, and these we kept in our safe subject to call.

The manufacturer had his eyes examined and new lenses made every year, and each time, on getting a new prescription, he had the lenses changed in every pair, the bill usually running somewhere around three hundred dollars.

Whenever this man travels, or even when he goes to a directors' meeting, he has his secretary take along the case containing the extra glasses. Before he makes a speech, he slips several pairs into his vest pocket, because when speaking he becomes excited and shakes his head with great violence. Sometimes his glasses fly off or he knocks them off, and then he does not stop to pick them up, and so interrupt his speech. He simply takes another pair from his vest pocket.

This manufacturer was the hardest man on eyeglasses I ever knew. In the course of a few years he used up several hundred pairs. When I asked him how he got the habit of having so many glasses, he said:

"Late one afternoon in New York I was making a speech in a directors' meeting, and it was a pretty strenuous affair. My glasses fell off, hit the edge of the table, and broke. I was unable to get new lenses until late the following afternoon, and because of that I practically had to waste twenty-four hours. I made up my mind that I'd never be inconvenienced again by being short of an extra pair of glasses. I haven't been."

Twenty years ago the majority of people who wore glasses ordered gold-framed spectacles. Then, gradually, spectacles without rims became popular. The next change was to eyeglasses which were attached to the nose by little spring clips; but eyeglasses with large springs which curved over the top of the nose were also worn by many people.

JUST before the war the imitation-shell rims made of celluloid came into vogue, and the war seems to have made them popular, because it was found that the rims were extremely durable. To-day, many people have ceased the use of celluloid rims for street wear, preferring eyeglasses or rimless spectacles. Celluloid rims will continue to be worn, I suppose, for home and office work by people who prize them for their lightness, comfort, and durability. I always recommend celluloid frames for school children, and believe they are better even than metal frames, for their rough usage. Metal rims bind the lenses tightly and sometimes cause breakage, whereas the flexibility of celluloid often prevents such damage. For heavy service, such as engineers and other outdoor workers, industrial employees, sportsmen, hunters, and fishermen give their glasses, I think the gold-filled spectacle frames are the most durable, and next to these, frames of aluminum.

Tortoise-shell rims would unquestionably gain in popularity if they were more durable and less expensive. Genuine tortoise-shell rims cost about forty dollars, and, being brittle, they break very easily. Even well-to-do people reserve their tortoise-shell rims for use in the library or at their dressing tables.

## What lead does in a motor car

**S**UPPOSE you took the lead out of your motor car. It might run—a few blocks—but with difficulty and inconvenience. In the first place, without the lead storage battery you would have to start it with a crank, and for lights you would have to return to gas or oil. You would have to carry your gasoline in a bottle; for, with the lead-tin solder out of the gas tank, the seams would leak, and for ignition you would have to return to dry cells.

### Lead in the radiator

After you had run a short distance, the motor would be so hot without your lead-tin soldered radiator that you would come to a stop. A good thing, too, for without the lead storage battery you could not blow the horn.

As a matter of fact, without lead you wouldn't have any gasoline to carry in a bottle, for litharge, an oxide of lead, is used in refining the gasoline that makes the automobile go.

### Lead in the storage battery

The storage battery which starts the motor, blows the horn, and provides current for the car lights is practically all lead. It contains lead in three forms. Red-lead and litharge, both oxides of lead, are spread as a paste on perforated hard lead plates. The hard rubber container in which the plates are immersed in sulphuric acid has lead in it.

### Lead toughens the tires

You cannot see the lead that is in the tires. But it is there. Lead oxides, added to the rubber at the time it is made, insure a uniform cure and give toughness to the rubber.

Lead is also in the soft rubber insulation around electrical wiring and in the hard rubber electrical devices and switch buttons. It is in the rubber top covering that gives protection from rain. The rubber mat on the car step contains lead. The electric light bulbs are made of superior lead glass because of its great heat resistance and brilliancy. Windings of wire in the generator which charges the lead storage battery are held in place with lead-tin solder.

### The protection paint gives

But none of these uses of lead are as widespread as that of white-lead in the manufacture of good paint. Not only the paint that protects the motor car but all good paint wherever used contains white-lead.

Buildings unpainted crumble from decay. Buildings protected with good paint with-

stand time and weather. "Save the surface and you save all" is a maxim wise men are heeding. And the more white-lead any paint contains, the greater is its protecting power and durability.

### Look for the Dutch Boy

NATIONAL LEAD COMPANY makes white-lead and sells it, mixed with pure linseed oil, under the name and trademark of *Dutch Boy White-Lead*. The figure of the Dutch Boy you see here is reproduced on every keg of white lead and is a guarantee of exceptional purity.

Dutch Boy products also include red-lead, linseed oil, flattening oil, bab-bitt metals, and solder.

Among other products manufactured by National Lead Company are lead tubing, sheet lead, soldering flux, lead pipe, bar lead, litharge, and lead plumbing materials.

### More about lead

If you use lead, or think you might use it in any form, write to us for specific information. Or if you have a general academic interest in this fascinating subject and desire to pursue it further, we will send on request a list of books which describe this metal's service to the civilized world.

## Quick Delivery makes Ordering a Pleasure

Because of the unique service which assures surprising promptness in our deliveries, thousands of people, both here and abroad, take delight in ordering American Stationery. We want you to test this service—to know that it equals, in every respect, the sterling quality of our paper. And we want you to learn how beautifully this particular stationery meets the need for a simple yet tasteful note-paper for informal and household-business correspondence. Order a package today. We know—and guarantee—that you will be thoroughly satisfied.

**200** Sheets-100 Envelopes  
PRINTED WITH NAME AND ADDRESS for \$1.00

This comprises our "Regular Package" which is made up as follows and mailed postpaid.

**PAPER:** National Bank Bond—clear, white, fine textured; exquisite writing surface. **SIZE:** Sheet 6x7; envelopes to match. **INK:** Name and address, printed as shown in illustration, in rich, dark blue ink.

For orders west of Denver and foreign countries, add 10%. Always remit with order. With the exceptional facilities of our large plant, all orders are filled with amazing speed. We have no agents or branch plants. All American Stationery is sold by mail from Peru, Indiana, where we, originators of this type of stationery, have successfully manufactured it for eight years.

**Mail** The American Stationery Co.  
Dept. 24, Peru, Indiana.

COUPON

THE AMERICAN STATIONERY CO.  
DEPT. 24, PERU, INDIANA

Gentlemen: Herewith is \$1.00 for 200 sheets and 100 envelopes of American Stationery to be printed as shown on attached slip. (Note: to avoid errors, write or print copy plainly.)

**MONEY READILY REFUNDED IF YOU  
ARE NOT WHOLLY SATISFIED**

The popularity of the lorgnette is largely due to the fact that women seldom have pockets in which to keep their glasses when they are not in use. The lorgnette, being attached to a ribbon or chain, is worn around the neck and thus is always handy. As it is made in attractive shapes, it is also ornamental when folded up and worn as a kind of pendant.

The Oxford style of eyeglasses is preferred by men and a good many women who do not find the lorgnette adapted to their use. Some women who have tried the lorgnette say that they find it something of a handicap, because to use it one hand is always required. The Oxford eyeglasses, with their large flexible springs, can be folded up and carried in a small case about the size of one lens, or they can be folded together, fastened by a clip and worn as an ornament at the end of a ribbon or chain.

Very few Americans have adopted the monocle, and I doubt if many ever will. It is not very practical for persons leading an active life, since it has to be held in place by drawing the cheek and the eyebrow together.

**I** HAVE known a good many people who really needed glasses to refuse to wear them because they thought them unbecoming; but nowadays no one wears glasses for the sake of being in style. When obliged to wear glasses, most people do, of course, try to select the style that is most becoming to them.

Some time ago, a young woman whose sight was not markedly defective asked advice as to the style of glasses that would make her look most distinguished. "The fact is," she said, "if you can give me glasses that will serve as a complete disguise so much the better."

As she was a very attractive young woman this request was mystifying; but before she was fitted out with a complete set of glasses—lorgnettes, eyeglasses with and without rims, and tortoise-shell reading glasses, she explained her request for a disguise. The year before she had been an assistant in the office of a hotel at a fashionable Southern resort. One of the guests at the hotel, a well-known millionaire, had fallen in love with her, and now, after their marriage, they were going back to the same hotel for the vacation season.

"I told my husband," said the young woman, "that I feared he might be embarrassed if some of the guests I used to wait on should come up to me and ask for rooms. He says that nothing like that could happen, and that he wouldn't be embarrassed anyhow; but I don't feel very sure of myself yet, and I want to be prepared. The lorgnette is the deadliest weapon you have, isn't it?"

We constantly see people looking awkwardly over their glasses and others who push their glasses up on their foreheads when they want to read. Such maneuvers are a sure sign that these people have not availed themselves of modern optical conveniences. The person who looks over the top of his glasses is wearing reading lenses and so, of course, his eyes cannot accommodate themselves when he wants to look off at a distance. The person who pushes glasses up on his forehead is wearing distance glasses, and he finds it impossible to examine objects close by until he has removed them from in front of his eyes. In

either case, the person needs what we call bifocal lenses, glasses which give a distance vision through the upper part and a near, or reading, vision through the lower part.

The inventor of the bifocal lens was an American—Benjamin Franklin. For a long time he had been wearing spectacles fitted with reading lenses; but at last he found that he had outgrown them and could see well with them at a distance. From this he knew at once that for reading he required much stronger lenses. He had the reading lenses made, and then he hit upon the idea of putting both his reading lenses and the distance lenses in the same frame. He had the lenses cut in two, put the halves of the weaker lenses (from his reading glasses) in the upper part and the halves of the new and stronger lenses in the lower part, binding them together in his steel spectacle frames. Thus he evolved the first pair of bifocals ever worn. The principle of the bifocals we wear today is exactly the same, but the method of making them has changed. By a special process the line of demarcation between the distance and the reading parts of the lens is made invisible, so that it is almost impossible to detect that the lens really has two parts.

Whether you wear eyeglasses or spectacles, there are two things of great importance you should remember: The lenses you wear should be proportioned to your face, and they should be centered with absolute accuracy. You should have your lenses fitted by a qualified optician, and in the matter of the size of your lenses you should rely on his judgment.

Most people make the mistake of wanting their lenses too big. This means that the pupils of the eye cannot be in the exact center. When this condition exists, everything the eye sees is more or less distorted.

It is much better to have your lenses too small than too large. Lenses that are too small may be objectionable because they are not becoming, but they are far less likely to cause distortion and injure the eyes than lenses that are too large.

**PEOPLE** who want extra large lenses because of their wider area of vision can solve the difficulty by getting lenses built especially for this purpose. The man whose nose is broad at the base and narrow at the crest usually finds that a large round or oval lens hits his cheek, and this, of course, tilts the glass so that it is not properly centered.

To avoid this the glass can be made narrower at the bottom than at the top, or the lens can be cut in an octagonal shape.

Many people seem to be ignorant of the fact that glasses should always be fitted by an eye specialist. I have known people to buy their glasses in hardware stores or at country fairs, wherever glasses are exposed for sale. Glasses chosen in this haphazard way may for a time seem to improve the vision, but in the end they injure it. One woman who picked out her own glasses on a bargain counter wore a lens before one eye three times as strong as the one before the other eye. The stronger lens made her almost blind in one eye and ruined its focus forever. To-day, she has only partial use of it, and this through a very strong lens properly adjusted to correct the defect she brought upon herself.

# Clemenceau's boundless energy is built on sound sleep

On his eightieth birthday, the busy "Tiger of France" said the secret of his unfailing youth and energy is *sound sleep*.

All successful men know that sleep is a faithful but exacting paymaster—that it will return many-fold all that you give it but make you pay if you cheat it.

Knowing this, *why* do you give your sleep equipment so little thought? Why do you buy a spring and mattress with less care than you give any other important necessity you purchase?

Take ten minutes tonight to study the mattress and spring you sleep on. Go to your furniture dealer's and examine the wide range of Simmons mattresses and springs offered at prices to fit any pocketbook.

Compare what you have with a Simmons mattress of buoyant *new* material and a Simmons spring of the type you best like.

Then judge for yourself whether health, energy and personal success are not worth more than the small cost of sleep comfort.

# SIMMONS

## *Beds · Mattresses · Springs*

BUILT FOR SLEEP

# How about the corncob?

## The old family meerschaum stirs no thrills in this smoker

"Dear Sirs and so forth," begins a letter we recently received from H. T. Spenser, Madison, Wisconsin, "I am cupping my hands in the shape of a megaphone and shouting a loud echo of approval to your correspondent who smokes a meerschaum pipe fifty years old.

"But I don't want him or any other smoker to get away with the idea that a meerschaum is the only pipe where Edgeworth is concerned.

"For, you see, I am a corncob smoker. What's more, I am a corncob-Edgeworth smoker.

"The corncob-Edgeworth combination is hard to beat. I have tried almost every combination of pipe and tobacco there is and have yet to find one that can approach it for year-in-and-year-out pipe smoking.

"So, if you're starting a Corncob-Edgeworth Clan, don't forget to put me down as a charter member."

We are continually being surprised by smokers who discover things about Edgeworth that we don't know ourselves. For instance, we never suspected that Edgeworth smokes any better in a corncob than it does in a briar. Frankly, we don't believe that it does. At any rate, we have any number of friends who claim that Edgeworth is the only tobacco to use in briars, in calabashes, in meerschaums, or in clays.

In smoking, we believe, it is every man to his own taste.

That's one of the reasons why we don't try to make all of the tobacco that is smoked in pipes. We know there are men who have perfectly sound reasons for not liking Edgeworth.

At the same time we know there are any number of men who would like it if they only had a chance to try it once. That's why we are always glad to send free samples.

If you have never tried Edgeworth, send us your name and address on a postcard. We will forward to you immediately free samples of Edgeworth Plug Slice and Edgeworth Ready-Rubbed. If you also include the name and address of your tobacco dealer, we will make it easier for you to get Edgeworth if you should like it.

For the free samples, address Larus & Brother Company, 25 South 21st Street, Richmond, Va.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size Edgeworth Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

Many people neglect to have their eyes examined at proper intervals. I have heard people say boastfully that they are still wearing the glasses they bought twenty or thirty years before. Such a boast is a proof only of foolhardiness, for glasses that old cannot possibly be suited to the person's present needs. The farsighted person ought to have his eyes examined at least once in every two years. The nearsighted person ought to have his eyes examined once a year. If the nearsighted person does do this he can almost certainly count on an improvement in his sight.

STATISTICS covering many years show that nine out of every ten persons over twenty-one usually have imperfect sight. At thirty-one, the proportion is larger. Above forty it is almost impossible to find a man or woman with perfect sight. Even though you think you do not need glasses, the best course is to have your eyes examined by a competent specialist. Today, thousands of people who think their eyes are all right are actually doing themselves serious injury by not wearing properly fitted glasses to eliminate eye strain.

There are two types of people who ought to consult eye specialists at once if they have not recently done so: those having difficulty in seeing and those suffering from headache, eyecache, and nervous disturbances.

Imperfect vision is not always apparent to persons so handicapped. They have always seen objects blurred or distorted, and believe they see as others do. I have known people who were nearly half blind to claim that they could see as well as anyone. Some people, after suffering for years from eye trouble, have discovered the

cause only accidentally upon closing one eye. By looking first out of one eye and then the other, they found that they could see much better with one than with the other.

People who have slight defects are usually the ones who suffer from headaches and the various nervous disturbances due to eye strain. The eye muscles can exert enough effort to overcome the small errors of vision, but in the end the continued strain produces painful symptoms. If the condition is not corrected, the symptoms grow worse. Even if you see well, and feel sure your vision is normal, you should, in case you have such symptoms as I have just mentioned, consult an experienced examiner.

These are the defects which can be corrected by glasses: First, the eyeball being too short—farsight; second, the eyeball being too long—nearsight; third, the transparent front of the eye curving more in one direction than in another—astigmatism; fourth, the natural change in the eyes, which require most people to use glasses for reading and near work after forty years of age.

The best eyesight is usually found among old sea captains, and next among hunters, fishermen, and others who have worked most of their lives out of doors. The eye is benefited by looking off long distances, and such men constantly have their eyes turned toward a long horizon. Lawyers, doctors, dentists, editors, printers, and proof readers almost invariably require glasses to correct defects of vision caused by eye strain at some time in their career; but, regardless of occupation, any person who does fine work or reads a great deal ought to make certain that he is not abusing his eyes by going without glasses.

## The Two Mikes: A Romance of Broadway

(Continued from page 37)

Italians lived I could make a success of it.

"But the owner of the theatre wanted four hundred dollars in advance and I had only about four hundred cents. However, I got Woods to let me set up a table in the lobby, during the week before he closed, and I sold enough seats in advance to pay my own first week's rent.

"My opera 'season' petered out at the end of two weeks; but I put on other shows after that, and managed to keep going for the sixteen weeks until Woods again took over the theatre.

"My next adventure was with a negro company which I organized with John Larkin as the star. He had been going around the country with the Black Patti, but he wanted to have a chance to shine all by himself. I took the company down South and succeeded in keeping afloat for ten weeks. Then we stranded in Montgomery, Alabama.

"It had been a tough proposition. My only personal possession of any value was this ring, which I still wear. My mother had given it to me. I used to pawn it in one town to help pay our fare to the next one. There, if we took in enough money, I would send the ticket back and redeem

the ring. But when we got to Montgomery, the situation was hopeless.

"Larkin had been more anxious for a chance to play a leading part than for anything else. So he hadn't asked me for any money except to pay his hotel bills. He had taken the rest in I O U's; and by this time they amounted to eighteen hundred dollars. I told him I was broke and offered to give him the production in exchange for what I owed him. When he accepted, I sent to my folks for money to pay my fare back to New York, and came home."

THERE is no need of telling all the details of Mindlin's experiences up to that night last October when he wore a path in the Klaw Theatre alleyway. I have told enough to show you that there had been plenty of hard work, initiative, courage, and self-reliance in those earlier chapters.

Now for the other Michael. As it chanced, he also was employed by Woods when he quit school at sixteen. This Michael began as an office boy and messenger. He ran errands for everybody, even for the women relatives of some of the older men in the office.

"Did you ever take a pair of slippers to

a dry-goods store and try to match them in stockings and gloves?" he asked me solemnly. "Maybe you think it's easy. Well, it isn't! If there's one thing I'm proud of in my checkered career, it's the fact that I came through that test all right."

"I did the greatest lot of assorted errands you ever heard of. I carried everything from spring hats to a bag full of money. In the past nine years, I'll bet I've walked enough miles, in New York's streets, to have taken me around the world a dozen times."

"After a while, I got into the publicity department, where my chief duty was to 'peddle pictures,' as they call it. I took dozens of photographs of our actors and actresses around to the newspapers and tried to get somebody to print them. You can see for yourself that I'm no six-footer. I guess the reason is that I never had time to grow that far. I didn't keep still long enough."

"**W**ELL, from the Woods office I went to William Harris, Junior, in his publicity department. But by this time I'd begun to figure that headwork was a lot better than footwork. So while I kept on peddling pictures by day, I got Mr. Harris to let me act as manager of 'East is West,' which was then running in New York. I had to count the receipts after the show, see to depositing the money in the bank, pay the actors, and things of that sort. I got twenty dollars a week extra for doing this work. And twenty dollars wasn't to be sneezed at—especially as, by this time, I was thinking of getting married. In fact, I had picked out the girl."

"Mr. Harris was having a very successful season that year. He had four plays which were doing big business. So, of course, he was not buying many others. Well, while I had been peddling pictures and paying actors and putting somebody else's money in the bank, I had been learning all I could and thinking a good deal. And the thing I thought of most, the thing I thought of *all the time*, was that if I could have a share in producing a successful play I could put some money in the bank for myself."

"It seemed to me that there must be some good plays among those that came into the Harris office. They might be refused by him because he didn't need them. But *somebody* would get them. Somebody would produce them. Why shouldn't I have at least a share in this?"

"I had to be at the theatre until midnight. But when I went home, I always carried two or three plays with me, and I'd sit up until almost daylight and read them. After a while, the office people used to lock the plays in the safe; afraid I'd carry them off and lose them, I guess. But I managed to slip a few out anyway. Those that seemed promising to me, I would carry around to the agents, or to other managers. Nobody paid much attention to me. If they said anything at all, it was usually something about the play being hopeless. Still I went right on reading them. And I suppose I couldn't help learning *something* about plays, just by doing that."

"Then came last season, when suddenly a new mystery play was put on and scored an instantaneous success. It was 'The Cat and the Canary,' a play which almost

every manager in New York had refused. Kilbourn Gordon, who was a press agent himself, got hold of the play, saw its possibilities and persuaded people to put up the money—a little from one person, a few hundreds from somebody else, and so on."

"I went to work for Mr. Gordon, chiefly at my old familiar job of peddling pictures. Still doing a lot of the same old footwork, you see. The play was a huge success; and that simply made me more than ever convinced that somewhere, in the piles of manuscripts kicking around the New York theatrical offices, there were other golden chances for whoever would have the courage to take them."

"One of the plays which I had tried, unsuccessfully, to get people interested in was a piece by Mr. Fallon. My friends used to guy me because I literally counted the cost of a play before I would consider it. But I *had* to do this. I had no money to speak of. I knew I couldn't raise money for an expensive production. So I never could look twice at a play that called for a large cast and expensive scenery. I remember when someone told me about this play by Fallon—it was called 'The Noose'—I asked about the characters and the scenery."

"There are five characters and the entire action takes place in Central Park," he told me.

"That's fine!" I said. "Then all we'll need is one bench and a few trees!"

"**W**ELL, I couldn't get anybody interested in 'The Noose,' but in the spring a friend told me that Fallon had another play, called 'The Last Warning,' a mystery play which nobody would take. Knowing that several mystery plays had made fortunes during the past few years I asked to see Fallon's much-rejected piece. It seemed to me that it had good possibilities. But there was no use going to the regular producers with it. They had turned it down already. So I didn't know *where* to turn."

"Then, one day in April, I was walking along Forty-second Street when I ran across Mike, here. I had met him when both of us were with Woods, but I had lost track of him in recent years. I knew he had produced some plays, however, so I immediately clutched at him."

"When I told him I was on the track of a play I wanted him to read, he made some impolite remarks about not having time to spend on my fool plays; but finally I persuaded him to look it over. Fallon, however, insisted that he must read the piece to Mike. So we got together one day and Fallon read it aloud."

"Fifteen minutes after he had finished the contract was signed for us to produce the play. Mike, who had a little money, wrote a check for Fallon's five hundred dollars' advance royalties. I gave Mike an I O U for my half of that amount."

"At last I was the part owner—on paper, at least—of a play! To be sure, it was a play that nobody else wanted. This wasn't a very exhilarating thing to reflect on; but Mike and I believed in the piece anyway; didn't we?"

"Yes," said Mindlin; "but when it came to getting other people to believe in it, we had an all-summer's job on our hands. If we hadn't had friends the play never would have been produced—not by us! But we did have a lot of friends; at

any rate, Mike did. And that was lucky."

"We decided that the only way we could raise the money would be by selling stock in the production. We, as owners and producers of the play, were to have fifty per cent of the net profits—if there were any! The stockholders were to have the other fifty per cent. We figured that we would need twenty thousand dollars for all expenses: scenery, lights, properties, costumes, and so on; also, to get a theatre, pay salaries and wages, the cost of trying out the piece on the road, advertising, and other items. So we decided to sell two hundred shares at one hundred dollars each."

"But deciding to do it and *doing* it were two very different things. At first we thought it was going to be easy sailing, for a few days after we bought the play we got one man to take two thousand dollars' worth of stock. That was fine! But it was six weeks before we succeeded in selling another dollar's worth."

"In the meantime, we had gone ahead and engaged our company. Under the rules of the Actors' Equity Association, we had put up a deposit of sixteen hundred and fifty dollars—and we had only two thousand altogether—just to guarantee payment of part of the salaries for two weeks."

"Robert Edeson, who was to be the leading man, made a different contract with us. He was to get a certain salary and a percentage of the gross receipts. So we didn't have to deposit a two-weeks guarantee for him. We couldn't have done it anyway. Didn't have enough money."

"But gradually we sold more of the stock, a few hundred dollars' worth at a time. Mike hung onto his position all this time, because he and his wife—he had married the girl, you see—had to live. But somehow or other he managed to get ninety minutes of work into a sixty-minute hour; and he did this for most of the twenty-four hours every day. Finally, in August, we began rehearsals. Actors rehearse four weeks without pay, you know; so we could do that much, anyway."

"**B**UT we had to have scenery too; and lights and costumes and furniture. The play called for 'period costumes' and also for modern ones. We had to pay for the modern ones outright; because if we used them at all they couldn't be returned, of course. But the period costumes could be used later by some other company. So we were allowed to buy them by making a deposit and agreeing to pay so much every week until they were paid for. If the play should fail before this was done, we would lose the costumes and our payments."

"We made the same arrangement in regard to the furniture, but we had to pay cash for the scenery and some other things. Mike became a regular monomaniac on the subject of saving money. In the play as it was written, there were several policemen; but Mike decided that we'd have to cut out the policemen and save the cost of their uniforms. So these characters were missing from the cast until we opened in New York."

"And so it went. We schemed and figured and cut corners and saved wherever Mike's eagle eye could find a chance. But gradually the thing took shape; and on September eleventh we opened in Hartford, Connecticut. The day we went up there our train was three hours late in leaving New York, and I said it looked to me

as if fate was doing its darndest to convince us we'd better *stay* in New York! But I guess I was mistaken," he said with a laugh.

"The very day before our scenery was shipped to Hartford, there was a fire in the building where it had been painted, and when it reached Hartford we found the canvas had been almost ruined by water and was still soaking wet. We had paid twelve hundred dollars for that scenery. It cost four hundred dollars more to have workmen at Hartford make it even half way presentable. When we got back to New York we had to pay seven hundred dollars more to get it all repainted. That's a sample of some of the luck we had.

"AT HARTFORD, the night before we opened there, Mike came to me and said: 'What will we do if the seat sale tomorrow is bad? We haven't any money. How will we get out of town?'

"Well," I said, 'the weather's pleasant, the walking's good, and New York isn't more than a hundred miles from here. I guess that's the answer.'

"For anybody with a past history like Mike's, in the matter of walking, he seemed very cold toward the idea," laughed Mindlin. "And he wasn't any more enthusiastic the next night, when we took in only four hundred dollars! But we stayed there three days, and did better at each performance. This happened at every town we played in. Business improved each night; and that was encouraging. We stayed out two weeks and lost only about two hundred dollars, which wasn't bad for a try-out trip.

"The experience had shown us one thing: the play would have to be revised before it opened in New York; but we figured we could do this in two weeks. Edeson wanted to draw his salary for the two weeks, but we simply didn't have the money to pay him. So, as he had other offers, we let him go and engaged William Courtleigh instead.

"Meanwhile, there had been the big problem of getting a theatre in New York. Of course nobody could be expected to want a couple of outsiders like us, especially when our play was one that had gone begging for a producer. But we knew that one of the big managers had gone to Stamford when we played there. We knew that he had sat through the whole play; and we also knew that there are mighty few plays he does sit through. So we thought he would be interested in us.

"But when we tried to see him, and didn't even gain admission to his office, it looked as if we must have made a pretty poor guess as to how he would act when interested. One night, however, we waited outside the building until eleven o'clock, because we knew he usually came to his office at a late hour. And after he had gone up we persuaded the elevator man, whom Mike fortunately knew, to take us up too.

"That time he did see us. And after we had explained our need of a theatre, he finally said he would let us have one, but only on condition that we make a deposit of thirty-five hundred dollars in advance. We had managed to sell some more stock by this time; but we didn't have thirty-five hundred dollars, and we told him so. We tried to get his figure down to twenty-five hundred dollars, but it didn't work.

"I knew he had the reputation of making

an interview abruptly, and I was afraid he might turn us out at any moment," said Mindlin with a laugh. "I kept hold of my hat all the time I was there, so that if I had to depart in haste I wouldn't lose that! It was the only hat I had and I needed it.

"Well, I did keep a hat to cover my head—but he didn't give us a roof to cover our play, and we lost several weeks trying to find one. At last, however, we got the Klaw Theatre on terms that we could meet, and the opening was set for Tuesday, October twenty-fourth. According to our contract with Mr. Klaw we could not keep the theatre if the receipts fell below a certain sum.

"Mike knew the men at the ticket agencies and the cut-rate offices. So he went around to them and told them just what the situation was. They were his friends. They agreed to push the sale of our seats. And with their assistance we hoped to shove out enough tickets so that we could hold the theatre for at least a fair trial. Of course, as things turned out, they didn't *have* to force the sale. The very first week it was well beyond the necessary amount. The second week it jumped to almost double the first. 'The Last Warning' was an instantaneous success, and we could keep the theatre indefinitely."

THE story has now got back to that first night when the two young men, whose great adventure had reached its crucial moment, paced nervously up and down in the alley back of the theatre. Their courage, which had brought them to this point in the game, failed them now. The verdict of the audience meant too much to them. They couldn't go in and get that verdict piecemeal. So they stayed outside.

At the end of the first act, Goldreyer went around to find out what the people were saying. With his heart in his mouth, he asked Heywood Brown, one of the best New York critics, what he thought of the piece.

"Why," said Brown, "I'm having rather a nice time."

That was a crumb of comfort—from a critic!—and Goldreyer picked up a few similar ones. At the end of the second act, the news was even more encouraging. And at the close of the play, the verdict was: "A sure-fire hit!"

A week later, one of the theatrical papers declared that the piece would earn a total of two million dollars for the author and the producers. Applications came to buy the rights for England, Holland, Australia, and other countries. Within a few days the two Michaels were offered fifty thousand dollars in cash for the moving picture rights—and refused it!

"The people who made us the proposition," said Mindlin, "knew that Mike and I had no money. They figured that fifty thousand dollars in *spot cash* would be a big temptation to us. The author would get one half of the amount, to be sure. But even twenty-five thousand dollars looks pretty big to you when you have been counting nickels as carefully as if they were gold eagles.

"I remember the first time we allowed ourselves to let up on the nickel-counting," he said with a laugh. "It was the opening night here in New York. There seemed to be a general impression that we had been on short rations for some time,

an impression for which there was some foundation, I admit. So a kind friend took us out to supper to celebrate.

"Mike had his wife with him, of course, and I had my wife and my little girl. When we got up from the table, Mike said to me, 'Gee! but I hate to take that long subway ride over to Brooklyn at this hour of the night!' It was then about one o'clock in the morning.

"I took a long breath and said in a firm voice, 'Why the subway? Why don't you go home in a taxi?'

Mike gave me an awe-struck look. Then in a husky whisper, he ejaculated, 'We *will*!' And he spent two dollars and thirty cents—how many nickels is that? forty-six! Count 'em!—for a taxi ride to his happy but distant home.

"As for my own family, we stayed at the Astor that night; for my home was just as happy but even more distant than Mike's. The morning papers were not out, so I told the clerk to have me called at six o'clock and to send every New York paper to my room at that hour.

"But nobody had to call me at six o'clock! I don't think I had slept a wink. When the papers came up I was so excited I could hardly open them. And when I found that for once all the critics agreed, that they said the play was a success—well, that was an experience I couldn't describe, so what's the use of trying? But what do you think was the first thing Mike said to me when I saw him that morning?

"Yes, it *sounds* good," he said, 'but wait until to-night. It's the *receipts* that tell the real story.'

"That's Mike all over," laughed Mindlin. "He has what you might call a 'box-office mind.'"

Then he added seriously, "But his good, hard, practical sense has been just what we needed. The most difficult thing for us has been to keep from losing our balance, to keep our feet on the ground. Just as soon as it was known that we had a success people began coming to us with all sorts of schemes and propositions.

"What are you going to put on next?' everybody asked.

"We're not going to put on *anything* else now," we told them; "we are going to stick to *this* job for the present."

TEN or fifteen years ago, a new firm, like Mike and me, put on a play which made a million dollars for them. Well, what did they do? They signed up every star they could get hold of. They went to Europe and bought a trunkload of plays, more than they could produce in five or six years. They tied up a lot of money that way. There were paying actors, so they hurriedly produced plays in order to have the actors working. They didn't choose their productions carefully nor put them on as they should have. The result was that inside of a few years they were broke. Their million was gone.

"Mike and I don't mean to let our heads be turned that way if we can help it. One success doesn't make a great manager, any more than one swallow makes a summer. We're not going to try to run so fast that we'll fall over our own feet. I expect we will have some tumbles, for the theatrical business is full of pitfalls. But we'll *try* at any rate to keep our feet on the ground and to watch our step."

## What color is oil?

When the man at the pump fills his measure with **TEXACO MOTOR OIL**, you will see a translucent stream of pure, brilliant gold.

That's the color of Texaco Motor Oil.

That clean, golden color is the visible evidence of its complete refinement, the quality that means in your car a clean, smooth running engine.

Texaco Motor Oils are full-bodied always, and always that same clean, clear, golden color, whether Light, Medium, Heavy or Extra Heavy.

# The Experiences of a Buyer

(Continued from page 67)

be surprised to know that there is one town in the United States where umbrellas are never sold. This isn't because the people prefer to get wet to carrying umbrellas, but because it never, or almost never, rains. The town is Corpus Christi, Texas. The last news I had was to the effect that it had not rained in Corpus Christi more than once in the past three years.

New York is the only city where "canes" are used as walking sticks to any great extent. There they have always been commonly carried by men, and recently even by women. A New Yorker who is used to carrying a walking stick finds it almost impossible to go into a store in any other city of the United States and pick out for himself a new stick, because the choice offered is so limited. Everywhere except in the metropolis the idea seems to be that canes are for the use of the lame only.

**I**N ONE section of the country mops are an absolutely unknown factor in household industry, yet the housewives there are well known for their cleanliness. This section is northern Pennsylvania, the region of the Pennsylvania Dutch. Rather than use mops, they get down on their knees and apply "elbow grease" to the floor through a scrubbing brush. Some years ago a buyer for a store in this section decided that he would try to start a revolution in the methods of household cleaning, and he stocked up with a dozen mops. Years have passed, and not one of the mops has been sold. The Dutch housewives have looked at the mops with curiosity and interest, but none has volunteered as yet to test the "new" invention.

Pittsburgh, Detroit, St. Louis, and Philadelphia are the cities which have the greatest proportion of people who will turn out for bargain sales. San Francisco comes about fifth. In proportion to population, New York is far behind all of these cities in the number of people who respond to bargain offerings. In Pittsburgh and Detroit all kinds of goods sell readily, regardless of whether they are in accord with current styles if they are priced attractively. In San Francisco the offerings must at least be "modern," but not necessarily of a very recent style. The most successful bargain sale I ever heard of was held in San Francisco. A merchant marked down everything in his store, and made the prices so favorable to his customers that he sold \$411,000 worth of goods in one day.

The most conservative city in the country as regards bargains is Rochester, New York. There the people prefer to buy quietly and never seem much interested in special features. After Rochester comes Boston. In both these cities the people seem to say "Just give us a dollar's worth and no more, for our money."

People often ask me under what conditions department stores are able to cut prices and hold "bargain sales." The bargain sale may be the result of many different conditions: If the summer season is

late in arriving or if, in the middle of summer, there is a long spell of cold or rainy weather, a merchant may find himself unable to dispose of a fairly large proportion of the summer dresses he has in stock. This means that he must give his customers the advantage of lower prices in order to avoid holding the goods over till the following year. Sometimes he finds it necessary to dispose of his surplus stock through a merchant in some other part of the country where the weather conditions are more favorable.

Two years ago, when a cold spell came in August, a New York merchant told me that he had on hand eleven hundred summer dresses which had been selling for from seven to twelve dollars and a half. "I'd be glad to sell them at any price," he said, "for I need the space; but New Yorkers aren't going to buy any more summer dresses this year."

When I said I would take the lot for a dollar apiece, the merchant gladly accepted the offer. Then, as I knew there would still be plenty of warm weather out on the Pacific coast, I communicated with a department store in Los Angeles. Two weeks later, as a result of this transaction, the Los Angeles department store held a special sale of summer dresses, and in one day the women of that city bought every one of the eleven hundred dresses at \$1.98.

Many stores plan long in advance to give their customers the advantage of a special sale, and arrangements for it may be made in this way: The merchant informs his New York buyer that he is going to have a sale of dresses and wants some particularly good values. The buyer informs the manufacturer as to the kind of dresses wanted and the price at which the dresses must sell. The manufacturer will probably take up the matter with the mill, which, in view of the large order, may cut its price for material. Then the manufacturer cuts his price for the making and the merchant cuts his own profit. Thus, the merchant is able to present a very attractive offering to his customers.

**M**ANY stores, especially in Pittsburgh, Detroit, Hartford, and in cities of the Middle West have every year what is known as a "spring opening." For this event the stores are always attractively decorated, one of the features being a great singing choir of from five hundred to one thousand canary birds. The birds we buy for this purpose must be good singers, for we have found that if they sing freely the customers are pleased, remain longer in the store, and make the opening more of a success by buying more. After the opening, there is always a bargain sale in canary birds. Then birds and cages which are worth ten dollars or more at retail can be had for as low as five or six dollars.

One of the newer and most popular kind of sales is that known as the "store-wide sale." The store management selects one article, soap or shirts, say, and this article is exposed on every floor and in every aisle. No matter what the customer goes to the store to buy, he sees this article specially

priced. Store-wide sales have been especially successful in Pittsburgh, where in less than a week one store sold one hundred thousand shirts.

The buyer is not only looking for bargains for his clients which they, in turn, can pass on to the retail purchaser, but he is prepared at all times to take advantage of market conditions which mean a change in future prices. Often the buyer knows that certain conditions, such as the cost of labor, transportation, or of raw materials, are going to result in an increase in the cost of manufactured articles. Then he immediately buys in large quantities, without even consulting his clients, in order to protect them and their customers against the increase.

**O**NE of the most remarkable bargains I ever had a chance to get was offered me some two years ago, but I had to let it pass. Among the war supplies the Government had to dispose of were eighty thousand brass beds, which had been made for the use of workers in war industries at a manufacturing cost of twelve dollars apiece. They were offered for sale at sixty-five cents apiece.

Brass beds are not nearly as popular in the East as they once were, but there is still a demand for them in the Middle West. I took an option on the beds with the privilege of investigating transportation conditions to Denver. I found that the cost of transportation would bring the price of each bed to \$6.50 for the Denver dealer, making a quick sale of the beds impossible. So I did not take up my option.

These beds were purchased by a man who had not had the forethought to investigate transportation conditions. After buying them, he found that he was unable to ship them except at an excessive cost. As a result, he had to dispose of them to an instalment house in New York for half what they cost him. The instalment house sold the beds for a dollar down and twenty-five cents a week for fifteen weeks.

Boston is the most conservative city of the United States in adopting the new styles. It is perhaps the only city whose people will refuse with a determined air of conviction to adopt a style which has already proved its popularity. Some eighteen months ago, for instance, sheer chiffon hose became fashionable. It was being worn in all our large cities and in many small towns when Boston had yet to buy its first pair. Altogether not more than a dozen pairs of chiffon stockings had been sold in Boston when an enterprising merchant found himself in a position to buy a large quantity at a very advantageous price. He offered them at less than half their usual retail value. But the people of Boston refused to have anything to do with them. The stock was finally disposed of and came into the hands of a merchant in Little Rock, Arkansas. What Boston had coldly rejected the people of Little Rock bought with avidity.

The new styles are most promptly accepted in New York, Chicago, and the fashionable coast resorts of Florida and

## AND SO THE WEST WAS WON

**A**CROSS the vast expanse of the American continent—dusty, toiling columns of covered wagons crawling toward the sunset.

Twenty-four hundred miles over the Oregon Trail! Twenty-four hundred miles of hardship, danger and death beneath a wilderness sky.

From 1843 onward, caravan after caravan of men, women and children moved westward—suffering, fighting, dying sometimes by scores, but turning back never.

Until, at last, by the valor and blood of a pioneer breed the West was won.

And now—the second winning of the West, the development of its vast resources, the harvest of its bounty.

The call from the Pacific Northwest is still for pioneers—not of the wilderness which has vanished. But for pioneers of commerce, agriculture and industry in a realm of large and beautiful cities, great ports, pleasant country-sides and humming activity.

Its opportunities are the

unparalleled opportunities of a vast domain that is young, still in its infancy—yet already rich and great beyond the dreams of its founders.

Its forests, proudest of the globe, annually yield billions of feet of lumber.

What was but two generations ago the wilderness of Washington, Oregon, Idaho, Montana and Wyoming, today pours more than a hundred million bushels yearly into the world's granaries.

Its mines, its herds and flocks, its orchards, fisheries and industries add hundreds of millions annually to the wealth of its people.

And where Hudson's Bay Com-

pany traders once carried on crude commerce with the Russians, great ships now dock from the ports of the world.

• • •

Yet the development of the vast resources of the region has scarce begun.

With millions upon millions of fertile acres, unlimited water power, tremendous natural wealth, strategic trade position, and gloriously mild and healthful climate—who may calculate or even imagine the future!

For the man who gets his living from the soil; for the industrial worker, the manufacturer, the retail merchant; for the professional man and the man with capital to invest there is room unlimited in the Pacific Northwest—room and boundless opportunity on a new frontier of industry, agriculture and commerce.

# Money and Success

**MATERIAL** success in life—**independence, a comfortable fortune—**means more than merely making money. It means keeping money and accumulating money, month after month and year after year.

Building a fortune requires constructive thrift. It also requires a working knowledge of the science of investment. There is nothing mysterious or even difficult about this—it is only common sense applied to putting money to work and keeping it at work.

All this is made plain in our booklet, "**Common Sense in Investing Money**". It tells, in clear, simple language, how to invest safely, how to avoid investment pitfalls, and how to build a comfortable fortune. It will be sent you on request, without cost and without obligation. Write for this booklet today. Specify

California. Among the small towns, Rochester, Minnesota, is easily first in demanding the smartest styles. The reason for this seems to be that many wealthy people from the large cities go there because of the famous sanitarium, and thus the people of the town quickly learn what is new. It sometimes happens that the latest style is old and finished in Rochester before it has become thoroughly acclimated to Fifth Avenue, to say nothing of Broadway. After Rochester, the towns which are keenest for the new styles are Salt Lake City, Reno, Nevada, Birmingham, Alabama, and Bloomington, Illinois.

Cities of the Middle West, such as St. Louis and Kansas City, are conservative in the adoption of styles.

The section of the country which is least affected by changes in style is northern Minnesota and the parts of Iowa and Wisconsin which have been settled by Swedish people. In this section the demand is all for staples, and styles of six and nine months ago in both women's and men's garments are preferred to the new.

Every retail dealer knows that women are more eager than men to keep up with the styles. He also knows that the average man is just as eager to have his wife wear stylish clothes as his wife is to appear in them. For himself, the average man looks for distinction rather than style, especially in tailored suits and sports clothes. College men and executives with college training prefer what they call "informal distinction"—loose clothes with some individuality. On the other hand, a considerable proportion of successful business men usually prefer to have their clothes cut to fit the figure.

**T**HE widespread use of the automobile has stimulated the demand for sports clothes on the part of both men and women. It was thought at first that the wearing of sports clothes by women would cause a falling off in the demand for stylish garments. The reverse, however, has been true.

The woman who drives her own car may wear a simple sports suit, but after the drive she wants to wear finer clothes than ever. The vogue of sports clothes among men and women who motor and pursue athletic activities has had one very definite effect, however. It has made styles simpler and brought in straight lines.

Sometimes we find that the coming in of one fashion has unexpected results in changing customs that seemed well established. To-day, for instance, very few women are buying long kid gloves, though only a short time ago these were much in demand. You might have thought that the sleeveless gown would have increased the demand for long gloves. Instead, it increased the demand for bracelets and the sale of jewelry generally. In the larger cities it is not unusual to-day to see a woman wearing six bracelets on one arm and two or three on the other.

People are wearing much more jewelry to-day than formerly. Those who cannot afford expensive jewels are wearing artificial pearls and rubies, and even semi-precious stones. The demand for what is known as "gay jewelry" has always come from the negroes of the South and from the Spaniards in Arizona and southern California. Gay jewelry includes brooches,

rings, bracelets, pendants, watch charms, and even cheap watches ornamented gorgeously with corals, onyx, rhinestones, and similar settings.

One of the most pronounced changes we have had in recent years is the country-wide demand for all kinds of wearing apparel for both men and women in brighter colors. Women at the beaches are wearing scarves, capes, and sashes patterned after those once devised for the bull-fighters of Spain. People are wearing neckties, hats, skirts, shirts, and suits in brighter colors than ever before, and the indications are that we shall never again dress as somberly as we used to.

**T**O-DAY, red is the most popular color in the Middle West. Tans, greens, and orange are the most popular on the Pacific coast. In the East the preference seems to be for brilliant, blended mixtures of a great variety of colors. The people of the South have been the slowest in adopting the newer, striking color combinations, many people there still preferring navy blues and dark colors the year round.

Some time ago we were all reading in the newspapers about a new "blue" to be worn by Mrs. Harding, the wife of the President. It was to be known as "Harding Blue." You may be interested to know how a particular color comes to be identified with the name of an individual. Usually it happens in this way: a textile manufacturer asks the notable person to name her favorite color. This she selects after looking at a color chart. Then the manufacturer may be given written permission to name the color after her, and textiles of this color usually have a wide popularity. Mrs. Harding, as it happened, expressed her preference for a certain Copenhagen blue with a tint of green in it.

When it became known that Mrs. Harding's color was blue, many women in all parts of the country were at once anxious to know just what shade of blue it was, so that their new dresses might be the same blue. It just happened that some time before Mrs. Harding had chosen her color several manufacturers had hit upon the idea that Copenhagen blue with a tint of green in it would be popular generally. They had made up considerable quantities of silks dyed with this color, and this accounts for the fact that in many of our smaller towns and cities "Harding blue" was being worn before even the First Lady of the Land appeared in it.

I can tell you that there is, happily, one exception to the general tendency toward brighter hues in wearing apparel. Petticoats, underwear, and shirts of red flannel are no longer worn to any extent. Not many years ago such garments were popular, because they were supposed to be unusually warm. To-day, red flannel shirts are worn only by a few miners in the West, while there is not, so far as I know, a single manufacturer making red flannel underwear or red flannel petticoats.

Few people to-day want the same heavy underwear that they once thought necessary. The change is due to the fact that we have come to believe heavy underwear is insanitary. Nowadays, most people wear the same weight underwear in winter that they wear in summer, relying for protection against cold upon additional weight in the outer garments.

# STUDEBAKER

THE BIG-SIX TOURING CAR \$1750

**S**TUDEBAKER has again demonstrated, in the 1923 series Big-Six Touring Car, that it is not necessary to pay a fancy price for a motor car of highest quality.

Fundamentally the same splendid automobile that 50,000 owners have found so satisfactory, this fine car incorporates all the new year's betterments and improvements.

Its performance is as exceptional as its beauty. It is unvarying in its dependability, comfortable for any journey, and is completely equipped with every feature for convenience and utility—even to the extra disc wheel with cord tire and tire cover and handsome nickel-plated bumpers.

The limited production of most of the better cars increases overhead expense and raises the cost of every manufacturing oper-

ation. This necessitates a high selling price and decreases intrinsic values.

The fact that Studebaker builds nothing but sixes, in large volume, and manufactures all vital parts in its own factories, enables it to reduce costs, eliminate parts-makers' profits and give more for the money.

Studebaker plant facilities are adequate for the most economical manufacture. Raw materials are bought at the lowest possible prices, labor is specialized and efficient, and overhead per car is reduced to a minimum.

These savings are reflected in the price of the Big-Six Touring Car.

Studebaker maintains quality standards that are second to none. Materials and craftsmanship are unexcelled.

The name Studebaker stands for highest quality and honest value.

## ENJOY COMPLETE ELECTRICAL COMFORTS

—in the home wired for "full-convenience"

### *The Book that thousands have sent for!*

This free book tells how to make electricity serve your home.

How to have unhampered use of all electrical conveniences, without unsightly dangling cords.

How to enjoy full use of portable lamps, together with vacuum cleaner, heater, fan and other appliances, anywhere in the home.

What to ask for in the newest equipment for controlling light from room to room throughout the house.

Study of the *many subjects* in the book will enable you to discuss your electrical problems with the qualified electrical contractor in your neighborhood who installs G-E wiring equipment.

Let him show you the vast improvement in wiring methods which makes the modern *completely* wired home. The slight additional cost will surprise you.

**What's your address?** Write for your free copy of "THE HOME OF A HUNDRED COMFORTS" to

## The Family's Money

### What Thrift Stamps Have Done for Us

**S**HORTLY after the United States entered the war I enlisted in the field artillery. Before leaving home, however, I made sure of the girl by enlisting in matrimony for life.

After our marriage my wife and I had to think about the future a little. We decided at once that we had better save every possible nickel to start our home with when I returned. My wife was a stenographer, a mighty good one, and she kept on working while I was in the army. She continued to live with her people and was able to save quite a bit out of her salary. When ordered across I was made top sergeant of my outfit, and that helped a lot. Between us we began to pile up the dollars fairly fast.

Of course we subscribed in every Liberty bond drive as heavily as we could. War savings and thrift stamps came in handy between drives. My wife got in the habit of taking thrift stamps for change and adding a war-savings stamp every pay day. The money I sent home from France and my allotment was handled in the same way.

In the summer of 1919 I returned from France and after a delayed honeymoon trip of a couple of weeks I took up my old job as city salesman for a wholesale grocery house. We certainly found our Liberty bonds and war-savings stamps a life-saver in starting housekeeping.

Unfortunately, we didn't know enough to keep on saving. And when we had got the "good time" idea out of our systems the youngster was at hand.

After that our expenses were larger. Although we eliminated a good deal of the unnecessary frivolity, we still didn't have the idea of regular saving. But I did keep up my ten thousand dollar government insurance, converted into permanent form; but that was about all we did in the thrift line.

**R**ECENTLY several things have happened to make us see the wisdom of saving.

Most important of all, we noticed in the newspapers recently a lot of publicity about a government plan for the exchange of war-savings stamps into a new kind of treasury-savings certificates. That reminded us to look up the remnant of our war-savings stamps. There were just \$75 worth of them left. We were struck by the fact that this amount was about \$13 more than we had paid for them. That \$13 was easy money. We hadn't worked for it; our money had worked for us. We began to wish we had some more of that kind of saving.

Finally, we looked into these new savings certificates the Government was putting out, and found that for \$20.50 we could buy a certificate which would be worth \$25 in five years, with no chance of losing anything. Our \$75 in war-savings stamps went right into them, and \$27.50 cash besides; for which we'll get \$125 back in five years. That gave us the idea

## Buick Authorized Service

### *A Valued Part of Your Buick Investment*

Second only in value to the unfailing motor car dependability which every Buick buyer procures is Buick Authorized Service.

Buick Authorized Service becomes an inseparable and important part of his car investment—an element deeply and consistently prized.

Infrequently as a Buick owner requires this service, its presence throughout America provides him with a satisfying assurance. He knows that the unvaryingly dependable performance which he has the right to expect from his Buick will be maintained continuously throughout its life.

# Intense Hatred Seared His Soul

Bitter hate was implanted in his soul and "The Bookworm" became a super-criminal whose dastardly crimes were the baffling sensations of the day. When tightly entangled in the meshes of the law he always managed to escape "scot-free." With diabolical cunning "The Bookworm" became a powerful factor in business and took fiendish glee in wrecking his friends and associates. The pure love of the one girl, who had saved him many times from the prison bars because she believed him innocent, caused him to change, but intense hate burning deeply in his heart caused her to marry another man and then—! Don't miss "The Bookworm," a novel

of intrigue, love, mystery, and hate, by Arthur Somers Roche. It's in the *Woman's Home Companion* for April.

## A Toast to the Bride

Ellen mistook William Heath Bennett, an American mining engineer living in Mexico, for a real honest-to-goodness Mexican guide. And he, enjoying the situation hugely, lived right up to the part to a "T." Then he fell in love with her, but Ellen, really believing him to be a high-class Mexican, hesitated and refused to marry him. So he told her the truth and then—You'll get many a merry chuckle out of "A Toast to the Bride," by Charles E. Scoggins. It's in the April issue of *Woman's Home Companion*.

## And in the Same Issue

"Why I Left the Church," by a former minister—an astounding article that makes you think and brings you face to face with conditions as they are. "A Woman's Place," by Viola Brothers Shore—the story of a girl who tried to live with her mother-in-law. "Now, if It Only Hadn't Rained," by Corinne Harris Markey. A truly delightful story scintillating with genuine humor.

The April

# WOMAN'S HOME COMPANION

15c a copy Now on sale at all news-stands 15c a copy

of buying at least one savings certificate every month. By doing this we will have, at the end of five years, \$25 coming back to us every month. Then it will take only \$16 a month new money to buy two certificates every month. If we keep reinvesting our money that way, with a little bit more each time, we can easily have \$75 a month coming in at the end of fifteen years, a tidy little sum to help put Junior through college.

That's going to be the foundation of our financial scheme hereafter. Every month \$20.50 of my salary is going into a treasury-savings certificate before we buy even a cake of soap. Saving is going to be first—not last—in our budget. Then we're going to live on the rest of my salary. My wife is economical and we can do it comfortably. Finally, the commissions I get are to go into a cooperative bank until we have a home of our own. Then we'll use them to build up a fund to go into business for ourselves. P. L. C.

## How I Save Work and Worry by the Use of Budget Bags

THERE is nothing to a home-maker more satisfactory than a budget. But the bookkeeping for one is sometimes a nuisance to the woman who does not carry several distinct bank accounts. The easiest way out of this difficulty, I have found, is to keep three bags: one marked "Church and Charities," one, "Pleasure and Profit," and one, "Household Expenses." Into each of these at the first of the week I put the amount allotted.

Even for my household expenses I run no bills at all, but pay for my meat and groceries as they are delivered. If I find the bag running low, I order oranges instead of grapefruit, or a pot roast instead of the coveted chicken. If there is any money left in the bag after all the necessary shopping is done on Saturday, I order staple groceries, like sugar or salt, that are almost exhausted. In this way I can make myself live within my income.

From my "Pleasure and Profit" bag I take the running expenses of my car; pay the magazine subscriptions, buy books and flowers; and also sometimes indulge in a theatre or concert ticket. There is no longer any question about whether or not I can afford a luxury. My bag tells me.

Nothing has added more to my self-respect and happiness than has this budget for benevolences. I delight in the sense of power and independence I now have, for when someone asks me to contribute to the Near East Relief, or the Salvation Army, I need not hesitate, or worry over how much I can give. My bag tells me. Now charity never comes as a surprise or as an unexpected drain upon my purse. It is all provided for in advance.

The expert accountant may laugh at this three-bag system of bookkeeping. But whatever the comment, I recommend it. For if we merely apportion the income on paper, and depend upon casting up the accounts later, we have only a backward instead of a forward look, with no means whatsoever of preventing the very excess that our budget is supposed to control.

MRS. L. A. M.

Under the rear deck of the new Two-passenger Coupe is an unusually large storage space, capable of accommodating several good-sized sample cases or suitcases.

A salesman's portfolio, doctor's case, or small parcels, can be conveniently stored inside the car, in space provided directly back of the seat.

The doors of the car are extra wide, affording a 31-inch opening. Door windows are adjustable for ventilation.

Body equipment includes dome light, sun visor, ventilating windshield and windshield cleaner.

**I**N this new Two-passenger Coupe, the body is a unit, specially designed, and solidly built of steel.

You grasp at once the superiority of such construction, and its obvious advantages—greater permanence and longer life, greater beauty, finer proportions.

Here is a body built in our own shops, in the scrupulous Hupmobile way, to withstand the rigors of hard and continuous service in the same sturdy fashion the chassis withstands them.

In such a car, protection from the weather is more complete.

But the greatest comfort is derived from the satisfaction an owner always finds in his car's ability to stand up and perform, no matter what he asks of it.

*Touring Car, \$1115; Roadster, \$1115; Special Touring Car, \$1215; Special Roadster, \$1215; New Two-passenger Coupe, \$1385; Four-Passenger Coupe, \$1535; Sedan, \$1675. Cord tires on all models. Prices F. O. B. Detroit—Revenue Tax Extra*

## How the Pilgrim Fathers got their meat

Food and shelter were the great questions with the first settlers in New England.

Shelter they could obtain, such as it was. Food was more difficult.

At first they subsisted precariously on game, and fish, and corn which the Indians taught them to plant and use.

But they missed their beef.

Eight years later there was a fair supply of cattle in the Colonies, in spite of wolves and the Indians; small, stringy animals—but beef.

Each family had to prepare its own animals for food in those scant, hard-working days.

November mornings found them at the work by early daylight. By night the meat was "cooled" in the crisp autumn air.

It had to be smoked or salted, or made into sausages for the winter's store—a tedious task with results that would scarcely win approval from a modern taste, accustomed

to the fresh, clean, wholesome meats of today.

\* \* \*

A descendant of those resolute, resourceful pioneers—Gustavus F. Swift—was one of the first to place meat packing on a basis which could take care of the expanding needs of the nation.

Today Swift & Company, still building on his vision, helps make the food wealth of the nation available. Branch houses supply the larger consuming centers. Refrigerator cars carry meat, under constant refrigeration, to towns and villages not supplied by branch houses.

Modern winter breakfasts, in contrast with the frugal fare of those early days, offer such a tasty treat as Brookfield Sausage—made from the meat of selected porkers, delicately seasoned with pure spices and savory herbs.

Swift & Company's service is performed with skill and thoroughness. Its profit from all sources over a long period of years has averaged only a fraction of a cent a pound.

## Up late at night, on time in the morning

**T**HERE are so many things to tempt us to stay up at night, and usually only one thing to get us out in the morning.

And few of us look forward to getting up as we do to staying up.

That is the reason for Westclox—to see that we wake on time, for no matter how late we are in getting to bed, our getting up time must be the same every day.

When our faithful Westclox rings us out of a sound sleep, we may be

inclined to be peevish until we remember that our faith in our Westclox enabled us to enjoy that sound, comfortable slumber.

Before an alarm clock can earn the right to wear the trade mark Westclox on its dial and tag, it must prove its ability to run on time, ring on time, and stay on time.

You will find Westclox alarms and watches at most good stores. Look for the orange-bordered, six-sided tag and the Westclox on the dial.

# The American Magazine's Directory of Schools

Schools and Colleges for Boys

Schools and Colleges for Boys

Culver is for the boy who is up and doing all the time. In the Woodcraft School he gets out into the woods, eating around camp fires, traveling by canoe and trail. The older fellows learn seamanship, sailing naval cutters, or get the fine points of horsemanship on Culver's famous horses. Even flying is taught at Culver. Culver boys live man-fashion life. They must be self-reliant and quick thinking. Every sport and activity a fellow wants in the summer. Write for the catalog of school that interests you most. Address:

The Dean's Office Culver, Indiana  
On Lake Monksuckee

## ULVER SUMMER SCHOOLS

Naval Woodcraft Cavalry Aviation  
On Lake Monksuckee

### PEDDIE An endowed school for boys

A preparatory school with graduates now leading in scholarship and student activities in many colleges. Peddie believes in physical development for the right growth of the mind. 80-acre campus. All athletic sports, swimming pool and gymnasium. Lower school for boys under 14. 56th year. Booklets. Address:

ROGER W. SWETLAND, LL.D., Headmaster  
Box 5Y Hightstown, N. J.

### Hitchcock Military Academy

16 miles from San Francisco. Everything to make your boy staid, sturdy American. All year round outdoor life. Splendid equipment. Experienced instructors. Academy fully accredited by Colleges. Indoor rifle range. Physical Culture. Football. Tennis, etc. swimming pool. High Moral. Thorough training of mind, body and character. Separate rooms for every pupil. Juniors in separate building. 46th year opens first Wednesday in September. Write for illustrated catalog to:

REX E. SHERER, President San Rafael, Cal.

### WILLIAM WARREN SCHOOL

Prepares Boys for College

Separate Lower School—7 years or older  
Box W-1 Menlo Park, California

### PALO ALTO MILITARY ACADEMY

A Special School—Exclusively for Primary and Grammar Grades  
In session 12 months in the year. Bicycle club. Outdoor swimming pool. Supervised rifle practice. Summer camp. COL. R. P. KELLY, Supt., Box 306-A, Palo Alto, Cal.

**Mohegan Lake School** (Military) Thorough preparation for College, Technical School or Business, with certificate privileges. Average number of pupils in a class, 8. Healthful location on Mohegan Lake. Physical training and Athletics under professional direction.  
A. E. LIGON, A. M., Principal  
New York, Mohegan Lake, Westchester County, Box 61.

**ONE MINUTE NOW** will put you in the way to earn from \$6.00 to \$25.00 a month extra. In your spare time, acting as our representative for The American Magazine, Woman's Home Companion, Collier's Weekly, The Mentor, and Elmer's Favorite. Write for particulars to Chief of Subscription Staff, Desk #1-A  
THE CROWELL PUBLISHING CO., 416 West 13th St., New York City

## Powder Point School

will understand your boy—and help him to understand himself. Thorough instruction. Clean, snappy athletics for every boy. Clearest understanding between boys and masters. Prepares for college and gives strong general courses. Ages 10 to 19. Number limited to sixty. Convenient to Boston. Address RALPH K. BEARCE, A.M., Headmaster, 99 KING CAESAR ROAD, DUXBURY, MASS.

### Mercersburg Academy

Mercersburg, Pa.  
Aim of the School—A thorough physical, mental and moral training for college or business.  
Spirit—A manly team of self-reliance, under Christian masters. Personal attention to each boy.  
Location—On the western slope of the famous Cumberland Valley, one of the most beautiful and healthful spots of America.  
Equipment—Modern and complete. Magnificent Gymnasium. Write for catalogue and "The Spirit of Mercersburg." Address Box 169  
WILLIAM MANN IRVING, LL.D., Headmaster

### NEW MEXICO SCHOOL OF MINES

A technical school with 4-year courses in Mining, Metallurgical, and Geological Engineering, and General Science. Strong faculty consisting largely of successful engineers. Excellent equipment. Classes not overcrowded. Climate greatly aids, dry, and healthful. New metal and coal-mining districts. Field work throughout regular semesters—on summer attendance required. Non-resident tuition \$20 per year. Dormitories. Write for catalog.  
E. H. WELLS, President, Socorro, New Mexico

A preparatory school with teacher for every 10 boys. Military. In beautiful Shenandoah Valley. 100 miles from Washington. Modern equipment, new gymnasium. Athletics under trained director. Music. 25th year. \$500.  
HOWARD J. BENCHOFF, A.M., F.R.S., Headmaster.

### SHATTUCK SCHOOL

(EPISCOPAL)  
A school that knows boys' physical and mental needs. Prepares for best colleges, or business. All athletics. Military drill.  
57th Year. Address Box A FARIBAULT, MINN.

### Chauncy Hall School

Established 1828. Prepares boys exclusively for MASSACHUSETTS INSTITUTE OF TECHNOLOGY and other scientific schools. Every teacher a specialist.  
FRANKLIN T. KURT, Principal.

### Electrical Engineering

men with training are in demand. For more than a quarter of a century, this school has been training men of ambition and limited time, for the electrical industries. Condensed course in Electrical Engineering enables graduates to secure good positions and promotions. Theoretical and Practical Electricity, Mathematics, Steam and Gas Engines and Mechanical Drawing. Students construct dynamos, install wiring and test electrical machinery. Course with diploma complete.

### In One Year

Over 3000 men trained. Thoroughly equipped fireproof dormitories, dining hall, laboratories, shops.  
Free catalog. 31st year begins Sept. 26, 1923.  
BLISS ELECTRICAL SCHOOL  
122 TAKOMA AVE., WASHINGTON, D. C.

### The St. John's Military Academy

(THE AMERICAN RUGBY)  
Summer Tutoring School

Courses open to all high school boys who wish to make up work or earn advanced credits. A wholesome amount of study and recreation amid ideal surroundings in Wisconsin's most notable lake region, and mingled with games, boating, fishing, hiking, or "just loafing." Send for prospectus, addressing:

ST. JOHN'S SUMMER TUTORING SCHOOL  
Box 18EE, Delafield, Waukesha Co., Wis.

### IRVING SCHOOL for Boys

Tarrytown-on-Hudson, N. Y.

25 miles from New York, in the beautiful, historic "Irving" country. 87th year. 33 years under present Head Master. Extensive grounds. Modern and complete equipment. Prepares for all colleges and technical schools. Athletic field. Gymnasium. Swimming pool. Address: Rev. J. M. Furman, L.H.D., Head Master, Box 925

### Tri-State College of Engineering

Makes you a Civil, Mechanical, Electrical, or Chemical Engineer in two years, 48 weeks each. No entrance examinations. High school Diploma not required. Compact courses made up of essentials only. Expenses low. For catalog address HILL SQUARE, ANSOULT, IND.

### CASCADILLA

College Preparatory School for Boys. Individual attention. Small classes. Athletics. Gymnasium. Well-equipped school crew. Bursar: 12th. Summer session. Write for catalog.  
THE CASCADILLA SCHOOLS Box 124 HANCOCK, N. Y.

### New Mexico Military Institute

A state-owned school, located in a high, dry climate. For information, address:

Colonel J. C. THOUTMAN, Superintendent  
Box M, Roswell, New Mexico

### Danville Military Institute

In famous Piedmont Region of Virginia. Prepares for colleges and U. S. Academies. Modern buildings, large campus, all healthful sports. Not conducted for profit. Rates \$200. Address for catalog:  
Col. William M. Kemper, Superintendent, Box A, Danville, Va.

### LE MASTER INSTITUTE

30 minutes from New York City  
Standard Electrical, Civil, Mechanical, Chemical, and Industrial Engineering Courses completed in two years. No entrance examinations. Regular High School course in two years prepares for leading colleges. Send for Bulletin A. East Orange, New Jersey.

### URBAN MILITARY ACADEMY

California's most beautiful school, highest scholarship, thorough character training, completely equipped playground, swimming pool, horsemanship, golf, band, radio, all athletics. In session all year, summer camp, enroll any time. Address the SECRETARY, Hancock Park, Los Angeles.

### Randolph-Macon Academy

Work endorsed by colleges and universities.  
Beautiful and healthful location. Military departments. Athletic grounds, new gymnasium and swimming pool. Terms \$405. Special reductions for 2nd term. Address: W. R. PHELPS or E. SUMNER SUMR, Box A, Bedford, Va.

Address Chautauqua and Lyceum Arts School  
512 DeWitt Park Ithaca, New York

## The founders of this business are looking for jobs

**T**WO YEARS AGO the members of the sales department of a manufacturing concern whose product sold faster than it could be made, resigned in a body to build a competing plant. All the money they had or could borrow went into machinery and equipment.

For a while the plant was a beehive of industry. The company introduced to the market a good product at a substantially lower price, and it sold readily.

### Today that factory is closed

The equipment will be sold at auction to satisfy debts. And most of the men who founded the business are idle, their savings gone, their assets pledged to creditors.

The magazine "Sales Management," commenting on the tragic incident, says:

"It is the story of every concern that ever started in business with the idea that selling was all there was to business. It is just such calamities as this that prompt us to repeat what we have so often preached—sales managers must study the big, broad phases of business. Make it your business to know the problems of the production man, the credit man, the purchasing agent and last but not least, the financing of the business. . . . There has to be some head to every business,

and that head must be able to see all sides of the problem."

You could hardly compress into one paragraph a better reason for the Alexander Hamilton Institute. It was founded by a group of business leaders who recognized that business makes specialists—but does *not* develop all-round executives. The vital way in which the Institute meets this situation is illustrated by another story.

### This man succeeded

For fourteen years R. Lee Smith was a sales manager, with an ambition to have a business of his own. "But my work gave me no understanding of business other than that which concerned selling," he wrote to the Institute. "I knew nothing of production, financing or business promotion."

Instead of setting forth unprepared, Mr. Smith clipped a coupon from an advertisement like this. He received and read "Forging Ahead in Business" and enrolled for the Modern Business Course and Service. With this sound foundation he organized the United Soda Fountain Company, which in only three years has become one of the leaders in its industry.

Problems of production, financing, accounting, advertising, credits, did not come to him as new and unfamiliar. "Your

Course and Service gave me an understanding of these things," he writes.

### Send for the book he sent for

This is not an isolated instance. More than 200,000 business men have shared Mr. Smith's experience. They were executives, salesmen, accountants, engineers, lawyers, bankers, factory and office men. The Institute did not make them better specialists in the one department of business where their experience had been gained. It added to that a working knowledge of all other departments, with results, in progress and income, testified to by thousands of letters voluntarily written.

These men gained their first knowledge of the Institute thru "Forging Ahead in Business," a book which contains *all* the facts about the Institute. Will you give it an hour in exchange for what it may give you in vision and in counsel? It will be cheerfully sent on this condition.

**Alexander Hamilton Institute**  
774 Astor Place, New York City

# Wash Chiffon?

## Yes! But first consider this test for safety

Would you think of using a laundry soap, whatever its form, on your face? Of course not!

We ask the question only to remind you of this: If such a laundry soap would injure your skin, it would probably also injure a sheer silk fabric like chiffon or crêpe meteor. Except your skin, fabrics like these are the most delicate things you will ever wash.

—this is the test:

*Would you be willing to use the soap on your face?*

Isn't this the natural test for such a soap?

For 44 years, millions of women have cleansed their faces and their most precious garments with Ivory Soap, because it is pure, mild, gentle, white.

Today, for quick, convenient

wash-bowl laundering of dainty silk blouses, sweaters and under-garments—and woolen things, too—these women use Ivory Flakes, which is just Ivory Soap, flaked petal thin, for instant suds.

Ivory Flakes passes the face-test—so it offers a real margin of safety for the exceedingly precious things which you would not dare trust to a soap less fine and less mild. Yet Ivory Flakes is so inexpensive that you may use it economically for all your fine laundering.

May we have the pleasure of sending you a free sample of Ivory Flakes and the useful booklet shown in the lower left-hand corner?

*Ivory Flakes, in full-size packages, may be had at grocery and department stores.*

PROCTER & GAMBLE

## IVORY SOAP FLAKES

*Makes dainty clothes last longer*

FREE—This package and booklet

A sample package of Ivory Flakes and the beautifully illustrated booklet, "The Care of Lovely Garments," will be sent to you without charge on application to Section 18-EF, Dept. of Home Economics, The Procter & Gamble Co., Cincinnati, Ohio.

*Saved!—the cost of a new dress*

Mrs. B. of Nashville had a dress of lovely peacock blue crêpe meteor which had gone out of style. Instead of giving it away, she took it to pieces, washed the silk in Ivory Flakes suds, and with the help of some old lace, remade it into the beautiful new dress pictured here. "Everything in this family," says Mrs. B.'s letter, "from Ann, aged 3, to the Persian rugs, knows the feel of Ivory suds."

*(Mrs. B.'s dress and her letter are now on file in the Procter & Gamble office.)*

*Beginning*

# Wheels Within Wheels

The story of a double mystery

*By Carolyn Wells*

ILLUSTRATIONS BY NORMAN PRICE

**A**MONG the most beautiful of the great country houses of America, and quite able to hold its own against many of the stately homes of England, was Howlands, the estate of Ralph Howland, of Normandale, Connecticut, and of New York City.

The New England village was proud of its citizen, yet not over-appreciative—for your true New England village appraises with discernment the status of its inhabitants, rich and poor alike. The Howlands were favorites in the community, however, and had been so for sixteen years. Perhaps it was pride of possession that kindled the kindly feeling, perhaps it was sympathy. No one of the simple village folk could forget the tragedy that had brought terrible grief to Ralph Howland and his wife in their first season at the green house on the hill top, sixteen years earlier, and had caused the place to remain closed for several seasons.

Change of scene, foreign travel, all efforts at diversion, had failed to obliterate the memory of that tragedy, and of later years the Howlands had returned, not in gayety, but reverently, as to a shrine. Their summer stays at Howlands had lengthened until now they were twice as long as their winters in New York. And now it was October, and there was no sign of their return to the city.

Nor was it surprising that they should wish to linger. The hills were a glory of flame-like trees; the valley roads were bordered with yellow goldenrod and red sumac, and clouds of tiny purple asters were beginning to appear.

"I think, Mary," Howland said, as he watched the setting sun turn the blazing maples into deeper, softer tints, "that we must go down to town a little earlier this year. I've some big deals to put over, and then, once things are settled, we can come back as early as you like in the spring, and never go away again unless you choose."

"Yes, Ralph," and Mary Howland looked indifferently at her husband.

Over forty, she had kept her youthful figure, her youthful looks, all but her youthful enthusiasms. Indifference was the keynote of her whole being.

She wore exquisite clothes and she had

beautiful appointments in her home. Yet, without being exactly listless, she was uninterested in everything, including even her husband. She loved him and there was strong sympathy and congeniality between the two, but any enthusiasm she might show was so palpably an effort, so obviously perfunctory, that Howland had ceased to expect or even want it. Eventually, she had ceased to display it.

They had occasional guests for house parties and larger social functions. They accepted and returned the village hospitalities. Yet, though Mary Howland was a perfect hostess, she greeted none with a real welcome.

Nor was Howland much more cordial. He had men friends; there was mutual liking; but little true comradeship or joy of meeting.

Leonard Swift strolled across the terrace, and sat down beside Mary on the balcony railing.

"Going to town soon, are you?" he asked, overhearing. "Sorry—it will cut my visit here short."

"Stay after we go, if you like, Len," Mary said; "I'll leave enough servants to keep you comfortable—"

"No; thanks. I love the place with people about, but not solitude up here. I'd get the creeps."

"What are you talking about?" said Howland indignantly. "This is no boggy place—the house isn't haunted."

"Awful lonesome, though, except with plenty of company."

"As you choose," said Mary indifferently.

**S**WIFT was Howland's cousin, and the two men were not unlike. But Swift was twelve years younger, and black of hair and mustache, whereas the other showed a graying tendency. Sharp, dark eyes both men had, and a quick, alert manner. This alertness had been modified in the case of the older man, but Leonard Swift was a live wire, and few things escaped or mystified his attention. He got on famously with Howland, but was never quite at ease with Mary. Indeed, few people were at ease with the sad-eyed, absent-minded woman.

"I met the foolish Conrad just now,"

Swift said. "It's awful to laugh at the poor, unfortunate chap, but he is so funny!"

"He is," and Mary smiled. "He comes up here pretty often, and yesterday he came to where I was sitting on the terrace, and he looked for all the world as a squirrel does, when warily approaching."

"That's it, exactly," said Howland; "he has just that funny little roguish look of a squirrel. As if he'd come ahead if all's well, and scoot if it isn't."

"I don't think he's funny at all, or even interesting," said Swift. "I can't bear to see him. He's—why, he's demented!"

"Oh, no, don't call it that," Howland said, "he's touched, if you like; he's half-witted—"

"No, he isn't," Swift interrupted, "if he had a little more brains he'd be half-witted; but as it is, he's a third-witted, or even less."

"Well," and Howland spoke indulgently, "he's the Village Half-Wit, so let it go at that."

**S**WIFT looked serious. "Conrad has, I think, a homicidal mania, and—"

"Oh, no," Howland smiled. "You're way off. Conrad Stryker is half-witted; he is demented, if you like, but he's no maniac. He hasn't a vicious hair in his head or a criminal thought in his mind."

"On the contrary," and Mary Howland spoke with a kindly light in her eyes; "he's a gentle, affectionate nature. He's always letting things out."

"Secrets?" Swift looked interested.

"No, not that," and Mary really smiled now; "but I mean, if he sees a chance to free a small animal from a snare or trap, he lets it out. Why, they say he opens his mother's mouse traps and lets the creatures free!"

"But he isn't an idiot," Howland persisted. "I've no special interest in Conrad Stryker, but I do believe in justice. He is a simple-minded, harmless boy—"

"Boy!" broke in Leonard Swift, "he's thirty if he's a day!"

"I don't mean a boy in years, but in mentality. His is a case of arrested development, or whatever the doctors call it, and though his brains are weak and undeveloped, they are there, and they are not distorted, as in the case of a real maniac."

Presently a suppressed shriek sounded from the library, and Magee rushed hastily

"Mr. Howland," said a soft voice from the house door, and they looked up to see the dainty figure of Howland's stenographer, Miss Mills.

"What is it?" asked Howland shortly.

"Mr. Peters wants you."

Rob and Sally Peters, a young married couple from New York, were house guests for the week-end.

Without further word, Ralph Howland rose and went into the house, following the girl.

Swift came over and took a chair nearer his hostess.

"Mary," he said, "don't let Ralph go into that fool scheme with Rob Peters. It's a wild-cat game, and not only will Ralph lose a lot of money but he may get himself into more serious trouble."

"**WHAT** is it, Len? I don't know anything about it."

"That's why I'm telling you. Never mind details, it's called the Right to Mine—but it's all wrong. I know. . . . Oh, Mary, you can't understand these things, but please do as I advise."

"Just what are you advising?"

"Only that you persuade Ralph—beg him, coax him, manage him any way you like—but make him keep out of it."

"If it's wrong in any way, he'll keep out of it himself."

"But he doesn't know it's wrong; and Peters is a cajoling sort. He'll wind Ralph round his finger—"

"Does Rob know it's wrong?"

"I'm not sure," and Swift looked perplexed. "I'd hate to think he did, and yet I don't see how he can help it. But in either case, we want to keep Ralph out of it."

"Len," and his hostess looked at him

in. "Oh," Edith cried, "oh, that awful boy, that horrid idiot! Make him go away!"

amusedly, "what has come over you? Since when have you, or have I, become Ralph's keeper? It's rather funny to think of our advising him."

For a few moments the two were rather silent.

"He's a strange chap," Swift said at last. "Doesn't he annoy you sometimes, Mary?"

"Nothing annoys me—just as nothing rejoices me."

"No, I suppose not. But I do wish you'd try to rouse yourself from that determined pessimism of yours."

"Pessimism! I rather think that if you—"

"Yes, I know, I know. But, when everybody is doing all that's possible for your good, for your happiness, I do think you might try—just try, you know—"

"YOU'RE right, Len—and I know it. But—Oh, I can't! Everybody tries to brighten me up and cheer me, until I nearly go frantic. But it doesn't do a bit of good; I think it makes me worse."

"But, why, Mary, can't you make a big, splendid effort and conquer it all?"

"Conquer what?" Her eyes blazed at him. "Memory?"

"No, no, of course not. But morbidity, melancholy, despair. Put up a fight!"

"Oh, hush, Len; I don't want to fight. You think, I suppose, you're saying something original, something novel. . . . I've had all that dinned into my ears by all sorts and conditions of people for sixteen years."

"Magee?"

"Yes, of course by Mr. Magee, and by the rector, and by the doctor, and by Nurse Lane, and even by Miss Mills."

"What are you talking about," said Howland indignantly. "This is no boggy place—the house isn't haunted"

"Good lord, what does she say to you?"

"Oh, she's no simpleton, you know. In fact, she gives me about the best advice of anyone. Just to go outdoors a lot, and ride and golf, and read, and mix with people—just general good advice. I've even tried it; but it does no good. To-night, I'm more than usually unstrung, because there's a thunderstorm coming up."

"A thunderstorm! In October?"

"Yes; such things aren't unknown. Anyway, there's one coming. You'll see."

AS ONE entered the wide and beautiful hall of Howlands, on the right was the living-room and on the left was the library, in which the master of the house spent most of his time. Back of the library was a billiard-room, and back of that the large and formal drawing-room. On the other side, behind the living-room, were the dining-room and kitchens.

Simple of plan, the rooms were so large and spacious and so well proportioned that there was an effect of long vistas; and the great staircase, which rose from the center of the hall and branched to either side, was an architectural triumph in itself. On the second floor, the Howlands' own suite was over the living-room, while across the hall, above the library, were

guest-rooms, now occupied by the Peterses. Behind these was Leonard Swift's room, and behind that the pretty room of Miss Mills.

To the rear of the Howlands' rooms was the room of Austin Magee, Ralph Howland's secretary, and back of this, the room of Nurse Lane, who, though classed among the servants, was a most important member of the household; indeed almost a member of the family.

Magee was dressing for dinner and was thinking about the mining scheme in which Rob Peters was so determined to interest Howland. The secretary had his employer's interests deeply at heart, and though he never had presumed to advise he was carefully considering whether it was not his duty to do so in this case.

Austin Magee's finely shaped head was well set and well carried on his shoulders. The man, though not specially well born, had a poise that a statesman might envy. His very walk across a room gave an impression of dignity and importance, and he was absolutely devoid of any appearance of self-consciousness.

His self-respect and self-reliance were plainly written on his strong, unhandsome face, and determination was, quite evidently, his besetting sin or his chief virtue,

according to the object of his will. His industry was tireless and his energy inexhaustible.

At thirty, Magee had achieved a position that pleased him. He was private secretary and general manager to Ralph Howland, a magnate of wide interests and various enterprises. Or rather, Howland *had been* actively engaged in high finance, but now, nearing fifty, he was retiring from business life and was winding up and disposing of many matters with a view to a leisurely old age, although one bound to be colored by the terrible tragedy of sixteen years ago.

IN THE first happiness of Ralph and Mary Howland in their new home, an epidemic of sleeping sickness had claimed their only child, the little six-year-old Angela.

Nurse Amy Lane had been the nurse of Baby Angela, and had remained with Mary ever since the loss of the child. Solicitous for the health and comfort of her mistress, Lane had been a bit spoiled and was, of late, growing domineering and dictatorial, as is a way with old family servants. On the whole, however, her presence was valuable, even necessary to Mary's well-being; and though disliked by

the other servants Lane was also feared and respected.

The sudden death of the child, during the excitement and disaster of the fearful epidemic, had been tragic in many ways: There had been no funeral, and the tiny casket had been taken away from the house during a violent and terrifying thunderstorm. This incident had so affected the nerves of the stricken mother that, ever since, she had been especially sensitive to weather conditions, and knew instinctively of the approach of the dreaded electric storms.

Dressing for dinner this evening, Mary Howland glanced continually and apprehensively through her windows at the heavens. The storm was still holding off and there were only distant rumblings and occasional faint flashes of lightning.

Mary, assisted by Nurse Lane, was getting into an evening gown of soft white that showed a bit of silver lace here and there. A long sash end of silver ribbon hung at one side, and her silver slippers tapped impatiently as she was being hooked up.

"There now," admonished Lane, "don't you begin tapping your foot, Mrs. Howland. You'll get all feezed up if you don't hold on to yourself."

Lane was a gaunt, ungraceful woman, with prominent elbows and knees, and had a bearing like a grenadier. Her eyes were faded and colorless, with sandy brows and lashes, yet even this effect of weakness was offset by her large nose and firm, hard mouth. A martinet, a virago, she looked, and was; but toward her idolized mistress she was all gentleness and affection.

"There, there, dearie," she would say, and taking Mary in her arms would wipe her tearful eyes as she would those of a child.

Austin Magee, as he finished dressing,

was still thinking about the mining project. He feared that Howland would be drawn into it. A smaller deal Magee would have ignored, but this was enormous. It might wreck Howland's whole fortune. Something must be done, and at risk of incurring his employer's deep displeasure Magee decided he would interfere. He had realized of late that Ralph Howland's judgment was not quite what it had been. Moreover, there was a certain momentous matter opening up—a matter that might revolutionize life at Howlands.

No, that great fortune must not be jeopardized, Magee determined. Shaking his head obstinately, he went down-stairs and joined the others in the drawing-room, where the first people he saw were Rob Peters and his pretty wife, Sally, standing at one side, engaged in earnest conversation.

**EDITH MILLS**, that invaluable member of the household, stood near Mary, helping her receive and entertain the dinner guests. Though only stenographer to Ralph Howland, Miss Mills also acted as his wife's social secretary, and she was both clever and useful in that capacity.

Magee made his way straight to the side of Edith Mills and, standing close, said in a low voice:

"Peters is dangerous. He's out for blood, and he's going to tackle the old man to-night."

"What can I do?" And though the girl's tone was a bit pert she looked earnestly at Magee.

"Not much; but you can do this: sit next to Peters at dinner and sound him. Just get all the information you can—not about the mine, but general information about the man, his habits, doings of late, and—"

"I know," the ash-blond head nodded. "Go away now, they'll notice you."

She turned away from him, and resumed her pretty tasks of entertainment.

"How attractive that girl is," somebody remarked to Leonard Swift. "Too attractive to be a man's secretary, I should say!"

"Oh, no," Swift explained. "She's a dear, and Mrs. Howland is devoted to her. Sometimes I wish she would adopt Edith and let her take the place of the daughter she lost."

"What an idea!" and the guest stared.

"Not at all a bad one," Swift returned. "Edith Mills is a fine girl, and a household favorite. She isn't secretary to Mr. Howland, Mr. Magee is that; but she is stenographer when needed, and she helps Mary socially at other times."

"She's certainly attractive-looking. Oh, my heavens and earth!"

The sudden exclamation, not entirely inappropriate, was called forth by a terrific clap of thunder, with an almost simultaneous lightning flash that was evident even in the electric-lighted room. Edith Mills, close at Mary's side, slipped an arm round the trembling woman, while Nurse Lane hovered in a doorway. But Mary Howland held herself well in hand, and as the bolt was not repeated, she summoned all her will power and led the way to the dining-room.

The serene smiles and gay banter of those at the table gave no evidence of the deep and perturbing thoughts beneath the urbane exterior of many.

Leonard Swift, with a reputation for repartee, made good at it, while his quick eyes and good ears took in all that was possible of anything said by his cousin or Rob Peters. Magee watched everybody, without being noticed; but Edith Mills, who was possessed of truly abnormal hearing, listened adroitly to everyone, and stored up several important bits of knowledge. (Continued on page 170)

The eyes that looked up at him, across her untouched breakfast tray, were moving restlessly about, and her wandering gaze was unintelligent and uncertain

Toward the end of this article Doctor Mott gives six interesting tests to apply to yourself and to others

# Vision

What it is, and how to tell whether you have it—Stories of great men who had it to a marked degree

An Interview with John R. Mott

Executive Head of the International Young Men's Christian Association

*By Bruce Barton*

WITH a man whose name I do not know, I sat on the observation platform of a transcontinental train while the glistening rails unwound themselves behind us across the surface of the Great Salt Lake—a roadbed of solid rock, as disdainful of the angry little waves on either side as a giant snapped at by puppies. They had fought a game battle, those waters; for many months they scattered and hid the rock as fast as loaded freight trains could haul it; mockingly they tossed themselves at the puny men who should have known better than to try to do a thing which could not be done.

As often as the men were beaten, they returned with bigger locomotives and trains more heavily loaded, until finally the mocking laughter died out of the waters and sullenness settled on them. Up through the surface the roadway pushed its huge shoulders, and stayed; the waves still snarl and snap, but the fight is gone out of them. The rock alone they might have conquered; the Thing they could not conquer is harder than rock—the will of a man who, seeing in his mind's eye the job already completed, will not rest until it is complete.

My companion on the platform tossed his cigar into the lake, thrust his hands into his pockets and took a deep breath.

"Always like to come back by this route," he exclaimed. "Sort of stiffens your backbone to think of that little chap Harriman. Everyone told him he couldn't build his railroad across the lake; but he went ahead and built it. All they saw in the road anyhow was a couple of streaks of rust. He saw the West, and he invested every penny he could beg or borrow. Anybody else could have bought the stock at the same price he paid; all it needed was Vision."

With a friend I rode through the highlands of Kentucky, to the crest of a hill which commands a view of the campus and buildings of Berea College. Every fall two or three thousand boys and girls make their way down the valleys from their

mountain cabins to Berea; every spring they go back again, each one an apostle of progress. You can trace their influence all through the mountains by farms that are better cultivated, by homes better built, by meals better cooked.

"I doubt if any other institution in America influences more people, directly and indirectly," said my friend. "It's a great monument to William Goodell Frost.

It certainly sounds like a record and, if so, it is only one of a number of records which belong to John R. Mott. No other American has addressed so many audiences in so many different cities; no other has ever spoken so often in all corners of the world to great crowds, through an interpreter; few have traveled so constantly back and forth around the globe. When the war broke out in 1914 it was said that

Mott knew personally the premier of every country, on both sides. For more than thirty years his business has been with the young men of the whole world and, as an incident of the progress of that business, he has had to be on terms of acquaintance or friendship with whatever emperor or president or czar happened to be in a position to hinder or help.

He was speaking that evening about a man he had met in Washington, a man whom he watched as a college student back in the nineties. It is a tragic thing, he said, how some careers, which open with so much promise, shrivel

and end in futility. This man had wealth and social position; he was a leader both in scholarship and student activities; his university expected much of him. Yet in his own city in the Middle West he has allowed the sphere of his interests and enthusiasm to contract year by year, until his influence is dead and his name forgotten.

"I couldn't help contrasting him with another man who was in a different university at about the same time," said Mott. "He lacked some of the favoring factors which entered into the life of the other; and his disadvantage was added to, apparently, by the fact that he went to the Orient after his graduation. But out there he rendered such conspicuous service, and made such an impression, that he was heard of in New York; he came back to Wall Street and in a few years established a recognized leadership. He went to France with the army and died, still a young man; but in his short life he had built himself into dozens of activities that still carry forward under the enthusiasm he imparted." (Continued on page 160)

## John R. Mott's Definition Of Vision

To see what others do not see.

To see further than they see.

To see *before* they see.

I visited the 'college' when he took hold as president, a one-horse affair if ever there was one. You wouldn't have given much for his chance of putting it across. But Frost had the Vision."

There are certain mystery words in the language, and "Vision" is one of them. In what does it consist? By what magic does it transform the son of a penniless parson, like Harriman, into a multi-millionaire? It builds colleges and cathedrals and factories; it leads nations to greatness and men—a few men—to fame. But how? No one stops to define the word; everybody uses it quite casually as though we were all perfectly agreed as to what it means. John R. Mott, executive head of the Young Men's Christian Association, used it one night, as we were sitting together in front of an open fire.

He had just returned from Washington, where he had transacted business with three Presidents in a little less than two hours—with Harding, Wilson, and Taft. Has any other man in history, I wonder, ever had dealings with three Presidents of the United States on the same morning?

*John R. Mott*

**PROBABLY** no other living American has influenced and inspired more young men than John R. Mott. He is executive head of the International Young Men's Christian Association, which has a paid membership of more than *one million* in this country alone, and carries on organized work in thirty-one other countries.

Doctor Mott was born in Livingston Manor, New York, and he is fifty-eight years old. He was graduated from Cornell University in 1888. During the late war he was the most important single figure in the direction of religious activities among the soldiers of the American Expeditionary Force.

*William Benson Storey*

**MR. STOREY** is president of one of the greatest transcontinental railway systems in the country—the Atchison, Topeka and Santa Fé. He began his railroad career with the Southern Pacific more than forty years ago as a stake driver at twenty dollars a month. From the bottom rung of the ladder he worked his way steadily and undramatically to his present post. For

more than twenty years he has held important executive positions with the Santa Fé road, where he was right-hand man to the late Edward P. Ripley, one of the outstanding transportation geniuses of modern times, whom he succeeded as president. Mr. Storey was born in San Francisco on November 17th, 1857. His home is on Lake Shore Drive, Chicago.

# From Stake Driver To Railroad President

The eventful life of "Bill" Storey, head of the Santa Fé, who just put one foot ahead of the other and on up the ladder to the top

By Neil M. Clark

THEY were preparing to build a new stretch of railroad through a swampy district in California. The chief of construction wanted to know how deep the swamp was, how far down he would have to go to get to bedrock. He sent off young "Bill" Storey in charge of a crew of three men to find out.

Storey was scarcely twenty years old. He had worked in surveying parties and construction crews on the railroad during his vacations for several years; but this was the first time he had ever been put in charge of other men. He was eager to make a good showing as a "boss" and get the required results in the least possible time. So the first day he turned to and worked harder than anybody, on the theory that the others would be inspired by his example and do likewise.

However, they were three blarneying Irishmen, well along in years and experience. When they saw their youthful boss working so hard, they told him that he was certainly a fine worker; and by keeping up the flow of compliments they cleverly concealed the fact that they did next to nothing themselves! That night "Bill" Storey was a stiff, tired, and disappointed boy.

William Benson Storey, the "Bill" of this episode, recalled the incident the other day in the course of a talk I had with him. He is now the president of a great railway system, the Atchafalaya, Topeka and Santa Fé.

"I lay awake the better part of that night," he told me, "trying to figure out why we had failed to get more done. I tossed and turned and studied, and finally I concluded that those Irishmen had been riding me. They saw I was working hard enough for all of us, and they naturally reasoned that it wasn't worth their while to overexert themselves! I saw I had gone at the job wrong.

"The next day I held back and told the others what to do. They did the work. I looked on and directed it. After that we got along a whole lot faster."

Mr. Storey related this incident to illustrate one of the things a man needs in order

high school. That was nearly fifty years ago. Except for the time he spent in school and college, it has been there ever since.

Some people imagine that achievement like his is largely a matter of bold strokes.

But William Benson Storey does not believe that bold strokes have very much to do with the making of a career. He got on by putting one foot ahead of the other, and by keeping everlastingly at it!

"I started," he told me, "with a surveying party on a small Western railroad. I had to earn money while I was in high school. And I had to earn my own money to put me through college.

"My first job was driving stakes. Usually, when a railroad man tells you he came up from the bottom, he explains that he started as a rodman.

"But as a stake-driver, I thought a rodman was a man of considerable eminence. He had a chance to help with the instruments. I did not. My job was the very humblest in the crew. The salary was twenty dollars a month. I had to work more than a year before I was advanced to a position as rodman.

"Between high school and college I worked for a solid year to accumulate something for my expenses. And I always worked on the railroad during vacations. My experience convinced me that railroading was a difficult profession, in which the pay was small for the effort, and I was sure I did not want to follow it permanently. I advised all my classmates against it.

"But I have come to believe there is a good deal in the force of circumstances. When I finished college jobs were scarce. I had no difficulty getting a position with my former employers, who knew something about me. Later, when I had opportunities to get out of railroading and into something else, I couldn't afford to change.

(Continued on page 178)

## Many Men Deliberately Choose Smaller Jobs

"I HAVE found," says Mr. Storey, "that quite a lot of people do not want to get on, in this sense: They are unwilling to accept the responsibilities that come with advancement.

"One of the great shocks of my boyhood occurred when I learned that the local telegrapher in the railroad station in our town had refused promotion to the dispatcher's office. He decided to stick to his key; and the reason he gave was that the added pay that dispatchers received was not sufficient to compensate him for the added responsibilities that he would have in the higher office.

"To me his decision seemed almost criminal. I saw it as a step upward. But he was thinking of his ease.

"That man died a telegrapher in a small station. He didn't get further because he didn't want to; or, if you like, because he didn't dare to.

"I recall a similar case that happened several years ago. A locomotive engineer was offered a promotion. He was to be given the position of road foreman of engines. The work was more responsible. It took the engineer out of the ranks. And it was the opening wedge to bring him to the notice of those above him.

"Can I," he asked, "try the job for six months with the understanding that if I want to then, I can go back on my engine?"

"We gave him permission to do that. And six months later he asked for the old job.

"I know how to drive an engine and give acceptable service," he said, "on the other job I'm liable to make a mistake and be fired. I'd rather take a chance on a sure thing."

"That man was a good locomotive engineer, which is a worthy thing, but he would never get higher—never into the important official ranks. He lacked the spirit of daring, and the wish to be trying new things for the joy of mastering them. To get on, and to keep getting on further and further, a man needs something of the spirit of adventure—a willingness to dare, to run the risk of making mistakes if he thinks he is right, to load himself up with responsibilities."

to get his foot on the ladder and start climbing; that is, he must understand the handling of men. The record of Mr. Storey's own career is intensely interesting and for an odd reason: it is long and distinguished, but scarcely a single strikingly dramatic occurrence has contributed materially to making it so. He got his foot on the railroad ladder when he was still in

*A cool, clammy breath fanned the back of Gideon's neck*

# Old Gideon—Detective

A story

By Samuel A. Derieux

ILLUSTRATIONS BY VICTOR ANDERSON

**O**LD GIDEON, colored, jogged along the blazing road in a racing sulky to which a small gray mule was hitched. Anywhere but in the black belt or upon the stage he would have been an amazing spectacle. So large was he in proportion to his equipage that you expected momentarily to see equilibrium destroyed, Gideon himself sitting in the road, and the diminutive mule elevated in the air between the shafts. His attire was as striking as his equipage. He was dressed in black "preacher's" clothes. The long tails of the rusty and somber coat, dangling down behind the narrow seat, almost dragged in the sandy road. A stovepipe hat sat upon his head, and crescent earrings of brass dangled from the lobes of his ears. He looked like a tall old Congo chief who had superintended the last culinary rites of a missionary, then dressed up in the missionary's clothes and calmly driven off in the missionary's rig.

Even in the black belt Gideon was a character. Sometimes he preached; sometimes he doctored, verbally, as it were; sometimes he conjured. Certainly he was a power among his people to the extent that he was forced to perform no physical labor whatever. If he wasn't fed by the ravens he was fed by the raven-hued. Wherever he went dusky crowds gathered about him. Whenever he spoke, dusky crowds listened.

Queer and divergent things were said about Gideon. If, according to the credulous among the blacks, he was a conjurer and a diviner, according to the whites he was a shrewd old sleight-of-hand artist and faker.

Whatever the source of his powers, they had more than once, it was rumored in the black belt, been requisitioned by the police in the city. Certainly he disappeared nobody knew where for long periods of time. There were other queer things about him, too. To-day, for instance, in spite of the torrid road, hot habiliments, and stovepipe hat, justly named from the thermos standpoint, he was not even perspiring. There were those who said he had spent part of his life in hell, and was therefore more than acclimated to the semitropical heat of the swamps in lower Carolina. But wherever he may have been and whatever he may have seen in his long and mysterious life, he was now engaged in a most congenial mission. He was on his way to investigate the actions of a ghost—a ghost that threw stones.

The unprecedented activity of this extraordinary ghost had thrown a whole neighborhood into wild excitement. It had started operations several nights ago on the old Pettigru place. Miss Betty and Miss Cynthia Pettigru, twin spinsters who lived there, had been terrified

about ten at night by the crashing of a stone through the window of the parlor, where they were singing hymns together, and had run out on the porch screaming for help. Before this help had come another stone had crashed through the bedroom window. The negro plantation hands and the house servants who lived in the yard had rushed out of their cabins to the assistance of the ladies. While they were all searching the premises, some out of doors, some indoors, out of the air itself as if thrown by no human hand, another stone had crashed through the dining-room window and rolled across the floor.

It had been a night of terror for the two old ladies and for the faithful domestics and hands. Ada, the housemaid, who slept in a room adjoining that of her mistresses, had gone into hysterics. Then other nights of terror had followed. With the magistrate and two sheriff's deputies watching two nights in succession stones thrown at intervals by unseen hands had crashed through window panes and rolled across floors!

**B**ACK of it all lay a legend, not a legend either, for it was founded on fact: Before the Civil War old Captain Pettigru, now dead, had had serious trouble with a slave with the suggestive name of Cain. This slave had openly threatened the captain's life, and then had run away and hidden in the big river swamps. He had remained hidden so long that all hope of finding him was given up.

Then one night while the captain sat near the parlor window reading, a stone had crashed through the pane and come near crashing through his skull as well, which no doubt was intended as its objective. Outraged, the captain had grabbed his shotgun and rushed into the yard. Hearing the sound of running feet and barely glimpsing a figure, he had fired. It was Runaway Cain.

"I gwine ha'nt you, Cap'n—you an' yo' chillun an' yo' gran'-chillun to the thud an' fo'th generation. Glory Hallelujah! Amen!" Such, it was said, had been Runaway Cain's last words.

Of all this Gideon was thinking as he jogged along. Now and then he spoke to his mule, not unkindly, but in an admonitory way: "Git up, Delilah—Git up, gal!"

Long before he reached the Pettigru plantation he began to meet groups of black folks returning home. When at sunset he came in sight of the place itself, he saw other groups about the yard, among them a cluster of white men. In strange contrast to the mystery that had caused them to gather, out in the yard a colored maid was picking flowers which no doubt would be placed on the supper table that night. Even in their terror the Pettigru sisters had not neglected their hospitality.

Through the grove of oaks in which it stood old Gideon made out the house itself, and the broken window panes, plainly visible and staring like the hollow eyes of a man stricken with some mysterious sickness.

His arrival created a stir among the darkies. One came to him as he clambered out of the seat, and led the sacred mule and sulky off toward the barn. A negro woman cried out, "De deliberer done come!" and someone laughed, though not heartily. A white man, no less a personage than the sheriff himself, nodded at him familiarly. And when, led by old Celia, the cook, he presented himself to the sisters, who with a few neighbor women sat in the parlor, Miss Cynthia spoke to him:

"Well, Gideon, so you too have come to visit us in our trouble."

He made a bow, for like everyone else he respected the Pettigru sisters, kindly souls both, friends to white and black, his eyes—unusually keen eyes they were—roaming about the dusky old room, taking in the polished top of the square piano and the broken panes behind it.

"I come to render my services, miss," he said. "Yes'm."

Out of doors, underneath the window, a woman broke into a sort of chant: "De deliberer—de deliberer done come."

Gideon was to play his part in the campaign the sheriff had planned for that night. He was included in the cordon of men, all the rest white, that after dark was drawn about the haunted house. The other darkies were ordered off the premises and told not to return until morning. They obeyed willingly.

"I ain't anxious to stay, no, suh," said old Ben, the gardener.

Only after Celia, an alarmed rear guard, had taken her departure, was the cordon drawn. At a little distance from the house a complete ring was formed, each man so close to his neighbor that no one going toward the house or coming from it could pass without being seen or heard. If they heard a stone fall, or the sheriff blew a whistle, each man was to rush straight toward the house. Thus, like a noose, the net of the law would be drawn.

**N**ONE but the two sisters and Ada, the maid, was allowed to remain in the house. They would not be much frightened with so many men around, the sheriff argued. He would wager his office, and he had worked hard to get it, that nothing was going to happen that night; or, if it did, somebody would be caught. Thus spoke the sheriff boastfully, his mind being of the earth, earthly.

Gideon was present with him in the parlor when after this manner he reassured the old ladies, both of whom tried conscientiously to be brave and matter of

fact, though night was now staring in at the windows and lamps had been lighted to keep it out. Of course it was perfectly ridiculous to talk about a ghost, Miss Cynthia declared. Yet when, just as they were thus mutually assuring one another, there came from overhead the sound of sudden scampering not only the sisters but the sheriff himself started visibly.

"Dat was rats," said Gideon.

THE sheriff placed Gideon in the garden to the side of the house, where he sat down on an empty box. Before him loomed the black contour of the trees in the yard and segments of the haunted house itself, where a solitary lamp burned for a time and then went out. It was one of those nights when the lights from other planets do not penetrate the fog that hangs over the earth—a damp, close, veiled night that seemed to be waiting breathlessly for something to happen.

Sitting out there on the box in the darkness Gideon might have served as a dusky, indistinct model of "The Thinker." Near this spot Runaway Cain had fallen and, dying, uttered his curse. Just back of the garden lay the old slave burying ground. If Cain rose out of the earth and drifted toward the house he would pass by Gideon—maybe pass through him! A cool, clammy breath fanned the back of Gideon's neck. In a muffled way he cleared his throat. Somewhere a white man, in a muffled way, cleared his. Then the stars and the katydids had the night to themselves.

It must have been well past midnight when it happened. Clear, distinct, startling there came from the house the tinkle of broken glass followed by a suppressed scream. A moment of deathly stillness and then the sheriff's whistle. Dark forms rose from the earth and accompanied by the crackling of sticks and the pounding of feet came closing in on that house of mystery, old Gideon along with the others.

It has been related how in the pride of

The voice that had shaken many a clapboard church to its

his heart the sheriff had boasted that night, and now must be recorded his humiliation. The contracting cordon of men closed in properly, but the only ghost spectacle afforded them was the sight of one another's white faces, to which Gideon's was a marked exception. And when it was over, the sheriff, fanning himself with his hat, spoke with emphatic conviction:

"By God, this beats me!"

AS FOR Gideon, he faced two shaken, not to say shattered, old ladies in the bedroom, where the lamp had been lighted and where Ada, who had fainted, lay across the bed.

"Whar dat las' rock fall?" he demanded of Miss Cynthia, his eyes shining with excitement.

"Through this window," cried the old

lady wildly. "It almost struck Ada. It's on the floor—somewhere—I can't see anything. Betty, Betty, where are my glasses?"

"Ha' you ever 'zamed dem' rocks, miss?" asked Gideon. "Does dey look like dese bodies de Lord frow at us from de sky? Is dey hot? Does dey sizzle?"

She hurried to the bureau and brought him a shoe box full of them. Her hands trembled so that it looked as if she were inviting him to some strange game of dice.

"Here they are!" she gasped. "Look at them. Everybody does it, but what good does it do? Betty, I feel that I'm losing my mind! Oh, I cannot stand this another night! I didn't know we had an enemy in the world—or out of it!"

Carefully Gideon examined the stones, shaking his head as if in disapproval of their conduct. They were small, flinty

foundation thundered above their heads: "De sword ob de Lord an' ob Gideon!"

formations about the size of guinea eggs, very heavy and of a pinkish hue. Two of them the old fellow dropped thoughtfully into the pocket of his waistcoat.

**C**URIOS to see what had happened in his absence, the sun of another August day poked his face, already heated as if by a fiery morning toddy, above the woods and groves, drinking up fogs and mists almost at a draft, and shining on the broken window panes of the Pettigru house, plainly haunted now. At the same time old Gideon, refreshed by a sonorous nap in the cabin of a follower, entered the yard, eager to continue his investigations.

Already there was activity. The banished servants had straggled back only to learn the worst. A few white neighbors—white people were scarce around there—had arrived and been conducted into the

darkened parlor. And then Ada came running down the steps.

"Here—you—Jud—Jim!" she screamed. "Miss want you to go up in de attic and fetch down de trunks!"

Gideon hurried across the yard to her. She was eighteen, slim and black as a coachwhip snake. Her eyes had a way of meeting yours squarely, holding them a moment teasingly, then looking away.

"Trunks?" demanded Gideon. "Whar you gwine, young sister?"

"We gwine move to town, lordy, lordy! We can't live wid de ghos' no mo'! We gwine crazy, we is!"

"Does you like de town, young sister?"

"I ain't 'posed to it," she said airily. "I like de fine sto's, de pitcher shows, and de young genmans!"

"Den why ain't you lef'?" asked Gideon.

"Kase I was bounden out by my pa to

Miss Cynthia wid his las' bref—his las' breavin' bref! Lordy, lordy, we can't stan' dis no longer! We gwine crazy, we is!"

She turned and ran up the steps. At the top she paused and looked back.

"De deliberer," she taunted, "done come."

"Maybe he is come, you Jezebel!" muttered Gideon darkly to himself.

In the kitchen, where he hurried next, he found Celia washing dishes, perhaps for the last time, and old Ben, her husband, scratching his wool.

"Everybody urge 'em to go," moaned Celia. "Everybody say dey ain't no s'lution. De sheriff, he lef' at daylight. He say dey better go. He busy in co'te, he say. Arter co'te sojourn, he come out an' go to de bottom of it. But, Lord Jesus, dey ain't no (Continued on page 216)

# What Everyone

*By H. G.*

Author of "The Outline of History,"

**T**HE discussion of what everybody should read is nowadays, and naturally enough, a hardy perennial. I can remember it flourishing ever since I was a small boy. It was a necessary outcome of the spreading of the modern idea of democracy, which asserts not only the right but the obligation of every man to be as full and complete and responsible a man as he can be, and to have a voice, as valid in the measure of his personal quality as any man's voice, in the destinies of his race and planet. But unless he knew— That was impossible unless he knew.

It is only very slowly that the mass of people in the world are coming to understand the realities of education and learning. We are only beginning to emerge from the old order of things in which the majority of human beings were either actually slaves or at any rate inferiors, whose rôle in life was to do exactly as they were shown and told. It wasn't for the common man of former days to understand; his lot was to submit to custom, law, and the imperatives of his "betters," to toil or suffer in mute obedience as his rulers contrived, and to be steered at last more or less painfully to his undistinguished and unremembered grave.

The idea of going on learning throughout life and having a will of one's own about the use of one's strength and powers has been hitherto, and still is, the idea of a select minority. It is an aristocratic idea. But sound democracy is only universalized aristocracy. In the great republic of the days to come the common man will be a gentleman and a statesman. When democracy becomes a reality to that extent then that idea of continuous learning will become the common idea, and every ordinary man and woman alive will seek to share to the utmost possible in the will and purpose and consciousness of mankind. Not votes but knowledge emancipates men, and our legal democracy, our formal equality at the ballot box, must remain essentially an aspiration, and largely a sham, until adult learning, steady learning throughout life, becomes the common habit.

It is the spreading realization of this fact which sustains this recurrent modern discussion of what every man and woman should read. Schooling and learning can never be "over" in the new world that dawns upon us. The belief that schooling or professional training can come to an end while life lasts, that anyone can have learnt all that need be learnt and need learn no more, is part of that slave inheritance from which our world is seeking to escape. "From everyone according to his ability," that is the new commandment of democracy. According to his *utmost* ability, goes without saying. A day will come when people will realize that they have no more right to give up reading and serious study because school and col-

lege days are over than they have to give up washing or the use of a tooth brush because they have grown up out of the tutelage of home.

Learning is a continuous process, and there are no bounds to it but the abilities and life of the individual. This, if we follow it out to its conclusions, sets aside the idea that there can be a canon of the best books that, once read, will suffice for all our intellectual needs, that we are then excused all further mental effort and can then go back to wages-grubbing or profit-grubbing. The reading of everybody needs to be as continuous and abundant as possible.

And having cleared away this too common assumption that there is a small, limited number of books which will suffice for intellectual salvation, we can go on to discuss what everyone should read with some hope of a profitable conclusion.

**FIRST**, I submit that everyone should read some history every year and every month in his or her life. History is the unfinished drama of which our lives are a part; we cannot understand ourselves except we have some understanding of history. Of course, like the horse that killed William the Conqueror or the geese that saved Rome, one may live in the world and even play an important rôle in the world without any historical knowledge. But without understanding we are, at best, floundering and perhaps mischievous actors. As we get understanding we can direct not only our votes and our public acts but the general activities of our lives more and more effectively, to forward or oppose the great forces that are manifest in the historical record. In our measure we can begin to control destiny.

Now in a lifetime even a very closely employed worker or a very busy business man may get through, and should get through, a very considerable number of books. I do not think an average book a week is an unreasonable demand to make. I do not see, therefore, why everyone should not get through four or five good books, big books, of history a year. When I say everyone, I mean the plowman and the policeman, the cook and the hotel page, as well as the doctor and the bank clerk. History is a story of everybody in the past for everybody in the present; it concerns everybody equally, though it may concern different people at different angles, and I do not see why, whatever their position, most busy people shouldn't get through about the same minimum of historical reading.

And, to come to particulars, it seems to me that for a large part of one's historical reading everyone should follow his or her own tastes and curiosities; one of us may find interest in medieval history and another in Egypt and yet another in China, and I believe that the proper thing is to seek the sort of history that interests

and is living to one's self, and to follow up that from book to book, quite irrespective of the tastes or advice of other people. But I think that also everyone should read ever and again some book that summarizes all history and puts one's life into relation with the whole adventure of mankind. That I would make a universal requirement.

The Hebrews, in the formative years of Judaism after the Persian and Greek and Latin conquests of the Semitic world, had such a summary of history in their Bible, which put all their lives into a simple and direct relation to the story of the whole world brought up to date. The early Christians in their Bible also had a still completer vision of the whole scheme of life up to the days in which they were living. The creative force of such a vision of history is enormous. The early Jews and the early Christians had the clearest idea of their relation to the whole scheme of things. It cemented their communities as nothing else could have done.

Nearly nineteen eventful centuries have elapsed now since those great summaries were made; nineteen centuries of change, and in addition much has been learnt to confirm and extend and modify the account they give of life. It is because of the growing realization of this fact that the world has taken again to reviewing history as a whole. It is a work undertaken under a sense of necessity and in response to a very great public demand.

**THIS** outbreak of historical curiosity is very wide and remarkable. It has been gathering force for three centuries. The rewriting of universal history was already afoot in the days of Shakespeare; Sir Walter Raleigh's "History of the World," though it never got beyond the Roman invasion of Asia, was planned to come down to the founding of Virginia. The eighteenth century produced several Histories of the World, compiled as a rule by various hands, and usually in a great number of volumes. Such collections have gone on appearing down to our own times; we have Helmholtz's "World's History," for example, and the great enterprise of the Cambridge History in its three parts, Ancient, Medieval, and Modern. But the growth of knowledge has cleared up much that was once crowded and multitudinous, and filled in and simplified much of the old outline. Increasing knowledge does not mean longer histories, but more confident and comprehensive generalizations. The whole of history is simpler than any part. A valiant attempt to get all history into one vision was Winwood Reade's "Martyrdom of Man;" it dates from the middle nineteenth century and is still a most inspiring book. A rather kindred book of later date, and also very stimulating, is Cowan's "Master Clues of World History." Breasted and Robinson together, Webster and West, each single-

# Should Read

Wells

"A Short History of the World," etc.

handed, have produced excellent two-volume histories of human progress very well illustrated, and there is a "General History of the World" without pictures, by Oscar Browning. So there is a large choice of books for "everyone" to read in making that general review of man's past which everyone should do. Everyone should read a universal history, but everyone need not read the same universal history.

I know that some readers will sneer at me that the cobbler says there is nothing like leather, because, I also, have made two such summaries in the "Outline of History" and the "Short History of the World," but I made those summaries because I believed they were necessary; I do not say they are necessary because I made them. I made them out of my own reading for busy people who hadn't the time or present opportunity to cover so wide a field of reading as I could do. I made them from my own point of view, and because I believed that the problem of the peace of the world could not be properly approached without such a prelude. I believe that they are only two among what will presently be a large and steadily increasing number of world histories. There is room and need for a lot of such universal histories, and it seems to me inevitable that universal history should henceforth be frequently rewritten. It is a perennial interest, and every year's experience alters the lighting and calls for a change in interpretation. It is a universal necessity. World history is our common story. It is the play in which our lives are parts. It is the explanation of our relations and duties one to another.

AND when I write of world history I would have it understood, in the widest sense, to cover all the known past not only of man but of man's precursors and of life altogether. Universal history must be read here to cover natural history and the description of the earth and the starry universe. A slave or a mere sordid wage-earner or squalid profit-hunter need know nothing but his master's rod or his pay-master or the customers he bests, as a pig knows the way to sty and trough, but a man is not fit to be a citizen in a great democracy who does not think constantly of the past and future of his race and of his place among the stars. It is the business, therefore, of everyone nowadays to keep pace not only with the general progress of historical discovery but with the trend of discovery and the general development of scientific ideas.

And next I suppose everyone should read a newspaper, if not a daily then at least a weekly newspaper, for to a properly intelligent man or woman the newspaper is the living edge of history, the two interpret each other. And when I write "a newspaper" I mean a newspaper that gives the news, not one of those sheets of betting tips, insurance coupons, jokes, anecdotes, short stories, funny pictures, idiotic photographs, and miscellaneous twaddle about why babies cry and whether old bachelors should marry, which people nowadays, and particularly English people, accept as newspapers. The degeneration of British daily newspapers in the years since the war has been very remarkable; they give less and less news and more and more snippets of trashy reading matter. There are really

with the ever-advancing boundaries of human knowledge and achievement. If there are people who cannot read such periodicals, then it is high time the schools that produce such people were looked into and shaken up to a higher level of efficiency. When I write of what everyone should read in a modern community I have of course to assume that the schools of that community have prepared them for their reading.

NOW, the particular history that people should read, as distinguished from the general presentation of history as a whole, is, as I have said, a matter of individual preference. We read to extend and broaden our tastes and sympathies and to get light on our individual problems, and one man may find his mental food and stimulus in the wonderful story of Greek science in Athens and Alexandria, another may be fascinated by the slow, romantic recovery of law and order after the collapse of the Western Empire, and another may find a pool of wonder in the mysteries of the Maya civilization of Central America. It is extremely good for the mind and soul to follow up such a chosen interest, to get everything that has been written about the place or people which has laid hold upon one's imagination, and to go to museums and places where remains and evidences are to be found. Everybody should read and follow up some such particular history in this fashion,

but everybody need not read the same history. There is no harm or shame in not knowing any particular historical facts, but one is a poorer and a meaner creature for not knowing some group of them well.

Something of the same enlargement and release and ennoblement of one's thoughts is served by reading good biography. But there again one must follow one's inner light. One man may find life and inspiration in the life of Faraday or the life of Abraham Lincoln; to another these lives may be quite dead and useless books. Many readers can never have enough of Boswell's Johnson, but to some it is the table talk of a rather tiresome old gentleman. I know a woman who finds stimulus in the lives of such great politico-spiritual women as St. Teresa, a publicist who goes again and again to Plutarch's "Lives." For everyone there must be some personalities recorded in biographical literature who have a sufficient appeal. Everyone should hunt about for his or her affinities. It is not only through biographies that we can get these (Continued on page 181)

## "What Everyone Should Learn at School" By H. G. Wells

IN AN early issue of THE AMERICAN MAGAZINE, H. G. Wells, the great historian and novelist, will give his ideas on "What Everyone Should Learn at School."

only two daily newspapers left in London now; the rest are dismal magazines with a selection of news and propaganda matter. The American dailies, on the other hand, increase steadily in dignity and the range and impartiality of the news they give. Twenty years ago they were all "local" newspapers with a comparatively weak and limited handling of world news.

But for the ordinary citizen, busied with many immediate things, it would be far more convenient and efficient to keep his idea of current events up to date by means of a weekly rather than a daily publication. He would get the matter in a compacted form and in better perspective. The development of the Sunday newspaper is still going on. The time may not be very distant when the type of a great and powerful newspaper will be no longer the "London Times," but some British or American weekly.

Everyone, I think, should read such a weekly newspaper as "Nature," of London, within its range the most honest and wonderful newspaper in the world, or the "Scientific American" to keep in touch

# Telltale Table Manners

The Cup Cuddler—The Stiletto Grip—The Table Ostrich—The All-day Sucker—The Two-Handed Corn Eater—The Divorced Digit—Front and Side Entrance—The Baby Grab—and many others

*By Gelett Burgess*

Author of "Are You a Bromide?" etc.

PHOTOGRAPHS BY LEJAREN À HILLER

**M**IGHTY pretty, I confess, I had found that stenographer in Sharpie's office that afternoon.

Walking up-town, Sharpie suspected me. Laughed at me as we came into the cold, night-sparkling bustle of Broadway. "Struck on her?" he jeered.

Turning into that big popular restaurant, I suspected Sharpie. Scowled at him. "Why won't you tell me about her?" I insisted.

In and out we squirmed through the tables, pink electric lights, jazz, smoke, laughter, and squirrel coats. "I thought you were going to make her your private secretary," said I, pursuing him.

Sharpie led me away from the fox-trots and cigarettes and bare shoulders into a secluded corner. "So I was," said Sharpie.

"Well, what was the matter with her?" I asked. And then, through the blare of the saxophone orchestra, "Doesn't paint much, does she? No jewelry, well manicured, doesn't chew gum or anything—why, I thought she was charming!"

"I thought so, too," said Sharpie irritably, now looking over his bill of fare. "But oh, lord, I found—"

"Isn't dishonest or anything, is she?"

"Worse than that!" growled Sharpie.

"She's a Cup Cuddler."

"A what?" I buttered a radish and waited. "A Cup Cuddler? Sounds horrid."

"Why, you see," said Sharpie, "much of my work is done at home, or on my yacht or private car, you know, and I needed someone whom I could lend to my wife, occasionally, as social secretary—"

"But the Cup Cuddler!" I demanded.

"I wanted someone," Sharpie proceeded, deliberately salting his oysters, "whom we could have with us at the table, you know. A lady. Well, one day I asked that girl to dine with me downtown, so we could finish up some work in the . . . in the evening, at . . . at—"

Sharpie had stopped. He was glancing with increasing disapproval at a military she-blond at the next table.

"If you will kindly, yet tactfully, roll your eyes slightly to the left," he re-

The Harpooner (above), whose far-reaching hand spears a roll or slice from the bread plate and bears it to his own in triumph. He is seen to advantage in boarding-houses, but often discovered right at home. Below, the Divorced Digit whose affected pose says, "Ain't I elegant, though!"

marked in a lower tone, "and note that indolent female with the remains of a cock fight perched upon her yellow head, you will catch a Cup Cuddler right in the act."

I turned. I saw. I understood. Both elbows resting upon the table, with both

her hands she was holding her teacup to her mouth. And as I watched, she sipped and sipped, while her cup swayed out, then back, then out and lazily back to her lips, then out again, back to her lips, cuddled in both her hands—sipping, talking, talking, sipping, until I turned away.

But of course you have often seen the lady yourself. She cuddles everywhere. At Bohemian resorts, especially where the conversation is more

important than the food, Cup Cuddling is an almost universal practice. But alas, not there alone. Even at the Ritz, yes, the aristo-plutocratic Ritz, I have seen cups cuddled.

Ah, my dear Aunt Julia! I remember how when she stayed with us my mother would never invite friends in to dinner. Never did Aunt Julia eat with her fingers, never ate audibly; no mistakes with her finger bowl. She might, indeed, have taken a small prize in the etiquette of the 1860's. But rich Aunt Julia, poor soul, though no one ever dared tell her, was a confirmed Cup Cuddler.

"Table d'Hôte manners," said Sharpie. "Elbow eating, I call it. Why, there's a whole family of Restaurant Diseases. Ever notice the Banjo Grip? Why, yes," he exclaimed, answering my amused look, "you hold your fork, you know, as if you were playing a chord in G minor."

Forthwith, Sharpie demonstrated the fingering. It was truly a most elaborate arrangement of digits. The thumb, ring, and little fingers were held underneath the handle, while the fore and middle fingers were clamped on top. "Rather difficult for a cultivated person to master the technique," he laughed, "but somehow a coal-heaver can usually do it without half trying."

"Oh, yes," I said, trying to imitate him; "but I always thought, though, it was called the Kansas City Grip."

"No, sir! You can't insult any city with it. The Banjo Grip is All-American—North, South, East, West. Why, you'd think anyone could hold a fork right, wouldn't you? Isn't it pathetic, that position? So unnecessarily complicated. But

The Table Ostrich (on the left) fancies that he is politely concealing his horrid work, but with a large whitenapkin makes it only more conspicuous and offensive to the appalled beholder. He has set a Booby Trap as well. That spoon, sticking out of his cup, like a railway semaphore set at danger, is the best possible way to insure the spilling of his coffee upon the tablecloth. At the right we see Lizzie Lick-the-Spoon, the ubiquitous haunter of soda fountains and restaurants. In and out that spoonful of ice cream will go forever, as she gazes pensively at the mirror, one load sufficing for ten timid tastings

to ignorant people I find that seems to be what elegance means."

Sharpie began to chuckle. He took up his fork again. "Why, to some people, the fork isn't even a musical instrument. It's a weapon. Why, only lately I was appalled by a woman, a very pretty woman, too, who used the old Stiletto Grip. Know what I mean? Seen it? Held her fork vertically, you know, in her left fist, stabbing a poor helpless sausage. Lord, you'd think she was afraid it might wriggle under her knife. And of course, to be consistent, she sawed away with that knife just as clumsily. The Baby Grab, it was. Know young children? You'll recognize the position. Handle is practically ignored, you know, and the forefinger is extended along the top of the blade. What you grinning at?"

I WAS thinking of a man I once knew, a well-known author. And one of the reasons I finally forsook his friendship was that always, after he had finished eating a boiled egg, he would smash in the empty shell with his spoon.

"Yes," said Sharpie, "those little mannerisms sometimes are simply unbearable. They've caused more divorces than jealousy. Why, my cousin Patricia met a chap in San Francisco last year. Clever chap he was, too—mining engineer. Handsome as a divinity student, and seemed to be a gentleman. She met him half a dozen times at dances and so on, fell in love, and got engaged. Well, he followed her back East to meet the family." Sharpie raised a solemn finger. "Next thing I knew, the affair was off."

"The Banjo Grip did it?"

"No, this time it was the Balanced Ration. Can't really enjoy even the most desperate wooing,

you know, when your beau's petting and patting mashed turnips."

The Balanced Ration was new to me

under that name; but familiar enough when Sharpie described the process. Distressingly familiar. One of those annoying

idiosyncrasies it is, like humming on the street, or whistling in an elevator, that's seldom mentioned by the conventional chaperons. But haven't you, too, often been fascinated by the sight of those fussy, pernickety eaters—the manufacturers of the Balanced Ration? You know—the ones who make studious selections of morsels from their plates, loading their forks so carefully, a dab at a time, with an assortment of foods—little piece of meat first stuck on, then a little mashed potato, then a few peas—all neatly packed upon the prongs, and finally smoothed over so smugly with a knife. A lingering torture to the spectator is the Balanced Ration. My mother had a homelier name for it. "Don't play with your food!" she used to adjure us.

NOW, no one would want to wear a sign like a sandwich-man, bearing the inscription: "I am vulgar; I don't belong to polite society!" would he? And yet many persons advertise their ignorance or carelessness just as plainly when they sit down to eat. Queer, too, isn't it, that "etiquette" originally meant a label? So these Cup Cuddlers and Banjoists are labeled by their strange etiquettes, like giraffes and ring-tailed monkeys at the Zoo.

Table Manners haven't changed much in principle since forks were invented. They've only become more and more refined. The art of eating properly, however, now involves the highest technique of civilized life. The consummate test, it is, of culture. If you are invited twice to a lady's table, you needn't be afraid of passing any of her other social requirements.

And the main trouble with these

## The Dog's Dinner, or Assembled Meal

LET us mention the Efficiency Expert who prepares a Dog's Dinner, or Assembled Meal. A most interesting accomplishment, I consider, this Assembled Meal. But after you have watched the Assembler cut up all the meat on his plate into tidy mouthfuls, after he has carefully, oh, so carefully, salted his string beans, neatly buttered a whole potato, and spread his gravy gloriously over all—then you come in for a big surprise. Does he set it down on the floor for his dog to enjoy? Not at all, he eats it himself!

The Great American Royne, or Two-handed Corn Eater, with a Demi-shampoo arrangement of his napkin, and giving a demonstration of the popular Elbow Eating. He also has on his plate a Dog's Dinner, or Assembled Meal

Egoistic Eaters we have mentioned (those, you know, who are so self-satisfied that they don't think, or don't care, how they appear to others), is that, although they may have been decently enough brought up, it was mainly by the multiplication of many Don'ts. Now, of course, to be correct at table does require some training and experience, even the most polite of us will recall his early education with a blush. Mere arbitrary corrections, however, don't explain why certain table rules exist. To be safe and sane one ought to understand the essential principles of good taste.

**B**UT the inner philosophy of prandial etiquette is fairly simple. A good description of perfect table manners was once given me by a child. I asked her how she

The Banjo Grip of the fork is shown above, the fingering seeming to be an attempt to render a chord in G minor. This complicated manipulation, while difficult to cultured eaters, is a popular Table d'Hôte method. The knife held by the Baby-Grab almost ignores the handle. And where have you see the Cup Cuddler shown at the left? Right at home, possibly, cups are cuddled and held in air as the cuddler sips and gossips and sips, making the drinking unpleasantly noticeable. Conspicuousness, awkwardness, and greediness, says Mr. Burgess, betray one as being ignorant of good table manners.

considered because nothing eccentric or conspicuous or ugly is worn, so a cultured dinner guest is one whose manners are not memorable.

Let's examine these, in this light, the manipulations of these Banjoists and Cup Cuddlers. Are their faults merely violations of Fashion's dogmatic requirements? No; the established canons of good taste at the table are founded upon something more real, more reasonable than are styles in dress.

**F**OR Eating there is a Golden Rule: Don't do anything you dislike to see others do. Indeed, the basic theory of all everyday etiquette is really ethical. It ordains that one's own comfort should be made secondary to that of others. We call one who so thinks, altruistic; and one who so acts, kind—which is only another name for being polite. In speech, in gesture, in pose, good breeding also requires that our actions be not unduly conspicuous, or awkward. Manners, then, are a combination of unselfishness and grace.

But the Egoistic Eaters, you see, fairly force you to notice them while at table, by some clumsy or remarkable use of their eating utensils. They "star" the knife, fork, or spoon, so to speak, or bring their cup or glass or chop or slice of bread into unnecessary prominence. The consumption of food, which ought to be practically invisible, as well (Continued on page 76)

knew that a friend of ours whom she had just met at dinner was used to luxury and refinement.

"Oh," she said, "when he was at the table I never noticed him eating at all."

He seemed to be just talking and having a good time. And yet he must have eaten sometime, because his plate was always nearly empty when they took it away! Just as a well-dressed man or woman is so

Behold above the Mulcher, who seizes a slab of bread, holds it in midair (or on the cloth), and smears it with butter. At the right we see the common Equator, or Bust Hug of a drinking glass, which ignores the stem and leaves finger prints to convict you of the crime

# Human Nature As Seen By A Country Editor

*By W. O. Saunders*

Editor of the Elizabeth City (N. C.) "Independent"

LET me say at the outset that I don't run an ordinary country newspaper. I am not content to publish country correspondence, mere local and personal items, boiler-plate miscellany and syndicated editorials. I try to dig out the real news about folks and things in my little corner of the world and play them up in print, just like a metropolitan paper plays up the nation's larger interests or a double murder in New York.

Now, the folks in a small town make news just like folks in big towns; but being close to their editor they expect him to feature only the things that boom their stock, and to soft-pedal on or suppress utterly anything that doesn't sound nice. An effort to print all the news in a small town is a rather hazardous job, because you've got to face the music. I have been facing the music here in Elizabeth City for fifteen years, and I have learned something about human nature in the time. Human nature in Elizabeth City is human nature in New York City—and in London, Paris, Berlin, Moscow, Hong-Kong, Bagdad, and Timbaktu.

The predominant trait of human nature as I find it is selfishness. Put salt on the tail of that idea, and you have the secret of all the world's social, political, and economic woes. At the bottom of every social, industrial, commercial, legal, and political wrong is the selfishness of an individual or a group of individuals.

And yet I am not condemning selfishness. The world's greatest teacher did not condemn selfishness, if I have read the record right. Jesus gave the world only two commandments: the first to love God, the other to love one's neighbor as one's self. The great teacher knew that there could be no greater love than self-love. He did not inveigh against this self-love; he accepted it as a matter of fact. And it's just about the most matter-of-fact thing in life.

The man who makes a success of a newspaper must consciously or unconsciously play to the self-interests of his community. I am not fooled when Mr.

Average Citizen comes along and slaps me on the back and says "That was a fine paper you gave us this week!" When he takes the trouble to tell me about what a fine paper I have published, I know that the chances are ninety-nine in a hundred that something in that paper voiced his own pet opinion, helped his particular

Just the other day the son of a prominent family absconded with certain funds of the bank in which he was employed. His father and mother were my friends. It was hard to print that news; but I printed it in all its details. I printed a picture of the boy and a picture of the woman whose influence was privately believed to have led him astray. It was a harrowing story. That night the mother of the boy called me on the telephone as I was going to bed.

"I have always been your friend," she sobbed; "I thought you were merciful—and you have broken my heart. I thought I could survive this thing, when here comes your paper with that picture of my boy—and that woman! Oh, my God! Why did you do it? Why didn't you drive a dagger into my heart. Just suppose—just suppose it had been your boy!"

I told the grief-torn woman that I thought I would have handled the same story about my own boy in the same way. I really think I would have been true to my newspaper ideals and have given the bare facts about my own flesh and blood. But the voice of that wretched mother haunted me through the night, and will haunt me.

That is the hard part of the game. Your great metropolitan daily may break a hundred hearts in the morning, but its publisher loses no sleep, the reactions never reach him; he sees only an auditor's report and gets no contact other than that of his banker, his lawyer, a politician, his family or his friends, at the club or on the links.

Hardly had the ink dried on the case of that boy absconder, when two young

## The Child of To-day Is Your Customer To-morrow

"I FIND human nature reacting favorably," says Mr. Saunders, "every time I publish a picture of a baby or any cute story about a child. All the world loves children. And now let me put in a piece of good advice to every newspaper man and every business man who reads this: Don't ignore the children in your community; because one of the fastest growing things on earth is a child. The man who runs a newspaper, a store, a bank, or anything else depending upon the public for good will and support is the biggest fool on earth if he thinks he can ignore the children. The kid rolling a hoop under your feet, or roller-skating all over your sidewalk and making a lot of unnecessary noise to-day, is simply notice to you of the energy that is going to run your town to-morrow. A boy or girl fifteen or sixteen years old has only five or six years to go before he or she will be playing an important part in the affairs of your town, and every one of them is a potential factor to be reckoned with. Those of the older generation who find themselves being crowded aside by younger men and women are those who neglected to run along with those same youngsters when the running was good. The kiddie that you befriend to-day will love you and respect you as long as he lives, if he's the right sort of kiddie; but if you cuff or wallop him he will never forget that, either. Take my own case: The great influences that shaped my life were mostly commonplace incidents in the lives of a few kind-hearted men and women who said an encouraging word here and there, or did some helpful thing for me when I was a kid."

game, or tickled his vanity. I know also that I might have printed any one of a dozen things that would have cost me the good will of that same citizen for life.

Printing the news and facing the music isn't all fun. There is a lot of pathos mingled with the comedy, and many a tear and heartache offset the laughter and smiles.

men, who had always been my friends, took aboard too much Monkey Rum (the local name for moonshine corn whisky), and under the influence of the stuff committed acts for which they later found themselves defendants in a serious court action. The fact that they were my friends did not relieve me of my obligation to the readers (Continued on page 184)

"Dick Ramsey? That old thing! He's my idea of nothing at all. Why, he's old, Hugh! He's thick and gray. I'm so tired of him I could die"

# No Fool Like a Middle-Aged One

The story of a man in the dangerous forties

*By Margery Land May*

ILLUSTRATIONS BY J. C. SHEPHERD

**A**LICIA told Janet Payne that she was going to marry Dick Ramsey. Thereupon, Janet, Alicia's friend since doll-house days, availed herself of the privilege of true friendship and did her thinking aloud.

"That faun? You must be mad!"

Alicia smiled good-humoredly, wrinkling the corners of her long-lashed, gray-green eyes. Then, cupping her chin in her hands and leaning forward with elbows on knees, she said:

"But really I am so sane, darling, that I'd like to know just why you think me mad."

Janet, who was making a pair of blue rompers for the youngest of her three little boys, threaded a needle before she explained. "He's too charming!"

Alicia threw back her head and laughed. "That's not what I'd call a plausible reason for not marrying a man. Jane duck, you're very, very droll."

"I may be droll," admitted Janet, "but I'm also analytical. The trouble with Dick is that he's too complacently conscious of his own charm."

"All men are vain, dear," returned Alicia. "Even your precious Bob nearly drives me wild with his continual boasting about his golf."

"It's terrible," sighed Janet; "but I'd rather have him conceited about his skill with a niblick than about the deadly power of his looks." Laughing, she added, "Bob's such a clumsy, ugly dear."

"He is a dear," conceded Alicia, and added soberly, "So you really think Dick is vain."

"He is good-looking and he knows it. At thirty-two, he'd pass for a youth just out of college. Unless he fleshens up he'll always look about twelve years less his age, while you—"

"While I look my full twenty-eight years. I know it. But what difference will it make?"

"A great deal—unless Dick gets over the notion that he's a faun. I've known him longer than you have, Alicia. When he was a college student, married women used to flatter and spoil him and call him their little boy. Because he looked just exactly like a little boy, their husbands didn't mind. Then, when he got older and figured in the sports columns of the newspapers as an amateur expert at tennis and golf, the débutante daughters of the women who'd called him their little boy went off their fluffy heads about him, and flattered and spoiled him again, because he was just like a great big boy. That's where the trouble lies. Dick has been able to get away with almost anything he

wanted to. What I'm afraid of is that, after you've been married to Dick a while, he'll get restive. Then he may start humming around with some little girl." She leaned forward, laying her strong hand on Alicia's slim knee. "And that, Alicia, will make you very sad."

The intent expression with which Alicia had listened to this analysis of the man she was to marry, suddenly vanished. "You forget that when he marries Dick will be up against the job of providing roof, food, and clothes for his wife and family—a big enough task to sober even a faun. Besides, he may get fleshy. That depends on what I feed him." And Alicia laughed whimsically.

Just then, from the hall, came the welcoming sound of children's voices, and Bob Payne, a jovial giant in golf hose and knickers, entered the room with a tousle-headed youngster on either shoulder, while his third son, the eldest, clung rapturously to his father's leg.

"Well, girls," cried Bob, as he tumbled the boys on a couch and stooped to kiss his wife, "I made the sixth hole in three to-day. Great Jupiter, you should have seen my drive!"

**AND** so one day in June Alicia married her faun. It was an outdoor wedding. Janet was there as matron of honor. Two of her little boys carried Alicia's train. The youngest bore the ring on a white satin cushion to the flower-banked altar.

Their vows pledged, Alicia walked toward the house on Dick Ramsey's arm. With tender, worshiping eyes he looked down at her, and she smiled back; but her eyes clouded for a moment when, in passing, she heard one of the guests exclaim, "My dear, how young he looks! Nothing but a boy."

He was, however, something more than a boy in the swift years that followed. He was the hard-working American husband fighting to overcome business obstacles and the high cost of living that he might provide for a growing family.

The first year of their marriage brought an heir and namesake; their fourth anniversary was celebrated by the arrival of little June. There were illnesses and commercial defeats such as come to the average family. But, as in the average American family, despite what cynics may say to the contrary, there was love.

The encouragement and inspiration of love steadied Dick. He plodded on, and finally found himself in such financial circumstances that he was able not only to do well by his family but to face the future, knowing that there was plain sailing ahead.

One night, when they had been married eight years, and were looking forward to a third addition to their household, Dick said:

"Darling, I met Bob Payne down-town to-day. He says the house next to theirs is for sale. The Grahams built it last year. Remember? Suppose we buy it. Cities are no place for children." Then, his cheek against her hair, he whispered, "I want this baby to be born among the flowers."

They moved from their Manhattan apartment to the well-to-do suburbs of Green Lawns, New Jersey. There, in a many-windowed room overlooking a garden, gay with blossoming flowers, little Jim was born.

Alicia and Dick adored all three of their children, but this newest baby, coming into their lives at a time when the stress and hue of existence had died away to leave their days rose-lit and calm, had a rejuvenating effect on both of them. Especially on Dick.

Watching him play with little Jim, Alicia thought, "How young he's beginning to look! Those lines about his eyes are almost gone. And what a dear he is," she smiled tranquilly. "How foolish of Janet to think I'd be unhappy with him!"

She confided these thoughts to Janet one day as they were sitting on the terrace of the Ramseys' house.

"Dick's getting to be his old boyish self again," said Alicia. "Little Jim's making him young again—little Jim and the golf and dancing and tennis at the Country Club." She spread her arms wide and locked them behind her head. "I'm a lucky woman, Jane darling. No one could be happier than I am with Dick. Remember your prophecies? You were mistaken about him, weren't you?"

**JANET** gave Alicia a quick sidelong glance. Then, "Yes, I guess I was," she answered, adding irrelevantly, "Alicia, have you ever seen that little Adams girl?"

Alicia shook her head and yawned, and said:

"No, I don't believe I have. Why?"

Janet's reply was elaborately careless: "Oh, nothing especially. She's a pretty baby-vamp little thing. Regular flapper style. Extreme clothes . . . dead white skin . . . red, red lips. Rouge and powder, of course. Rather smart-looking and thoroughly imbued with the idea that she's a siren. Movie fiend, also, of course. Does her hair in the high pompadour style. You must have seen her at the club."

"Come to think of it, I believe I have. She was playing golf last Sunday, wasn't

With tender, worshipping eyes he looked down at her, and she smiled back; but her eyes clouded for a moment

she? Had on a vivid yellow sweater, and made Dick and Bob furious because she wouldn't let 'em play through. That the girl?"

Janet nodded. "That's Marcia. She and young Hugh Attaway were engaged, but they tell me it's off. Hugh's playing around with that youthful-looking widow, Mrs. Farnham. They say she's the cause of the break between them. I don't care much for Marcia. Spoiled and pampered and full of herself. She's too modern for me. Oh, this age!"

It was strange that Dick, looking across a bowl of pansies, should happen to say to his wife at dinner that night:

"There's a girl here, Marcia Adams,

who plays a crackerjack game of golf. I met her on the links this afternoon and we did nine holes together. She played 'em in sixty-eight. Pretty good for a girl on that course, eh?"

"Splendid!" agreed Alicia, who always congratulated herself if her score didn't exceed a hundred.

**D**ICK tasted the soup, and went on blithely:

"She spoke about the dance at the club to-night and I told her I thought we'd go. Fact is, I got her to promise me three dances." He sighed ecstatically.

"Gosh! It's great to be able to take some time off from business. I feel like a boy

again." He reached over to pat Alicia's hand, "Don't mind going to the dance to-night, do you? Not too tired, dear?"

Alicia laughed. "Tired? Heavens, no! I don't do anything to make me tired!"

Though she had not actually wanted to go to the dance that evening, Alicia was glad she had come when she saw Dick dancing with Marcia Adams. In white flannels and dark coat, he was radiantly happy, waltzing and fox-trotting around the polished floors. Alicia, following his lithe, not ungraceful figure, felt a maternal pride in him. What a boy he was! Her boy. In spite of additional weight, in spite of that wing of gray at the temples of his dark head, in spite of the faint lines

when, in passing, she heard one of the guests exclaim, "My dear, how young he looks! Nothing but a boy"

about his mouth and at the corners of his eyes, he was to her as young and striking as on the day she had married him.

He danced well, too. He and the Adams girl fairly flew to the stirring music of a popular rag. They whirled and dipped around the ballroom, unconscious of being observed by Alicia, and by others not so indulgent.

They danced several numbers more than the three Marcia had promised on the links. Availing himself of the privilege of cutting in on encores, Dick took Marcia away from two or three growling youngsters.

One of those on whom Dick cut in was Hugh Attaway, a good-looking chap with

sensitive features. Attaway, however, was not one of those who growled. Instead, he smiled sarcastically and, for the rest of the evening, devoted himself to the mysteriously youthful Mrs. Farnham.

DICK danced with Alicia, of course, but not so blithely as he had danced with Marcia. He felt so utterly young to-night that somehow it seemed natural to him to want youth as tender in years as he was in emotion. Once, over Alicia's shoulder, his eyes met Marcia's. He grinned, and when her reddened lips smiled at him in response, he had a sudden feeling that there was a bond between them.

The next morning, Sunday, he divined

that she, too, was aware of this curious, intangible bond. She was teeing her ball when he came upon her.

"Was that woman in blue, the one with the blondish hair" (Alicia's hair was coppery gold), "your wife?" she asked, her gaze following her ball down the course.

"Yes, that's Alicia," Dick said.

"Oh!" cried Marcia.

Marcia's surprised inflection caused Dick to look at her questioningly. "Who did you think it was?"

"Why, you see"—she hesitated, with a tantalizing smile—"you're so young-looking I couldn't believe it."

Dick laughed heartily:

"Maybe you (Continued on page 80)

# Mary Pickford Describes Her Most Thrilling Experience

It happened when she was only thirteen years old, struggling to make her way on the stage, and so poor that she wouldn't spend even a nickel for car fare if she could possibly avoid it

*By Mary B. Mullett*

**T**HE last time Mary and Douglas—or, as the well-known *vox populi* puts it, "Doug and Mary"—came to New York, I went to see Mary at the Ritz-Carlton Hotel. I needn't explain that I mean Mary Pickford and Douglas Fairbanks. Nobody in the world, except possibly a few Hottentots and Zulus, needs to be told that.

Most people also know that the Ritz is a very aristocratic and dignified hotel. But when Douglas and Mary are in town the corner suite which they occupy becomes a scene of hectic activities.

I felt as if I were taking part in one of those farces in which the actors conceal themselves in every available nook, and dodge madly from divans to dumb-waiters, from library tables to laundry tubs.

Douglas was being interviewed by one reporter, while another sat in the hall awaiting his turn. Scenario writers came and went, bearing bulky manuscripts. Adoring friends flashed in and out. Equally adoring strangers knocked, like Peris at the gates of Paradise, then wistfully faded away. Trades people came with hats, with gowns, with flowers, with photographs. A harassed secretary flew wildly from room to room. A French maid opened boxes and carefully hung up in wardrobes the ravishing raiment they had contained. The telephone rang and rang and rang.

Meanwhile, behind the closed doors of her bedroom, the little girl-woman, who is the most universally beloved person in the world to-day, sat and talked with me. Under the softly shaded lights, her hair shone like burnished gold—only deeper and warmer in color. Her eyes were sweet and sincere; deep, serious eyes which win your instant trust and liking. And in contrast with the rouged cheeks so common nowadays, her delicate skin seemed almost pale.

That is "our Mary" as she is in real life: unaffected, genuine, smiling often, but always very much in earnest.

She said to me, half apologetically, "I'm afraid I'm a very serious person."

And she is serious. But not solemn

and priggish! No one could love a prig; and if one had to describe Mary Pickford in one word, nine persons out of ten would choose "Lovable" as that one word.

When you think of her extraordinary career, you imagine that it must have held many exciting experiences. She has earned fabulous sums of money. She has received ovations which a queen might envy her. She has piled triumph on triumph, until one would expect her to be dizzy with success.

But when I asked her what was the most thrilling experience she ever has had, she apparently did not give a thought

sponsible for the whole family; and, as a matter of fact, she became their chief support before she was ten years old.

"When you see me in the rôle of a child on the screen," she said, "I am living the childhood which was denied me when I was a little girl myself. The child in me never grew up, because it never was satisfied. So I still have the dreams and the longings of childhood."

"I was the first member of our family to go on the stage. My mother sewed and I acted, although neither of us earned very much. Then, after a year or two, I was given a leading part in a play that needed some other children and also a woman to take an Irish rôle. My little brother and sister were engaged for the children's parts; and my mother, who had a wonderful brogue, asked for the Irish rôle."

"She wanted it so badly that when the manager asked if she had any stage experience, she told a fib and said she had. I felt horribly guilty about this. And the opening night, when Mother had to make her first entrance on the stage, I got my brother and sister into the dressing-room and plumped them down on their knees with me while I prayed that God wouldn't make Mother fail as a punishment for that fib!"

Miss Pickford laughed as she told of this early act of piety. Indeed, she laughed over many of the things she

told. But she would quickly turn serious again. For that strange childhood of hers was a serious business. She took it in deadly earnest then; and the memory of it is no light thing to her even now.

For several years after this, the family kept together, playing in cheap companies, mostly on the road doing one-night stands. Mary was, as she told me, official packer for the whole family. She earned most of the money they received. In her own mind at least, she was the head of the family, with all the responsibility which that involved.

But for their sake, as well as for her own, she wanted a chance at something better than the sort of work she was doing. She had saved a (Continued on page 104)

## "A Whip to Beat Yourself With"

**M**ARY PICKFORD says she wants to be *hungry* all her life.

"Not hungry for food," she explains, "but hungry for something better than I have, or have done. Do you understand what I mean? I want to be hungry for work, so that I can make it *better* work than anything I have achieved in the past. Whenever I do something that seems pretty good, do you know what it is to me? It is a whip to beat myself with! That is what any achievement is to the sincere worker. It isn't something for him to sit down and look at and think how nice it is. It is something that lashes him on to a greater effort."

to these moments of triumph. She went back instead to the days when she was poor and struggling and unknown; to the summer when she was thirteen years old; and to one night in particular—the night when she first met David Belasco, the famous theatrical manager.

She had been on the stage eight years, ever since she was five years old. Her father had died when she was only four, leaving her mother with nothing, except three little children to be taken care of. Mary, who was then Mary Gladys Smith, began being "a very serious person" from the day that her father died.

She never had a real childhood. For one thing, she was always desperately poor. Anyway, she felt that she was re-

# The Story of The "Czar of the Great Lakes"

Harry Coulby, when a boy of eighteen, walked from New York to Cleveland, hoping to become a sailor on the "inland seas" of which he had read—  
He became a stenographer, instead—To-day he is, as a business competitor puts it, the czar of those same inland seas

*By Keene Sumner*

**J**UST forty years ago, a boy named Harry Coulby was living in the country near Nottingham, England, the town where the lace curtains are made. He had been born on a farm in that section and, after quitting school when he was only ten years old, had worked on a farm until he was seventeen.

He was a country boy who knew nothing, by actual experience, of the great world outside. He never had been even as far as London, though it was only about two hundred miles away. With the world of business, of commerce, of industry, this country-born and country-bred lad hadn't even a mere speaking acquaintance.

But there were other things he did have: For instance, he had a boy's love of adventure; and seven years of the routine of farm work had not dulled the edge of his appetite for something a little more exciting. To him, as to countless other eager boys, then as now, America was the land of romance. He earned little; but he spent less! And by that simple process in arithmetic he managed to accumulate enough money to pay his passage to New York.

That, as I said before, was forty years ago. To-day—well, I can best describe what he is to-day by quoting a business man in Cleveland, where he now lives:

"Harry Coulby is the czar of the Great Lakes," this man said to me. "But if the Czars of Russia had ruled with as much fairness and justice," he added, "the last one might still be alive and on his job. Coulby controls more than half the freight traffic on the lakes: a total of millions of tons. As a member of the firm of Pickands, Mather, and Company, he directs a fleet of fifty-two vessels. As the representative of the United States Steel Corporation, he controls another fleet, twice as large. This makes him the dominant figure in lake transportation."

"He took charge of the United States Steel interests twenty years ago. But instead of using his power to crush his competitors, he has made it the greatest factor in stabilizing the whole industry. In any

situation where there was a question as to which should be favored, the big fellow or the little fellow, he has consistently given the little fellow the benefit of the doubt. In his field, he has the power of a czar. But he has used it with a just regard for the rights of others."

The man who said this is, himself, a competitor of the interests represented by Coulby. It is a fine thing to have earned such a tribute from a business rival. And the rise of an English country boy to the power of a "czar of the Great Lakes" is another of those romances with which the story of American business is crowded.

When he landed in New York, however, Harry Coulby had no idea that this par-

"Yes—all the way. It took me six weeks, for I did enough work, en route, to pay my expenses. It was cold, too, I remember. March and early April are not to be recommended as a good season for a walking tour. Not in this climate."

"Then why didn't you stay in New York?" I asked.

"Well," he said smiling, "it was like this: As a boy in England, I had read about the Great Lakes; inland seas that make our English lakes seem like mere ponds. You can understand how this appealed to the imagination of a boy who had seen as little of the world as I had. The name itself—the 'Great Lakes'—fascinated me. So when I came to

America it was with a well-formed plan in my mind. I wanted to see those lakes! If possible, I was going to sail them.

"Of course I had no conception of the 'magnificent distances' in a country the size of this one; and I was rather dismayed, on reaching New York, to find how far I still was from my goal. But I was a boy, a good strong one, too. And after covering two thousand miles of ocean, I knew I could manage a few hundred miles of land.

"But I also knew that I mustn't waste any time about it. I had found out that the lake season opened in April, and I wanted to reach Cleveland while the vessels were being fitted out. I intended to sign up

as an ordinary seaman and to become a sailor on the 'inland seas' I had read about.

"My long excursion afoot, however, spoiled that scheme; for when I reached Cleveland all the vessels except one had fitted out. That was the 'Onoko.' I tried to get on her; but I was young and without experience, so I was turned down."

What the ex-country boy did in this emergency affords an interesting glimpse of his character. Back on the farm in England, absolutely remote from business life and with no business associations whatever, this boy had somehow got a vision of other possibilities than those in his own environment. And with this half-formed vision in (Continued on page 174)

## Are You on a Short Ladder?

**"IN BUSINESS,"** says Harry Coulby, "there are short ladders and long ones. On some of them the top rung isn't much higher than the bottom one. If I found myself on one of these short ladders, I *stepped off* and tried to find one that reached higher."

ticular sort of romance was in store for him. He did have a very definite notion of what he wanted to do; and, curiously enough, it carried him straight to the scene of his present activities.

"I landed in New York in March, 1883," he said to me, "and from there I drifted to Cleveland."

"Did you have any money?" I asked.

"No," he said; "I had saved only enough to pay my passage."

"Then how did you get to Cleveland?" I asked. "It's about six hundred miles, isn't it?"

"It seemed *more* than that to me then," he said. "You see," he went on, looking up with a smile, "I walked!"

"From New York to Cleveland?"

"If it isn't Uncle Tim's far-away glasses!" she cried. "He never wore them unless Aunt Aggie made him, and the last few months he swore he'd lost them entirely!"

# Timothy's Last Joke

A story

*By Valma Clark*

ILLUSTRATIONS BY HERMAN PFEIFER

**T**IMOTHY had moved the shepherd from his lonely position at the exact right of the gilt clock to the side of the shepherdess on the left. This he had done so they could "chin" together; and, though they forever destroyed the balance of Agatha's marble mantel, they were going to be left that way—for Timothy was dead.

Agatha, brooding alone, looked from the two china figures, Timothy's last whimsical touch upon the room, to the empty chair of her husband opposite her, and winced under the fresh gale of laughter that burst from the kitchen. It was May-time on the farm and in the kitchen, but it was November in Agatha Brant's old heart. How could they laugh like that—Dean Mackie, with his mother ailing again, and Fay, with her own uncle only six months in his grave!

Agatha could stand it no longer. An angular, thin-faced woman, she went to the door, and the laughter was quenched as abruptly as though a damp cloth had been flung over it. Dean, who was trying to capture Fay, dropped his pursuit—also a handful of sticky dough—and melted from the kitchen. Fay turned her flushed face, with dough on the chin and dough in the eyebrows, upon her aunt—and reached for the towel.

"A good day for the parlor rug if the sun holds," was all Agatha said, but it was enough.

"Yes, Aunt Aggie."

**T**HE older woman returned to the living-room, which was quite as befitted a house of mourning, and pursued her own somber thoughts. Since young Dean Mackie had come to take over Timothy's

work on the farm, coming at dawn and leaving after evening chores, so that his mother might not be left alone nights, he had also taken over Timothy's place as playfellow of Fay. It seemed incredible to Agatha that Fay could laugh with Dean, just as a few short months before she had laughed with Timothy. The girl's grief had seemed as deep as Agatha's at first, but she had forgotten quickly! Agatha suddenly found herself hating youth—its quick joy, its hardness. . . .

Fay had never been the kind of girl Agatha would have chosen for a daughter. But Agatha had a way of doing her duty by folks, and no one could say she hadn't done her duty by this own niece to Timothy. Perhaps she had been a little jealous, for Fay and Timothy had been pals in their fun and Agatha herself had never been much of a hand for fun.

Was it a rabbit hunt and a night down in the old sugar camp the girl and her uncle were planning? . . . But no, Agatha had just finished the fall washing of the blankets, and she'd thank no one to drag them out in the dirt. Was it a breathless mental jaunt to Yellowstone Park they were indulging in? . . . Who, then, would take care of the farm, and what about the litter of pigs that was coming on? Timo-

had finally brought Agatha a newspaper article which stated that microbes lodge in cracked dishes: "If I die, Aggie, my death'll be on your head." Agatha had given in, but at each meal implied her disapproval.

As for Timothy's frivolous will, Agatha had taken it quite seriously. The yellow mustache mug was enshrined in the parlor cabinet; the time-tables for a trip to the

the kernel of him, was to Agatha only the chaff. Yet, oddly enough, it was in the recollection of his sly little quips that Agatha best recaptured the flavor of Timothy. She remembered his old retort to her "What you doin', Tim?" . . . "Busy restin', Aggie." . . . She recalled a bit of conversation he had repeated: "'I'm just dumb worried about the world, Timothy,' he says to me. 'So?' I says back. 'Strikes me it takes a man with a powerful bump on himself to get to feelin' responsible for the universe. I'm leavin' the world to the Lord; but just now I'm worryin' about a settin' hen.'" Agatha saw him standing there, rubbing his hands together, his mild blue eyes twinkling; heard his dry little cackle, heard Fay's rush of laughter, joining in, saw them rocking together in high glee. . . .

Dinner was a subdued affair. Once Agatha caught the glimmer of a smile between Fay and Dean, and choked upon a mouthful of Timothy's favorite honey fritters. Obviously they had to suppress their good spirits, for they were cheerful in spite of Tim's empty place among them. Agatha clenched her hands in passionate protest against the girl's fresh, untroubled face. If Fay would only go away and leave her, Agatha, alone with her grief. Fay had offered to go just after the funeral; but Agatha had replied grimly, "This is your home as long as I live; Timothy would want it."

"A bit of a party in the Masonic Hall to-night," said Dean tentatively.

"A . . . party?" managed Agatha.

"H'm . . . high-school kids—"

FAY scowled at him, whereupon he subsided and silence again reigned.

"I figure we'll drive over to the cemetery on Sunday; it's time to be gettin' in some plants, Fay," spoke Agatha at last.

"I'd thought o' crimson ramblers, Uncle Tim's favorite flower, you know," answered Fay with enthusiasm. "They're such jolly flowers, crimson ramblers, and they spread like sin—"

Agatha's mouth came together in a tight line. "We'll set in calla lilies, I think; they're more . . . appropriate."

"More wood, please, Deany, the box is 'most empty," begged Fay, as the boy scraped back his chair.

"Your Uncle Tim never let the wood box get empty," muttered Agatha.

Dean threw in an armful of fresh-sawn firewood, and from the depths of the huge box came a rattle of tin. "Huh! What's this?" Stooping and delving, he drew up a coffee can, which Fay snatched from him and opened.

"If it isn't Uncle Tim's far-away glasses!" she cried. "He never wore them unless Aunt Aggie made him, and the last few months he swore he'd lost them entirely. The sly old darling—no wonder he kept the wood box full!" And suddenly

thy had jovially reproached Agatha for always taking the starch out of their dreams with her practical objections; but Agatha, outwardly scorning their folly, had been rather hurt, and she had never learned how to pretend.

Timothy had even put some of his joyful reproaches into his will, and the will, too, had hurt Agatha. Hardly a fitting thing to have been read aloud in the darkened parlor on that solemn occasion: "To Fay Brant, my niece, I bequeath my love, and twenty-five dollars to be spent for a fan of pink ostrich feathers. . . . To Agatha Brant, my wife, I bequeath my yellow china mustache mug, in loving memory of friendly little tiffs we have had; my time-tables and dreams for a trip to the Orient; and some small part of my sense of humor; also, to Agatha, everything else whatsoever of which I die possessed. And I warn her that I have had the last word in a little matter on which we have long disagreed."

The yellow mustache mug had been a present to Timothy. Agatha had insisted that he keep it for company and Sundays and use the cracked white one on week days. Timothy, with a special weakness for yellow, and for all bright, cheery colors,

Orient were carefully folded away in Agatha's top bureau drawer. What Timothy had meant by his final warning, Agatha often wondered. What was the little matter on which he had had the last word?

TIMOTHY had been a good husband to her. For all his extravagant dreams and his impractical ways, Timothy had stayed in the harness, had never broken the traces except in little things. An amateur painter with flowers in the bit of land about the house, he had been forever threatening to sow the north lot to poppies, instead of corn, and the wood lot to tulips, instead of potatoes, but in his exuberance he had never gone beyond a row of sunflowers in the cabbage patch.

The fun in Timothy, which had been

Fay sat down chuckling, dabbing at her eyes with a handkerchief.

"Here, give them to me!" The tears spilled over as Agatha's hand closed about the old, worn case. She was sorry she had nagged Timothy about the glasses. "What you can find to—laugh over!" she choked.

"Auntie, there's a little trading in town," Fay had ventured at supper, "and Deany here's going to drive me over. So you'll have a nice peaceful evening. Don't bother to wait up—"

Fay was a long time moving around in her room up there in preparation for a little trading, thought Agatha. Like as not she'd forget the nutmeg, after all her fuss. Agatha would just go up and remind her again.

On the threshold of Fay's room she paused, for, contrary to all precedent, the door was drawn to. As it swung silently open beneath her touch, Agatha halted again, in fresh astonishment. For Fay, absorbed in her own radiant reflection, stood before the mirror, arrayed in her pink silk party dress, waving the pink feather fan, posing, smiling at herself! Now she took two little dancing steps,

Agatha halted in fresh astonishment. For Fay, absorbed in her own radiant reflection, stood before the mirror, arrayed in her pink silk party dress, waving the pink feather fan, posing, smiling at herself!

humming an accompaniment, caught up her long dark cloak, pirouetted—and saw Agatha!

"Where you . . . goin'?" whispered Agatha.

"I thought—Dean and I thought—the high-school party—"

"A . . . dance! And Timothy in his grave less than a year!"

FAY, struggling against the numbing clutch of her aunt's disapproval, lifted her chin: "But I—like to dance. Uncle Tim adored it! There was no one could call out better for a Paul Jones."

Agatha's eyes rested on the pink dress.

"He loved this dress," quivered Fay;

ing silence, the girl broke: "You don't want me ever to laugh! I will laugh! I've a right to laugh! You don't ask Tag Along to be sober. (Tag Along was the shepherd pup.) Don't say I don't miss Uncle Tim! Don't I remember his little pet jokes, and laugh in spite of myself? Do you know what I think? Mourning's hypocrisy! You go round telling the world you're sad all the time, when really you're sad only sometimes. When we're laughing, haven't we got Uncle Tim right here with us, chuckling over our shoulders? When we gloom around, crying all the time, we just plain scare him off. Oh, you needn't look at me like that!"—the girl's eloquence turned to defiance—"you never knew Uncle Tim at all, unless you'd learned to laugh with him—"

"Oh, I'm sorry, Aunt Aggie!" Fay melted abruptly, wearily, turned away, fumbled for her handkerchief. "I didn't mean to be horrid, dear, and I won't go to the dance; but if you'd laugh yourself, just once, you'd feel better. Why, you've not smiled since Uncle Tim died!"

"Not much of a hand for laughin'," sniffed Agatha, drawing herself rigidly aloof from Fay's warm young arms. "I can tend to the nutmeg myself to-morrow," she added; and that was Agatha, practical to the death!

So the two women spent a silent evening with Timothy's chair between them. When Fay, having changed back to her dark serge, came down-stairs and broke the news to Dean, he turned sullen, and Agatha fancied she caught a muttering, "Old lady needs a jolt. . . ."

"Well, I'll be getting along to Mother," he said aloud. "Say, walk with me to the gate, Fay!"

"Well."

A long walk to the gate, Agatha reflected bitterly. But Fay came back at length breathless, with a little secret smile and flush that came and went. A few moments later she spoke impulsively: "Why do you hate me so, Aunt Agatha? You'd be happier alone, wouldn't you?"

AT BREAKFAST, at which Dean for once was absent, Agatha said she was going to town: "Libby Holt's promised me some o' her calla lily plants, and I'll likely stay to dinner. Funny what's keepin' Dean—wonder if his mother's worse. Think he'd be afraid to leave her, with her heart trouble, down on that forsaken place. You might bake up a crock o' those red kidney beans, Fay; and be careful not to burn 'em again." After further detailed instructions, Agatha at last drove off.

Jogging homeward before supper time, Agatha saw Dean plowing in the north lot, and wondered what damage they had done, the two of them; last time they had used all the cream for fudge! But the kitchen was immaculate and deserted. Agatha called, listened, called again. There was no answer. Fay had gone off to that McGrew girl's over on the Hill Road, probably; shiftless of her not to be back for the supper hour. And the crock of beans had been set out of the oven only half baked!

"Where's Fay?" she demanded, when Dean entered.

"Fay?" he countered. "Isn't she here?"

"Fay got your dinner, I take it. Where'd she go after that?" (Continued on page 189)

"he wouldn't want me to go around in dingy black."

"I should think," said Agatha sadly, "you'd want to put your fan away and keep it precious—his last gift."

"Uncle Tim used things—even his yellowing—"

And then, under Agatha's grim accus-

# Have You Quit Asking Questions?

If you have, your curiosity is declining, and you are well on the way to becoming a "dead one"

*By Dr. Frank Crane*

**D**R. CHARLES STEINMETZ, the engineering genius, said the other day that there are no foolish questions, and that no man becomes a fool until he has stopped asking questions.

It is the fashion to condemn people who are too curious, and we have got into the way of thinking that curiosity is a bad thing. It is not. It is a powerful thing. It is a great force, and, like every other force, it is bad or good according to the way in which you use it.

Fire is a power. The human race has perhaps discovered no other thing so useful as fire. Fire may cook your dinner and make your living-room comfortable if properly used; yet, on the other hand, it may destroy great cities. Electricity is a valuable servant in the telephone, while as lightning it may be an instrument of death. A trained horse will draw your load to market, but a wild horse will run away and break your neck. The question about any power is not whether it is good or bad, but whether it is your master or your servant, whether it is trained or lawless.

Curiosity is really the motive force of a vigorous mind. When it is trained and used it is of the greatest value; when it is untrained it is a nuisance.

Nobody will deny that the most important members of the family are the children. Children are what Nature intends when she kindles the flame of love and brings the young man and woman together. It is the children who have the chief place of interest in the family. Parents think for them, plan for them, and work for them. And, for that matter, the whole nation and the whole world exist for the children, and the ultimate object of all our thought and work is to make this world a decenter place for them to live in. The family without children is like the play of Hamlet with Hamlet left out.

And the most characteristic thing about the child is its curiosity. The reason for this is that curiosity is the natural expression of the life force, and children are more alive than grown-ups. When we cease to be curious we are dead ones.

Most of us are perplexed, not to say dismayed, at the persistent curiosity of children. They are continually asking questions. They want to know a thousand

things we cannot tell them. And they also want to know a great many things they have no business to know.

We will find the key to this difficulty if we will bear in mind that it is not curiosity in itself that is bad, but untrained curiosity.

Curiosity is an indication of growth, the growth of the mind. And the child's chief business is to grow. We are confronted, therefore, simply with a problem of healthy development. We should not be

If we examine this matter of curiosity, we will see that it is the real cause of the progress of the human race. We will not discuss the question as to whether we are descended from monkeys, but there is no denying the fact that the advance of civilization, of knowledge, and of all the arts and sciences has been by the process we call "monkeying."

Logical thinking and the carrying out of well-laid plans have their place in the improvement of human conditions. But the start is almost always made out of sheer curiosity, that is, by making all sorts of experiments to see what will happen.

For instance, in the time of Henry II, of England, sailors when caught in fog or darkness used to touch a needle with a bit of magnetic iron, and found that it would whirl around and point north. Upon this experiment is based the compass, and modern commerce.

Along in the thirteenth century people got to monkeying with bits of curved glass, and found that objects seen through them were magnified. From this monkeying have come our microscopes, telescopes,

spectroscopes, and cameras, and a vast deal of information concerning the universe.

Somebody, not so very long ago, when monkeying with certain chemicals, discovered, perhaps to his sorrow, that they exploded. From this came gunpowder, and an alteration in the warfare of the world.

Some lazy man, seeking a way to save work as a copyist, invented movable type. Whence comes printing, the extension of education and civilization.

A boy was monkeying with a teakettle and found that the steam pushed up the lid when the spout was stopped. Hence, the steam engine, and a new era in the transportation of the world. Hence, huge factories, overgrown cities, monstrous industrialism and piled-up capital, labor organizations, soviets, national debts, and so on. All because a boy monkeyed with a teakettle.

The monkeyers have even produced new substances, as well as new methods. They have played with the molecules and atoms and forces, and out of their monkeying in the (Continued on page 131)

## Try These Tests On Yourself

**T**OWARD the end of this article Doctor Crane gives a few tests which you can apply to yourself. Examine them, and find out whether you are still a learner, or whether your ears and mind are closed.

THE EDITOR.

irritated by this, but should train this great force to useful things.

Curiosity power is like will power. Foolish parents complain of the child's strong will. They speak of him as being very self-willed. Sometimes they say, "The child's will must be broken." They had much better break his back. For if there is anything the child will need when he grows up it is a strong and vigorous will.

By the same token, if he is to be successful he will need a strong and vigorous curiosity, and we have done him a great service when we have shown him how so to direct this force of curiosity as to give him initiative, to make him efficient, and in every way a superior person.

**A**BOVE all things, we should not judge the qualities of our children by the test whether they bother us or not. Bother is a word that we often use for that feeling of impatience we have when we are faced with a responsibility. Children are often vastly wronged by the sheer laziness of their parents, who refuse to assist them to solve their continually recurring problems.

# Seeds That Are Worth Six Times as Much as Gold

Think of flower seeds costing about \$2,000 a pound!—Of common vegetable seeds so valuable that they are stored in bank vaults!—Of one small handful of seeds producing six tons of tomatoes!—The story of seeds is a story of miracles

*By Allison Gray*

**S**UPPOSE you were just going out of the front door, some fine spring morning, and your wife called after you: "Oh, John! I want to have a bed of double petunias this season. . . . I wish you'd buy some seeds to-day."

And suppose that you should actually remember your wife's request and stop at the seed store on your way home. In spite of this strange feat of memory, you are just an average man. You know nothing about petunias. Until your wife mentioned seeds, you thought a petunia was a gland! Pituitary or petunia, it was all the same to you. So now, after guessing at the requirements for a flower bed, you say to the clerk:

"Give me an ounce of double petunia seeds."

To your surprise, the clerk shows signs of falling in a fit. When he has recovered his powers of speech, he stutters, "D-d-double p-p-petunia seeds! . . . An ounce!"

"Yes," you say, "I want enough to make a nice bed of flowers."

"Well," says the clerk, with a glance of mingled scorn and pity, "an ounce of double petunia seeds will produce thousands and thousands of plants and will cost you, at a rough guess, about *two thousand dollars* a pound!"

It's your turn to stutter now. But you manage to explain that you don't want a petunia farm! You just want a nice little bed in the back yard.

"All you need is a packet of seeds," says the clerk.

He produces a very small envelope, takes your fifty cents, and then remarks: "Guess you don't know much about double petunia seeds. Let me show you."

He tears open the packet and carefully extracts another and smaller envelope.

"The seeds are in the inner envelope," he explains. "But you'll have to look sharp, or you won't find 'em. People often bring a packet back and say it was empty, when it had enough of these seeds in it to start a garden. They are smaller than grains of sand. People sometimes mix them with sand when they plant them. That's the only way they can see that they *have* planted them."

You tuck the little envelope in your waistcoat pocket and go off with something new to think about. Two thousand dollars a pound! Why, that is more than six times the value of pure gold. And for just flower seeds! You never would have believed it.

Well, here is something else that may surprise you, a true story about the seeds of a common garden vegetable. Some years ago the Equitable Building in New York City was destroyed by a fire that burned for three days. It was bitter cold weather and the shell of the ruined building became coated with ice from the streams of water played on it.

**O**N THE ground floor was a bank. After the fire, a representative of Peter Henderson and Company, seedsmen, went to the bank to recover the valuables which the firm had deposited in the vaults. I doubt if you can guess which of these valuables he was most concerned about.

It was cauliflower seed! Years before, the firm had developed a new variety, known as "Snowball cauliflower." At the time of the fire their entire crop of this seed from the previous season was stored in their vault at the bank. It was worth forty-eight dollars a pound then, and the vault was half full of it.

This represented a good deal of money; but even more important was the fact that

if this seed was ruined it would take a whole year to produce another supply.

During the three days of the fire, the vaults had first been exposed to the heat of the flames. Then they had become coated with ice. The all-important question was whether the little germ of life in those precious seeds had withstood this experience. A germination test was immediately undertaken; and to the immense relief of everybody concerned the seeds sprouted.

**P**ERHAPS you think that since double petunia seeds are worth about two thousand dollars a pound, you may as well make some money out of them yourself. So when you hand over the little packet to your wife you say:

"See here, Mary! Those seeds cost more than gold dust! Now, you save all the seeds we get from the flowers and we'll sell them for enough money to pay for your whole garden."

Clever idea, isn't it? The only trouble is that you won't get *any seeds at all* from your double petunias. That is one of the many, many queer things about this whole subject.

Of course you ask where the seeds came from that you did plant. Well, this is the explanation: The nurseryman plants a row of single petunias and, next to it, a row of double petunias. Soon the two rows of plants begin to bloom; and all summer long one man is kept busy, carrying the pollen from the double flowers and putting it into the heart of the single flowers.

This is called pollination. It is usually done by bees and butterflies. When they visit one flower in search of honey, they get some of the pollen on their feet and their bodies. Then they fly to another

flower; and as they burrow down into its heart, some of this imported pollen is rubbed off and remains there, fertilizing the flower so that its seeds will germinate.

But the seedsman cannot depend on this hit-and-miss method in regard to double petunias, which—except in the case of one variety, recently developed—bear no seeds. The single ones do have seeds. So one man spends his summer pollinating the single flowers from the double ones. But the result of all this labor is only three or four ounces of seeds that will produce double petunias! No wonder they cost a good deal of money.

Small as they are, they do not hold the record in that respect. Have you ever noticed the little brown specks on the under surface of fern leaves? These specks are composed of myriads of the spore, or seeds, of the plant. These seeds are as fine as dust; so minute that several thousand of them could be placed on the head of a pin.

**C**OMPARE this with what is perhaps the largest seed of a flowering plant, that of the castor bean. It is about three times the size of an ordinary kidney bean, and many thousands of times as large as the particles of fern spore.

There are mighty few persons in the world who have not, at one time or another, planted some seeds and then wondered why they didn't come up. Perhaps you will find one explanation in these three stories, told me by Peter Henderson, the grandson of the man who founded the business seventy-six years ago.

"Down at Norfolk, Virginia," he said, "a market gardener sowed a good-sized plot to spinach years ago. He had been bothered by darkies who stole his chickens; and, hearing a disturbance in the poultry yard one night, just after he had sowed the spinach seed, he rushed out with a shotgun and chased the marauders away. In their haste, they ran across the freshly seeded plot. Some days later, while the rest of the field was still brown and bare, the tracks made by the chicken thieves were green with little sprouts of spinach.

"At the Bradley Beach golf grounds, a short time ago, part of the course was plowed up and freshly seeded. Some

ELWIN B. BARRETT

**Double white lilac.** It is one of nature's miracles that a single small seed will produce a plant which, in time, will bear thousands of blossoms with countless myriads of new seeds

careless individual walked across this plot before the seed came up. I saw a photograph which was made a little later, in which the footprints of the man were plainly visible, covered with young grass, while the ground around them was still bare.

"We once sent a dozen rose cuttings to a woman down South. In the course of a few weeks, we received a letter from her saying that she had planted them very carefully. She was sure that everything was done just right, except that her husband accidentally stepped on one of the little plants, almost crushing it. She tied it up to a small stick, hoping to save it. And she went on to inform us that there must have been something wrong with the plants; for the *only* one that did well was the one that her husband had stepped on.

"If more chicken thieves, careless persons, and husbands would walk across freshly planted ground," laughed Mr. Henderson, "fewer seeds would die an un-

timely death. A great many amateur gardeners plant seeds, then loosely brush the soil over them—or over the roots, in the case of plants—and leave them that way. They do not, as we call it, 'firm the soil' over the seeds and roots.

"My grandfather once experimented by sowing twelve rows of sweet corn and twelve rows of beets. After sowing, he trod down the soil of each alternate row, leaving the others loose. In the trodden rows, the seeds came up in *four* days; in the others, *twelve* days passed before the sprouts appeared. They wouldn't have come even then, if it hadn't been that rain fell; for the soil was as dry as dust.

**H**HE TRIED the same experiment with turnips and spinach. The trodden-in seeds germinated quickly and made a good crop. The others started poorly and were finally burned out by the dry, hot air that penetrated through the loose soil to the roots.

"Of course, you needn't do the 'firming' with your feet. The best way is to press the soil down with a board or plank. But don't plant seeds in ground that is *already* hard and packed. The soil must be dug up and pulverized. At the top there should be sifted soil to about an inch in depth. If the soil is clayey, it should have some sand mixed with it, so that it won't pack.

"There is a general rule that a seed should be planted at a depth of two or three times its diameter. Very fine seeds are sprinkled on the surface of the loose, pulverized soil, which is then firmed down with a flat board. Hard-shell seeds will sprout more quickly if they are soaked in water for twenty-four hours before planting. Very large seeds should be planted one by one, an inch apart. Smaller ones are dropped, a pinch at a time, then spread apart so that they won't lie in a lump.

"Many people seem to think that if they plant or sow seeds very profusely, they will be sure to get *something*. But they may not get as many plants as if they sowed fewer seeds. If the sprouts come up

Seeds of double petunias are worth about \$2,000 a pound. One ounce of them will produce many thousands of plants. The double flowers do not bear seeds. But the single petunias, if fertilized with pollen from the double ones, have seeds which will produce double petunias. The pollen is transferred by hand

(Left) Sunflowers used to have one row of deep yellow petals around a center, crammed full of seeds. Man has reversed this and produced flowers with thousands of petals and few seeds. He has developed them in new colors, from lemon-yellow to purplish-black

(Right) It seems incredible that this enormous cabbage, completely filling a wheelbarrow, could come from one seed, not half as large as a grain of rice. The seeds cost \$10 a pound, but one seed will produce a head of cabbage weighing from 20 to 30 pounds

close together they must be thinned out. There is only so much food in the soil. If too many plants are crowding each other and trying to get this food, none of them will thrive."

"If seeds are kept a great many years and then planted will they grow?" I asked.

"Perhaps a few of them might," said Mr. Henderson; "but not many. You probably have read about wheat being found in Egyptian tombs where it had lain for centuries. The story always tells that the wheat germinated when planted. I remember one account that said it produced grain which was ground into flour and the flour made into bread.

"I DON'T take much stock in that story. We have tried keeping seeds for ten years, and then testing them. But only a few had retained the power to germinate. Some seeds should be planted as soon as they are harvested. Onion seed, for instance, doesn't keep. On the other hand, lettuce seed shouldn't be planted until it is a year old. Cotton seed is particularly long lived. It will grow even when it has been kept twenty years.

"Amateur gardeners often specify that they want 'fresh' seeds. They have an idea that all seeds must be planted at least the first season after harvesting them. But it depends on the kind of plant. Some seeds take a year or more to ripen; others will spoil if kept that long."

These commonplace little

seeds, with that marvelous germ of life within them, have many strange and curious ways. There is celery seed, for instance. And, by the way, while celery isn't in the same class with double peonies, its seeds are so minute that it takes about ten thousand of them to

make an ounce. Wonderful celery is grown in California; but it is grown from French seed.

If these plants are allowed to bear seed, and that seed is planted in California, the celery produced will be rank and poor in quality. But, if this California seed is sent East and planted *there*, it will produce a fine crop. The California grower, however, must import seed for his own use from France every season.

THE best cabbage seed comes from Denmark and from Long Island, New York. From these two places it is sent all over the world. Wonderful peas are grown in England. But if the English peas are brought to this country and planted they produce, at first, a crop of poor quality. Several successive crops must be grown before they become acclimatized. Then the American grandchildren of these English ancestors, so to speak, will produce excellent peas. The best peas in this country are grown in Michigan and Idaho. If peas are soaked in water for twenty-four hours before planting they will come up two or three days sooner than those that are not soaked. And it is a curious fact that if lima beans are planted with the "eyes" down, they will come up more quickly and be less likely to rot, than those planted with the eyes up.

If you have a parsley bed, shade it from the sun after a rain. Otherwise its color

A spray of white hawthorn, one of the most beautiful of early flowering shrubs or small trees

will fade! If you raise some squashes and pumpkins, leave a piece of the stem on when you cut them from the vines.

By the way, can you tell a pumpkin from a squash? You probably think you can; because the only pumpkin you are familiar with is the Jack-o'-lantern kind. And to you a squash is the well-known Hubbard squash, nothing more. But there are many different varieties of both vegetables; and the only way to identify them surely is by the stem. Pumpkins have hard stems; squashes have soft ones.

You see how naturally one drifts from the subject of seeds to the plants themselves. But the seed interests us just because it is a plant in embryo. And here is one of the most amazing facts in nature. Someone might give you a handful of seeds—all of them exactly alike. Suppose they are sweet pea seeds. You plant them in your garden. A few weeks later you walk the

Nature's one aim and purpose has been to produce seeds! In uncultivated places there is a constant war of seeds; myriads of them fighting for "a place in the sun." The soil is not plowed and cultivated and fed and watered to enable them to live and grow. Consequently not one in a million survives.

Yet plants, like human beings, have the instinct to preserve their species. This instinct leads to the production of incalculable billions of billions of seeds every year.

**TAKE** the wild strawberry, for instance; it may be a sour little thing no larger than a pea. Yet it has as many seeds as you will find in a luscious cultivated strawberry twenty times its size. The only purpose of Nature was to keep on producing strawberries. The one essential to that end was seeds. So the wild berry has seeds and hasn't much else. Immense numbers of seeds have to be produced by all wild-growing plants, because only occasionally will there be one which can grow under the (Continued on page 193)

At the left of the path, in the picture above, is a border of sweet alyssum, known as "carpet of snow." It grows only four or five inches high and one plant will bear as many as three hundred blossoms.

The picture at the left shows a wonderful specimen of candytuft, each cluster of flowers measuring over two inches in diameter.

length of the row and pick a flower of every different variety you can find. At the end of the row you may hold a hundred blossoms in your hand, no two of them alike! They range in color from white to almost black. They are single, or double, or ruffled. They are large or small; have weak stems or strong ones, long or short. Yet all this wealth of variety was concealed in a handful of seeds which could not be told one from another.

**AT** THE seed store I held in the palm of one hand an ounce of tomato seeds. Remember! Just one ounce! Yet there, in the palm of my hand, lay the promise of fifteen hundred plants; enough to produce at least five or six tons of tomatoes. A single one of those tomatoes might weigh two pounds; more than thirty times the weight of all the seeds in my hand.

Suppose that all the seeds, from all the tomatoes raised from that one ounce, should be collected. At a very moderate estimate there would be a thousand ounces of seeds; enough to produce one million five hundred thousand plants, which would yield about nine million tons of tomatoes! Imagine it! Just one generation removed from that single ounce of seeds in the palm of one hand.

This leads to one of the most interesting facts about seeds. Of course all the fruits, vegetables, and flowers we have were originally wild. Most of them have had centuries of cultivation, but they still go on growing wild in waste places. There is one great difference between the wild and the cultivated plants. In the former,

Dahlias are now the fashion among flower growers, many marvelous new kinds having been developed. Flower catalogues list over 3,000 varieties; some with flowers nine inches across, some tiny as a button—fringed, frilled, or quilled. Some solid in color, others striped, spotted, or shaded from dark to light.

Kululak splashed ashore and found her. Tenderly he gathered her up and carried her to the dory, where he wrapped her in blankets and poured hot tea between her lips

A story of revenge

ILLUSTRATIONS BY MEAD SCHAEFFER

**A**LKI *nesika tenas chako!* "By and by our little one comes." As the girl spoke, she looked up half shyly at the man who had just entered the cabin, but it was apparent that the meaning of her words had not registered on Blunt's brain.

Rough-spoken, cruel, a brute of a man, he advanced a little way into the room, reeling slightly. She, of a different race, waited submissively for him to speak, but he said nothing. Catching his balance, he squirmed his thick shoulders free from a pack, which tumbled to the floor with a thud. Something crashed; a liquid seeped through the pack and trickled in a little stream across the uneven floor, filling the little room with the heavy odor of "white mule."

Too drunk to realize fully what was taking place, he contemplated it blankly, then lurched to the pack, spilled its contents about, picked up the broken bottle and regarded it stupidly.

With the eagerness of a child, the "klooch," as Blunt called her, commenced to examine the packages from the trading post. Having torn the wrappings away she gave a low cry of pleasure, for she had found what she was seeking—a bag of cheap candy. Greedily she stuffed her mouth with the sweets.

From where he had slumped into a chair Blunt's eyes rested on the native girl. He had not bought the candy. It had been thrown in as a present by the trader in appreciation of a settled account.

"Hey!" shouted Blunt, suddenly, "you'll get sick—eatin' candy that way. Give it to me!" And when the bag was obediently handed over to him he tossed it to the top shelf of a cupboard, adding, "Now leave it there till I tell you you can have it. I don't want no sick klooch on my hands."

"Alki *nesika*—" she began timidly, but paused. The time was not propitious for such an announcement.

Blunt had come into her life two years before. Late in spring the cannery fleet wings its way over the North Pacific, through Unimak Pass and into the Bering Sea. It drops anchor in the waters of Bristol Bay when the surface is yet dotted with small bergs. From the damp holds of the vessels pour steady streams of cannery supplies and men. Here, for the season, are gathered gentlemen and crooks; adventurers and students; men of every race and clime, including a generous skimming of hell's thickest scum.

They come to work and do work. In slack hours they gamble, fight, and occasionally slay. Some die and others go insane, but the work always goes on. From sea and river comes a steady stream of salmon, their gleaming bodies flashing silver in the sunlight as conveyors bring

them to the dock. At last from the canneries alongside the dock the salmon emerge in tins, cased. They swing through the air and drop by the sling load into the vessels' holds. Deeper and deeper ride the laden craft, until with the approach of autumn the water laps at the Plimsol mark. Then as silently as they came the ships depart, fleeing like frightened birds from the fury of the Arctic winter.

Blunt, with bold eyes, had watched the native girl feeding a labeling machine. He had whispered low words that had startled her at first. Then she had come to believe these whispers. Without compunction, Blunt had hurdled the social barrier, and a union was formed unsanctioned by either God or man.

With the coming of the first fall the girl's heart had filled with fear. Would he sail south with the others or stay with her? He had remained behind because the cabin was warm and plentifully stocked with food bought with their joint earnings, and "white mule" was obtainable at a price. He had caroused or brooded by the fire during the long winter months. When the girl displeased him, he had beaten her cruelly, but she expected that. On those rare occasions when he had smiled at her she was repaid a thousandfold.

**T**HE klooch was rather pretty, with a graceful, lithe figure and a certain slumbering fire in her dark eyes. Her feet were big and awkwardly formed, the heritage of ancestors who had always squatted beside fires or twisted and cramped their feet into *bidarkas*. It had never occurred to Blunt that the girl's love was a deathless thing. Jealousy had prompted him to transport her to a lonely cabin where other men would not be likely to see her.

"Listen, Klooch," he had said, "this year we clean up big; make plenty money. I charter gas-boat. You're an Indian, you know where salmon run heaviest. You show me? Plenty money. One, two Indian boys help us, huh?"

She was happy to serve him. Together they had toiled early and late, sometimes with the aid of a native known as Kululak because he came from Kululak Bay. Kululak, who had loved the girl long before Blunt's appearance, had accepted the situation patiently, knowing that it could not last. He labored willingly beside the girl and his successful rival. Blunt called him "the Siwash," and treated him with the contempt he had for all natives.

That second fall, when he had counted the fat roll of bills, and sometimes when he had gazed off with uncertain eyes toward the fleet, the girl had watched him closely. Pangs of fear had gnawed at her heart while his decision hung in the balance. Then suddenly he had tossed the bills into the tin box which was kept be-

neath the cabin floor. "Got a good thing," he muttered, "and I'd better hang onto it. Another year!"

The year had been a good one, but the mind and heart of the native girl were at peace. Now she could hold him forever, because, as she whispered reassuringly to herself, "*Alki nesika tenas chako!*" There was a new light in her eyes, a soft, happy light shining with the joy of expectant motherhood.

To-night, when she had planned to fill his heart with joy, he had come home so drunk that his sodden brain had failed to comprehend the words she had twice spoken in Chinook dialect.

Realizing his condition, she had gone into the little room that served as kitchen, to stir the fire. He would be hungry even if drunk. Watching her through blurred vision, he muttered incoherently, "Le's see now, the pack's about done! Two weeks and they'll sail for God's country, two weeks more, an'—" He nearly slipped from the chair but pulled himself up with a jerk. "And I'm going with 'em!" He rose unsteadily, lurched across the room and fell upon the bed in a stupor. Presently he was sound asleep.

Several hours later, when the meal had long been ready, Blunt awoke in an ugly mood. "Hey, there!" he bellowed. "I want something to eat. What's the matter with you lately, always loafing. Leave it to an Indian to be lazy."

She hastened to satisfy his wants. When he had finished eating, he sat on the edge of the bunk, rubbing his aching head. "If that Siwash shows up," he said suddenly, "tell him we don't fish to-morrow. I'm going over to talk to the big boss, see?"

For an instant the native girl was possessed by her old fear. Then she smiled. Now was the time. She crossed the room, knelt at Blunt's feet, and placed her soft cheek against his knee: "*Alki nesika tenas chako!*"

**F**OR a moment Blunt was silent, then his face paled, his hand grasped her hair and he jerked her head back so he could look into her face. "What's that?" he exclaimed, and then, anger surging over him, he cried, "You're lying, Klooch! Lying, like all you squaws do when you get your hands on a white man. You know what I'm going to see the big boss about, and want me to stay here! But I'm a white man! Did you think I was going to live with a squaw all my life? Go ahead and lie, you vixen; you won't keep me here."

"You no want baby?" she faltered in slow school English, her lips quivering.

"You lie," he repeated, shaking her roughly; "you know you lie. Say you do! Say it!"

To-night, when she had planned to fill his heart with joy, he had come home so drunk that

She was sobbing. . . . "*Alki nezika*—"

"Cut that Siwash gab!" snarled Blunt. "Talk a white man's language. Blubbering ain't going to get you nowhere. I'm going. That's flat!"

"No!" she pleaded. "Stay for baby, such nice big baby, just like you, like his . . . his . . ." she fumbled for the word, found it, and smiled through her tears, "nice baby like his *daddee*! You stay with me and baby."

As Blunt got to his feet the girl threw her arms about his knees, repeating words of entreaty. Roughly, he thrust her aside, but stood looking at her for a moment half in fear, half in rage. Then, without a word, he pulled on his shoe-pacs, donned his mackinaw, and stepped out into the night.

**I**N THE early morning hours, Blunt tied up his gas-boat at the cannery dock. The big boss, Wallace, was at his desk. He was working fifteen and eighteen hours

daily, winding up the season's business. The rattle of winches and rumbling of trucks loaded with cased salmon filled the air as Blunt crossed the rain-soaked dock. Wallace glanced up as Blunt entered. "Hello, Blunt!" he remarked without enthusiasm.

"Good morning, sir," replied Blunt; then, after a moment's hesitation, added, "I want to go outside with the fleet this season. Easy find room, won't I?"

"You?" queried Wallace, looking at him in surprise.

"Sure. I can go, can't I?"

"I suppose so; but what about the Indian girl?"

"The klooch? Oh, she don't care. She's only a squaw, and don't feel about these things as we do. Even if she did, she'd get over it."

"I am not so sure of that! I know the natives up here pretty well, and yours isn't the first case I've observed. The time has passed when a man can come up here,

take an Indian girl to his cabin as his klooch for a few months, and then go blithely on his way and forget. You may sail with the fleet; but I'll wager that long before we clear Unimak Pass there'll be a radio to a U. S. marshal, and regardless of where you land you'll be picked up, returned, and forced to right your wrong."

Wallace drummed with his fingers on the table between them, and continued bluntly: "I'd make an appeal to your manhood if there were anything in you worth appealing to. You've made a lot of money, you've brought in fish by the boatload when others often returned empty—thanks to this girl's peculiar knowledge. My advice is to do the right thing. Hunt up a priest, minister, or commissioner and have a ceremony performed. If you don't choose to take my advice, that's your privilege. The company shipped you up here, and agreed to return you. As manager, I'll give you passage south with the fleet if you insist."

his sodden brain had failed to comprehend the words she had twice spoken in Chinook dialect

The dull red of anger had mounted Blunt's cheeks, but he remained seated until Wallace had finished.

"Klooch or no klooch, I go with the fleet," he said. "I'll take my chances on radios and marshals. I got twenty thousand dollars, and part of that will hire a good lawyer—if I'm pinched."

"Twenty thousand, eh? The sum total of your joint earnings—and you're taking it all! I'm not surprised." The calmness suddenly vanished and in its place came the righteous indignation of a real man. Wallace leaped to his feet. "We'll live up to our contract and take your dirty carcass south," he shouted. "Now get out of my sight, you cur!"

His hands thrust deep into the side pockets of his mackinaw, Blunt paced to and fro on the dock, debating his chances of escape. Kululak, pausing in the act of shoving his motor dory into the water, observed Blunt's agitation. Blunt should be putting to sea for salmon or, if he did

not intend to fish, then he should have been asleep. "Huh!" grunted the native, "Blunt no like baby, huh! *Hyaas rollix!* (big mad)."

**ABRUPTLY**, Blunt's nervous pacing ceased and he set off with long strides. Kululak followed him down the beach to a lonely cabin. It was a place patronized by the rougher element of the cannery hands. Here, a human derelict known as Cultus Jim had established a crude still where he manufactured "white mule." Blunt pounded heavily on the door, and after a short interval was admitted. Kululak, his ear pressed against the shack, listened eagerly. He heard the gurgle as liquid tumbled from bottle to glass, and the satisfied "Ah-h!" as Blunt drained it. This was followed by a long silence.

"Cultus," said Blunt slowly, "you're a wise devil. You've knocked around these parts many years. When a white man wants to go to God's country and finds

that he's got a klooch on his hands, what does he do with the klooch?"

"Bump 'er off!" answered Cultus promptly; "it's the only safe way. Squaws like white men and they don't want to let 'em go. Take an old squawman's tip, and if your klooch starts squawkin', bump her off!"

"And get hung!"

"Might if you got caught!" admitted Cultus; "but suppose you was out in a rough sea and she got washed overboard. That wouldn't be murder. That'd be an accident."

Blunt handed him a bill. "Guess I'll let it go," he said; "take this and forget I ever asked you." But Cultus, wise in the way of lawless men, knew differently. "Thankee, thankee!" he mumbled, pocketing the money. "I never know nothin'; I never hear nothin'; and I never see nothin'; if I did I wouldn't be here now."

Kululak, who had made the run from the cannery at top (Continued on page 147)

# Spring Fever

*By Nina Wilcox Putnam*

**I**T IS kinda hard to say why should one season make a person feel any different from another, but they do. I don't mean quite that, neither, because I can always tell myself from Pres. Harding, for instant, but what I mean is that some times of the year make you feel one way and another season gives you an entirely different mixture in your personal carburator and you got to adjust it all over again, and spring does it the most of any part of the 12 mons.

When this Editor of this AMERICAN MAGAZINE give out the order for this spring medicine he couples the remark with well, make it good and snappy. And I says nobody feels snappy in spring unless they are a yellow dog and he says that is a bum joke. So I says well then if my jokes is no good, why I will not write the darn thing, and he says all right, don't.

Well being a married man he had ought to of known better than to say that to a wife, even when not his own. Because naturally I at once got out the key to the typewriter-garage and was just setting down to think up what could I say about spring which would be a purely original remark, when George, that's my husband, come in and interrupted me as per usual. Well, when a person is in the act of attempting the impossible it is maybe just as well they should be interrupted, but not with the handle of a rake, which is what I was.

This rake was a brand-new one of the usual size and shape of which we get such a bumper crop every spring, and it had brought George out on the five-fifteen, making a way for him fore & aft as if he was the Prince of Wales or something I have no doubt, but considerably less popular. He come in the door with it under one arm, turned to shut the door with it still there, and give my hair a good combing with the teeth of it before he knew what he was doing. So I says, for the love of tripe put that thing down in a corner before you break the lamp Aunt Nellie gave us for our wedding present and George says no such luck, it will undoubtedly stand there intact where she can see it long after we are dead and gone, but he stood the new rake in the corner just the same and then asked me had I got that Ed Smith to dig the garden yet and why and the blazes not. And I says because I was talking to a Editor all day about spring, and George says there, isn't

that just like a woman, talk talk talk and never get a thing done how do you expect we are going to have any peas to can if you don't get Ed here to dig that patch so's I can get them planted. And so I says good lord the way you talk about your garden anybody would imagine you did the work in it, I have other duties to neglect without taking on yours. Why don't you attend to it yourself. I suppose you think a woman has nothing to do all day except the things you said was the man's end of the home. And etc.

Well, after a few more conventional remarks like these, why George says all

again I could be thankful I hadn't got to the point where I read seed catalogues aloud in my sleep. It is a funny thing how spring affects some people: with one it is Baseball, with another it's Rose-cold, but in our family it's gardens. When the languid ozone gets working around the first part of April, you know, that sickly stuff which give the poets their colic, why George plans a garden not any larger than a Kansas farm. The plot he lays out would need ten men and a tractor to look after it right, but at planting time George always wishes he had plowed a little bigger piece and doesn't know how he is going to get

all his stuff in. By July 4th he don't know how he's going to get the weeds out, and wonders why on earth he ever chewed off a ranch like this. And another funny thing about George, or it would be funny if you didn't have to live with it, is the way he gets a man to dig it, our Junior to weed it, me to transplant it, and then tells the neighbors all about his garden.

Another peculiarity George has got and which makes him a sign of spring, is that towards then he believes I should get a lot of exercise. No sooner do I lay down for one instant after working like a slave, than a commanding voice from the attic will yell where are my golf clubs, and keep it up, too, until I arise off the dining-room sofa and go up and say here they are, stupid, right behind you in the corner where you put them your own self last fall. Still another peculiarity that George has got is the way he will, about Oct. 15th or so, take his summer suit and brush it off good and hold it up to the light and squint at it and determinedly ignore the thin places on the under side of the cuff and say, hey Nina this suit is not so bad, it's pretty

## What Are These Sheep-Faced Adults Going to Do?

**I**N OUR family," says Mrs. Wilcox, "we have a Junior, but he's still too small for us to buy him the kind of suit where you get two pairs of pants with it. We still got to shop for him in the depts. where suits, when the seat is gone out of them, they are gone indeed.

"Because, see, I have brought Junior up like a good mother to love the dumb and noisy animals, and kept him setting still by the ¼ of an hour at a time showing him the Zoo in pictures accompanied by such intelligent instructions as see the dreat bid horsey, sweetie, and Oh look at the 'normous elephant with his trunky-wonkey! So of course he has got a pretty good idea about animals and so 4th and can recognize a Circus-poster the very minute he sees one, and keep right on calling my attention to it until some results is effected. I don't know for sure, but I got a strong suspicion that them animal-alphabets is got out by the big circus trust or someone, and it had ought to be prevented. Anyways, Junior seems to know to the minute when the circus attendants commence raking the moth-balls out of the camels & lions, and the way that kid worries his father and self untill I and he and all go to the circus, is a crime. We simply have to do it each year, as does also his grandfather, and of course we couldn't very well ask the old man and leave out Grandma, so she has to come along too. Last year Uncle Henry and Aunt Mary was staying at our house and they went to the circus last year, too, because it didn't seem fair to let the poor child go comparatively alone, and they brought a friend of theirs and his wife along. Of course we go only because of Junior, but this year I am kind of worried over it on account he has not shown so much enthusiasm as usual and has took a notion he would rather have a birthday party instead. If he sticks to that, believe you me, a bunch of sheep-faced adults is going to be out of luck."

right, all right, have it your own way only shut up, which every wife will recognize as the typical masculine flag of trounce, and then he dove into his seed catalogues and other inspired literature, and left me to write this article which I had been told not to, and think up some stuff *re* spring. At first all I could think of was poets, but at once dismissed them as overdone.

I wished most heartily that it was to be a piece on Thanksgiving instead, on account I could easily think of so much to be thankful for, thankful I wasn't the kind of a dumb-bell George was, for ins. and thankful he hadn't crowned me with that new rake he had brought home. Then

good yet, I can use it first thing in the spring. Then he will bound me until I get him some camphor and a old moth-bag, and insist upon putting it away himself because women never do these things properly, especially on idle Sunday afternoons when there is no place to go. Then in the spring he will take off the wrappings during some other idle hour, stuff them in the garbage pail, look the suit over carefully, take the lid off the pail again and stuff the suit in after them. This seems to go with straw hats, as well. I got a kind of guilty feeling about letting last year's straw hats go that way, though. I sort of imagine I ought to keep them and

gild them and paint on a few forget-me-nots, add a ribbon bow and save them for next-Christmas presents. But I guess I only imagine so.

Another thought I had while trying to think up a few remarks about spring, was the way George's office looked one day during it when I paid him one of those pleasant little wifely visits without telephoning first in order he should pay me one of those pleasant little husbandly

checks without being able to escape, or have a conference, in time.

Well anyways, the people in that office was going about their job with all the pep of a snail with a bad case of creeping-paralysis. And it wasn't because the boss had gone out either, on account I got the check all right. They acted like that because they was dreaming of green meadows and blue skies and the great free open spaces where the ants can crawl

down your neck and the mosquitoes chew on wherever they can reach, and other beauties of nature and etc.

Yes sir, I could see *plain* that at this season something come over the entire office force that give them the same general effect as a steady diet of hot mince pie for lunch. The only difference was they enjoyed the misery which old lady Spring was handing them, whereas with the pie, why everybody will say we (Continued on page 114)

## Sid Says:

### *Find out whether you want to knit or crochet*

A SUBSCRIBER writes: "They tell me statistics show that most businesses fail and that few win out. Why is it? And heaven knows that most individuals fall way below what you expect of them. They simply don't make good. Why is that?"

One of the biggest reasons is that they lack direction of effort. By that I mean direction from within—self-direction. All successful enterprises have a clear policy, a direction of effort. They make their course of action so plain that you can stand on the side lines and see exactly what they are up to. They impress themselves on your mind so distinctly that by and by when you happen to want something in their field you turn naturally to them.

Suppose you were here in New York and wanted to take a ferryboat to Staten Island. You would go down to the lower end of Manhattan Island and take what is plainly labeled a Staten Island ferry—a boat that is known and posted as going straight to Staten Island. You wouldn't get into a boat the captain of which was *thinking* of going to Staten Island, but might not; who, if the weather continued fine, might decide to take the afternoon off and go on a picnic to Coney Island. You would say that such a captain had no policy, no direction of effort. You would not even want to patronize his craft as an excursion boat—unless he got down to dots, said where he was going, and whether he would be home in time for supper.

Yet thousands of businesses and millions of human beings are almost as lacking in clear purpose as that captain. *They* don't know where they want to go, and *you* don't know where they want to go. *They* make no progress, and *you* can't help them by your patronage because you actually can't see just what they are selling or precisely what they have to offer you.

I could take you here in New York to two wonderful restaurants, both of which have a clear policy, both of which succeed. At one of them your lunch will cost you three or four dollars. They will make enough fuss over you and put on enough airs to delight your heart, if that is the way to delight it. You will have to wait quite a while for your grub, but that is part of the game. The idea is elegance, leisure. And if that is what you want you can get it. The other restaurant is noted for its cheapness and its quickness. Low prices and speed are what it is selling. Cleanliness, yes—but no airs. You jump into it in a hurry and out in a hurry.

You can finish eating there in the length of time it will take the head waiter in the other place to make over his French into English that you can understand. And the whole price of your lunch in the cheap place will be about what it will cost you to sit down in the other. Both restaurants, I say, are enormously successful. Both have a policy, a clear direction of effort. You know what you will get, and they give it to you. And they don't ape each other. They have settled on a business and they stick to it.

What is the main reason why businesses and individuals get off the track and fail to adhere to some sort of definite policy? I should say that the main reason is imitativeness. Most of us haven't got the power to control our desire to look over the fence, see what the other fellow is doing, and try to copy him. Young people—and lots of older ones—have a hard time making up their minds what they really want to do. They look longingly from business to law to medicine to engineering, and all around the block. And frequently they light on something for which they have no real zest, simply because Pa, or a brother or a friend, is in that line.

Then they set out to try to impersonate an enthusiasm which they do not feel. Perhaps they make a half-success of it. Anyhow, they marry, take on responsibilities, and end up by going through life in a line of work which they do not really love, and in which they never can achieve anything unusual.

The pitiful struggle that small businesses make to imitate each other is best illustrated in small stores. Walk down certain streets in almost any city or town and you can see the result. If a man on the street is making a success selling rat traps you will see that rat traps have begun to appear in the show windows of other stores—no matter whether rat traps have anything to do with the real business of the store or not.

The chief result of all this lack of policy, lack of direction, is confusion. If you can't hit upon a clear policy—and adhere to it—if you keep wandering off into fields that are not your own, you confuse other people. They get so they don't know you, can't identify you, can't depend on you, and won't start out with you, because *you* don't know where you are going and *they* don't know where you are going.

To sum up—I should say that the main characteristic of failure is confusion.

# If You Are Worried— Don't Eat

How grief, anger, worry, shocks, and fears  
affect your digestion

An Interview with Arthur L. Holland, M. D.

*As reported by M. K. Wisheart*

**D**R. ARTHUR L. HOLLAND has specialized for years in the treatment of gastro-intestinal diseases. He is a member of the Attending Staff of the New York Hospital; Member of the Faculty, Cornell University Medical College; Consulting Physician, New York Infirmary for Women and Children; Consulting Physician, Misericordia Hospital, New York.

**A**PATIENT of mine, a business man who had just returned from a long vacation following a breakdown in his health, recently dropped into my office to let me see how much he had improved. He greeted me cheerfully, and there was a pleasant ring in his voice as he said he had never felt better in his life.

Looking him over superficially, I noticed that his skin was clear, his eyes bright, his hands free from tremor. Further, I found that his tongue was a healthy red, free from fur, also that his breath was sweet. A complete and most rigid physical examination confirmed these indications, and I was able to tell my patient that he was in excellent shape in every way, after which our conversation turned to other things.

During our chat the telephone rang, and my patient's wife asked to speak with him. Presently I saw a look of anguish come over his face; his hand trembled. Finally he thanked his wife for calling him, hung up the receiver, and turned to me with a forced smile.

"Bad news?" I asked.

"We've lost the law suit," he answered, referring to a litigation which I knew involved a large sum of money. "My wife called to tell me the decision was unexpectedly handed down to-day."

With an effort he then tried in a light way to take up our conversation about casual things, but the strain he was under was perfectly apparent. In speaking, he made a sort of clicking noise with his lips so that I suspected his mouth was dry.

Again I had him let me look at his tongue, and now I found that it was perfectly white. Not only was his mouth dry, but his breath was heavy. The action of his salivary glands had been completely checked. The blood supply to his mouth had evidently been diverted to his internal organs.

Actually this man did not lose money as a result of this litigation, for the case came out favorably when taken up on appeal; but the shock which came to him when he *thought* he had lost his case was

directly responsible for the acute disturbance in his gastro-intestinal tract. One might say that he should have taken the news his wife gave him more philosophically, and have avoided the acute reaction by hopefully anticipating the result of an appeal to the higher courts; but most of us, under similar circumstances, would have gone through the same emotional strain that he suffered. And what I want to stress is that such shocks, followed by periods of intense anxiety, or even by moderate worry, cause a great variety of gastro-intestinal symptoms.

Suppose the news this man received in my office had come to him when he was eating a meal? What would have happened then?

Since the flow of his saliva had stopped, it is easy to conjecture the effect of the shock on the other secretions of the digestive apparatus, particularly the gastric juice. This would probably have been checked and the tone of his stomach (its muscular force) would have been lowered, and he would probably have suffered a spasm of the pylorus—the valve-opening from the stomach into the intestines. This would have been accompanied by a sinking sensation, such as we refer to when we say "my heart has gone down into my stomach." He would probably have been unable to swallow more food; first, because of the dryness of his mouth and throat; second, because fear, shocks, anguish—any strong emotion—instantly obliterates one's mental appetite, that conscious desire for food which is an essential part of digestion, since the flow of the digestive secretions depends upon it.

Further spasms of the pylorus would probably have given this man a severe pain in his stomach. He might have experienced nausea followed by vomiting. Failure to vomit might have been followed by an attack of what is called acute indigestion.

**T**HE symptoms I have just described were recently experienced under peculiar circumstances by a prominent New York business man whose timidity had made him believe that he could not possibly speak in public. While attending the banquet of a trade convention, he was called on for some remarks. He declined at first, but was hard pressed and finally rose to his feet. He was conscious of expressing himself very inadequately, floundered through some remarks which he felt were foolish, and then, to the relief of everyone

except himself, sat down. His trouble had just begun.

Upon retiring to the lavatory of the hotel, he vomited. Later, he was taken home in a taxicab and was ill in bed for two days—solely because of the fear he had suffered while speaking. He had suffered severe pains in his stomach, due probably to spasm of the pylorus; and his stomach, having lost its muscular tone, had collapsed so that it was nothing but a bagful of victuals—a condition usually described as acute indigestion—a most unpleasant if not always serious trouble.

The direct effect of strong emotions upon the digestive tract is likely to be most pronounced if the emotional strain occurs during a meal. However, if a person suffers to a moderate degree, but over a long period of time, from worry, grief, anger, fear, the effect, while not immediately so apparent, may be even more serious in the end. The reason for this is that the secretory and the muscular apparatus of the stomach are prone to form habits.

**W**HEN a man allows himself to indulge continuously in strong emotions relating to his business, professional, or domestic cares, whether at meal times or at other times of the day, he is literally training his stomach to act abnormally. The emotion may increase the amount of acids produced, causing a chronic hyper-acidity, or it may have the opposite effect of reducing them even to the point of totally abolishing, with a chronic gastritis as a result. We know that such emotions directly affect the muscular activity of the stomach, so that food may be sent into the intestines before it has been sufficiently softened and changed in its chemistry. Thus the stomach may "get the habit" of chronically secreting too much or too little hydrochloric acid.

The first effect of acid in superfluous amounts is felt in the uncomfortable "heartburn" so frequently complained of by chronic nervous dyspeptics. This is in itself bad enough, but its long-continued action on the stomach is more serious. It also tends to over-stimulate the pancreas, with later degeneration of this important gland. As a digestive organ, the pancreas is even more important than the stomach, as its juice is essential to the final digestion of the sugars and other important food elements.

A Wall Street man I know has been in the hospital four times with a recurrent stomach ulcer. Each time under treat-

ment the ulcer has healed over. The first three attacks followed a severe drop in the financial market when he was "long" on the market; the last one followed a sharp rise in the market—but on this occasion he was "short." In each case his trouble has been directly due to the shock of his financial losses, followed by anxiety and worry. Spasm of the pylorus caused by his distressed mental condition had led to a mechanical irritation of the healed-over ulcer. Increased activity of the stomach owing to the same cause had accentuated the trouble.

Among my patients is a physician who has a very large general practice. He is an over-conscientious man who allows himself to be driven day and night by his duties. He has never given the thought he should to arranging his affairs so that routine matters of his practice can be attended to by his nurse or secretary. I have known him to sit up all night with a dying patient, though his presence could serve no purpose, and even though this duty should have been performed by a nurse. He will even hurry through his luncheon so as to be able to take a prescrip-

tion to a drug store and personally supervise its preparation.

Several times this man has been to me to complain of pains in his stomach and of inability to sleep at night. He is always worse in winter, when his practice is heaviest. I have explained to him that he is over-working and letting his cares stay with him when he should relax. After each visit he reforms for a while. Then when his condition has improved he relapses into his old habits.

NOT long ago I dined with this physician and his family. We were hardly seated at table when the telephone rang. Then I saw my friend reach down and take a telephone from a shelf concealed under the table! During that meal the bell rang five times, and each time my friend answered, giving instructions to nurses and a druggist, and arranging for rooms at a hospital for two different cases. I had here a new clue as to one of the principal causes of my friend's relapses into stomach trouble—and later this was astonishingly confirmed when I went into his bathroom and found a telephone fastened to the wall

above his tub, so that he could be in touch with anyone who wanted him even while he was bathing!

Many business and professional men are bringing upon themselves the very same trouble this physician has, by not putting aside their problems when they should. Even at meals, or when they should be seeking recreation, their minds are busy planning committee meetings, outlining projects, considering suggestions to be laid before directors.

It is really important that we should have our meals under pleasant circumstances, undisturbed by business cares. If a man must devote his lunch time to business, he should eat very lightly. At dinner he should make a point of talking with his family and friends of subjects apart from his work. I have found that an easy way of getting one's mind off one's problems when eating alone is to read a little from some favorite author. For such use I always have with me little booklets containing extracts from Kipling, or something like the Bab Ballads. The adoption of some such agreeable device as this would materially (Continued on page 196)

THESE exercises were especially designed by Dr. Arthur L. Holland for the use of persons suffering from gastro-intestinal troubles, including lack of tone in the abdominal organs and constipation. When done sufficiently they also aid reduction. They will be found beneficial for persons who are nervously inclined, and they are recommended to the man or woman of large business affairs whose physical endurance falls short of his mental possibilities.

**Breathing:** Lie flat on your back, hands at your sides, palms down. Take a deep slow inhalation, raising chest high, bringing abdomen in and turning palms up, with shoulders to the floor—hold breath for five seconds. Exhale, return to relaxed position, turning palms down. Ten times

Lie flat on your back. Draw knees up with both feet on floor. Place a heavy book on abdomen. Raise the book by contracting the stomach muscles and lower it by relaxing them. Repeat fifty to a hundred times

From flat position, place palms down, legs out straight. Raise right leg up as far as possible, keeping leg straight, toes pointed. The same exercise should be done with the left leg. Then swing left and right legs alternately, keeping both in motion as indicated by arrows

## Doctor Holland's Exercises For People With Digestive Troubles

Everyone should give a reasonable amount of time and effort to keeping himself in a normal physical condition.

These efforts should be conscious and methodical. You may walk for exercise, but if your thoughts are centered on getting to your destination you will not take the deep inhalations that are much more important than the leg work you do in walking.

Your day's work is a drain on your physical and nerve power. Sleep and rest are great recuperative forces; but they do not themselves clear your system of each day's accumulation of poisons. The organs of elimination, such as the lungs, bowels, kidneys, and the pores of the skin, must be kept alive. These exercises are especially designed to stimulate proper functioning of these organs. Any man or woman who will faithfully do them each morning, as directed, will be inspired to deeper breathing and a more erect carriage, and will find himself

From flat position, hands straight behind head, raise body to sitting position (without bending knees), trying to touch toes with finger tips

From flat position, legs out straight, hands clasped behind head, raise head and draw up right knee, trying to touch your chin with your knee. From same position, this exercise with left leg

or herself conscious of greater zest, strength, and nerve force throughout the day.

The first exercise in the set should be done ten times. The second should be done from fifty to a hundred times. The rest should be repeated four times to begin with, but increased to ten or more as you become accustomed to them.

The exercises given here were selected by Doctor Holland from a complete chart of thirty-three exercises, as best meeting the needs of the average person. Through the courtesy of Doctor Holland and the McGovern Gymnasium, the complete chart with illustrations and directions may be had by readers of this magazine upon request. The request must be accompanied by a two-cent stamp.

Lie on right side, right hand under your head, left hand on hip, draw left knee up to chin, keeping toes pointed

(a) Lie on right side, right hand under head, left hand on hip. Raise and lower left leg, keeping knee stiff and toes pointed. (b) Lie on left side, same position as shown for (a). Swing right leg forward and backward from hip, keeping knee stiff and toes pointed. (c) Same position as (b). Draw right knee up to chin, keeping toes pointed. (d) Same position as (b). Raise and lower right leg, keeping knee stiff and toes pointed

Lie flat on stomach. Hands folded behind on the small of the back. Raise head and shoulders toward the ceiling

# This Boy Had The Will to Conquer

Moissaye Boguslawski used to play the piano at cheap dance halls until his fingers bled—At thirteen, he gave lessons to other children at fifteen cents an hour—From the time he was four years old he worked, against overwhelming odds, to make himself the distinguished musician he is to-day

*By Allan Harding*

SOME years ago, a slender black-haired boy used to play the piano in one of Chicago's cheap dance halls. He was barely fifteen, yet he had to play there for eight hours at a stretch, two or three nights a week.

On Sunday—known to most of us as a day of rest—he began at two o'clock in the afternoon and, with one hour for supper between six and seven, played until three or four o'clock Monday morning; twelve or thirteen hours of work altogether!

Time and again, his fingers would bleed until the ivory keys were red instead of white. Finally he hit upon the device of putting court-plaster on his fingers. It interfered with the delicacy of his touch; but as noise was the chief essential this was not a serious drawback.

In the small hours of the morning he would drag himself home to the tenement where he lived with his father and mother. But at eight o'clock, after a few hours of sleep, he was up again, practicing on his own poor old square piano, which had been bought, second-hand, for five dollars eleven years before.

It was wheezy with age. The keys, however, were still intact; and he did not have to pound them now for a mob of noisy dancers. He could develop his hands and train his fingers, even though he could not evoke beautiful music from the old instrument he played on.

The boy was Moissaye Boguslawski, now one of the best pianists in the country and one of the most successful teachers of piano playing. He has taught thousands of pupils, beginning when he himself was a boy only thirteen years old.

He received fifteen cents a lesson then, his pupils being the children of his neighbors in the Chicago Ghetto. To-day, as one of the head professors in the Chicago Musical College, he receives fifteen dollars for a lesson; exactly one hundred times the amount of his first fee. As for his own playing, it has won the praise of the most severe critics in New York, Boston, Chicago, and the other musical centers of this country.

His personal story is an extraordinary one; a story of almost incredible energy,

courage, and patience. Then, too, there is his experience as a teacher. In probably a million American homes, right now, there is a daily discussion as to whether it will pay to have Gladys, or Dorothy, or Johnnie, or little Bill "take lessons" on the piano. Boguslawski has some interesting things to say on this subject.

He is thirty-five years old now. It probably will surprise a good many readers to be told that Paderewski was older than that when he won fame as a pianist. Boguslawski looks younger than he really

is; for he is still as slender as a boy and his thick hair is actually "as black as midnight." In his make-up he is a curious combination of poetry and practical business sense.

"I was born in a tenement on Canal Street, which was then the Jewish quarter of Chicago," he said to me recently, while he was in New York making records for the phonograph and the player piano. "Both my father and my mother came from Russia. My father made a precarious living by playing the clarinet or the flute at Jewish weddings. And my mother, before she was married, worked in a cloak factory."

"That was what she *did*. But what she *wanted* to do was to become a singer. When she met my father—" Boguslawski smiled—"well, of course, she married him because she loved him. But I imagine it was *easier* for her to love him because he was a musician; at least, he played a musical instrument, and she naively imagined that she was, so to speak, marrying a musical career for herself."

"Instead, she found herself living in two rooms on the top floor of a tenement, with a hard struggle to keep the wolf from the door. Her dreams of becoming a singer quickly faded. But when I put in my appearance she transferred her ambition to me, hoping and praying, from the day I was born, that I would become a real musician."

"What I have achieved I owe in great measure to her. When I was four years old she persuaded my father to buy a funny old square piano, so that I could take lessons. It cost five dollars, and I can remember now the trouble they

had in getting it up all those flights of narrow stairs. It took up so much room that we had to dispense with a dining table and use the top of the piano instead. I was so small that I ate my meals standing."

"An old German, named Steinbach, gave me lessons at fifty cents apiece plus ten cents for car fare. I had one lesson a week, except when there was a Jewish holiday. Poor as our home was, my mother always kept it immaculately clean. Whenever a religious holiday came around, the rooms were scrubbed almost from floor to ceiling. And on these occa-

MOISSAYE BOGUSLAWSKI

Although his name is Russian, Boguslawski was born in Chicago in a tenement house of what was then the Ghetto. He had his first piano lessons when he was four years old, on a second-hand instrument which his father bought for five dollars. He is now one of the leading professors in the Chicago Musical College, and has won a wide reputation as a concert pianist. He is only thirty-five years old. But into those years has been crowded an almost incredible amount of work; and up to the time he was twenty it was done in the face of constant privations and discouragements

sions I missed my weekly lesson, because my mother was not strong enough to do this scrubbing, and the sixty cents had to go to a charwoman instead of to Steinbach.

"Later, I had a young Russian for a teacher. He was a bit better than Steinbach, but not very good. Still, it was the best my parents could do for me; and, poor as it was, it meant a degree of self-sacrifice which you can hardly comprehend.

"I used to practice several hours a day when I was only seven or eight years old. If I had been fortunate enough to have a good teacher—who knows? I might have been saved years of struggle; but perhaps I should have missed some of the things I got from the struggle.

"As it was, I did learn to play, because I kept everlastingly at it. As a matter of fact, I was chiefly my own teacher. I was my own task-master too; and I drove myself harder than anyone else would have driven me.

"When I was ten years old, I began to go with my father to play at Jewish weddings. He had hard work to collect the full fee for me, I remember. People didn't want to pay a child a man's price, even though I did a man's work.

"WHEN I was thirteen I played in a Yiddish theatre frequented chiefly by peddlers and junkmen. Inwardly, I rebelled against the environment. I hated it!

"But I always tried to keep myself aloof from degrading surroundings. I would have nothing to do with the people. I would not drink with them—which was customary—or even talk with them."

Boguslawski's next experience was the one I have already mentioned, the one in the dance hall, where he used to play until his fingers bled.

"When I look back at that time," he said, "I wonder at the dogged persistence of that boy who was myself. During the intermissions between dances I used to push down the practice pedal, so that the piano keys would not sound when struck; and even when my fingers were cracked and bleeding I would spend the intermissions doing various exercises, especially in double-thirds, which are one of the most difficult tests for the pianist.

"I am very grateful to that boy now," he said with a smile; "for I think I may claim to have a mastery of double-thirds which is possessed by very few of even the world's greatest pianists.

"Next I set up for myself, as it were, by forming my own orchestra to play at Jewish weddings. This so-called orchestra consisted of only three pieces, and each player received three and one-half dollars a night. I took part of the money earned in this way to pay for some lessons at a cheap little music school. The instruction

didn't amount to much, but it was the best I could afford.

"About this time, I heard that Ossip Gabrilowitsch, the famous Russian pianist, was coming to Chicago. Before this, I apparently hadn't thought of trying to bring myself to the attention of any real musician. I just plodded along more or less blindly, doing the best I could by myself. But when I heard that Gabrilowitsch was coming, I determined to try for a hearing.

"In my mind I chose a Rubinstein concerto as the piece I wanted to play; but I hadn't the money with which to buy the

"After sacrificing my whole childhood and part of my youth, after working and slaving day and night for ten years, giving up everything in the way of pleasure and self-indulgence—and now to be told that it had all been useless, that I hadn't the ability to reach the goal! As we went down in the elevator after leaving Gabrilowitsch, I didn't care whether it ever stopped going down. I wished it *wouldn't* stop.

"But that was only the first reaction. Dogged determination, when it has become the habit of years, is hard to break. And for ten years I had been developing strength, not only in my hands, but in my will also. Before my mother and I had reached home this will began to assert itself.

"Before we went to Gabrilowitsch I had said that I wanted to get the verdict of a man who was competent to judge my ability. And I had declared that I would abide by his verdict. Whatever it was, it should decide my future.

"WELL, from my point of view, his judgment was one that condemned me. He admitted that I might become a mediocre musician; but there was no comfort to me in that. The only goal I cared to reach was a far higher one than mere mediocrity.

"I remember the whole experience as if it had occurred yesterday. You couldn't have found, in the city of Chicago, two people more silent and crushed than my mother and myself as we walked out of the Auditorium Hotel. But we had not gone far before something in me came to life. It welled up in me, choked me, brought tears of defiance to my eyes. And as I stumbled blindly along beside my mother, I clenched my hands and swore to myself that I *wouldn't* abide by the verdict that had been pronounced; that I *could* reach the goal I had chosen, and that I would prove that I could. That experience, instead of taking the heart out of me, simply increased my determination to carry out my purpose.

"There is a sequel to that incident which may interest you," said Boguslawski with a little gesture of apology. "A few years ago, after one of my recitals in New York, Gabrilowitsch came back of the stage to speak to me. It was the first time I had seen him since that afternoon when he had passed judgment on my playing. He came up to me, put his hands on my shoulders, and said:

"Well, my boy, time has made great changes!"

"Before he left, he engaged me to appear as soloist with the Detroit Symphony Orchestra, of which he is the conductor. I think that has meant more to me than any other recognition I have received.

"Gabrilowitsch, (Continued on page 136)

## The Ages at Which We Make the Most Progress

"THERE are two periods when human beings make the greatest progress," says Professor Boguslawski. "One is between the ages of eight and twelve; the other is between twenty and thirty.

"The intermediate period, between twelve and twenty, is the time of adolescence; a period of emotional excitement and constant distraction. The eight-to-twelve period is perhaps the most important in the life of a human being. The character is so plastic then that you can shape it almost entirely at your will.

"Parents should understand this. What they do with their children in those four years is almost unalterable later on. During that period, too, you can get a child to do more serious and more concentrated work than he will do a few years later. You can dominate him then—which you cannot do between twelve and twenty.

"When they reach their twenties, if they have the right stuff in them, you get another period of rapid development, of serious and concentrated effort. Only, now it is at the behest of their own will; not, as in the case of most of them when they were children, at the behest of some older person."

music. I thought about it by day and dreamed about it by night, and finally I had an inspiration. The man who ran the little music school I attended was going to send out a lot of circulars. I told him of my predicament, asked him to get the concerto for me, and to let me pay for it by addressing these circulars. He agreed; and by addressing two thousand envelopes I earned the coveted piece of music.

"WHEN Gabrilowitsch came to Chicago, I took my precious concerto and, with my mother, went to see the great pianist at his hotel. He listened to my playing, then he said to my mother:

"I will be perfectly frank with you. I cannot see in your boy any evidence of genius. He has some talent, and if his mind is set on a musical career you had better send him to a good teacher and let him learn what he can. But I do not see anything of great promise in him."

"Well—that was a bitter pill to swallow," said Boguslawski, shaking his head.

# A Great Woman—Who Didn't Know It

A story

*By Nelia Gardner White*

ILLUSTRATIONS BY CHARLES W. ANDERSON

**W**HEN Sarah Briddon was ten and went to the two-room school at Cameron Downs, where the seats were double

and marked with the cryptic, jackknife-dug hieroglyphics of decades of learning, loving, mischief-crammed youth, the teacher said of her:

"Sarah Briddon is not an ordinary child. She's going to be known all over the country some day."

The teacher thought in her heart that Sarah would be an actress, but she did not say so aloud. Folks didn't think so much of actresses in Cameron Downs. But Sarah had a gift for mimicry, a love of the dramatic, an understanding of the subtleties of words that bordered on genius. There was a huge old apple tree that spread its branches from Frank MacKerzie's orchard over the school fence, and at recess time those who weren't playing Annie-Annie—Over, gathered under its shade. And Sarah, always in the midst, dramatized the reading, the history, and the geography. Miss Blount, seeing her from the window one day—straight and slim, her black hair in Indian-like braids over each shoulder, her feet in paper moccasins, living intently as Pocahontas—felt a thrill of anticipation for the child's future, and a pang of regret at the barrenness of her own life.

Sarah, at that time, dreamed great dreams. Sometimes she would be a second Bernhardt (though she'd never heard of Bernhardt); sometimes she would write books with more love in than her one love story, "Lorna Doone,"

possessed; sometimes she would sing before kings (gowned in white satin and with a thick rope of pearls about her neck). But always in her dreams she was great and

hewed-down-to. For Sarah Briddon realized, also, dimly, that she was not ordinary.

There was no high school in Cameron Downs, but Miss Blount urged and

Suddenly Sarah felt old and worn out and useless and disappointed. She had

cajoled the Briddons till they sent Sarah to Canisteo to high school. She didn't make any particular stir in Canisteo High School. She was a dark, vivid little thing, with startlingly direct eyes. She asked embarrassingly difficult questions in classes sometimes. She was too much absorbed in dreams to become a very integral part of the school life. She knew "Merchant of Venice" by heart, and in her little room alone at night she would give impersonations of Lady Macbeth and Rowena and Eppie. But she was shyer than in Cameron Downs days and no one ever knew of the impersonations.

**I**N HER senior year the class gave a play. Sarah had three lines to speak. For the first time someone noticed her specially. Professor Behm, head of the English department, dropped in one day to a dress rehearsal. Sarah was a gypsy girl—she

appeared only for five minutes, and then she was not important. But Professor Behm's keen eyes noted the absolute correctness of Sarah's varicolored costume, the gypsy wanderlust of her eyes, the perfection of accent in the three lines.

"She ought to have been the star," thought Behm; "I'm going to know that girl!"

But it was near commencement time. There were the commencement speeches and the examinations to fill his time. Professor Behm did not remember Sarah till he saw her in her simple white dress, fresh from the unsophisticated fingers of Miss Nellie Morey of Cameron Downs, come across the platform for her diploma. And then it was too late.

But Sarah still dreamed. She wanted intensely to be out of the ordinary. She determined to go to college. When she broached the subject her folks laughed.

"College!" said Sam Briddon. Sam ran the hardware store and made a pretty good thing out of it, too. "College! Don't none but sissies and high-brows go to college, Sally! Don't get such ideas in your head. College don't fit girls for anything useful. Why, when I was young, folks were thought pretty clever if they got to high school. College—humph!"

"I'll work for my board," pleaded Sarah; "lots of girls do. It'll just be the tuition!"

Sam thought lots of Sally. He was proud to think she'd graduated from Canisteo High School. But Hosea Butterfield was the only boy who'd gone to college from Cameron Downs. Hosea's father was the rich man of the town. Hosea was a trifling, white-trousered nonentity, in Sam's mind. He'd never done a lick of work. But Sam saw the great desire in his daughter's eyes, and he compromised handsomely.

"I'll tell you what, Sally," he said generously; "you can go down to Galloway to the normal school! Then, maybe, when Miss Blount gives out, you can get this place to teach!"

Sarah realized that her father was being generous, but her heart sank. It was college she wanted. College was so much bigger than normal. It was the pathway to the realization of big dreams. No one ever became great out of a normal school. They became like Miss Blount. But she went to normal. She couldn't bear to disappoint her father, and she knew he'd never consent to college.

"I'll teach till I earn the money to go!" she resolved in her heart.

**B**UT when she got to Galloway and had registered as a prospective grade student, things conspired to change her ambition. She had been there a fortnight when one day she passed the open door of the kindergarten room. Kindergartners were a new departure for Galloway. They'd been quite content with grade and high-school teachers before; but Bramport had put in a kindergarten course, and it was up to them to follow suit.

As Sarah passed the door, the class in dramatization was holding sway. The normal girls, somewhat stiffly, were dramatizing "The Sleeping Beauty." The stiffness, the unreality of the thing, hurt something in Sarah. Hardly conscious of what she did, she walked into the room and over to the little group.

tried to build surely and strongly, but she had a hideous sense of failure

"Yes," Chloe said in that strangely sweet voice of hers, "yes, John, Mumsie is wonderful. . . . I didn't used to realize it so much; but lately since I—I've loved you, I've known it better"

"Oh—that's not the way!" she cried: "Let me be the Princess!"

Too surprised to protest, they let her be the Princess.

The play changed from unreality to life. The Princess explored the castle and spun and slept and awakened. The others caught fire from Sarah's enthusiasm and aliveness. They saw the fairy tale in its intended beauty, with its inner meaning of a whole world's awakening. Miss Graeme, the directress, kept Sarah after the class had been dismissed.

"My dear," she said, "you are going to be a kindergartner!"

"Oh, no!" said Sarah. "I'm going to teach the Cameron Downs school, back home." The defeat of dreams was in her voice.

"You're not going to do any such thing," said Miss Graeme. "I'll assure you of a position right now if you'll change to our course. Kindergartens are just getting a foothold, and a few girls

like you in the ranks will be a godsend!"

It was three weeks before Sarah's letters home bore fruit. But in the end she took the kindergarten course. It was not just the path of her dreams; but she had come already to take second-bests as part of the game. And it was, after all, a rather satisfying second-best. It was in the story-telling that she shone most. The dramatic urgings melted into the lure of the public story-teller. She had never heard of public story-tellers before, but Miss Graeme filled her head with them. It would mean that she must go to some school of elocution before she could ever become one; but when the practice-school kiddies sat intent and world-forgetful under her words, her heart kindled to the ambition. She could and she would achieve it! She was a somebody in Normal School. Everyone admitted she was gifted. Miss Graeme saw her future as the future she would have liked for herself, but had not had

quite the ability nor the perseverance to attain. But she gave all she had to Sarah, and Sarah soaked it in gratefully.

**H**ER first year out of school, Sarah taught at the Adams Street School in Syranac. The children were Jews. Sarah liked it, but she saw herself always in something bigger. She went to the Orphans' Home once a week and told stories. Folks came to know her from that. She was undoubtedly clever. But folks did not know that her appearing each Saturday before the children was merely a means to an end; that she was training herself to appear before crowds; that she was developing her story-technique patiently, persistently. She was a good kindergartner. She could not fail to be, with her love of children, her ability to live their life with them, and her appreciation of the big things of life applied to childhood's simple activities.

She took a (Continued on page 165)

# How Some Men Spoil Their Lives By Being Stingy

*By Edgar A. Guest*

I HAVE never been able to get the psychology of the stingy man. Everybody knows him, for he is everywhere. Every circle of four or more, every club, and every organization has him as one of its number. There is no neighborhood without him.

The stingy man isn't a miser. Indeed, misers in this age are few and I personally have never known one. The stingy man is just petty and small and trifling, and makes himself the laughing stock of his companions. Whatever his attainments and whatever his accomplishments in life, he mars the joy of his character by a defect for which there seems to be no reasonable excuse.

The stingy men of my acquaintance are all fine fellows, but they could easily be finer at very little expense to themselves, and of themselves. They could be happier men to meet, and pleasanter men to do business with. I once heard it said by a frank and liberal man to his stingy friend:

"Joe, do you know all that stands between you and being a real good fellow is about one hundred dollars a year?"

Now, Joe's income has been estimated to be more than ten thousand dollars a year. In the large affairs of life he is as liberal as his neighbor. His gifts to charity are in accordance with his means; he does readily and quickly many fine things; but he spoils it all by a niggardliness in the little things. He gives away dollars, but grudges the dimes.

The old saying that charity covers a multitude of sins is true; but the reverse of it is stronger and truer, I think.

Stinginess ruins a thousand virtues.

The stingy man seems not to recognize his pettiness. It is a matter of principle, he tells you; he persists in his practices, though it costs him good service in his favorite restaurant or club, and though it causes his friends, at times, to feel abashed at his miserly tips.

I am not making an argument for tipping. It may or may not be un-American, as its enemies declare it is. The fact is that custom has established it, and I fear custom will continue it. I am going to have much to say about tipping, be-

cause my observation of the way people acknowledge the practice or shy off from it has turned my attention to this kind of stinginess. But let it be clearly understood in this connection that I am speaking of the people who can afford to tip, and who frequent the places where tips are the rule and where they are established as a part of the compensation of the employees. I have in mind the men one meets in clubs, hotels, and cafés, and not at all the fellow whose every penny is re-

in which to go back and forth to his work, and I have an idea that this radical change from his present condition would not abolish tips. So long as human nature remains unchanged, those who render personal services to others will be pleased by some substantial recognition of their efforts and, in the main, those who have been well served will be pleased to bestow tips.

The custom is one which the generous man is inclined to use for his own comfort and convenience, while the close-fisted man uses it in such a way that he causes discomfort to his friends and himself. Foolish men have abused the custom, while greedy servants have overworked the extended palm and the small-change tray. In this, at least, tipping is American—it permits every man to indulge himself a little in the pleasure of giving. The stingy man robs himself of this joy.

Waiters ought not to look disgusted at ungenerous tips, but they do. They ought not to mark the stingy man and avoid him; but, being human, they repay smallness with smallness. All this makes the guests at the stingy man's table uncomfortable and miserable. What was at the start, and would have been throughout, a delightful party has been spoiled by stinginess—or, as the host would say, by "a matter of principle." You can't help wondering if it should not be spelled "principal."

Whenever I see a close-fisted friend fumble at the change in the tray and carefully pick up the extra little nickel or dime I feel like asking him what he is going to do with it. . . . He not only has made himself look cheap for a five-cent piece, but he has made the rest of us feel ashamed.

I was at a luncheon not long ago given by one of my "close" friends at a downtown hotel in honor of a friend of his who is nationally known. The host had taken great pride in the table arrangements. No expense had been spared to insure the success of the affair. There were ten of us at the table, and the check for that luncheon amounted to not less than seventy-five dollars. Two waiters were in attendance, and (Continued on page 202)

## The Stingiest Man I Ever Knew

### Prize Contest Announcement

YOU know many stingy people. Write us about the champion tightwad of the crowd. How about the man who never has but one cigar and, taking that one from his pocket, says to you, "Sorry, Old Man, I can't offer you this. I've already had it in my mouth." Then there's the fellow who always fumbles around in his clothes hunting for his money while someone else steps up and pays for the movie tickets or the soda pop.

Think it over. Then tell us the incident that makes one of your acquaintances stand out as the stingiest person you ever knew. And, while thinking about it, include yourself in the list of your acquaintances. Maybe some story about yourself will win!

It is not the purpose of this contest to give you a chance to take a slam from ambush at some neighbor. Self-righteous and vindictive letters are not wanted. Write the incident in a good-natured way; no need to fear putting down the facts, as names will be withheld.

For the best letter of not more than 400 words we offer these prizes: \$20, first prize; \$10, second prize; \$5, third prize. Competition closes May 20th. Winning letters will appear in the August number.

Address Contest Editor, *The American Magazine*, 381 Fourth Avenue, New York City.

Contributions to this contest cannot be returned, so make a copy of your contest letter if you want to preserve it. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of *THE AMERICAN MAGAZINE*.

quired to provide, as best he can, for the actual necessities of his family and himself.

I should be surprised if a good many people did not object to what I am saying about tipping, because they will conclude that I am an out-and-out advocate of it. I am neither an advocate nor an opponent; I am merely discussing it as a condition and not a theory. Give your waiter a salary of a thousand dollars a month, furnish him with an expensive automobile

# Just "Common" Folks— These Eighteen Hundred Heroes

Stories of some of the men, women, and children who have won the Carnegie Hero Medal—All of them risked their lives, and many of them died, trying to save others—Wonderful acts of heroism in everyday life

*By Stuart Mackenzie*

**W**HEN I was a small child, I used to sing a Sunday-school song which stated that I wanted "to be an angel and with the angels stand; a crown upon my forehead, a harp within my hand."

I liked the tune. But I always kept my fingers crossed to indicate secret reservations in regard to the sentiment! For although of course I wanted to be an angel, I decidedly did *not* want to be one right then.

Most of us feel the same way about being a hero. We would like to be one—but at some far-off time in the hazy future, not right here and now.

And yet if the test really did come now some of us would meet it without flinching. Some of us would enroll in that great Democracy of Courage whose members are found in every land under the sun.

Courage knows neither sex, nor age, nor race, nor calling. Wealth cannot buy it, nor poverty prohibit it. Neither the learned nor the unlearned have any monopoly of it. The strong sometimes possess it—but not always! And those who are most frail in body may have the bravest spirit. It is strange. And it is one of the most beautiful things in the world.

For two days I have been reading stories of heroism; about eighteen hundred of them! Stories of men, women, and children who risked their lives, who in many cases *laid down their lives*, to save others. In so doing, they have won their Badge of Courage.

These stories are told in the records of the Carnegie Hero Fund Commission, which Andrew Carnegie established nineteen years ago, and which has its headquarters in Pittsburgh. In a Deed of Trust, dated March, 1904, he provided for the creation of the commission and transferred to it \$5,000,000 in bonds of the United States Steel Corporation. The income from these bonds, \$250,000 a year, was to be used to pay the expense of conducting the commission and in rewarding acts of heroism, according to a plan which Mr. Carnegie clearly outlined.

One of the things which he

specified was what should constitute "an act of heroism." He gave two essentials: First, a person would not be a hero, from the commission's point of view, unless he had tried to save the life of someone else at the peril of his own life.

The second point is less obvious. You probably think that *anyone* who risks his life for another is a hero. But he wouldn't necessarily be a Carnegie hero. To be eligible to that distinction he must have risked his life when he had *no duty or obligation to do so*.

A husband who tries to save his wife from drowning, a mother who rushes into a burning building to save her children—there would be no Carnegie Hero medal for them. They are following a natural law which every one of us should obey.

Even an animal will fight to save its mate, or its young. But there is no natural law which makes an animal, human or any

other kind, risk its life for a creature that has no such claim. When a human being does that, he performs an act of real heroism.

Neither is a man a Carnegie hero if he risks his life in performing an act for which he is paid as part of his regular work. A fireman may rescue a dozen persons from a burning building; but that is his duty as a fireman. A soldier may perform prodigies of valor in war; but that is his duty as a soldier. The captain of a vessel must sacrifice his own life, if necessary, to save his passengers. It is his duty as a captain.

And so I might go on. Human beings have made a glorious record of courage in the performance of duty. But among these eighteen hundred men, women, and children, of whom I have been reading, there is not one on whom rested any obligation to perform the act for which he was recognized as a hero; not any, *except* that imposed on him by his own impulse of pity and courage and self-sacrifice.

I wonder, for example, what you would have done, if you had been in the place of Charles F. Lentino, at one o'clock in the morning of October 5th, 1908, in New York City. Lentino—an American-born Italian, twenty-two years old—happened to see smoke coming from a four-story tenement house in Mulberry Street. He didn't live there. None of his own folks lived there. A fire in that tenement was "no business" of his.

But he *made* it his business. He ran into the hallway and tried to reach the door of the rear rooms; but the smoke and flames drove him back. Through the smoke, he ran up the stairs and kicked on the door of the rear rooms, rousing their occupants. Then to the front apartment, where a woman came to the door. She was in her night clothes, so Lentino put his own coat around her and helped her down to the street.

He could not get back up the stairs, so he climbed a water spout to a sloping ledge about one foot wide, where he was close to a window. There he helped Mary Shallow to reach the fire escape on the adjoining building, from which she could

Fourteen persons were burned to death in this New York tenement. Sixteen others were saved from the same fate by one man, Charles F. Lentino. They were not his relatives or friends. It was "none of his business" to rescue them at the risk of his own life. Some people would say he was a fool to do it. But all human life is ennobled by this glorious folly of heroism

go down to the pavement. Lentino then climbed to the third floor, broke a window, climbed through, and rescued three children from an adjoining room.

**H** HE WENT again to the third floor, got another child, and carried it down to where he could drop it to men standing on the pavement. Back to the third floor again! The mother of the rescued children was ill at the time. Lentino helped her down and dropped her to the men below. He helped her husband too. Then he climbed to the fourth story, where he assisted a whole family and two other men to escape. By this time, smoke and flames were pouring out below him and he thought he would have to jump—from the fourth story!—when the firemen arrived with a ladder, by which he escaped. Fourteen persons in the building were burned to death. Lentino rescued sixteen men, women, and children from a like fate.

Did you ever refer to Italians, patronizingly, if not outright contemptuously, as "dagoes"? Well, this man was of Italian descent. Do you like to laugh at jokes about plumbers? This man was a plumber. Only a "dago" plumber! Yet he risked his life—and *knew* that he was risking it—to save people who had absolutely no claim on him. It ought to make us more humble about ourselves, less arrogant toward others.

Another popular subject for facetiousness is the name Percy. I was reminded of this peculiar custom when I read the story of the following incident. The next time any of you Johns and Jims and Bills are tempted to be flippant about the Percys, perhaps you will think of this story:

In 1912, a man named Henrickson was out on Lake Hemet, in California, when his canoe upset. He was five hundred feet from the shore; and the water was ice-cold, for the day was the twenty-ninth of February and the mercury was only three degrees above freezing. The wind was blowing and the lake was choppy.

Henrickson clung to the canoe and called for help. Several men were on the bank, but all of them were afraid to risk their lives in the ice-cold water. All except one—Percy Walker. He was a hotel proprietor, forty-five years old, with a weak heart and other physical disabilities. He was not related to Henrickson. It was not his "business" to risk his life for the man. But he did it, just the same.

He took off most of his clothing, someone hung a flask of whisky around his neck, and another man helped him to roll

Several years ago a man named Lutz fell into the Niagara River, several hundred feet above the falls. People on the bank saw him being swept toward certain death; but no one dared attempt to rescue him, except a young Armenian laborer, Iram Kevorkian, who waded into the torrent at a point only one hundred and fifty feet above the brink and caught Lutz as the current carried the latter within reach. Kevorkian was dragged several feet along the slippery bed of the river, but kept hold of Lutz until the men on shore formed a human chain and thus rescued them both. In the picture above, X and Z show the relative positions of Kevorkian and Lutz just before the latter was caught

a log into the water. Pushing this log ahead of him, Walker had almost reached Henrickson, when the latter sank and did not reappear.

Instead of saving himself, Walker put his face under the water, trying to locate Henrickson. Then he swam to the canoe and searched under that. He called to the men on shore that he was getting very cold, and they told him to take a drink of

This is James W. Brice, Senior, a poor negro laborer, who was blind and had only one hand. Another colored man, Jones, was overcome by carbon dioxide gas at the bottom of a well. Although Brice knew the danger, he had himself lowered into the well and, with his one hand, tried to tie a rope around the unconscious Jones. Just a poor blind and crippled negro! But he had that divine spark of courage which makes heroes out of all kinds of material

the whisky; but his hands were too numb to open the flask. Someone tried to get a horse into the water, hoping to reach Walker in that way. But even the horse refused to go. Walker had been in the water three quarters of an hour. For half an hour longer, he clung to the log. They could hear him groaning, now and then.

Finally his head sank below the surface. He had died from exposure.

Some people say that "hero" is only another name for a fool. And perhaps you will claim that Percy Walker was a fool to risk his life in that vain attempt to save a man

who had no real claim on him.

But what superb folly it was! A sort of folly that transmutes the common clay of humanity into fine gold. An infinitely precious kind of folly, beside which our vaunted practical sense seems a dull and inglorious virtue.

In these stories which I have been reading two phrases occur over and over again: "Died in saving" and "Died in attempting to save." They recur so often that they are like the strokes of a bell: "Died—died! . . . Died—died!" It tolls for the passing of brave spirits; a requiem for plain, common humanity that nevertheless had reached the heights of glorious folly. A strange and motley army! But an army with banners—the Flag of Courage, before which we all stand with uncovered heads.

**P**ERHAPS, instead of Percy, the name you prefer to joke about is Clarence. I believe there is a man owing to that name who is trying to form an Association of Clarences to combat the alleged public injustice to them. He could get some interesting data from the reports of the Hero Fund Commission.

For instance: Clarence B. Shaw, aged 46, teamster, died attempting to save Cheney L. Plummer from electric shock, Carthage, Missouri, September 6th, 1920. Clarence Henry, aged 42, machinist, died saving two schoolboys from drowning, Port Clinton, Ohio, July 4th, 1921. The boys were saved through his efforts, but Clarence perished.

Clarence J. Pope, aged 20, a student at Cornell University, attempted to save another student, McCutcheon, during the terrible fire of December 7th, 1906. Clarence was making his escape, although his hands had been badly burned. He had reached a stone balcony, when he looked through a window and saw McCutcheon lying on the floor inside. After three attempts, he reached McCutcheon. But in

trying to drag him through the window, Clarence fell back over the edge of the balcony to the roof of a porch below, and thence to the ground. Fortunately, he was not seriously injured.

And how about this 15-year-old school-boy, Clarence Hitchborn? Seeing another boy, named Lampshire, struggling in the Gunnison River, Colorado, Hitchborn swam one hundred and fifteen feet and reached out his hand to him. Lampshire clutched it and climbed on Hitchborn's back, forcing him under the water.

Hitchborn could not break the boy's hold, so he waded seventy-five feet toward the bank, getting his head above water occasionally by standing on submerged rocks. But he was entirely under water most of the time. Another boy came out to them and got Lampshire ashore. Hitchborn then lost consciousness and sank. But the other boy waded in and brought him to shore, where he was revived.

THESE stories are typical of those about other Clarences whose deeds of heroism are recorded in these reports. Go on joking about them, if you want to. I guess they can stand it if you can.

Apropos of these schoolboys, I seem to recall a great many remarks—and these, too, were patronizing if not downright contemptuous—which I have heard men make about "women and children."

I wish I could tell here every one of the stories of boys and girls that are given in these reports. But there are over three hundred! Fifty-one of these children ranged in age from eight to twelve years. And seventy out of the three hundred died in their attempt to save others.

Just as an example of these little heroes and heroines, here are two stories: In January, 1913, Henry O'Donnell and Blanchard Whitworth, each of them only eleven years old, were skating on the ice in an old clay pit. Whitworth suddenly broke through at a spot twenty feet from the nearest bank. The water there was eight feet deep.

There were men and other boys close by, but no one attempted to help Whitworth; no one—except eleven-year-old O'Donnell! He was not a strong child. His left arm was atrophied. He was afraid, too. For he couldn't swim and he knew the ice at that place was unsafe. But he went, nevertheless.

Taking off his skates, and with a hockey stick in his one good hand, he walked out to within five feet of the hole and held out the stick to Whitworth, who grasped it. But when O'Donnell tried to pull him out of the water, the ice broke and O'Donnell also fell in. Twice he sank below the surface. But he kicked and beat the water with his hands when he came up, managing finally to get hold of the ice. He had

Mrs. Prince, Mrs. Parker, Miss Pierce, and four children under eight years of age, were perceived by the bull as they came out of an old shack standing in its pasture. It evidently resented their intrusion, for it immediately rushed toward them in a fury; and when they ran back into the shack, it butted against the door, snorting, bellowing, and pawing the ground. Then it ran around to the front of the shack, where it broke a window in its effort to get inside. It was almost certain to succeed, for the walls of the building were full of cracks and the doors were flimsy.

TO GIVE the others a chance to escape the front way, Mrs. Prince went out of the back door, to entice the bull around there. It responded with such furious alacrity that she barely succeeded in getting into the shack and shutting the door before the bull plunged, head-first, against it. She threw her weight against the door, but the enraged beast forced it partly open and got its head through.

Mrs. Prince had caught up a broken shovel; and, still trying to keep the door from opening farther, she repeatedly struck the bull's head with this, her only weapon of defense. Meanwhile, the others had escaped by the front way. When she knew that they were

safe, Mrs. Prince dashed out through the front door, just as the bull plunged into the shack. There it evidently became confused, for it remained inside while Mrs. Prince reached a fence and climbed over.

Please remember that the children whom she saved did not belong to Mrs. Prince. If they had been hers, she would not have been considered a Carnegie Hero.

This would have applied also to Marie Langdon, who saved three persons from freezing to death. It happened in Telma, Washington, in January, 1907, when the temperature was fourteen degrees below zero and the snow was six feet deep. It was out in the country, too, where neighbors were few and far between.

Early one morning, Mrs. Langdon heard faint cries for help. Running out of her house, she fought her way through the snow, falling repeatedly, until she met Mrs. Jacques, crawling on her hands and knees and carrying a baby, Estella, while her four-year-old boy, Henry, struggled after her. They had been forced to flee from their burning cabin.

Mrs. Langdon (Continued on page 206)

© JEFF A. JONES, OREGON, 1919.

In August, 1919, a young clerk from Chicago, named Kraft, visited Iceberg Lake, in Glacier Park, Montana. He climbed almost nine hundred feet up the right-hand cliff, in the above picture, pulling himself up by bushes. He then tried to cross the small glacier between the cliffs, but slid one hundred feet, spraining his ankle and breaking some bones. Not realizing that the left-hand cliff was bare rock and almost vertical, he tried to descend that way. After an hour's work, he reached a ledge only two feet wide, hundreds of feet in the air. He clung there until a party of tourists appeared, down by the lake. Among them was Aaron Friedlich, a young lawyer. He climbed the precipice, sometimes swinging out with his feet in mid-air and pulling himself up to the overhanging ledges with his hands and arms. He finally reached Kraft and then worked his way to the glacier, often pulling Kraft along by a canvas belt. After two hours and a half, he succeeded in reaching safety. He had been in constant peril—and all for the sake of a total stranger to him.

been in the water five minutes when men with planks rescued him. Whitworth was drowned.

In November, 1911, a little boy named Benjamin Draper broke through the ice near Cowansville, Quebec, at a point where the water was five feet deep. Doris Lewis, a 14-year old schoolgirl, went to his rescue. She held out a hockey stick to him, but he was too numb to grasp it. So she crawled forward, trying to reach him with her hands. The ice broke under her and she, too, went into the water.

She swam a few strokes to the edge of the ice. Then her foot happened to touch a rock on the bottom and she stood there, in icy water up to her shoulders holding the boy with her arm, for ten minutes, until assistance came. When taken out, she was unconscious and half frozen, but was revived.

And then there are the women. Poor, weak creatures who scream at the sight of a mouse! That's another well-worn joke. But it somehow lost its flavor for me when I read about Eva Prince, of Mason, Michigan, and her encounter with a mad bull.

# Stella Dallas

The story of a great love

By Olive Higgins Prouty

ILLUSTRATION BY J. SIMONT

STELLA set forth in quest of 172 North Blank Street the next afternoon. If it had been a matter of less importance she would have written. When Ed had given her this address, he had meant that she should write.

"Uncle Sam will find me here," he had told her. "Drop me a line sometime when the offspring's away and you're feeling lonesome."

That was over a year ago. She hadn't seen Ed since. He might feel entirely different about her now. A year was an awfully long time. Perhaps he wouldn't want to marry her now. Perhaps he'd never really wanted to marry her. He had always laughed when he had suggested it, and she had always laughed back when she had refused his crazy offers. She guessed Ed would be surprised to be taken seriously all of a sudden. She did hope he hadn't married anybody else. Ed wasn't a bit the marrying kind, but just hoping so hard made her think of all sorts of catastrophes. Perhaps he'd moved away from Boston entirely. Perhaps he was dead, or perhaps—what if she wasn't attractive to him any more? She was a whole year older, and a whole year after you're forty—well!

He'd find her alimony attractive, anyway, she guessed. Ed hadn't been very successful in his various business ventures. But say—look here, there wouldn't be any alimony, would there, if she married again? Hadn't there been some such clause? She had never given it much thought, because she had been so dead sure she never was going to marry again. Gracious, she hadn't thought of that! Well, never mind, she could contribute something in the way of funds. She had a savings-bank account amounting to over a thousand dollars. Last time she had seen Ed, it looked to her as if he hadn't a bank account amounting to anything.

"I'm sort of out of luck this year," he'd told her apologetically (the lining of his overcoat had been frayed and ragged round the cuffs. He had caught her looking at it). "But I can still give you a good time, little girl, just the same. See?" He had opened his overcoat. She had caught a glimpse of a bottle shining. He had patted it tenderly. "More where this comes from, too," he had winked; "but, say, it's awful expensive stuff now. Dearer'n a woman! Prohibition has played the devil and all with my capital, Stella." No. Ed might not scorn her little nest-egg.

She became more and more convinced he might not, as she approached the

vicinity of the address on the card. She had never been down this way before. Why, it was slums—regular slums! North Blank Street was a narrow, roughly-cobbled sort of alley. There was a row of low brick houses on each side, dilapidated and out of repair. There was a dark, damp look to the alley and a dark, damp smell, too, that reminded Stella of underground cellar stairs. Unlike most of the other doorways in North Blank Street, 172 still had all three of its numbers clinging to the battered brown paint. Stella, standing on the narrow sidewalk, reached up over the two front steps and knocked loudly just below the numbers. She knocked three times, then, receiving no answer, turned the loose knob and walked in.

"Anybody here?" She called up the rickety stairway.

"What yer want?" A young woman of about twenty, with a mop of black bushy hair, cut short, stuck her head out of a door at the rear of the hall.

Stella told her.

"Ma," called the woman in a powerful voice, "here's a lady wants to see Ed Munn."

"Ma" came to have a look at Stella, too. Both mother and daughter stared at Stella with hard, suspicious eyes. It didn't make Stella flush. She didn't blame them. It did look funny.

"He ain't here any more," crisply Ma told Stella.

"Oh, ain't he?" groaned Stella.

"No, he ain't. This is a respectable place. This ain't no dope-den."

"Do you know where he has gone?"

"Nope."

"I do, Ma. He's over at Liz Halloran's. She was tellin' me 'bout him."

Eagerly Stella turned toward the younger woman, "Say, take me there. Take me there now. I got to see him."

BUT she didn't see Ed, nor that day. Liz Halloran, a thin, haggard old woman with no front teeth, told Stella, standing in her miserable black hole of a doorway, like the opening into the cavity of a decayed tooth it was, that he wa'n't fit to be seen just then. "He's just lyin' there like dead to-day."

"How often does he get this way?" Stella inquired.

"Oh, off and on; I don't know. I don't keep track. Couldn't get no hootch. That's what done it."

"When do you think I could see him?" Stella asked.

"Oh, he'll be rousin' up to-morrow or the day after. He'll be real bright for a spell, too."

"I'll call again day after to-morrow."

An hour later, as Stella sat gazing out of the window of an electric car that was bearing her back to the apartment and Laurel, she kept saying to herself, grimly, doggedly, "I can stand it. I wasn't brought up in a pink-and-white nursery, thank God! I sha'n't mind it after a while. I'm tough as tripe. Anyhow, it's better than jumping off the Harvard Bridge."

TEN days later, nonchalantly to Laurel, Stella remarked one morning, "I sha'n't be here, most likely, when you get back this afternoon, Laurel." Laurel was attending business college daily now. "I've got an invitation for luncheon and the matinee."

"An invitation? From whom, Mother?" Stella smiled. "I haven't got so many admirers. I guess you can guess."

The color flooded to Laurel's cheeks: "Mother, you haven't accepted an invitation from Mr. Munn!"

"I'd like to know why I haven't."

"Knowing how I feel about him—how I dislike him."

"Gracious, Lollie! Honestly, it's funny! You act as if you were the mother, and I the child."

"Mother, you haven't been seeing that creature again, have you?"

"That creature! How you talk! Why, Laurel, Ed's a real nice man."

"I don't want to discuss him, Mother. I don't want to hear you stand up for him. I don't see why you're bringing him up again. I thought we'd decided we'd drop him, long ago."

"You mean you decided it. I never did. Mercy, I've got to have a little independence. With you away so much every day, Laurel, and nothing for me to do, I'd be a very foolish woman indeed to allow a notion of yours to cheat me out of a little harmless entertainment."

Thus did Stella proceed. She mustn't marry Ed immediately, on top of the discussion with Laurel, following her return from New York. Laurel might smell a rat. There must be no blundering this time. Ed must be slipped onto the field of action naturally, inadvertently. Funny how things worked around. That which Ed had been years ago between herself and her husband, through carelessness and indifference, now to-day, through diligence and effort, she must make him become again, between herself and her child—an issue, a sore point, a bone of contention. Not until then would the time be ripe to marry Ed. Steadily, unswervingly, Stella set herself to her task.

It was easier than she had supposed.

Laurel's hostility to Ed was so white-hot that even a reference to him kindled a controversy. Therefore Stella referred to him frequently, in a light and inconsequential vein, laughing at Laurel's opposition. Not only did she refer to Ed but she saw him; she made engagements with him; she kept engagements with him; she stayed out with him until after one o'clock at night on one occasion; failed to appear for supper, or to telephone, on another. One afternoon, defiantly, she established Ed in an arm chair in the living-room of the apartment, and arranged that Laurel, due home from down-town, should find him when she came in. She repeated this a week later. Oh, it was too bad! She hated to watch the slow torture her procedure was to the child. But it couldn't be avoided. Somehow she must make her marriage to Ed seem logical.

**L**AUREL'S light laughter faded, disappeared; the soft light in her eyes hardened like a disillusioned lover's. Night after night she lay, on the extreme edge of the bed, beside her mother, silent and unrelenting, and drifted into a silent and unrelenting sleep. She grew years older.

One afternoon, after a particularly difficult morning of argument with her mother about Ed Munn (afterward Stella had called good-by to Lollie out of the front window, but she wouldn't answer), she returned to the apartment to find it empty. There was a note fastened to the handle of the oven door of the gas stove in the kitchen. Laurel discovered it when she went out to get some supper.

DEAR LOLLIE: I guess you won't be much surprised. I guess you've sort of seen the way the wind was blowing. Ed has wanted me to marry him for years, and as I hadn't any good reason not to now, I'll be Mrs. Alfred Munn when you read this. I would have told you all about it, but I knew how you felt about poor Ed, and it would only have meant more fuss.

Ed's got a grand job down in South America, and he's crazy to have me go down there with him. You know I never had much of a chance to travel, and it seems a big chance for me. So I'm jumping at it. We may be gone a year or two. I'll send you an address when we get one.

I've had this up my sleeve quite a long while, marrying Ed, I mean. You can't explain everything to a child. That's why I hoped you'd stay with your father. But when you didn't, of course I had to keep my promise to Ed just the same. It wouldn't have been fair if I didn't,

and he wouldn't listen to anything else. He's been waiting for me all the time you've been growing up, and I won't say I haven't been waiting, too. I've tried my best to make you see Ed the way I do, these last weeks, but you just won't, so I've given up trying, and gone ahead and done what I think is right.

Ed and I will be back and close up the apartment, sometime before we sail. I guess we all three can fit in somehow. I expect you to be nice to him though, now he's your sort of father.

When you're out, leave the key under the mat, same as usual. Ed and I may be back anytime. Love from Your Mother.

P. S. It was too bad you wouldn't turn round this morning and wave good-by.

Stephen and Helen, returning late from town the next evening to their summer home on Long Island, were surprised upon

entering the hall to hear a sound in the living-room. They stepped to the door. It was Laurel! She still wore her hat. Her suit case still stood by the chair where she had been sitting.

"**W**HY, Laurel! Why, my dear!" exclaimed Stephen and Helen, both hastening toward her. They met her in the middle of the room. They kissed her—both of them. She returned neither caress. "What is it, Laurel?" She was very white. Her eyes had a startled, frightened expression.

"I've come back," she said quietly; "I'll stay now, if you want me—if you'll take me." She made no gesture, her expression did not change. There was fixed calmness about her, as hard as adamant.

A policeman finally discovered her and told her to move now. I've seen enough." For the instant before she had

along. "All right," she replied cheerfully. "I will. I'm ready seen straight into Laurel's heart for a fleeting ten seconds!

"What has happened, Laurel?"

"I've been put out. I've no other place to go but here. If you don't want me—if—"

"You know we want you!" exclaimed Helen. "Dear child! Come. Sit down. You're tired. You've had a long journey. Why, you haven't even taken off your hat."

Laurel remarked, not moving, making no sign of response, "Mother has married." And, after a pause, "Mother has married." It was like the wailing of a tolling bell.

Stephen said, "Oh!"

Helen said, "I shall take off your hat myself." And quickly, deftly, she removed the small toque, and laid it aside on a table, Laurel standing listless and in-

different beneath her administering hands. "There! That's better." Then lightly she went on, "You ought to have telephoned when you reached New York, Laurel."

"She's married Alfred Munn, Father," said Laurel to Stephen. And, after a pause, again, "She's married Alfred Munn," as if the tolling bell had changed its note.

HELEN touched Laurel gently on her shoulder. "Come up-stairs to your room now," she said. "We'll talk about it in the morning. I'm going to give you some food and put you to bed now."

"Father, you knew him. You couldn't stand him, either. I understand now. I see. Of course you couldn't live with her. I couldn't live with her myself."

married a man she knew I hated. She has chosen him instead of me. She has married Ed Munn. He's awful. He's horrible. An animal is clean beside him. And she likes him. My mother! She's fond of him. She's been waiting for years to marry him."

"Oh, no, Laurel."

"Yes, she has. I know. Read that!"

She drew her mother's letter from the front of her dress, and passed it to Helen.

Helen sat down on the foot of the bed and opened the folded sheets. The letter had been written by Stella in pencil, carelessly, in haste apparently. It was read by Helen slowly, painstakingly, as if it had been written in blood. She read it twice. Afterward she looked up at Laurel.

(Continued on page 90)

"Don't take it so hard, Lollie," said Stephen.

"Don't call me Lollie!"

"Don't suffer so, dear."

"I'm not suffering. I'm not suffering at all."

"Will you bring up Laurel's suitcase, Stephen?" asked Helen. "Come, Laurel." She slipped a steadying arm through Laurel's. "You must go to bed now."

THEY mounted together to the lavender-tinted room which Helen had told Stella last summer would be Laurel's. ("She'll be sleeping in that, I suppose," Stella had remarked from the threshold of the room, as she had gazed upon the bed, fresh and crisp with muslin valance and canopy. "I'll be thinking of her in that," and she had wiped her eyes.) Helen recalled the scene, the voice, the tears as now she set about preparing with her own hands the waiting bed for that absent woman's child.

Behind her, Laurel was standing, here, as down-stairs, impassive and indifferent, just where Helen had left her when she withdrew her arm that had guided her hither.

"Come. We'll undress now."

"Mother has married a man I hate." Laurel took up the interrupted motif again. "She's

# They Have Tempers, Too!

The story of Bon, the hippopotamus with a toothache, of the leopard that killed its mate because an ingrowing toe nail hurt him, and of the fight between King Edward, a lion, and Dan, a great tiger—Menagerie men know that circus elephants have corns, and that the services of a chiropodist are essential to the preservation of the peace—Here's an inside story of the troubles of a circus man

*By Courtney Ryley Cooper*

ONCE upon a time I saw a gang fight, down in the gashouse district of New York. The street had been quiet a moment before, save for two men walking toward each other and a group of be-capped, furtive-eyed individuals lounging in front of a cigar store, intent upon nothing, apparently, except loafing. The first blow was struck as the two men met!

Immediately that crowd of loafers leaped into action. They crowded about the fighting pair, darting and leaping in their attempt to reach the man they strove to overcome. At last the struggling twain broke for a moment, giving an opportunity for the gang to reach its victim,

crept upon him unaware, caught him with their heavy claws, dragged him through an opening beneath the sliding door of the cage partition and ripped him to pieces! It was the gashouse district fight all over again!

When quarrels and bickerings and temper are concerned, one encounters some strange things in the menagerie of a big circus. If you become interested enough to look behind the scenes, to find the causes for the various quarrels and feuds, you will inevitably draw one comparison: The menagerie is like a community of people. The investigator finds that everything with which a chief of police is forced to cope in an ordinary town is work for

the menagerie superintendent also. The same fights, the same hatreds are there—the only difference being that the chief of police has the advantage. He copes with human beings, to whom he can talk, and whom he can warn against future infractions of the law. The lawbreakers under the supervision of the menagerie superintendent are animals, and one can't punish a lion by fining him five bones. He doesn't know what is meant by it, and simply stores up a new grudge because he's been deprived of his food.

There is far more lawlessness in the menagerie than there is in the community. When Bill Jones comes home to dinner with a headache there may be a

and in short order they left him an unconscious thing of welts and wounds lying upon the pavement. The gang slunk away into places of hiding, lest they be discovered upon the arrival of the police.

Not so long ago, I saw another gang fight. This time the scene was not a city street but the "permanent cages" of a menagerie in the winter quarters of a big circus. The victim was a hyena, the gang composed of striped Bengal tigers. But the tactics were just the same!

One began the fight, centering every attention of his victim upon himself. Then, while the howling, loathsome hyena strove his best to ward off the attack of a superior foe, the three other Bengal

Above: Suzanne, monstrous captive gorilla on exhibition in San Diego, California, is very vain. She likes to have her nails manicured. Since her keeper first performed the nail-polishing act, Suzanne has taken much pride in keeping her nails in trim. A manicure every week is her motto. Her owner has made a standing offer of twenty-five dollars to any young woman manicurist who will undertake the act of keeping Suzanne's nails in order.

In oval: Four little baby seals were recently brought from Southeast Alaska to Seattle's Woodlawn Park Zoo. On their arrival there, the youngsters went on a hunger strike, because they were too young to eat fish, and refused to take any kind of nourishment. Three of the youngsters died as a result of their hunger strike. The only remaining one, named "Jigge," is being brought up on a gun filled with condensed milk. The photograph shows two of the keepers of the Zoo "shooting" the food in the gun into the little fellow's mouth.

INTERNATIONAL NEWSREEL

Nature in fashioning the camel seems to have decided that just any old shape would do. And the camel, by way of retaliating for the figure that was wished on him, developed the worst disposition of the menagerie. He's the champion grouch of the animal world. To the right above is a hippopotamus. Imagine that mouthful of toothache, and then you can appreciate the story of Bon, the big river hog who went on a rampage because his tusk needed filling

quarrel because of his grouch, and he may tell his wife that she's the world's worst cook; but as a rule he doesn't pick up the ax and carve his initials on her head with it. But when someone crosses a lion that's suffering from headache—the sky's the limit. Into action leap his claws and teeth, and unless there are plenty of prod-bars and feeding forks handy, the result, all too often, is another family murder. When a jungle beast is the owner and possessor of a splitting headache he doesn't care how soon he kills his mate—the quicker the better. After which, perhaps, he can get a bit of uninterrupted rest.

In the menagerie, a headache is a perfectly good alibi. It wouldn't amount to much for a man to stand in court and announce that he killed his wife because his head or tooth ached, or because he had an ingrowing toe nail. But in the menagerie, the justifications are a bit different.

Animal men realize that the caged charges under their care cannot understand what is wrong with them, or what gives them such a terrific grouch, and so the men blame themselves when these things happen, and render a verdict:

"We the jury, find that the Lioness Trilby came to her death because she bothered Duke, who was suffering from indigestion."

**F**OR, let it be known, all these things happen with animals. Headaches, indigestion, sore feet, tuberculosis, pneumonia, rheumatism, toothache, ingrowing toe nails, and even insanity are all logical excuses for assault and battery, even murder, when the culprits are the caged beasts of a menagerie or zoo. To

say nothing of the hundred and one elemental and emotional causes which bring trouble, and which, by the way, can be found also on the police blotters of any large city. Just as greed, hate, avarice, theft, the desire for power, the difference between races, viciousness and downright cantankerousness cause work for the police of a community, so do these things breed excitement in the menagerie. Behind every quarrel of the cages there is a reason.

Perhaps the physical ills—indigestion, rheumatism, headache, and the like, are

To make a baby crocodile swallow something is not the easiest job in the world, but it can be done, as this picture shows. The crocodile is a highly developed reptile, found in tropical regions where water abounds. One variety lives as far north as Florida. "Crocodile tears," a figure of speech in common use, sprang from an erroneous belief that the creature shed tears over his prey

Monkeys are like people in many ways, one of them being the kind of ailments they contract. Here is one with pneumonia. A doctor has wrapped him in a pneumonia jacket in an effort to save him from the effects of the lung trouble captivity brought upon him. The expression on his face indicates that he is not feeling so well to-day, thank you

the occasion of most brawls. Sounds a bit unusual, doesn't it, that animals should be subject to the same ailments as humans? Yet, on consideration, it shouldn't. The construction of the body of man or beast is about the same.

Rheumatism with animals comes most often from inbreeding. When the father and the mother of the beast are too closely related, the result is a knotty, stumbling cub, practically saturated with rheumatism. The further result is a mean-minded animal, built upon the same principles as the human incorrigible. More than one "untamable" beast has been cured of rheumatism and then has become perfectly tractable. No mind in the world can be peaceable with every joint of the body aching!

**T**HE same is true of toothache, and in one instance at least I've seen it lead to some surprising things. Whether you know it or not, the hippopotamus, contrary to general belief, is one of the most amiable animals of the whole menagerie. A great river hog, he has little thought save his tank, his carrots and hay—and to be let alone.

In one of the big shows is a hippo so tractable that he is allowed to wander almost at will. Until a few months ago his wanderings, especially when the show was in winter quarters, were made things of continual woe by two baby elephants which persisted in tormenting the poor old hippo by every sort of trick that came into their brains. They would slap him with their trunks, then move swiftly away. They would butt him about the yard, steal his food, and in general make life a burden, while the hippopotamus did nothing save grunt in piteous fashion, and strive his best

to get out of their way. Then came the change.

Bon, as the river hog was called, on a warm day in spring, waddled as usual into the winter quarters yard. The two elephants were there to receive him, and to start their usual pranks. But the first move brought disaster. Wide went the long-toothed mouth of the hippo, a bellowing

grunt came from his big throat, and the elephants started hurriedly in the other direction. Bon, pig eyes

up the hole. Nearly three weeks was required for the task, as it was necessary to kill the nerve by degrees, with the hippopotamus lashed by a perfect network of chains and his big mouth held open with blocks and tackles. But it was accomplished—and since then Bon has been his old amiable self again.

**A**S TO the indigestion and headaches, sometimes they go together, and sometimes they don't. Indigestion almost invariably causes headaches, while the headache, as a solitary ailment, is caused by an oversupply. (Continued on page 222)
